The location and arrangement of these facilities will support efficient daily work and reduce conflicts among service vehicles, deliveries, visitors and learning activities. Improvements may provide better access for animal care, agricultural production, maintenance and program preparation while preserving the character of the working farm. Supporting facilities and equipment will be considered alongside the public spaces and activities they serve, including opportunities to use shared OCP resources where practical.

Individual projects will account for continuing maintenance, utilities, equipment replacement and staff needs. Staff assignments, equipment specifications, procurement methods and maintenance schedules will remain within applicable OCP administrative processes.

Equipment purchases and installed improvements will be evaluated under the agreement's capital-project definition and applicable funding requirements before being credited toward a specific investment commitment. [A-01 §§1.4, 4.4, 4.10]

A.11 Project development and CIP updates

Advancing projects

Projects will advance through the process described in Section A.1. Selection and sequencing will consider safety, accessibility, animal care, asset condition, stewardship, public demand, support for school and outdoor learning programs, available funding and continuing operating needs.

Projects may proceed individually or together where coordinated work improves results or reduces disruption. OCP may adjust sequencing to respond to conditions, funding opportunities and operating needs, while accounting for agricultural activities, public programs and BHS's specifically retained rights.

Working within the approved capital framework

The approved CIP establishes the project types, locations and intended uses that OCP may pursue as funding becomes available. Within that scope, OCP may refine designs, quantities, materials, schedules, delivery

methods and budgets through applicable County processes. These implementation decisions do not independently require an IPP amendment.

Projects outside the approved capital scope will follow the applicable BHS approval requirements. Section 4.4 requires prior written BHS approval for capital improvements not included in the approved PAP; proposals involving purposes outside those authorized by the agreement require the consent specified in §2.4. Changes to the parties' contractual rights or responsibilities must follow the agreement's amendment provisions. Applicable County authorizations, permits and expressly reserved BHS rights continue to apply. [A-01 §§2.1–2.4, 4.4, 4.7.4]

Updating the CIP

OCP will update the CIP at least every four years and submit it to BHS for review and approval under §4.7.4, which provides a 60-day review period. Updates will reflect current conditions, completed work, emerging needs and anticipated investment opportunities. [A-01 §4.7.4]

Attachment B — Park Operations and Management Plan

B.1 Operating framework

OCP manages Discovery Oaks as a working agricultural learning campus and public park, bringing together the people, expertise and shared services needed to sustain farm operations and deliver welcoming public experiences. Operations follow applicable County policies, this Integrated Park Plan and the BHS interlocal agreement, including its specifically retained rights and responsibilities. [A-01 §§4.3, 4.9]

An integrated operating team

Discovery Oaks' operating capacity combines site-based staff with district operations, specialized program teams and systemwide support. Outdoor Learning provides leadership for educational experiences and stewardship participation. Health and Wellness Activation and Recreation Programs and Services contribute to public participation, seasonal experiences, events and partnerships. Park Operations and facilities specialists support grounds, buildings, utilities, maintenance and site readiness. Planning, engineering, business systems, communications, finance and administrative services provide additional expertise as needed.

These functions work together to connect program ambitions with the practical requirements of delivery. Program staff identify the intended experience and participant needs; farm and site personnel identify agricultural requirements and daily operating conditions; and operations and technical teams support the facilities, equipment and services that make delivery possible. Shared staffing, equipment and specialized services allow Discovery Oaks to benefit from the capacity of the broader park system.

Michigan State University Extension contributes agricultural and livestock expertise through the applicable farm operating arrangements. Its role connects practical farm management with agricultural learning and complements OCP's program and operating responsibilities. Employees, volunteers, contractors and authorized partners may contribute to delivery within their respective roles, while OCP remains accountable for its obligations under the interlocal agreement. [A-01 §§4.3, 4.9; A-04]

Continuity of care and service

The working farm requires care throughout the year, including periods when public programs are not operating. Livestock care, crop production, utilities, security and essential maintenance continue across weekends, holidays and seasonal changes. Staffing and service planning will account for these responsibilities alongside instruction, visitor services, program preparation, cleanup and event support.

OCP will coordinate these needs through its established budgeting, staffing and work-planning processes. Changes in programming or facility use will be considered alongside the supervision, maintenance, technical support and continuing resources they require. Public activity will be managed to support safe operations, animal welfare, school and outdoor learning programs, and BHS's specifically retained rights.

Clear responsibilities and adaptable delivery

BHS retains ownership of the premises and the property and school-use rights specified in the interlocal agreement. OCP directs park operations within its authorized role. Other organizations contribute through their applicable agreements, with responsibilities for services, facilities and assets addressed in the relevant portions of this POMP. [A-01; A-04]

This POMP establishes operating responsibilities and direction. Detailed staffing assignments, schedules, procedures, emergency plans and service arrangements remain in OCP's administrative records and may be adjusted within its authority. This approach preserves clear accountability while allowing the operating model to evolve with experience, community needs and available resources.

Routine design, scheduling, staffing and program decisions will remain administrative matters within existing authority, approved budgets and the governing agreement. Proposed changes to park purpose, services, capital scope, budgets or continuing operating commitments will follow the approval requirements applicable to that decision. The nature and extent of the change will determine the required authorization; this plan does not establish an additional approval process.

B.2 Leadership and staffing

Leadership and coordination

OCP provides coordinated leadership for Discovery Oaks' public programs, visitor services and daily operations. The OCPRC Director and BHS Superintendent, or their written designees, administer the interlocal agreement. Site and program responsibilities are carried out through OCP's organizational structure and the applicable farm operating guidelines. [A-01 §§4.1–4.3; A-04]

The Chief of Outdoor Learning and Environmental Stewardship leads curriculum planning for OCP's field-trip program serving schools across Oakland County. OCP's outdoor learning team develops and delivers these experiences, connecting agricultural education, environmental learning and stewardship with the farm's animals, production areas and facilities.

BHS instructional staff remain responsible for curriculum and student supervision within the existing BHS-operated program at the site. That responsibility is specific to BHS's program and does not extend to directing OCP's field trips or other public learning experiences. Scheduling and use of shared resources will respect BHS's retained rights while supporting the wider educational purpose of Discovery Oaks.

The farm operating guidelines provide supporting detail for OCP administrative leadership, MSUE oversight, farm management and livestock care, consistent with the POMP framework described in Section B.4. These roles connect agricultural expertise with OCP's program leadership and operating support. [A-04]

The Chief of Outdoor Learning and Environmental Stewardship will establish outcomes for learning programs, including the authentic agricultural demonstrations and hands-on work that support those experiences. The Chief of Health and Wellness Activation will establish outcomes for agricultural production. Program staff will design the learning experiences, and farm management will coordinate agricultural activities to support both sets of outcomes, contributing technical expertise and identifying production, seasonal and animal-care requirements.

When competing learning and production priorities cannot be resolved by the responsible Chiefs, the Deputy Director will resolve the matter within delegated authority or refer it to the Director, as appropriate. Coordination will respect each organization's employment responsibilities and any applicable professional, licensing or permit authority. Only personnel with the applicable delegated authority may commit staffing, expenditures or continuing operating resources. Matters reserved to the Commission, other County authorities or BHS will follow existing approval requirements.

Decision	Responsibility
Learning-program outcomes, including agricultural demonstrations	Chief of Outdoor Learning and Environmental Stewardship

Decision	Responsibility
Agricultural-production outcomes	Chief of Health and Wellness Activation
Learning experience design and delivery	OCP program staff
Agricultural planning and daily execution supporting both functions	Farm management, with applicable MSUE expertise
Animal care and suitability for participation	Assigned livestock leadership and qualified professionals
Unresolved priorities between learning and production	Deputy Director within delegated authority; Director as appropriate

Function	Leadership and responsibility
Administration of the interlocal agreement	OCPRC Director and BHS Superintendent, or their written designees, within the agreement's provisions.
Site administrative leadership	OCP Chief of Health and Wellness Activation, as identified in the signed farm guidelines, coordinating the participating operating and program functions.
OCP school and outdoor learning programs	Chief of Outdoor Learning and Environmental Stewardship leads curriculum planning; the outdoor learning team develops and delivers field trips and related educational experiences.
Agricultural operations	MSUE oversight and farm management carry out the agricultural responsibilities assigned in the signed farm guidelines, coordinated with OCP's program and operating teams.
Daily livestock management	Livestock leadership directs animal care, health, breeding and herd management within the signed guidelines and applicable professional requirements.
Facilities and operating support	Assigned OCP operations, facilities and specialist teams provide maintenance, technical services and other support through established responsibilities and work processes.
Existing BHS-operated program	BHS instructional staff direct that program's curriculum and supervise its students.
Other partner services	Responsibilities are established through the applicable authorized agreements.

Staffing and reliable coverage

OCP will organize staffing and shared support around the work required to operate the park. Coverage will account for daily animal care, agricultural production, school and public programs, visitor services, seasonal activities and essential facilities. Assignments may combine site-based personnel, shared OCP staff, MSUE expertise, seasonal employees and authorized service providers.

Staff preparation and training will reflect the responsibilities assigned. Livestock handling, equipment operation, food service, adventure learning and technical maintenance require different skills and

qualifications. Supervisors will coordinate coverage, task assignments and access to appropriate expertise as operating needs change.

Volunteers support learning, stewardship and farm activities through defined assignments and appropriate supervision. Their contributions complement staff and professional responsibilities, with OCP, MSUE and BHS requirements applied to their respective activities. [A-01 §4.9; A-04]

Staffing levels, reporting assignments and service arrangements will be managed through the responsible organization's employment, budget and administrative processes. The plan establishes no fixed headcount or additional continuing BHS staffing obligation. Employment and transition provisions remain governed by the interlocal agreement. [A-01 §§4.9.2–4.9.3]

B.3 Reserved school use and building services

Instructional spaces and shared use

Discovery Oaks supports OCP's school and outdoor learning programs alongside the existing BHS-operated program. The interlocal agreement reserves specific instructional spaces for BHS and establishes when those spaces are available for other uses. OCP will coordinate scheduling and access according to these room-specific arrangements. [A-01 §4.18.1; B-03]

Space	Reserved use and availability
Room 117	Reserved exclusively for BHS instructional use during the school year, including evenings and weekends. Available for OCP-scheduled summer use unless the designated representatives agree otherwise in writing.
Rooms 115, 116, 118 and 119	Secured from public access during school hours. Available for OCP scheduling after school, on weekends and during summer as provided in the agreement.
Rooms 113, 114, 120 and 122	Available for general OCP use under the agreement.

Source: A-01 §4.18.1; B-03, building floor plan.

OCP will use calendars, staff coordination and access controls to support these arrangements and make shared spaces useful across the day and year. Scheduling will account for OCP programs, farm operations and BHS's specifically retained rights.

Renovations, repairs or other necessary work may temporarily affect instructional spaces or require activities to relocate. When this occurs, the appropriate OCP and BHS administrative representatives will coordinate the affected use and determine arrangements consistent with their authority under the agreement. Changes to reserved rights will follow the applicable agreement process.

Building services

OCP will arrange routine custodial, maintenance and security services through its established operating processes, consistent with the agreement's allocation of responsibilities. Service delivery may involve site staff, shared County services or authorized providers. Cleaning schedules, room changeovers, access arrangements and service contacts will remain administrative operating details. [A-01 §§4.5–4.6, 4.14, 4.18.1.4]

BHS remains responsible for its instructional activities, student supervision, instructional materials and other costs expressly assigned to it. Continued BHS use does not create an additional contribution toward general

park operating costs. Any proposed continuing contribution beyond BHS's existing obligations would require a subsequent written agreement.

BHS reservations and activities

BHS may reserve educational activities and BHS-sponsored events through OCP without a use fee when they do not conflict with scheduled activities, as provided in the interlocal agreement. BHS remains responsible for the associated setup, operation and cleanup costs specified by the agreement. Each party's promotion of the other's park activities will follow §4.18.2. [A-01 §4.18.2]

When BHS student activities involve livestock, machinery or restricted farm areas, access and supervision will follow the signed farm operating guidelines. BHS instructional staff and the responsible farm personnel will coordinate those activities within their respective roles. [A-04]

B.4 Farm learning and animal care

Learning through the working farm

Livestock and daily agricultural work are central to Discovery Oaks' identity and educational purpose. Feeding, watering, cleaning, observing animal health and caring for productive landscapes provide authentic opportunities to understand agriculture and the responsibilities it involves. OCP's field trips, summer camps, public programs and volunteer activities connect participants with this work through experiences suited to their abilities, the setting and the needs of the animals. The existing BHS-operated program and authorized MSUE/4-H activities provide additional opportunities within their respective arrangements. [A-04 §§1, 7, 11; PAP §1.6]

A working educational farm must balance efficient agricultural production with meaningful opportunities to learn through authentic work. Tasks that experienced staff could complete quickly may require more time, preparation and supervision when learners participate. That additional effort serves the farm's educational purpose.

Program staff will lead the design of learning experiences, determining how farm work can support participation, skill development and understanding. Farm management personnel will plan and carry out agricultural activities supporting the learning and production outcomes established by the respective Chiefs in Section B.2, contributing technical expertise and identifying practical requirements for animal care, crop production and stewardship. Together, they will identify opportunities for learners to contribute to real farm needs while maintaining animal welfare, safety and reliable operations.

This POMP establishes the management framework for farm learning and animal care, subject to the interlocal agreement. The September 2026 Farm Operations Guidelines were developed to provide interim direction as the school year began. They provide supporting operational detail and will be maintained consistently with the approved POMP. Routine procedures may be adjusted within existing authority without requiring a plan amendment.

Animal care and welfare

Animal care includes suitable housing, reliable feed and water, appropriate handling, health monitoring, veterinary care and management of breeding and animal movements. The MSUE Livestock Coordinator leads day-to-day livestock management and coordinates veterinary services. The Farm Manager is responsible for supporting facility conditions, equipment, biosecurity infrastructure and farm operations. These complementary responsibilities support reliable animal care and the farm's educational purpose. [A-04 §§2–4, 10]

Animal care and use follow MSU Extension standard operating procedures established and maintained under Michigan State University's Institutional Animal Care and Use Committee (IACUC). Applicable procedures govern staff, students, volunteers and visitors. Animal activities not addressed by an existing procedure require review and approval through the IACUC process before proceeding. Detailed care instructions remain in the operating procedures so they can respond to the animals, veterinary guidance and changing conditions. [A-04 §4, p. 5]

When the Livestock Coordinator cannot be reached and immediate veterinary intervention is necessary to prevent serious animal suffering or death, an authorized staff member present may contact emergency veterinary services, with the Livestock Coordinator, Farm Manager and MSUE District Director notified as soon as practicable. The Livestock Coordinator or Farm Manager may also intervene immediately to protect animal welfare in an emergency involving school-based enterprise animals. [A-04 §§4, 6, 10, pp. 5, 7, 11]

Coordinating instruction and participation

OCP's outdoor learning team leads its field trips and public learning experiences, coordinating animal and facility use with the responsible farm personnel. BHS remains responsible for instruction and student supervision within its own program, as described in B.2.

Farm personnel and instructional staff will coordinate BHS learning activities through annual and monthly activity planning. Those arrangements address confirmation of activities, supervision and communication when operating changes affect planned instruction. Routine activity planning remains an administrative process, separate from formal IPP amendments. [A-04 §§5, 7–9, pp. 6, 8–11]

BHS students do not independently access livestock areas, farm facilities or equipment. After-hours participation follows the scheduled BHS-instructor or approved MSUE/4-H supervision pathways; school enrollment or 4-H membership alone does not authorize access. Equipment use remains subject to applicable age, training, authorization and direct-supervision requirements. OCP programs and volunteer activities follow their applicable supervision and safety procedures. [A-04 §11, pp. 12–13]

Ownership and care responsibilities

Animal records will distinguish park-owned livestock, BHS-owned animals and individually owned project animals. Ownership, care responsibilities, costs and authorized use will be documented for each arrangement. Schedule 1.4 incorporates the October 23, 2026 inventory summary as the current baseline for animal transfers. OCP will maintain operational records reflecting subsequent changes in the farm's animal population. Housing an animal at the farm does not itself establish ownership or authority to transfer it. [A-01 §4.11; Master Animal Inventory, summary updated October 23, 2026.]

For BHS school-based enterprise animals, the BHS instructor is responsible for day-to-day care and student supervision under MSUE oversight, with BHS responsible for feed costs. Care during weekends, breaks and absences must be addressed, including documented backup care where the instructional program cannot provide continuity. These arrangements will follow applicable animal-welfare safeguards and operational confirmation processes. [A-04 §6, pp. 7–8]

B.5 Programs and Public Access

Participation and continuing learning

Discovery Oaks offers multiple ways to engage with a working agricultural landscape. School field trips, summer camps, public programs, volunteer activities and seasonal experiences connect people with animals, food

production, heritage and the natural environment. Designated public areas can also support everyday visits and informal exploration. Together, these experiences provide opportunities for an introductory visit to develop into continuing learning, practical involvement and stewardship. [PAP §§1.5–1.6]

OCP's outdoor learning team will lead the development and delivery of its educational programs, working with farm personnel and other OCP teams to align learning experiences with agricultural activities, facilities and available resources. School field trips require coordination of learning objectives, group arrangements, supervision, transportation and billing. Summer camps and public programs require qualified staff, suitable spaces and accommodations appropriate to participants and activities. Animal-related learning will follow the responsibilities and care framework in B.4.

Learning groups and community participation

Gardening, beekeeping and other agricultural interest groups can extend the farm's educational reach through specialized instruction, demonstrations, volunteer service and sustained participation. Groups such as the Master Gardeners of Oakland County and the Southeast Michigan Beekeepers Association illustrate the connections between the farm and people committed to learning and sharing practical skills. The association's eleven-week course held onsite provides an example of recurring participation that connects classroom learning with an agricultural setting.

OCP may work with these and similar groups to complement public programs, share expertise and create opportunities for participants to deepen their involvement. Arrangements will distinguish OCP-delivered programs from activities organized by outside groups and identify the applicable responsibilities for instruction, supervision, facility use and operating support. Partner and third-party operating arrangements are addressed in B.7.

Public access and paid experiences

The proposed access framework combines free use of designated public areas with paid experiences that require additional staffing, equipment, materials or supervision. The planned western trail entrance and associated day-use parking would provide access for walking and informal exploration, with routes and interior fencing separating visitors from controlled agricultural work areas. These facilities remain proposed improvements under the CIP. [Attachment A, trails and connectivity]

Free park entry and parking remain distinct from participation in particular programs, attractions and services. Open Barn is ordinarily a paid farm experience; designated partnership-supported occasions may offer participation without a fee. Registered programs, camps, equipment rentals and seasonal attractions may also carry charges established through OCP's applicable processes. Fees will be administered consistently with the interlocal agreement's resident entry and parking protections. [A-01 §§4.12, 5.2]

Free public access is available through existing seasonal offerings and designated admission-free Open Barn days, including those supported by partnerships. Winter Park provides free admission and use of the skating rink, with access to the farm store, kitchen and associated visitor amenities during operating hours. Food, ice cream and other retail purchases, skate rentals, tubing and other separately priced experiences remain paid offerings. These opportunities provide access before development of the proposed western trail entrance and parking area.

Access follows published operating hours and designated visitor areas. Agricultural work areas, animal enclosures and other controlled spaces remain subject to operating restrictions.

OCP will consider affordability, assistance and outreach in relation to public purpose, participation barriers and available resources. The financial approach in Section 1.8 guides these decisions without establishing a universal cost-recovery requirement or a permanent fee schedule.

Accessible service and visitor information

Public information will help visitors understand where to arrive, which areas are available for general access, whether registration or payment is required, and how to request an accommodation. Information about routes, surfaces, entrances, restrooms and temporary limitations will support informed choices and preparation.

Staff will address participation barriers through appropriate program design, accommodations, adaptive equipment and practical operating adjustments while longer-term capital improvements advance. Restricted production, equipment and animal-care areas will remain controlled. Accessible observation, interpretation and alternative activities can support participation where direct access or hands-on involvement is unsuitable. [C-04; B.4]

Managing an evolving program portfolio

OCP will establish and adjust operating hours, program calendars, group sizes, registration practices and offerings through its normal management processes. Decisions will consider educational purpose, public demand, staff expertise, accessibility, space, animal welfare, seasonal conditions and operating sustainability, while respecting the agreement's purposes and BHS's specifically retained rights. Routine changes within OCP's authority do not require separate partner approval. Activities outside the agreement's permitted purposes remain subject to its applicable provisions. [A-01 §§2.4, 4.3, 4.18]

The Outdoor Learning Program Inventory in Appendix G provides a supporting reference for program planning and coordination. OCP will use information about audiences, seasonal demand, facilities, staffing and participation to guide delivery and adjustments through its normal management processes. Program names, schedules, fees and delivery arrangements may evolve within the authority established by the interlocal agreement and this plan.

Individual offerings may evolve as needs and opportunities change. Community gardening may continue, be modified, relocate to another suitable setting or be discontinued through applicable OCP processes and agreements. Its inclusion in this plan does not establish a permanent commitment to a particular program format or location.

Participation records and visitor feedback will inform these decisions using the framework in Section 1.9. School visits, camp registrations, event admissions and estimated visitation will remain distinguishable, with participant information managed under applicable privacy and records practices. [D-01–D-02; G-01]

B.6 Food Service and Agricultural Production

Connecting production, learning and the visitor experience

Agricultural production, food preparation and the farm store connect the daily work of Discovery Oaks with the visitor experience. Growing crops, caring for livestock, harvesting, preparing food and purchasing farm products offer complementary ways to understand agriculture and its relationship to everyday life. These connections support the Farm, Food, and Working Landscapes initiative described in the PAP.

These experiences come together at the visitor center, the farm's hub of activity, where visitors begin their visit and return through the Farm Store and Kitchen as they leave. The kitchen can support food preparation,

demonstrations and educational activities, while the store provides opportunities to purchase farm products, prepared foods and other items that complement the visit. Seasonal offerings can help visitors connect what they see in the fields, gardens and animal areas with what they taste, learn about and take home. Products sourced elsewhere may complement onsite production, with their origins represented accurately.

Managing agricultural production

Farm management personnel will lead production planning and define the agricultural outcomes, methods and practical requirements of the work. Program staff will design learning experiences that connect participants with those activities. As established in B.4, production planning will balance efficient operations with the additional time and supervision needed for meaningful participation by learners.

Production may include vegetables, pumpkins, field crops, sunflowers, horticultural bedding plants and livestock products, with the mix responding to growing conditions, educational priorities, visitor interest and available resources. Conventional methods and demonstrations of sustainable, organic and permaculture practices can help participants explore different approaches to agriculture, including their effects on soil, water, labor and productivity. The use of particular practices does not itself establish organic certification. [PAP §1.6]

Planting, animal management, harvest and product use will be coordinated with staffing, equipment, storage, handling capacity and intended markets or programs. Animal welfare, soil and water conditions, responsible chemical use and food safety will inform operating decisions. Production may support instruction, demonstrations, retail sales and food service without requiring the farm to supply every ingredient or product offered onsite.

OCP may adjust crops, growing methods, production areas and product offerings through its normal management processes. The plan establishes no fixed annual production quantities or guaranteed financial return. Decisions about expansion will consider both the resources needed to produce an item and the capacity to harvest, store, prepare, use or sell it.

Food preparation and service

Food preparation, concessions, retail sales and farm-to-table experiences will operate through clearly identified responsible staff or authorized providers. Each arrangement will identify responsibility for food handling, preparation, storage, sanitation, equipment care, staffing and service. Activities will follow applicable licensing, inspection and food-safety requirements. [A-01 §§4.17, 6.12]

Educational food activities and commercial food service may use shared facilities, but their supervision, preparation and operating needs will be addressed according to the activity. Scheduling will account for instruction, production, service, cleaning and storage so that these uses can function together. Facility improvements supporting these activities are addressed in the CIP.

Friends of Bowers Farm may support kitchen production, food service and related experiences through an authorized operating agreement. OCP may also use other qualified providers where appropriate. The applicable agreement will define the services provided, responsibilities retained by OCP and financial arrangements. Partner roles are addressed further in B.7. [J-02]

Retail, revenue and operating accountability

OCP may operate food and retail services directly or partner with a qualified vendor to activate the Farm Store, Kitchen and related visitor spaces. Vendor selection and contracting will follow applicable Oakland County purchasing policies. Operating agreements will define responsibilities for staffing, purchasing, inventory, pricing, sales transactions, receipts, applicable taxes and payments, using approved accounting and financial

controls. Park revenue and partner payments will be handled consistently with the interlocal agreement and applicable written agreements. [A-01 §5.3; PAP §1.8]

Food and retail services contribute to hospitality, agricultural learning and earned revenue. Their performance will be evaluated in relation to those purposes and the resources they require, including ingredients, products, staffing, preparation, cleanup, waste and shared operating support. Sales receipts alone do not establish their financial contribution.

Production and food-service staff will coordinate purchasing and product use to manage seasonal availability, reduce avoidable waste and make practical use of the farm's output. Composting may support appropriate management of organic materials where facilities and operating practices allow. Detailed menus, product selections, production schedules and service procedures remain operational decisions that can evolve within OCP's authority.

B.7 Partnerships, Events and Third-Party Use

Purpose and partner contributions

Partnerships, events and organized group activities extend Discovery Oaks' educational reach, strengthen community involvement and support a welcoming, active farm. Partners can contribute specialized knowledge, volunteer leadership, fundraising, food service and distinctive experiences that complement OCP's programs and daily agricultural operations.

OCP will determine how these activities fit the park's purpose, available facilities, program commitments and operating capacity. Arrangements will distinguish OCP-delivered programs, jointly delivered activities, contracted services and independent third-party uses so that participants and providers understand who is responsible for each experience.

Friends of Bowers Farm

Friends of Bowers Farm is a nonprofit organization whose mission is expressly dedicated to supporting the farm's property, programs and activities through financial support, community outreach and volunteerism. Its fundraising capacity provides a means for community contributions to sustain and strengthen the farm and the experiences it offers. [Friends of Bowers Farm, "Our Mission," schoolfarm.org/friends-of-bowers-farm; accessed October 26, 2026.]

The partnership will seek to connect that mission with Discovery Oaks' public purpose and OCP's Mission 26 priorities. Shared funding priorities may include expanding access and activation, helping schools and communities underrepresented in farm participation attend educational programs, supporting field-trip transportation and participation costs, and creating opportunities for families and individuals facing financial or other barriers. These investments can help more people experience agricultural learning while sustaining the working farm that makes those experiences possible.

Friends may also contribute through program activation, volunteer coordination, sponsorship and fundraising, signature events, and kitchen and food-service support. Its independent fundraising role remains directed toward its farm-support mission. Shared priorities and specific contributions will be developed with Friends through its governance processes and applicable donor restrictions.

The intended operating approach is an annual memorandum of understanding or other authorized agreement defining services, support, use of facilities and equipment, financial arrangements and coordination with OCP staff. The agreement will connect agreed contributions to identifiable farm needs and public benefits without presuming a fixed annual contribution or committing funds that Friends has not authorized. [J-02]

OCP retains its park management responsibilities. Friends' activities will complement OCP's program direction, farm operations and applicable volunteer and financial processes. Food-service responsibilities are addressed in B.6. Friends' funds, restricted contributions and park revenue will remain separately identifiable and administered according to their applicable terms.

Learning organizations and service providers

Gardening, beekeeping, agricultural, heritage and other community organizations may contribute instruction, demonstrations, volunteer projects and recurring learning opportunities. Their involvement can provide pathways from an introductory visit to sustained participation and practical skill development. The learning groups described in B.5 illustrate this role.

Operating arrangements will identify responsibility for instruction, participant supervision, scheduling, equipment, facility access, setup, cleanup and any associated charges or support. OCP may engage qualified vendors and service providers where they strengthen the visitor experience or provide needed expertise and capacity. Vendor selection and contracting will follow applicable Oakland County purchasing policies.

The scope and duration of each arrangement will reflect its purpose. Participation in a program or event does not itself establish continuing access to farm facilities, animals, equipment or staff support.

Preservation Bloomfield

Preservation Bloomfield's relationship to Discovery Oaks reflects its ownership of the historic buildings covered by its land lease with BHS. Those buildings were not transferred to OCP through the interlocal agreement. Their history, interpretation and potential use nevertheless contribute to the experience of the broader agricultural campus. [PAP §1.7; Appendix A, Preservation Bloomfield land lease]

OCP will pursue a memorandum of understanding with Preservation Bloomfield to address how the organizations can coordinate public access, interpretation, programming and use of the historic setting. The proposed MOU can clarify scheduling, communications, operating support and responsibilities associated with agreed activities.

That coordination will respect building ownership and the applicable lease responsibilities. It does not establish a general OCP obligation to preserve Preservation Bloomfield's buildings. OCP's applicable landlord, grounds and maintenance responsibilities are addressed in the maintenance and heritage portions of this POMP; any additional commitments will be established through an authorized written agreement.

Events, rentals and licensed use

Seasonal attractions, community gatherings, private functions and other authorized uses can introduce new audiences to the farm, encourage repeat visits and generate revenue supporting park operations. OCP will schedule these activities in relation to its school and outdoor learning programs, public offerings, agricultural work, animal care and BHS's specifically retained use rights.

OCP may license third-party park use through written agreements without BHS approval or notification, subject to the conditions in §4.17 and other applicable agreement limits. Required agreements will include BHS as an indemnified party and as an additional insured where insurance is required. Licensing a particular use does not authorize assignment of OCP's interlocal rights or obligations contrary to §7.2. [A-01 §§4.17, 7.2]

Event planning will address the needs of the activity, including capacity, setup and removal, parking and circulation, emergency access, sanitation, utilities, weather contingencies, food service, animal welfare and cleanup. Responsibilities will be assigned among OCP staff, organizers, contractors and other providers as

appropriate. Detailed arrangements may change through normal operating processes without amending the POMP when the activity remains within approved authority.

Sponsorship, financial administration and evaluation

Sponsorships and commercial arrangements will follow OCP policies and the interlocal agreement's specific restrictions, including those concerning school property and school sessions. Partner payments, park revenue and any authorized financial arrangements will follow the applicable written agreements and County controls. [A-01 §§4.16–4.17, 5.3, 6.10.2]

OCP will evaluate events and partnerships according to their public purpose, participant experience, financial contribution and demands on staff, facilities and other programs. Attendance and gross receipts provide useful information, but decisions will also consider preparation, shared operating support, cleanup and the effects on the working farm.

OCP may adjust, renew or conclude arrangements within its authority and their applicable terms. Authorization of an individual activity does not establish a permanent entitlement to a particular date, location or operating role.

B.8 Maintenance, Utilities and Equipment

Maintenance responsibility and service delivery

OCP will manage maintenance, repair and utility services within its responsibilities under the interlocal agreement. The purpose is to sustain a dependable working farm, protect facilities and equipment, and support animal care, agricultural production, learning and public use. BHS's expressly retained responsibilities remain in effect. [A-01 §§4.5–4.6, 4.14]

Site personnel, district operations staff, County technical services and qualified contractors will contribute according to the work required. OCP will use its established work-order, inspection, budgeting and procurement processes to organize preventive maintenance, respond to failures and identify renewal needs. Service schedules and assignments may change with operating conditions and available resources without requiring amendment of the POMP.

Maintenance planning will account for the farm's year-round responsibilities. Water, power, secure animal facilities and essential equipment support daily care even when public programs are not underway. Planned interruptions and repairs will be coordinated with farm personnel and program staff, with temporary arrangements appropriate to the affected operation.

Buildings, grounds and infrastructure

Maintenance encompasses the buildings and systems supporting the agricultural campus, including roofs and building envelopes; electrical, fire-safety and mechanical systems; HVAC and geothermal controls; water, sanitary and drainage infrastructure; roads, parking and paths; barns, fences and greenhouses; and visitor and service areas. Grounds care includes seasonal maintenance, snow and ice management, vegetation management and upkeep of designated public routes.

JFR's assessment provides a baseline for deferred-maintenance needs in the five structures it examined. GMB's infrastructure evaluation and the accessibility assessment provide additional information for setting priorities. OCP will use those findings alongside current inspections, operating experience and professional advice to determine the work needed. Assessment recommendations inform maintenance and capital planning without committing OCP to complete every identified improvement. [C-02–C-04]

Priorities will consider safety, animal welfare, accessibility, the risk of further deterioration and the consequences of service interruption. Repairs and renewal may be coordinated where addressing several systems together improves reliability or reduces disruption. Larger improvements will proceed through the capital framework and applicable authorizations described in Attachment A.

Equipment and asset management

OCP will maintain asset records and establish appropriate inspection, servicing, storage and operator requirements for equipment used in farm and park operations. Staff, volunteers and program participants may use equipment subject to OCP policies and applicable authorization, training and supervision requirements. Equipment condition may require repair, restricted use or removal from service.

The equipment-transfer approach is intended to preserve the resources previously used exclusively to manage and operate the farm. In response to BHS Operations' request to retain certain tools and equipment, the attached BHS retention list identifies a defined exception to that approach. All remaining active farm and kitchen inventory will remain onsite and transfer to OCP. The items identified for BHS retention will be available for pickup following adoption of the IPP. [C-01; Schedule 1]

Original inventory records will be preserved, with uncertain descriptions, quantities, condition or active status identified for resolution. Equipment condition and readiness for use will be evaluated separately from its allocation under the transfer and retention schedules.

BHS-retained equipment will be identified separately from the remaining active farm and kitchen inventory designated for transfer to OCP. Nature-center inventory will remain separate for the Bloomfield Oaks plan. The ownership schedules and supporting inventory records will document the final allocation. [C-01; Schedule 1]

OCP may repair, replace, acquire or retire equipment through its applicable asset-management and purchasing processes. Decisions will consider agricultural needs, educational use, operating reliability, staff capacity and lifecycle costs.

Preservation Bloomfield facilities and grounds

OCP will carry out the landlord and grounds responsibilities assigned to it under the governing arrangements for the Preservation Bloomfield lease area. Maintenance coordination will distinguish those responsibilities from the preservation and care of buildings owned by Preservation Bloomfield.

The proposed MOU described in B.7 will clarify practical arrangements for access, grounds care, maintenance coordination and support for agreed public uses. It will not be treated as transferring building ownership or assigning OCP a general historic-preservation obligation. Work on Preservation Bloomfield's buildings and any additional services will follow the applicable lease and authorized written arrangements. [PAP §1.7; Appendix A, Preservation Bloomfield land lease]

Caretaker residence

The caretaker residential lease is to be administered through BHS as the property owner. OCP's role in coordinating any caretaker services will remain distinct from the residential tenancy. The applicable written arrangements will identify responsibility for occupancy, utilities, maintenance and any services associated with the residence.

This plan does not authorize OCP to execute a residential lease as property owner or assume additional residential obligations beyond those established through the governing agreements. The lease and service arrangements remain to be finalized and reconciled with the interlocal agreement before reliance on a particular allocation of responsibilities.

Stormwater management

Stormwater maintenance will be coordinated with farm operations, grounds care, infrastructure work and natural-resource stewardship. Attention to drainage, runoff and the condition of stormwater facilities supports usable paths and pavement, productive agricultural areas, animal facilities and water quality. GMB's findings provide a baseline for evaluating drainage concerns and related improvements. [C-03; Attachment A]

OCP's proposed approach is to manage site stormwater compliance through its established technical and operating processes. If Corporation Counsel determines that BHS is not legally required to retain that responsibility, but BHS elects to continue managing compliance through its third-party vendor, BHS will be responsible for the associated costs. This proposed allocation remains subject to legal review and documentation in the applicable written agreement.

This review draft does not establish BHS's proposed vendor arrangement as an accepted OCP obligation. The final allocation will be documented through the appropriate written arrangement, with responsibility for required compliance maintained during the transition.

Transition and retained BHS responsibilities

The executed Transition Services and Operational Continuity Agreement provides for BHS support from July 1 through December 31, 2026, unless extended, modified or terminated under its terms. OCP reimburses BHS for the actual cost of services performed, with monthly invoicing and payment within 30 days of receipt. The agreement supports continuity while responsibilities transfer to OCP; it does not establish permanent BHS operating responsibilities beyond its term. [A-02 §§I–V.]

From January 1, 2027, this plan assigns no additional general continuing park operating costs to BHS beyond its express obligations. BHS's separate capital investment, property-insurance obligations, specified school-use and event responsibilities, and retained property rights remain as provided in the governing agreement. Any additional continuing BHS operating contribution will require a subsequent authorized written revision. [A-01 §§4.18, 5.1.2, 6.10.3]

B.9 Security, Technology and Emergency Response

Security and controlled access

OCP will provide park security at its expense, consistent with the interlocal agreement. Security arrangements will support a welcoming public setting while protecting participants, staff, animals, facilities and equipment. Access controls will account for public arrivals and departures, BHS's retained instructional spaces, agricultural work areas, deliveries and after-hours animal care. [A-01 §§4.14, 4.18]

Keys, access credentials, alarms, cameras and related systems will be managed through applicable OCP and County policies. Access will reflect the responsibilities of staff, authorized partners and service providers. Changes to assignments, programs or facility use may require corresponding adjustments to access permissions and security practices.

Public routes and entrances will be distinguishable from restricted animal-care, production, equipment and service areas. Security measures will accommodate authorized school use and emergency access while allowing OCP to adjust daily operations within its authority. Detailed access permissions, credentials and sensitive system information will remain in controlled administrative records.

Technology and service continuity

Communications, internet connectivity, registration, payment systems and operating technology support the farm's daily work and visitor services. OCP will coordinate these systems with the responsible County technical services and authorized providers, identifying ownership, support responsibilities and arrangements for responding to interruptions.

Technology planning will consider the needs of public programs, summer camps, events, farm operations and administrative work. Reliable communications and usable systems support staff coordination, visitor information, transactions and timely response to operating issues. Equipment and services may be updated or replaced through applicable County processes as needs and technology change.

BHS instructional systems and school-owned technology will remain distinguishable from OCP's operating systems and transferred assets. Shared services, connections or support arrangements will follow the applicable written agreements. Installation, testing and service handoffs will be managed through the responsible technical teams; unresolved transition items will remain in the completion memo until confirmed. [A-01 §4.18; B.8]

Emergency readiness and response

OCP will maintain emergency arrangements appropriate to a working agricultural campus serving school groups, campers, families, volunteers and event participants. Procedures will address foreseeable incidents such as medical emergencies, fire, severe weather, missing participants, animal incidents, utility failures and unauthorized access to restricted areas.

Site leadership will coordinate staff preparation, emergency contacts, responder access and current site information through OCP's established processes. Site maps will identify entrances and gates, buildings and access routes needed by responders. Staff responsibilities will reflect their roles, training and the activities underway, including coordination with BHS personnel when an incident affects its students or retained instructional spaces.

Programs and attractions with specialized risks will have operating and emergency procedures suited to the activity. Adventure-learning and challenge facilities will require appropriate staff preparation, inspection and rescue readiness before use. Animal emergencies will follow the care and veterinary-response framework in B.4. Event arrangements will address participant movement, emergency access and the responsibilities of organizers and service providers. [B.4; B.7; C-05]

Authorized staff may modify, suspend or close an activity or affected area in response to conditions, consistent with OCP policies and applicable authority. Communication with participants, partners and responders will support immediate response and an orderly return to operations.

Detailed response procedures, staff contact information, access credentials and sensitive security information will be maintained outside the public IPP and appendix binder. OCP may update procedures, training, contacts and operating arrangements through its normal administrative processes without amending the POMP, provided those changes remain within the governing agreement and applicable requirements.

B.10 Natural and Heritage Resources

Land and water stewardship

Discovery Oaks' fields, pastures, gardens, ponds and wooded areas support agricultural production, wildlife, public learning and recreation. Their care will reflect these different purposes while sustaining the health and character of the farm's landscape.

Farm leadership will coordinate with OCP's Natural Resources and operations staff on soil management, grazing, manure and composting, drainage, tree care, invasive plants and habitat management. Program staff will help connect this work with learning and volunteer participation. Management practices will respond to site conditions, agricultural needs, seasonal demands and available resources.

Productive agricultural areas will remain active settings for demonstrating how land is cultivated and cared for. Soil improvement, crop rotation, grazing management, composting and responsible water use can support both production and practical learning. Conventional and alternative growing methods may be demonstrated where appropriate, with practices selected for their suitability to the site and instructional purpose.

Woodlands, ponds and other natural areas will be managed for ecological health, suitable public access and outdoor learning. Work may include invasive plant management, habitat improvement, tree maintenance and protection of pond edges and drainage areas. Trail care and vegetation management will be coordinated with farm activities and visitor movement. Stormwater maintenance and the proposed allocation of compliance responsibilities are addressed in B.8. [Appendix E; B.8; Attachment A]

Stewardship will also provide opportunities for meaningful participation. Volunteers, school groups, summer camps and community partners may contribute through activities suited to their abilities, supervision and the work required. Program staff will shape the learning experience, while farm and natural-resource staff establish the technical requirements and intended land-management outcomes.

Environmental findings and responsible work

Environmental assessments will inform maintenance, excavation, construction and changes in use within affected areas. OCP will use the Phase I assessment, subsequent investigation findings and qualified professional advice to determine the precautions or additional evaluation appropriate to the proposed work. Recommendations for further investigation will remain distinguishable from confirmed conditions and enforceable restrictions. [E-01–E-03]

Staff planning work in an affected area will coordinate with the responsible technical personnel so that relevant findings are considered before work proceeds. The response will reflect the location, nature and extent of the activity. Routine maintenance, environmental investigation and remediation serve different purposes and will be managed accordingly.

Responsibility for environmental assessment, contamination response and associated costs will follow the interlocal agreement and applicable requirements. This section does not change that allocation or treat every assessment recommendation as a funded project. Supporting reports and subsequent findings will remain available in Appendix E to inform operating and capital decisions. [A-01 §§3.5, 6.4; Appendix E]

Heritage care and interpretation

Heritage buildings and agricultural traditions help visitors understand the people, skills and land uses that shaped the farm. Their interpretation can connect the site's history with contemporary agriculture, food production and stewardship, enriching the experience of Discovery Oaks as a working farm.

Preservation Bloomfield owns its historic buildings at the site, including the Benjamin-Barton Farmhouse and Craig Log Cabin. Those buildings did not transfer to OCP under the interlocal agreement. Preservation Bloomfield retains responsibility for their preservation under the applicable ownership and lease arrangements. OCP will carry out the landlord services assigned to it under the governing arrangements, coordinated with the park maintenance responsibilities described in B.8. [Section 1.7; applicable land lease; B.8]

OCP will pursue an operating memorandum of understanding with Preservation Bloomfield to define how the organizations will work together. The proposed agreement will address applicable landlord services, grounds and access, building use, program coordination and financial responsibilities. Any additional services or commitments will require authorization through that agreement rather than being assumed from historical practice.

Heritage activities may connect the buildings and landscape with traditional agricultural and household skills, craftsmanship and food preparation. Programs, demonstrations and volunteer projects will reflect the suitability of the setting, available expertise, accessibility and operating requirements. These experiences can complement the farm's broader learning program without requiring a fixed schedule or permanent commitment to particular offerings.

Care of other farm buildings and agricultural structures will follow their respective ownership and operating arrangements. Potential restoration, adaptation or reconstruction projects are addressed in the CIP. Their inclusion provides a planning framework; individual projects will establish the intended use, responsible parties and continuing care requirements as they advance. [Section 1.7; Attachment A; Appendices F and J]

B.11 Financial Records and Continuing Administration

Financial administration and accountability

OCP will administer park fees, revenue, expenditures and financial records through applicable County policies and accounting processes. Fee decisions will respect the resident entry and parking provisions of the interlocal agreement. The financial approach described in Section 1.8 will guide decisions about public subsidy, earned revenue and responsible investment. [A-01 §§5.2–5.4; Section 1.8]

Financial records will distinguish park operating receipts and expenses, capital expenditures, restricted contributions and funds belonging to BHS or partner organizations. Payments to vendors, program providers and partners will follow their authorized agreements and applicable County purchasing and financial controls. Park revenue will be received and accounted for by OCP as provided in the interlocal agreement. [A-01 §§5.3–5.4; B.6–B.7]

OCP will maintain records supporting its capital investment commitment and the improvements funded through it. Documentation of BHS's separate commitment will identify the accepted scope and qualifying investment. Section 1.8 describes the investment framework and matters requiring confirmation; Attachment A establishes the broader capital scope. Historical estimates, authorized budgets and actual expenditures will remain distinguishable. [A-01 §5.1; Section 1.8; Attachment A]

BHS may request the annual revenue accounting and exercise the audit rights established in the interlocal agreement. OCP will respond through its established financial and administrative processes. Internal management information may be developed as needed without creating an additional contractual reporting schedule. [A-01 §5.4]

Grants, insurance and retained responsibilities

OCP and BHS will coordinate grant opportunities in accordance with the interlocal agreement. Potential sources include the Michigan Natural Resources Trust Fund, administered by the Michigan Department of Natural Resources, which supports land acquisition for conservation and outdoor recreation and the development of public outdoor recreation facilities. At Discovery Oaks, this could support consideration of eligible trail, accessibility and outdoor recreation improvements. Proposed applications will be evaluated for eligibility, required matching funds, public-access conditions and continuing maintenance obligations. Improvements supported through BHS grants will follow the agreement's applicable provisions. [A-01 §5.5; Michigan DNR, Michigan Natural Resources Trust Fund program guidance.]

BHS will retain its real-property insurance responsibilities under the interlocal agreement. OCP will fulfill the specified reimbursement obligations for qualifying new-building premiums, and the parties will follow the agreement's process for repairs following an insured loss. These responsibilities continue according to their terms after the transition of daily park operations. [A-01 §6.10.3]

Other insurance, claims, liability and compliance matters will be administered under the governing agreement and applicable County processes. Authorized staff will maintain the records and coordinate the actions necessary to carry out their respective responsibilities. [A-01 §§6.2–6.13]

Continuing administration and plan updates

OCP will maintain operating records, procedures and service arrangements appropriate to the park's activities. These may include program schedules, staff assignments, maintenance records, animal-care records, equipment inventories, vendor agreements and emergency procedures. Detailed administrative and sensitive records will be maintained outside the public IPP.

OCP may adjust programs, activity formats, staffing deployment, providers, schedules and work methods within its existing authority and approved responsibilities. Such adjustments do not, by themselves, require amendment of the POMP. Changes affecting a reserved BHS right, an agreement requirement or another matter subject to approval will follow the applicable process. [A-01 §4.7.5; PAP implementation and approval provisions]

The POMP will be updated at least every five years and submitted to BHS for review and approval in accordance with the agreement's 60-day review provision. Updates will reflect changes in operations, facilities and management needs while preserving the responsibilities established by the governing agreement. Capital-plan updates will follow the separate requirements applicable to the CIP. [A-01 §§4.7.4–4.7.5]

Approved plan versions and subsequent authorized revisions will be retained with the governing records so staff and partners can identify the current direction. Changes to the interlocal agreement itself will follow its amendment requirements. Routine coordination and administrative updates will support implementation without creating additional partner approval rights or recurring obligations.

PAP Schedule 1: Equipment and Animal Transfers

Equipment and animal transfers are identified in PAP Schedule 1, which forms part of this plan. Section B.8 describes the equipment transfer arrangements, and Section B.4 addresses animal care and management.

The equipment and animal schedules identify the property included in the transfer under the interlocal agreement. BHS-retained items are separately identified. The final schedules will carry a date and version identifier corresponding to the schedules approved with the PAP. Program or group labels in an inventory describe an association and do not, by themselves, establish ownership.

Schedule 1.1 Farm and kitchen inventory directed for OCP transfer

Sheet	Row	Source equipment description	Model or identifier
Farm	6	Air compressor	Pro 4000
Farm	10	Various Automotive Tools	Not specified
Farm	11	Generator - Unleaded	Honda
Farm	12	6 Foot Tiller	Woods
Farm	13	4 Foot Tiller	Bad Boy
Farm	14	4 Row Corn Planter	John Deere 7000
Farm	15	Brush Hog 7'	BD840 Woods Brush Hog
Farm	16	Finishing Cutter	RDA400
Farm	17	Brush Hog 5'	Bad Boy
Farm	18	Post Hole Auger	Woods PHD 65
Farm	19	Hay Spike	Not specified
Farm	20	3 Prong Hay Spike	Not specified
Farm	21	Tractor Forks	Not specified
Farm	22	Tractor Buckets-Large &Small	New Holland TN65 & TN35
Farm	23	Scraper Blade	Ford Back Blade
Farm	24	Cultivator	John Deere Sweep Style
Farm	25	Disc	John Deere
Farm	26	Plow	John Deere 3 Bottom
Farm	28	Sprayer	Boom Type 200 gallon PTO

Sheet	Row	Source equipment description	Model or identifier
Farm	29	Tractor Rake	Ford-rear rake
Farm	30	Planter	1 Row
Farm	31	Subsoiler	3-shank
Farm	32	Harrow	John Deere 6'
Farm	33	Tiller w/ Depth Roller	For BCS
Farm	34	No Till Drill	Saya 507
Farm	35	Box Blade	County Line
Farm	36	Power Harrow	For BCS Rototiller
Farm	37	Agri-Fab UTV Tow Spreader	Not specified
Farm	39	Log Splitter	County Line
Farm	40	Hay Elevator	MYD-HAN-D
Farm	41	Trash Pump	Predator
Farm	42	Various Hand Tools	Not specified
Farm	43	Flail Mower	For BCS
Farm	47	Weed Trimmer	Stihl FS90R
Farm	48	Dewalt Cordless Mower	Not specified
Farm	51	Titan Post Driver	PGD3200XPM
Farm	53	Post-Hole Auger	Predator
Farm	55	Grinder Wheel	Duracraft 5hp
Farm	56	Metal Chop Saw	Ryobi-5hp
Farm	60	Drill Press	Craftsman 15in- 12 speed
Farm	62	Power MIG Pressurized Gas	Lincoln Power
Farm	64	(4) Angle Grinders	(2) Dewalt (2) Makita
Farm	67	Finishing Nailer	Air powered Porter Cable
Farm	71	Router Kit	Hitachi
Farm	72	Bench Grinder	Jet

Sheet	Row	Source equipment description	Model or identifier
Farm	76	Orbital Sander	Dewalt
Farm	77	Belt Sander	Ridgid
Farm	78	Shop Vac	Rigid 5hp
Farm	79	Tractor with loader	TNG65
Farm	80	Tractor	TC35
Farm	81	Tractor	3910
Farm	82	Tractor	TN55D
Farm	83	Tractor W/Loader	Bad Boy
Farm	84	Tractor with Loader	Boomer 50
Farm	85	Walk Behind Tractor	BCS 749
Farm	86	Manure Spreader	Model 175 2-speed-2117
Farm	87	Aluminum Four horse slant Gooseneck trailer	Exiss CX/400
Farm	88	Titan HitchTrailer	Challenger
Farm	89	Delco Stock Trailer	S816
Farm	90	K Trail Equipment Trailer	2RYKBCG27PM037989 SS#
Farm	93	Gray flatbed trailer	2-Wheel hitch trailer
Farm	94	Concessions trailer 18 ft	Not specified
Farm	96	Turf Gator	W00Turf003665
Farm	97	Kubota RTV-X1100	RTV-X-1100
Farm	98	Farm Truck	GMC- 3500
Farm	99	(4) Tractor Drawn Wagons	Not specified
Farm	100	Mobile Chicken coop wagon	Not specified
Kitchen	6	Walk in Fridge/Freezer	Not specified
Kitchen	7	Small Pizza Oven	Not specified
Kitchen	8	Ice Cream Freezer	Not specified
Kitchen	9	Bakers Display Rack	Not specified

Sheet	Row	Source equipment description	Model or identifier
Kitchen	10	Popcorn Maker	Not specified
Kitchen	11	Popcorn Maker	Not specified
Kitchen	12	Slushee Machine	Not specified
Kitchen	13	Gas Range	Not specified
Kitchen	14	Industrial Vent Hood	Not specified
Kitchen	15	Refrigerator	Not specified
Kitchen	16	Warming Oven	Not specified
Kitchen	17	Ice Maker	Not specified
Kitchen	18	Commercial Chemical Dishwasher	Not specified
Kitchen	19	Mixer	Not specified
Kitchen	20	Counter Top Oven	Not specified
Kitchen	21	Donut Maker	Not specified
Kitchen	22	Microwave	Not specified
Kitchen	23	Coffee Maker (4)	Not specified
Kitchen	24	Small Display Refridgerator	Not specified
Kitchen	25	Chest Freezer (2)	Not specified
Kitchen	26	Electric Range	Not specified
Kitchen	27	Dishwasher	Not specified
Kitchen	28	Over Counter Microwave	Not specified
Kitchen	29	Sandwich Press (2)	Not specified
Kitchen	30	Refridgerator	Not specified
Kitchen	31	Display Freezer	Not specified
Kitchen	32	Display Cooler	Not specified
Kitchen	33	Drink Cooler/refridgerator	Not specified
Kitchen	34	Display Freezer	Not specified
Kitchen	35	Display Cooler	Not specified

Source: C-01, May 2026 workbook; disposition direction: H-01. Original descriptions are preserved. The three active-status checks below remain unresolved. This is the review-draft schedule, not a representation of completed transfer.

Schedule 1.2 Equipment retained by BHS

Sheet	Row	Source equipment description	Model or identifier
Farm	7	Kubota Sprayer	Fimco Industries - 50 gallon
Farm	8	Boss UTV Snow Plow	Boss
Farm	9	Boss UTV Salt Spreader	Not specified
Farm	38	2-Small sprayer-Backpack	Chapin
Farm	46	Exmark Zero Turn Mower (small)	IH500V
Farm	49	Stihl Chain Saw	MS311
Farm	50	Backpack Blower	Echo PB-580T
Farm	52	Weed Whacker	Stihl FS 110R
Farm	54	Post Driver	Unknown
Farm	57	Chop Saw	Dewalt Double Bevel
Farm	58	Table Saw	Dewalt
Farm	59	Power Washer	Dewalt 3600
Farm	61	Power MIG Electric	Lincoln Power
Farm	63	Nailer	Dewalt - Battery powered
Farm	65	Reciprocating Saw	Dewalt
Farm	66	Circular Saw	Dewalt
Farm	68	Dremel Saw	Dewalt
Farm	69	Impact Wrench	Milwaukee
Farm	70	Hammer Drill	Miwaukee
Farm	73	Power Pack	Pittsburgh
Farm	74	Dewalt 20 Volt Batteries	Dewalt
Farm	75	Dewalt Cordless Blower	Dewalt
Farm	95	Kubota RTV 900	RTV 900

Schedule 1.3 Active status requiring resolution

Sheet	Row	Source equipment description	Model or identifier
Farm	27	Plow	Pittsburgh 282 3 Bottom
Farm	44	Riding Mower	John Deere R70
Farm	45	Riding Mower	Toro 520-H

Confirm the active status and intended disposition of these three entries before the final transfer schedule is approved. Preserve the source descriptions and identifiers. [C-01; H-01]

Schedule 1.4 Current Animal Transfer Schedule

The following schedule reproduces the animal groups and quantities recorded in the October 23, 2026 summary of the Bowers Farm Master Livestock Inventory. It provides the current inventory baseline for documenting animal transfers under the interlocal agreement. The complete workbook is retained in Appendix C, including supporting identification and historical animal-management records.

Animal group	Recorded quantity
Bourbon Red Turkeys	13
Broad Breasted Turkeys	40
Heritage Breed Turkeys	11
Chickens (laying hens)	120
Broiler Chickens (FFA)	69
Guinea Fowl	3
Ducks	22
Dairy Goats	5
Boer Goats	5
Boer Goat kids	6
Pygmy Goats	2
Hampshire Cross Sheep	5
Lincoln Sheep	1
Polled Dorset Sheep	11
Horned Dorset Sheep	5
American Guinea Sows/Gilt	3
American Guinea Hog - piglets	5
Ponies	6
Horses	5
Maine-Anjou Cows	4
Llamas	2
Rabbit	3
Cats	3

These quantities describe the farm's animal population on the inventory date. They do not establish permanent stocking levels or require OCP to maintain particular animals, breeds or quantities. Subsequent animal management will follow the care and operating framework in Section B.4.

Source: Master Animal Inventory, "Cheat Sheet (SUMMARY)" worksheet, updated October 23, 2026, rows 1–25.

Broiler Chickens (FFA): BHS-owned; included in the transfer to OCP.

Approval Record

This record identifies the approved plan and schedules, the actions taken by OCP and BHS, and the effective date. Planned milestones are shown separately from completed approvals. [A-01 §§1.8, 4.7.6; A-03]

The approval documentation will expressly identify whether BHS accepts the proposed October 1, 2028 OCP investment deadline and the requested BHS investment package described in Section 1.8.

Planned review and approval milestones

Milestone	Planned date / basis
Commission consideration and submission authorization	November 4, 2026; final approval remains subject to A-01 §4.7.6.
Delivery to BHS representative	November 5, 2026; document actual receipt.
Requested BHS response target	December 4, 2026; administrative target.
BHS comments and recommendations due	December 5, 2026, assuming November 5 receipt; 30 calendar days.
Extended Final PAP delivery deadline	December 15, 2026; delivery only, not a deadline for all approvals.

Final approval and effective date will be recorded after the applicable process. The November 4 resolution form and any subsequent Commission action remain subject to confirmation.

Actual approval record

Record	Entry
OCP action/resolution and date	_____
Actual BHS receipt date and delivery record	_____
BHS approval or deemed-approval basis and date	_____
Final PAP effective date	_____
Approved PAP, CIP and POMP version/date	_____
Schedule 1 equipment version/date	_____
Schedule 1 animal version/date	_____
Chris Ward, Director, Oakland County Parks	Signature and date: _____
Rick West, Superintendent, Bloomfield Hills Schools	Signature and date: _____

Disposition and remaining evidence

Included once: each of the 38 substantive documents in the prior review binder, with A-02 replaced by the fully signed copy; four additional records listed on the cover. The previous report, directory and BHS-only transition copy are excluded. The historical assembled binder is retained separately.

Cross-references: the Preservation Bloomfield land lease appears once as F-02; references from Appendix A and J point to it. B-04 is the July 2023 master plan, not a second copy of the binder. G-01 contains historical budgets; Appendix I references those rather than duplicating them.

Still to assemble or reconcile: verified existing-facilities/gates map and survey; additional cited strategy, research and history records; raw survey subset calculations; farm care standards; source IDs for leadership directions; historical versus current source status. See embedded source register for the detailed research history. Its earlier binder page references are superseded by this directory for included documents only.

Animal inventory: all 14 pages of the current PDF export are included. The summary is dated October 23, 2026; detailed historical pages do not replace that summary. Ownership confirmation for the FFA broilers is recorded in the IPP and tracker. The native animal workbook was not obtained in this assembly; change the master’s claim that the complete workbook is retained here, or supply it before final publication.

Review limits: source boundaries, page counts and document navigation were checked. Representative pages and all newly generated pages were visually inspected; this is not a fresh technical validation of every laboratory result, engineering recommendation or historical record. No source findings have been suppressed because they complicate the plan.

INTERLOCAL AGREEMENT BETWEEN
THE COUNTY OF OAKLAND
AND
BLOOMFIELD HILLS SCHOOLS
FOR BOWERS FARM

This Agreement (the "Agreement") is made between the County of Oakland, a Constitutional and Municipal Corporation, located at 1200 North Telegraph, Pontiac, Michigan 48341 ("County"), by, through, and administered by its statutory agent the Oakland County Parks and Recreation Commission ("OCPRC") and Bloomfield Hills Schools, a Michigan general powers school district, located at 7273 Wing Lake Road, Bloomfield Hills, Michigan 48301 ("BHS"). County/OCPRC and BHS may each be referred to herein individually as a "Party" and jointly as the "Parties".

INTRODUCTION AND PURPOSE OF AGREEMENT.

A. BHS is the owner of approximately 84+/- acres of real property, commonly known as Charles L. Bowers Farm, with Parcel Identification Numbers of 19-01-376-006, 19-01-451-002 19-01-451-004, and as more particularly described in the attached Exhibit A and to be confirmed by survey and title in accordance with Section 3.3.3.

B. The Parties desire to have OCPRC operate, manage, plan for, and maintain the Premises as a County Park, for conservation purposes and for public recreation purposes, including, but not limited to, public recreation activities, pathways, trails, and a parking lot for such purposes.

C. To effectuate this desire, the County and BHS enter into this Agreement, pursuant to Michigan law, to delineate the duties and responsibilities of the Parties with respect to operation, management, planning, and maintenance of the Premises as a County Park.

The Parties agree to the following terms and conditions:

1. **DEFINITIONS**. The following words and expressions used throughout this Agreement, whether used in the singular or plural, shall be defined, read, and interpreted as follows:

   1.1. **Agreement** means the terms and conditions of this Agreement, and Exhibits attached hereto, and any other mutually agreed to written and executed modification, amendment, addendum, or exhibit approved in accordance with Section 2.

   1.2. **Bloomfield Hills Schools ("BHS")** means BHS, a Michigan general powers school district, its Board of Education, Board members, administrators, employees, agents, contractors, subcontractors, volunteers, and/or any such persons' successors.

   1.3. **Bloomfield Hills Schools Employee** means any BHS administrator, employee, agent, contractor, subcontractor, and/or any such person's successors or predecessors (whether such persons act or acted in their personal, representative, or official capacities). "BHS Employee" shall also include any person who was a BHS Employee at any time during the Initial Term, or Renewal Term, of this Agreement but, for any reason, is no longer employed, appointed, or elected in that capacity.

   1.4. **Capital Improvement Project** means a project that: (1) costs thirty thousand dollars ($30,000.00) or more; and (2) extends the life cycle of an existing facility or asset on the Premises; replaces, renovates, or remodels an existing facility or asset on the Premises; or adds a new facility or asset on the Premises.

1.5. **Claims** means any alleged losses, claims, complaints, demands for relief or damages, lawsuits, causes of action, proceedings, judgments, deficiencies, liabilities, injuries, penalties, litigation, costs, and expenses, including, but not limited to, reimbursement for attorney fees, witness fees, court costs, investigation expenses, litigation expenses, amounts paid in settlement, and/or other amounts or liabilities of any kind which are incurred by or asserted against a Party, or for which a Party may become legally and/or contractually obligated to pay or defend against, whether based upon any alleged violation of the federal or the state constitution, any federal or state statute, rule, regulation, or any alleged violation of federal or state common law.

1.6. **County** means Oakland County, a Municipal and Constitutional Corporation, including, but not limited to, all of its departments, divisions, the County Board of Commissioners, elected and appointed officials, directors, board members, council members, commissioners, authorities, committees, employees, agents, volunteers, and/or any such persons' successors. The County and OCPRC may be used interchangeably throughout this Agreement to mean either or both.

1.7. **County Employee** means any County employee, officer, manager, volunteer, attorney, contractor, subcontractor, and/or any such person's successors or predecessors (whether such persons act or acted in their personal, representative, or official capacities). "County Employee" shall also include any person who was a County Employee at any time during the Initial Term, or Renewal Term, of this Agreement but, for any reason, is no longer employed, appointed, or elected in that capacity.

1.8. **Day** means any calendar day beginning at 12:00 a.m. and ending at 11:59 p.m.

1.9. **Effective Date.** the date the last Party signs this Agreement.

1.10. **Exhibits** means the following documents, which this Agreement includes and incorporates herein by reference:

1.10.1. **Exhibit A:** describes and depicts the Premises.

1.10.2. **Exhibit B:** Preliminary Park Use and Improvement Framework.

1.11. **OCPRC** means the Oakland County Parks and Recreation Commission, as established by resolution of the Oakland County Board of Commissioners pursuant to Public Act 261 of 1965, MCL 46.351, et seq., which is a statutory agent of the County.

1.12. **Park** means the park, with the name set forth in Section 2.6, located on the Premises, which is owned by BHS and operated, maintained and managed by the County as a County Park pursuant to the terms and conditions of this Agreement, except for the Bowers School Academy Building, as described in Section 4.18 below.

1.13. **Park Fees and Charges** means the following fees and charges: (1) equipment/facility rental fees; (2) event program fees; (3) sponsorship of events/programs by third parties; and (4) and all other fees and charges charged and collected by OCPRC associated with the use of the Park or the Premises.

1.14. **Park Revenue** means the monies generated from the Park Fees and Charges received by OCPRC and grants, gifts, and donations received by OCPRC or by BHS for the Park or Premises.

1.15. **Premises** means the real property including any buildings and improvements that are described and depicted in **Exhibit A**.

1.16. **Transition Period** means a period of time commencing on the Effective Date and ending on June 30, 2026. Prior to June 30, 2026, the BHS Representative and OCPRC Representative (as defined in Section 4.1) may mutually agree to change the end date of the Transition Period, but in no event shall the Transition Period extend beyond September 30, 2026.

2. AGREEMENT TERM/ REAL PROPERTY DESCRIPTION & TERMINATION.

2.1. **Agreement Term.** This Agreement shall commence on the Effective Date and terminate thirty (30) years from the Effective Date of this Agreement ("Initial Term"). Prior to the expiration of the Initial Term, the Parties may mutually agree to renew this Agreement for up to thirty (30) years, upon mutual written agreement of the Parties ("Renewal Term"). The terms and conditions contained in this Agreement shall not change during the Renewal Term, unless mutually agreed to in writing by the Parties. The approval and terms of this Agreement and any amendments shall be entered in the official minutes of the governing bodies of each Party. An executed copy of this Agreement and any amendments shall be filed by the County Clerk with the Secretary of State.

2.2. **Agreement Amendments.** All amendments or modifications to this Agreement shall be in writing and approved by both Parties and filed as set forth in Section 2.1.

2.3. **Real Property Subject to Agreement.** BHS grants to the County use of the Premises for the purposes and according to the terms and conditions set forth herein.

2.4. **Use of Premises.** On the date the Transition Period ends, OCPRC shall have care, control, and use of the Premises to operate, manage, plan, maintain, and improve the Premises for public recreation activities as a County Park, except for the Bowers School Farm Building, as described in Section 4.18 below, or as further described and delineated herein, and to provide other recreation activities mutually agreed upon in writing by the Parties. OCPRC shall obtain BHS' prior written consent to use the Premises for any purpose not described herein, and such approved use does not require a written amendment to this Agreement.

2.5. **Fee for Use of Premises.** The County shall not pay a monetary fee to BHS for the use of the Premises pursuant to this Agreement. The Parties acknowledge that the services provided by the County during this Initial Term and Renewal Term of this Agreement are adequate consideration for this Agreement.

2.6. **Designation of Park & Name of Park.** During this Agreement, the Park shall be designated as a County Park and named: "Discovery Oaks" with the farm areas designed at "Bowers Farm."

2.7. **Termination/Expiration.**

2.7.1. **Termination by BHS.** BHS may terminate this Agreement, at any time, if OCPRC is notified in writing at least one hundred eighty (180) days prior to the effective date of termination and any one of the following occur: (1) the Premises is no longer being used for the purposes identified in this Agreement; (2) OCPRC provided BHS with information at any time during the Initial Term or Renewal Term of this Agreement that was false or fraudulent; or (3) OCPRC fails to perform any of its obligations under this Agreement and such failure is not cured within thirty (30) calendar days after written notice of default to OCPRC or, if such default is of a nature that it cannot be cured within the thirty (30) day period, and OCPRC does not proceed to diligently cure the default in a time period

mutually agreed to by the Parties.

2.7.1.1. **Termination by BHS in Absence of Default/Breach.** If BHS terminates this Agreement, in absence of default or breach by OCPRC, then BHS shall reimburse OCPRC the amount of the non-depreciated value of Capital Improvement Projects to the Park, paid for by OCPRC, on the date of the termination notice, or such other period as agreed to by the Parties in writing.

2.7.1.2. **Termination by BHS for Default/Breach.** If BHS terminates this Agreement for default or breach by OCPRC, then BHS does not have to reimburse OCPRC the non-depreciated value of Capital Improvement Projects to the Park paid for by OCPRC.

2.7.2. **Termination by OCPRC.** OCPRC may terminate this Agreement, at any time, if BHS is notified in writing at least one hundred eighty (180) days prior to the effective date of termination and any one of the following occur: (1) the Premises is no longer being used for the purposes identified in this Agreement; (2) BHS provided OCPRC with information at any time during the Initial Term or Renewal Term of this Agreement that was false or fraudulent; or (3) BHS fails to perform any of its obligations under this Agreement and such failure is not cured within thirty (30) calendar days after written notice of default to BHS or, if such default is of a nature that it cannot be cured within the thirty (30) day period, and BHS does not proceed to diligently cure the default in a time period mutually agreed to by the Parties.

2.7.2.1. **Termination by OCPRC in Absence of Default/Breach.** If OCPRC terminates this Agreement in absence of default or breach by BHS, then BHS does not have to reimburse OCPRC the non-depreciated value of Capital Improvement Projects to the Park paid for by OCPRC.

2.7.2.2. **Termination by OCPRC for Default/Breach.** If OCPRC terminates this Agreement for default or breach of BHS, then BHS shall reimburse OCPRC the amount of the non-depreciated value of Capital Improvement Projects to the Park, paid for by OCPRC, before the date of the termination notice, or such other period as agreed to by the Parties in writing.

2.7.3. **Disposition of Personal Property Upon Expiration/Termination of Agreement.** Upon expiration or termination of this Agreement, for any reason, each Party shall retain ownership of personal property purchased by them, unless the Parties otherwise agree in writing. "Personal property" does not include buildings or fixtures attached to the Premises.

2.7.4. **Condition of Park Upon Expiration/Termination of Agreement.** Upon the expiration or termination of this Agreement, OCPRC shall cease all Park use, planning, management, maintenance, and operation, and surrender the Premises to BHS and cooperatively work with BHS to transfer management and operation of the Premises to BHS.

2.7.5. **Payment for Non-Depreciated Capital Improvement Projects Upon Agreement Expiration**. If this Agreement is not renewed at the end of the Initial Term for the Renewal Term, then BHS shall reimburse OCPRC the amount of the

non-depreciated value of Capital Improvement Projects to the Park, paid for by OCPRC, before the date this Agreement expires, or such other period as agreed to by the Parties in writing. Upon the expiration of the Renewal Term, BHS shall not reimburse OCPRC the amount of the non-depreciated value of Capital Improvement Projects to the Park, paid for by OCPRC.

3. **TRANSITION PERIOD.**

3.1. **Transition Period.** This Agreement includes a Transition Period. During the Transition Period, the Parties shall work cooperatively to facilitate the transfer of Park planning, management, maintenance, and operations to OCPRC. Notwithstanding any other provision, either Party may terminate this Agreement, without liability, prior to the end of the Transition Period, if they are not satisfied with the plans for the transfer, planning, management, maintenance, and operations of the Park. No Capital Improvement Projects may commence during this Transition Period.

3.2. **Park Information.**

3.2.1. **Grants & Endowments.** Within thirty (30) days of the Effective Date, BHS shall provide OCPRC copies of any grant agreements, endowment agreements, or other agreements, if any, that impose restrictions and conditions upon the Premises and its use.

3.2.2 **Agreements between BHS and Third Parties.** Within thirty (30) days of the Effective Date, BHS shall provide OCPRC with copies of all third-party agreements relating to the use, management, maintenance, or operation of the Premises, if any. OCPRC is not under any obligation to assume any third-party agreements relating to the management or operation of the Premises.

3.3. **Rights and Obligations During the Transition Period.**

3.3.1. **Park Operation and Maintenance During Transition Period.** During the Transition Period, BHS shall be responsible to operate, repair, and maintain the Premises and pay all costs associated therewith, including utilities (water, sewer/sanitary, electric, and gas).

3.3.2. **County Right to Access and Perform Work on the Premises.** During the Transition Period, the County may access the Premises to plan for maintenance, restoration, repairs, security and improvements to the Premises and only provide programming, mutually agreed to by the BHS Representative and OCPRC Representative in writing.

3.3.3. **Premises Inspections.** During the Transition Period, the County shall inspect the infrastructure and conditions of the Park/Premises and the title for the Premises, including but not limited to, the condition of utilities and their connections, parking lots, trees, buildings, restrooms, pavilions, playground equipment, trails and pathways, and any other structures or buildings located on the Premises. The inspection shall be codified in a written document to illustrate the condition of the Premises at the end of the Transition Period and provided to BHS. Any damage to the Premises due to such inspections, shall be repaired by the County and the Premises shall be fully restored to a condition that existed prior to such inspections. Additionally, any changes to this Agreement that are required based upon the County's inspection of the Park/Premises, including any restrictions or encumbrances relating to title, shall be reflected in an amendment to this Agreement

which shall be mutually agreed upon and entered into by the BHS Representative and the OCPRC Representative to reflect the same prior to the expiration of the Transition Period.

3.3.4. **Preliminary Park Use and Improvement Framework.** The Preliminary Park Use and Improvement Framework, **Exhibit B**, sets forth the use and improvement plan for the Transition Period and shall form the basis of the Park Action Plan described in Section 4.7.

3.3.5. **Park Planning.** During the Transition Period, the County shall: (1) assume primary responsibility for Park planning consistent with the Preliminary Park Use and Improvement Framework; (2) regularly consult with the BHS Representative about such planning; and (3) organize public/community engagement concerning the park development, and planning. The Parties acknowledge that OCPRC has conducted previous public/community engagement regarding this Park and the additional engagement required by this Section will build upon the previous public/community engagement.

3.3.6. **Park Programming.** During the Transition Period, OCPRC may organize and host recreation programs, events, volunteer activities, and other activities on the Premises upon mutual written agreement of the Parties.

3.4. **Mutual Assistance Agreements.** During the Transition Period and thereafter and until the Final Park Action Plan is mutually agreed to by the Parties, the BHS Representative and OCPRC Representative may enter into agreements, as needed, to provide additional services for the operation, repair, maintenance, and programming for the Park and to address the costs associated therewith.

3.5. **Environmental Condition.**

3.5.1. **Environmental Assessments.** During the Transition Period, OCPRC shall examine the Premises and perform a Phase I Environmental Site Assessment (ESA), at its sole cost, and may perform additional environmental assessments that OCPRC deems necessary, in its sole discretion and at its sole cost.

3.5.2. **Copies of Environmental Assessments.** OCPRC will provide BHS with a copy of the Phase I ESA and any other environmental assessments. OCPRC shall take possession of the Premises subject to such Phase I ESA and other environmental assessments performed pursuant to this Section.

3.5.3. **Termination Related to Environmental Assessments.** Notwithstanding any other provision, OCPRC or BHS may terminate this Agreement prior to the end of the Transition Period, if either Party is not satisfied with the condition of the Premises as evidenced by the Phase I ESA or other environmental assessments performed pursuant to this Section.

4. **PARK GOVERNANCE & OPERATIONS.**

4.1. **Agreement Administration.** BHS' Superintendent or his successor or his written designee is BHS' Agreement Administrator (hereinafter "the BHS Representative"). The OCPRC Director or their successor or their written designee is OCPRC's Agreement

Administrator (hereinafter "OCPRC Representative"). Each Party must notify the other Party of any changes to their written designees.

4.2. **Disputes.** All disputes arising under or relating to the interpretation, performance, or nonperformance of this Agreement involving or affecting the Parties shall first be submitted to the BHS Representative and the OCPRC Representative for possible resolution. If the BHS Representative and the OCPRC Representative cannot resolve the dispute, then the dispute shall be submitted to non-binding mediation, and both Parties shall share equally in the costs associated with mediation. If the Parties are unable to resolve the dispute through mediation, then either Party may seek any remedy available as permitted by law, in accordance with the governing law provisions under Section 7.10 of this Agreement.

4.3. **Park Management and Operations.** Except as otherwise provided by this Agreement, OCPRC shall manage and operate the Park in a manner consistent with other OCPRC Parks, OCPRC policies, the OCPRC 5-Year Parks and Recreation Master Plan ("OCPRC Master Plan") the Park Action Plan described in Section 4.7, and any other plans and programs set forth and described herein. OCPRC shall manage, maintain, and operate the Park with OCPRC employees, volunteers, and contractors and subcontractors pursuant to the plans and programs set forth and described herein.

4.4. **Park Improvement Projects.** OCPRC shall be responsible to provide, perform and construct (either directly or through third parties) improvements for the Park. This responsibility and the costs associated therewith shall be addressed in the Park Action Plan set forth in Section 4.7, with the general understanding that OCPRC shall be responsible for the costs associated with such improvements, unless otherwise agreed to by BHS. Where applicable, all improvements and Capital Improvement Projects that are to be completed pursuant to this Agreement or as part of the Park Action Plan pursuant to Section 4.7 shall be done in a professional and workmanlike manner and in compliance with all applicable local, state, and federal laws, including, to the extent applicable, those laws pertaining to school building construction, being the Revised School Code, MCL 380.1 *et seq.*, the School Building Construction Act, MCL 388.851 *et seq.*, the Still-Derossett-Hale Single State Construction Code Act, MCL 125.1501 *et seq.*, and the Michigan Building Code (collectively the "Construction Acts"). All Capital Improvement Projects constructed pursuant to the Park Action Plan shall become an integral part of the Premises, remain on the Premises at the expiration or termination of this Agreement, and shall be owned by the BHS. As such, BHS shall account for depreciation of any Capital Improvement Projects (if constructed) on BHS' financial statements. No Capital Improvement Projects shall occur without the prior written approval of the BHS Representative, unless such Capital Improvement Project is included in the Park Action Plan created pursuant to Section 4.7.

4.5. **Park Maintenance/Repairs.** The responsibility for, provision of, and costs for Park maintenance and repairs shall be set forth in the Park Action Plan described in Section 4.7. Notwithstanding the foregoing, it is the Parties intent that OCPRC shall be responsible for the all costs associated with such maintenance and repairs, unless otherwise agreed to by BHS and the Park, at a minimum, shall be maintained in a similar manner to how OCPRC maintains its other Oakland County Parks.

4.6. **Park Utilities and Services.** OCPRC shall be responsible to provide the utilities and services, it deems necessary for the operation of the Park. The provision of and costs for

all utilities, including water, sewer/sanitary, electric, and gas, for the Park and Premises shall be the responsibility of BHS until the end of the Transition Period and shall be responsibility of OCPRC thereafter during the Initial Term or Renewal Term of this Agreement. The Parties may further delineate the responsibilities and costs applicable to the Park and Premises utilities in the Park Action Plan described in Section 4.7. Notwithstanding the foregoing, it is the Parties intent that OCPRC shall be responsible for all the costs associated with such utilities and services, unless otherwise agreed to by BHS in writing. However, OCPRC shall not authorize or approve any easements or other encumbrances to, on, or across the Park or the Premises.

4.7. **Park Action Plan.**

4.7.1. By May 1, 2026, OCPRC shall create a Preliminary Park Action Plan for the Park and by September 30, 2026, OCPRC shall create a Final Park Action Plan for the Park. The Preliminary Park Action Plan and the Final Park Action Plan shall be collectively referred to in this Agreement as "Park Action Plan." The terms of this Agreement shall apply equally to the Preliminary Park Action Plan and the Final Park Action Plan. The OCPRC Representative and the BHS Representative may agree in writing to extend the deadline for the delivery of the Final Park Action Plan.

4.7.2. The Park Action Plan shall be based on **Exhibit B**, the Preliminary Park Use and Improvement Framework and created pursuant to OCPRC's current policies and procedures. The Park Action Plan shall establish a structure to guide the stewardship, operation, and investment of the Park with the following intentions:

4.7.2.1. Guide operational and capital decisions during the first five years of implementation;

4.7.2.2. Align Park priorities with OCPRC system goals;

4.7.2.3. Provide continuity and transparency as planning, engagement, and investment activities happen; and

4.7.2.4. Ensure the Park is managed in a manner that is equitable, fiscally responsible, resilient, and sustainable over the long term.

4.7.3. The Park Action Plan will have two Attachments: (1) Attachment A, the Capital Improvement Plan ("CIP") and (2) Attachment B the Park Operations and Management Plan ("POMP").

4.7.4. The CIP shall establish a five (5) year framework to identify, evaluate, and prioritize potential capital investments at the Park. The CIP serves as a planning and evaluation tool, not a guarantee of implementation. Inclusion of an item in the CIP does not constitute project approval, funding authorization, or a commitment to proceed. The CIP will set forth a process for approvals, authorizations, and commitments to proceed. Inclusion of an item in the CIP constitutes BHS pre-approval for the project type to proceed when funding is available, without requiring additional BHS approval. The CIP may be amended as set forth in the Park Action Plan, but at least every four (4) years OCPRC shall create an updated CIP, which the BHS Representative shall have at least sixty (60) days to review and approve. If the BHS Representative does not approve the CIP, the improvement may not be made, unless otherwise agreed to by the Parties. The updated CIP, approved by the BHS Representative, shall replace the existing CIP and be incorporated into the Park Action Plan as Attachment A.

4.7.5. The POMP shall establish a framework for day-to-day Park operations, Park maintenance, Park staffing, Park programming, and Park coordination. The POMP may be amended as set forth in the Park Action Plan, but at least every five (5) years OCPRC shall create an updated POMP, which the BHS Representative shall have at least sixty (60) days to review and approve. If the BHS Representative does not approve the POMP, the change may not be made, unless otherwise agreed to by the Parties. The updated POMP, approved by the BHS Representative, shall replace the existing POMP and be incorporated into the Park Action Plan as Attachment B.

4.7.6. Once completed, OCPRC shall submit the Park Action Plan to the BHS Representative for comments and recommendations. The BHS Representative shall submit comments and recommendations to the OCPRC Representative within thirty (30) Days of receipt of the Park Action Plan. The OCPRC Representative shall review and consider the BHS Representative's comments and recommendations and shall endeavor to address all comments and recommendations. The Park Action Plan shall not be approved or implemented by OCPRC without prior written approval by the BHS Representative. If the BHS Representative does not respond within the thirty (30) day period, then the BHS Representative is deemed to have approved the Park Action Plan. Every five (5) years OCPRC shall create an updated Park Action Plan, which the BHS Representative shall have at least sixty (60) days to review and comment on.

4.8. Notwithstanding any other provision in this Agreement, if the BHS Representative and OCPRC Representative cannot agree to a Preliminary Park Action Plan by the end of the Transition Period, then OCPRC or BHS may proceed under the Dispute Resolution Section of this Agreement, Section 4.2 or terminate this Agreement. No Capital Improvement Projects may commence during this Transition Period.

4.9. **Volunteers and Employees.**

4.9.1. OCPRC shall manage and operate the Park with OCPRC employees, volunteers, and contractors and subcontractors.

4.9.2. OCPRC may use volunteers at the Park in various capacities, including existing volunteers and volunteer groups. All volunteers providing volunteer service at the Park shall become part of OCPRC's volunteer program.

4.9.3. OCPRC has no obligation to hire BHS employees to work at the Park, but OCPRC shall provide information to BHS employees, who currently work at the Premises, on how BHS employees may apply for OCPRC employment.

4.10. **Personal Property and Equipment.** At no cost to OCPRC, BHS shall transfer ownership of all personal property and equipment listed in the Final Park Action Plan. The Parties acknowledge that this Agreement and the Final Park Action Plan will operate as a bill of sale and that no further documents are required to effectuate the transfer of the personal property and equipment. The BHS Representative and the OCPRC Representative are authorized to sign any other documents needed to effectuate the transfer of the personal property and equipment.

4.11. **Animals.** At no cost to OCPRC, BHS shall transfer ownership of all animals listed in the Final Park Action Plan. The Parties acknowledge that this Agreement and the Final Park Action Plan will operate as a bill of sale and that no further documents are required to

effectuate the transfer of the animals. The BHS Representative and the OCPRC Representative are authorized to sign any other documents needed to effectuate the transfer of the animals.

4.12. **Park Access/Parking.** OCPRC shall be responsible to determine how Park patrons will access the Park (ingress to and egress from the Park) and where patrons will park while using the Park. This responsibility and the costs associated therewith shall be addressed in the Park Action Plan with the general agreement that OCPRC shall be responsible for the costs associated with such parking, unless otherwise agreed to in writing by the BHS. In no event shall any resident of BHS or the County incur any fee or charge for entering the Park or Premises or for parking a vehicle in or on the Park or Premises.

4.13. **Park Rules.** During the Initial Term or Renewal Term of this Agreement, the Park and Premises shall be subject to OCPRC Rules and Regulations and OCPRC policies and procedures, except as otherwise provided by this Agreement.

4.14. **Park Security.** Security for the Park shall be provided by OCPRC at its sole expense.

4.15. **Signs.** OCPRC shall be responsible for and is permitted to erect signs to identify the Park and features/structures located therein and to erect other signs that are typical and/or necessary at a public park of this nature. OCPRC shall be required to comply with local ordinance requirements regarding the design and placement of any new signs. OCPRC shall be responsible for the cost of signs it erects.

4.16. **Sponsorship of Events/Programs at Park by Third Parties.** Without approval from the BHS, OCPRC may solicit or accept sponsorship of events/programs at the Park by third-parties, pursuant to OCPRC policies and procedures; provided that third-party sponsorships may not be associated with alcoholic beverages or drugs (legal or illegal) while school is in session on the Premises. Any sponsorship of events/programs shall be limited to those that would not be prohibited in BHS' facilities or on BHS property (use or promotion of alcohol, drugs or other illegal activities, etc.).

4.17. **Use of Park by Third Parties.** Notwithstanding any other provision in this Agreement, OCPRC may license use of the Park to third parties for events or programs, without approval from and notification to BHS. OCPRC shall allow such use via written agreement with the third party, pursuant to OCPRC policies and procedures. To avoid scheduling conflicts at the Park, all third parties desiring to use the Park for events or programs shall schedule such use through OCPRC. The written agreement for use of the Park by third parties shall also include BHS as an indemnified party and an additional insured as well, if insurance is required.

4.18. **Use of Park by BHS.**

4.18.1. **Bowers School Farm Building.** BHS shall have exclusive use and access to the Academy Wing of the Bowers School Farm Building pursuant to the following parameters:

4.18.1.1. Room 117 (Agriscience classroom) shall remain restricted for exclusive instructional use by BHS during the BHS school year. Room 117 would not be used by anyone else on evenings or weekends during the school year, but the Room can be used by others during the summer when school is not in session, unless otherwise agreed to, in writing, by the BHS Representative and OCPRC Representative. When school is not in session OCPRC shall be responsible for scheduling use of Room 117.

4.18.1.2. Rooms 115 and 116, 118, and 119, will remain secured and restricted from public access during BHS school hours. After BHS school hours, on weekends, and during the summer, the Rooms listed in this Subsection can be used for recreation and OCPRC programming and such use shall be scheduled by OCPRC.

4.18.1.3. Rooms 113, 114, 120 and 122 are considered general-use space and will be available for use by OCPRC.

4.18.1.4. Services and maintenance of the space in the Bowers School Farm Building, including but not limited to, custodial and security, shall be set forth in the Final Park Action Plan.

4.18.2. **BHS Events or Programs.** BHS may use the Park for education use or other BHS-sponsored events or programs at no cost, charge, or fee, if such use does not conflict with other scheduled events or programs. To avoid scheduling conflicts at the Park, BHS shall reserve use of the Park for its events or programs, through OCPRC. BHS shall be responsible for all costs associated with the setup, operation, and cleanup of such events or programs. Each Party shall promote activities planned by the other Party to take place in the Park in the same manner as they promote their own activities.

5. **PARK FINANCES.**

5.1. **Park Investments.**

5.1.1. **Investment by OCPRC.** OCPRC shall invest a minimum of One Million Five Hundred Thousand Dollars ($1,500,000.00) into the Park, which shall be used as set forth in the Final Park Action Plan.

5.1.2. **Investment by BHS**. BHS shall invest One Million Five Hundred Thousand Dollars ($1,500,000.00) into the Park ("BHS Investment"), which shall be used by BHS as set forth in the Final Park Action Plan.

5.2. **Establishment of Park Fees & Charges.** OCPRC shall establish all Park Fees and Charges at the Park. The Park Fees and Charges shall be created, adopted, and implemented pursuant to OCPRC's current policies and procedures as may be amended by OCPRC. Notwithstanding any other provision in this Agreement, at no time shall any BHS or Oakland County resident be charged a fee for entry into the Park or the Premises or for parking at the Park or on the Premises.

5.3. **Park Revenue.** Subject to applicable law, all Park Revenue shall be paid to OCPRC and shall be deemed OCPRC's revenue, unless otherwise agreed by the Parties during the Transition Period and codified in the Park Action Plan. OCPRC shall record the monies of all Park Revenue according to generally accepted accounting principles and in a manner similar to how OCPRC records other revenue it collects and receives.

5.4. **Annual Accounting and Audits.** If requested by BHS, OCPRC shall provide BHS with an annual accounting of Park Revenue consistent with generally accepted accounting policies and procedures. BHS has the right to annually review and audit OCPRC's records related to Park Revenue, upon written request to OCPRC.

5.5. **Park Grants.** The Parties shall use their best efforts to work together to secure grant funding for Park expansion, development, improvements, operation, and maintenance.

OCPRC and BHS shall work together to apply for and manage grants related to the Park. Any improvements to the Park funded via grants secured by or through BHS shall not be subject to reimbursement under Section 2.7.1.1 upon expiration or termination of this Agreement.

6. **ASSURANCES/LIABILITY/INSURANCE.**

6.1. **Title to Premises.** BHS warrants that it will confirm that it has fee simple title to the Premises in accordance with Section 3.3.3 and both Parties acknowledge that each Party has the authority to enter into this Agreement. Each Party shall hold the other Party harmless (including payment of attorney fees) against any third-party Claim challenging that Party's right to execute this Agreement or use of the Premises as set forth herein.

6.2. **Liability for Claims.** Except as otherwise provided herein, each Party shall be responsible for any Claims made against that Party by a third-party and for the acts or omissions of its respective BHS Employee or County Employee arising under or related to this Agreement.

6.3. **Liability for Claims Prior to the Effective Date.** To the extent permitted by law, BHS shall be solely responsible for and shall defend and hold harmless OCPRC (including payment of reasonable attorney fees) from any Claim that occurred prior to the Effective Date of this Agreement or that was incurred but not reported prior to the Effective Date of this Agreement.

6.4. **Liability for Environmental Matters.** Notwithstanding any other provision, OCPRC shall not be responsible to perform or pay for remediation or clean-up of any environmental contamination on or around the Premises, which existed on the Premises prior to the Effective Date and/or discovered by the Phase I ESA or any other environmental assessments performed pursuant to this Section 3, unless exacerbated by OCPRC during its inspections. OCPRC shall be responsible to perform or to pay for remediation or clean-up of any environmental contamination on or around the Premises, which is caused by OCPRC and, to the extent provided by law, is caused by any of its agents, employees, volunteers, officers, or officials, contractors, subcontractors or consultants, or invitees on the Premises.

6.5. **Legal Representation.** Except as provided herein, each Party shall seek its own legal representation and bear the costs associated with such representation, including judgments and attorney fees, for any Claim that may arise from the performance of this Agreement.

6.6. **Responsibility for Costs/Fines/Fees.** Each Party shall be solely responsible for all costs, fines and fees associated with any acts or omissions by its respective BHS Employee or County Employee arising under or related to this Agreement.

6.7. **No Indemnification/Reimbursement.** Except as otherwise provided for in this Agreement, neither Party shall have any right under this Agreement or under any other legal principle to be indemnified or reimbursed by the other Party or any of its agents in connection with any Claim.

6.8. **Governmental Function/Reservation of Rights.** Performance of this Agreement is a governmental function and government service. This Agreement does not, and is not intended to, impair, divest, delegate, or contravene any constitutional, statutory, and/or other legal right, privilege, power, obligation, duty, or immunity of the Parties. Nothing in this Agreement shall be construed as a waiver of governmental immunity.

6.9. **Limitation of Liability.** In no event shall either Party be liable to the other Party or any other person, for any consequential, incidental, direct, indirect, special, and punitive or other damages arising out of this Agreement.

6.10. **Insurance.**

6.10.1. Except for the insurance set forth in Section 6.10.2 and Section 6.10.3, this Agreement does not require either Party to obtain insurance to cover loss exposures associated with this Agreement and the Park. Each Party is solely responsible to determine whether it will obtain insurance, and in what amounts, to cover loss exposures associated with this Agreement and the Park.

6.10.2. If a Party purchases a special event insurance policy for use the Premises, for whatever reason, then the Party shall name the other Party and its boards, commissions, elected and appointed officers/officials, employees, and volunteers as "additional insureds" on such policy.

6.10.3. BHS, at its sole cost, shall obtain real property insurance or self-insurance for existing buildings and structures located on the Premises and for any future buildings and structures located on the Premises whether built by BHS or OCPRC. If a building or structure that is covered by BHS' real property insurance is damaged or destroyed, OCPRC shall repair or replace the building or structure in a timely manner and the BHS shall reimburse OCPRC for all costs associated with the repair or replacement of such building or structure to the extent such repairs or replacement are covered by BHS insurance coverages. OCPRC shall invoice BHS for the costs of the repair or replacement and BHS shall pay such invoice within thirty (30) calendar days. However, OCPRC shall reimburse BHS for insurance premiums related to buildings and structures constructed on the Premises by OCPRC.

6.11. **Waste.** Neither Party shall commit or allow to be committed any waste or nuisance on the Premises and will not use, or allow the Premises to be used, for any unlawful purpose.

6.12. **Compliance with Laws.**

6.12.1. The Parties shall comply with all applicable federal, state, or local laws, regulations, rules, and ordinances related to the operation, management, planning, maintenance, and improvement of the Premises and Park. OCPRC shall obtain any necessary permits regarding its use of the Premises.

6.12.2. OCPRC shall comply with all applicable grants and other agreements between BHS and another entity such as the State of Michigan, governing the operation of and restrictions upon the Premises, if OCPRC receives notice of such grants and other agreements from BHS.

6.12.3. The Parties acknowledges that any violations of the federal, state, or local regulations or convictions of any resource violations may be considered a default of this Agreement and the other Party may terminate this Agreement, as provided herein.

6.13. **Authorization.** The Parties have taken all actions and secured all approvals necessary to authorize and complete this Agreement. The persons signing this Agreement on behalf of each Party have legal authority to sign this Agreement and bind the Parties to the terms and conditions contained herein.

7. **GENERAL TERMS AND CONDITIONS.**

7.1. **No Interest in Premises.** Through this Agreement, OCPRC shall have no title interest in

and/or to the Premises or any portion thereof and has not, does not, and will not claim any such title or any easement over the Premises.

7.2. **Delegation or Assignment**. Neither Party shall delegate or assign any obligations or rights under this Agreement without the prior written consent of the other Party. For purposes of this Section, consent for the County shall be given by the OCPRC Director or his/her successor and consent for BHS shall be given by the BHS Representative.

7.3. **No Employee-Employer Relationship**. Nothing in this Agreement shall be construed as creating an employer-employee relationship between County and BHS.

7.4. **No Third Party Beneficiaries**. Except as provided for the benefit of the Parties, this Agreement does not and is not intended to create any obligation, duty, promise, contractual right or benefit, right to indemnification, right to subrogation, and/or any other right in favor of any other person or entity.

7.5. **No Implied Waiver**. Absent a written waiver, no act, failure, or delay by a Party to pursue or enforce any rights or remedies under this Agreement shall constitute a waiver of those rights with regard to any existing or subsequent breach of this Agreement. No waiver of any term, condition, or provision of this Agreement, whether by conduct or otherwise, in one or more instances shall be deemed or construed as a continuing waiver of any term, condition, or provision of this Agreement. No waiver by either Party shall subsequently affect its right to require strict performance of this Agreement.

7.6. **Severability**. If a court of competent jurisdiction finds a term or condition of this Agreement to be illegal or invalid, then the term or condition shall be deemed severed from this Agreement. All other terms, conditions, and provisions of this Agreement shall remain in full force.

7.7. **Captions**. The section and subsection numbers, captions, and any index to such sections and subsections contained in this Agreement are intended for the convenience of the reader and are not intended to have any substantive meaning. The numbers, captions, and indexes shall not be interpreted or be considered as part of this Agreement. Any use of the singular or plural, any reference to gender, and any use of the nominative, objective or possessive case in this Agreement shall be deemed the appropriate plurality, gender or possession as the context requires.

7.8. **Force Majeure**. Notwithstanding any other term or provision of this Agreement, neither Party shall be liable to the other for any failure of performance hereunder if such failure is due to any cause beyond the reasonable control of that Party and that Party cannot reasonably accommodate or mitigate the effects of any such cause. Such cause shall include, without limitation, acts of God, floods, fire, explosion, vandalism, national emergencies, insurrections, riots, wars, strikes, lockouts, work stoppages, other labor difficulties, or any law, order, regulation, direction, action, or request of the United States government or of any other government. Reasonable notice shall be given to the affected Party of any such event.

7.9. **Notices**. Notices given under this Agreement shall be in writing and shall be personally delivered, sent by express delivery service, certified mail, or first class U.S. mail postage prepaid, and addressed to the person listed below. Notice will be deemed given on the date when one of the following first occur: (i) the date of actual receipt; (ii) the next business day when notice is sent express delivery service or personal delivery; or (iii) three days after mailing certified U.S. mail.

7.9.1. If Notice is sent to County, it shall be addressed and sent to: OCPRC Director,

2800 Watkins Lake Road, Waterford, Michigan 48328 and the Chairperson of the Oakland County Board of Commissioners, 1200 North Telegraph Road, Pontiac, Michigan 48341.

7.9.2. If Notice is sent to BHS, it shall be addressed and sent to BHS Superintendent, 7273 Wing Lake Road, Bloomfield Hills, Michigan 48301.

7.9.3. Either Party may change the individual to whom Notice is sent and/or the mailing address by notifying the other Party in writing of the change.

7.10. **Governing Law/Consent To Jurisdiction And Venue**. This Agreement shall be governed, interpreted, and enforced by the laws of the State of Michigan. Except as otherwise required by law or court rule, any action brought to enforce, interpret, or decide any Claim arising under or related to this Agreement shall be brought in the 6th Judicial Circuit Court of the State of Michigan, the 48th District Court of the State of Michigan, or the United States District Court for the Eastern District of Michigan, Southern Division, as dictated by the applicable jurisdiction of the court. Except as otherwise required by law or court rule, venue is proper in the courts set forth above.

7.11. **Counterparts.** This Agreement may be executed in any number of counterparts, each of which shall be deemed an original agreement, but all of which together shall constitute one Agreement. Copies (photo, fax, or electronic) of signatures to this Agreement will be deemed originals and may be relied on to the same extent as originals.

7.12. **Entire Agreement**. This Agreement and the referenced Affidavit represents the entire agreement and understanding between the Parties regarding the maintenance, operation, and management of the Park and the Premises. This Agreement and the referenced Affidavit supersede all other oral or written agreements between the Parties regarding that subject matter. The language of this Agreement shall be construed as a whole according to its fair meaning and not construed strictly for or against any Party.

INTERLOCAL AGREEMENT
BETWEEN
BLOOMFIELD HILLS SCHOOLS AND
THE OAKLAND COUNTY PARKS AND RECREATION COMMISSION
FOR TRANSITION SERVICES AND OPERATIONAL CONTINUITY

This Interlocal Agreement (the "Agreement") is made and entered into between the County of Oakland, a Constitutional and Municipal Corporation, located at 1200 North Telegraph, Pontiac, Michigan 48341 ("County"), by, through, and administered by its statutory agent the Oakland County Parks and Recreation Commission ("OCPRC") and Bloomfield Hills Schools, a Michigan general powers school district, located at 7273 Wing Lake Road, Bloomfield Hills, Michigan 48301 ("BHS"). County/OCPRC and BHS may each be referred to herein individually as a "Party" and jointly as the "Parties".

INTRODUCTION AND PURPOSE

A. BHS and the County entered Interlocal Agreements for park operation and management under which certain property, set forth in the attached Exhibit A and described as parcels 19-01-376-006; 19-01-451-002; and 19-01-451-004 ("Discovery Oaks") and 19-09-301-050 and 19-09-301-051 ("Bloomfield Oaks" and Johnson Nature Center"), will be under the care, control, and use of OCPRC as of June 30, 2026, unless extended. Exhibit A is incorporated herein.

B. OCPRC desires to have BHS perform certain maintenance and services at Discovery Oaks, Bloomfield Oaks, and Johnson Nature Center and BHS is willing to undertake certain maintenance and services at such locations on the terms and conditions set forth below.

C. This Agreement for maintenance and services at Discovery Oaks, Bloomfield Oaks, and Johnson Nature Center will further the public health, safety, and welfare, promote efficient use of governmental resources and effectiveness of local governments;

Therefore, in consideration of the mutual covenants and conditions set forth herein, BHS and OCPRC agree as follows:

I.
COMMENCEMENT DATE

The commencement date of this Agreement shall be July 1, 2026 ("Commencement Date").

II.
TERM

The initial term of this Agreement shall begin on the Commencement Date and end on December 31, 2026 ("Initial Term"), unless terminated or modified by the Parties. Thereafter, upon mutual

agreement of the Parties, this Agreement may be amended to extend the Initial Term or renew the Agreement, unless terminated earlier by either Party as set forth below. An amendment, under this Agreement, shall be given by the OCPRC Director on behalf of the County and OCPRC. All terms and conditions of this Agreement shall equally apply to any amendments.

III.
SCOPE OF SERVICES

BHS shall assist OCPRC in providing the following activities/services at Discovery Oaks, Bloomfield Oaks, and Johnson Nature Center (collectively referred to as the "Properties"). The activities/services shall include the following, collectively referred to as "Services":

a. Operate, maintain, and repair all facilities, buildings, grounds, and infrastructures thereof in a safe, clean, functional, and ready for public and educational use manner;
b. Pay all utilities, including but not limited to municipal water and sewer, wells, septic systems, electricity, and gas;
c. Pay all operating expenses, including staffing, supplies, equipment, and program delivery;
d. Perform all groundskeeping, and land stewardship activities including snow and ice removal, landscaping, trail maintenance, invasive species removal, forestry, and environmental sustainability practices;
e. Manage all agricultural and seasonal operations, including maple syrup production and other site-based demonstration activities;
f. Provide comprehensive animal care and management for the animals housed at the Properties, including feeding, health monitoring, enclosure maintenance, and accurate record keeping;
g. Procure, operate, maintain, and repair all equipment, vehicles, and materials required for safe and effective operations/activities on the Properties;
h. Coordinate, schedule, and deliver all educational programming and site-based activities including staffing, logistics, transportation coordination, and partner engagement;
i. Administer all financial operations, including invoicing, revenue collection, deposits, payroll, expense processing, and budget tracking; provided that all revenues shall be paid to OCPRC pursuant to the Interlocal Agreement;
j. Manage all administrative, clerical, and operational systems, including records, calendars, staffing coordination, and compliance with laws, policies and procedures;
k. BHS will report any major repair issues to OCPRC as soon as they are identified; and
l. BHS will attend monthly communication meetings organized by OCPRC.

IV.
PAYMENT

OCPRC shall reimburse BHS for the actual cost of Services undertaken and performed by BHS or its contractors pursuant to this Agreement. BHS shall invoice OCPRC on a monthly basis for

the Services. OCPRC shall pay BHS within thirty (30) days of receipt of invoice. Upon request, BHS shall provide itemized and detailed receipts or documentation to support the costs contained in the invoices.

V.
TERMINATION

This Agreement may be terminated, in whole or in party, at any time, with or without cause, by either Party upon giving thirty (30) days advance written notice of termination to the other Party. In the event of such termination by either party, OCPRC shall immediately pay all fees, which may be due and owing to BHS for work performed through the date of termination of the Agreement. The OCPRC Director may terminate this Agreement, in whole or in part, on behalf of the County and OCPRC

VI.
RESERVATION OF RIGHTS, INSURANCE AND LIABILITY ASSURANCES

a. No Waiver of Governmental Immunity. All of the privileges and immunities from liability, and exemptions from laws, ordinances and rules, and all pensions, relief, disability, worker's compensation and other benefits which apply to the acts of BHS and their officials, officers, agents, and employees when performed within the territorial limits for their respective agencies shall apply to the same degree and extent to the performance of such acts of BHS, officials, officers, agents and employees of OCPRC. No provision of this Agreement is intended, nor shall any provision of this Agreement be construed, as a waiver of any governmental immunity as provided by Section 9 of the Act or otherwise under law.
b. Independent Contractor. BHS and OCPRC agree that at all times and for all purposes under the terms of this Agreement, BHS's relationship to OCPRC shall be that of an independent contractor. No liability, right or benefit arising out of any employer/employee relationship, either express or implied, shall arise or accrue to BHS or OCPRC as a result of this Agreement. BHS shall retain all authority for the rendition of services, standards of performance, control of personnel and other matters incidental to the performance of services by BHS under this Agreement. Nothing in this Agreement shall make any employee of BHS a OCPRC employee for any purpose.
c. Liability and Indemnification. BHS and OCPRC shall each be solely responsible for the acts and omission of its own officials, employees, agents, and contractors the costs associated with those acts and omissions. In no event shall either Party be liable to the other Party, for any consequential, incidental, direct, indirect, special, and punitive or other damages arising out of this Agreement.
d. Insurance. Each Party shall be responsible for maintaining liability insurance or governmental self-insurance covering its activities as they relate to this Agreement.

VII.
MISCELLANEOUS

a. Entire Agreement. This Agreement sets forth the entire agreement between the parties and supersedes any prior understandings related the to the provision of maintenance and services provided in this Agreement..
b. Multiple Counterparts. This Agreement may be executed in multiple counterparts, each of which when executed shall be deemed an original, and such counterparts when taken together shall constitute one and the same instrument.
c. Severability. If a Court of competent jurisdiction finds any provisions of this Agreement invalid or unenforceable, then that provision shall be deemed severed from this Agreement. The remainder of this Agreement shall remain in full force.
d. Governing Law. This Agreement shall be governed by Michigan law. Except as otherwise required by law or court rule, any action brought to enforce, interpret, or decide any claim arising under this Agreement shall be brought in the Oakland County Circuit Court.
e. Amendment. The Agreement may be amended only upon written agreement and approval of the Parties, which approval shall be given by the OCPRC Director and the BHS Superintendent.
f. Permits and Licenses. Each Party shall be responsible for obtaining and maintaining, throughout the term of this Agreement, all licenses, permits, certificates, and governmental authorizations for its employees/and/or agents necessary to perform all its obligations under this Agreement. Upon request, a Party shall furnish copies of any permit, license, certificate, or governmental authorization to the requesting party.
g. No Implied Waiver. Absent a written waiver, no failure, or delay by a party to pursue or enforce any rights or remedies under this Agreement shall constitute a waiver of those rights with regard to any existing or subsequent breach of this Agreement. No waiver of any term, condition, or provision of this Agreement, whether by conduct or otherwise, in one or more instances shall be deemed or construed as a continuing waiver of any term, condition, or provision of this Agreement. No waiver by either Party shall subsequently affect its rights to require strict performance of this Agreement.
h. Notices. Notices given under this Agreement shall be in writing and shall be personally delivered, sent by express delivery service, certified mail, or first-class U.S. mail postage prepaid to the person appointed to the governing board by the governing body of the participating agency.
i. Assignment and Subletting. This Agreement may not be assigned nor may duties or obligations hereunder be delegated without the prior written consent of both parties.
j. Interpretation of Agreement. This is a negotiated Agreement. Should any part of this Agreement be in dispute, the Agreement shall not be construed more favorably for one party over the other, and the doctrine of construction against the drafter shall not apply.
k. No Third Party Beneficiaries. The parties do not intend to confer third party beneficiary status on any non-party to this Agreement.
l. Contacts. Concerning matters associated with this Agreement, the primary contact person for BHS shall be Rick West, Superintendent of Schools, and the primary contact person for OCPRC shall be Chris Ward, Director.
m. Remedies. No right or remedy granted herein or reserved to the parties is exclusive of any right or remedy granted by law or equity; but each shall be cumulative of every right or remedy given hereunder.
n. Authorization. The Parties have taken all actions and secured all approvals necessary to authorize and complete this Agreement. The persons signing this Agreement on behalf of

each Party have legal authority to sign this Agreement and bind the Parties to the terms and conditions contained herein.

JOINT AGREEMENT TO EXTEND
FINAL PARK ACTION PLAN DEADLINE

Date: September 9, 2026

Re: Discovery Oaks – Bowers Farm and Bloomfield Oaks – Johnson Nature Center

Pursuant to Section 4.7.1 of the respective Interlocal Agreements between Oakland County and Bloomfield Hills Schools for Bowers Farm and Johnson Nature Center, the undersigned BHS Representative and OCPRC Representative mutually agree in writing to extend the deadline for delivery of the Final Park Action Plans from September 30, 2026, to December 15, 2026.

The additional time will allow the parties to complete review of recently available planning, engineering, environmental, operational, and community-engagement information and incorporate that information into the final five-year plans for each park.

This extension applies only to the deadline for delivery of the Final Park Action Plans. All other terms and conditions of the respective Interlocal Agreements remain unchanged.

We remain committed to the successful long-term partnership between Bloomfield Hills Schools and Oakland County Parks and to the continued stewardship of Bowers Farm at Discovery Oaks and the E.L. Johnson Nature Center at Bloomfield Oaks as valued educational, recreational, and community resources.

Agreed and acknowledged:

FARM OPERATIONS AND COLLABORATION GUIDELINES

Bowers Farm at Discovery Oaks

Oakland County Parks and Recreation Commission | MSU Extension | Bloomfield Hills Schools CTE

Effective Date: 9/24/26 *Review Date:* _____

1. Purpose

These guidelines establish clear roles, responsibilities, communication expectations, and planning processes for the collaborative use of Bowers Farm at Discovery Oaks by Oakland County Parks (OCP), MSU Extension (MSUE), and the Bloomfield Hills Schools (BHS) Agriculture, Food and Natural Resources (AFNR) Career and Technical Education program. The goal is to support authentic student learning experiences while maintaining animal welfare, operational integrity, site safety, and OCP's obligations as a public park operator.

These guidelines are a coordination document. They do not independently create binding legal obligations. All enforceable commitments are established in the interlocal agreement between OCP and BHS and codified in the Integrated Park Plan (IPP).

2. Operational Authority and Leadership Structure

The following leadership structure governs all farm operations at Bowers Farm at Discovery Oaks:

- The MSUE Livestock Coordinator manages day-to-day livestock operations, animal health, breeding, and herd management.
- The MSUE Farm Manager manages day-to-day farm and agricultural operations, facilities, equipment, and grounds, and serves as a primary coordination point for BHS instructional activities alongside the Livestock Coordinator.
- The MSUE District Director provides administrative oversight of all MSUE operations at the site.
- The OCP Chief of Health and Wellness Activation retains final administrative authority over site operations in OCP's capacity as park operator.

The Livestock Coordinator and Farm Manager have complementary and distinct operational domains (see Section 3). Either may serve as the designated point of contact for a given activity depending on whether it primarily involves livestock or farm and facility operations. The CTE Instructor should direct coordination requests to the appropriate role; when uncertain, either contact may be used and will route accordingly.

Any activity involving animals, livestock facilities, farm operations, or site facilities must be communicated to and confirmed by the Livestock Coordinator or Farm Manager

before it begins. This applies to all staff, students, volunteers, and outside partners without exception.

3. Roles, Responsibilities, and Limits

The following table defines the primary domain of each role and the limits of each party's authority.

Domain	BHS AFNR CTE Instructor	MSUE Livestock Coordinator	MSUE Farm Manager
Primary role	Leads instruction, curriculum delivery, and student supervision.	Leads day-to-day livestock management, animal health, breeding, and herd management in accordance with the approved livestock management plan, budget, and established animal care protocols	Leads day-to-day farm operations, facilities, equipment, grounds, and agricultural production
Animal activities	Communicates plans and receives confirmation before conducting animal activities outside the approved monthly plan; the confirmed monthly plan serves as standing confirmation for activities listed within it. Has sole responsibility for care, oversight, and basic husbandry of School-Based Enterprise SAE animals including outside class time, under MSUE oversight (see Section 6)	Approves and oversees all activities involving livestock; issues confirmation for animal-related requests in a timely manner	Coordinates non-livestock farm and facility activities; supports animal activity logistics as needed
Veterinary care	May include veterinary professionals in planned instructional activities with advance approval; does not contact or schedule veterinary services independently	Coordinates all veterinary services; must approve any veterinary contact or visit; schedules routine appointments with reasonable consideration for	Supports veterinary logistics (facility access, records) as directed by Livestock Coordinator

		student instructional availability when practicable	
Breeding & reproduction	No independent authority; provides educational input through the planning process regarding breed selection, production cycles, and curriculum alignment. CTE instruction provides all program needs and breeding objectives in an Annual Program Overview. BHS may financially participate in breeding and reproduction activities for designated instructional herds through the Annual Program Overview, subject to facility capacity and OCP approval	Directs all breeding, reproduction, and herd development decisions. Consults with the CTE Instructor for educational input on instructional herd breeding decisions; retains final decision authority. All breeding costs funded by OCP are determined by OCP operational and public park mission priorities. For instructional herds identified in the Annual Program Overview, the Livestock Coordinator will consult with the CTE Instructor sufficiently in advance of breeding and selection decisions to discuss breeding objectives, educational priorities, and anticipated student learning opportunities. The CTE Instructor's educational input will be meaningfully considered in the planning process and, when practicable, student instructional activities will be incorporated into the breeding and selection process. Breeding direction remains with the Livestock Coordinator, as	Supports breeding operations as directed by Livestock Coordinator

		aligned with OCP site goals.	
Animal ownership & disposition	Animals funded and owned by OCP are managed and disposed of at OCP's discretion with advance notice and consultation prior to their removal. BHS may own specific animals outright, with full financial responsibility, 24/7 care responsibility, and mandatory IACUC compliance; ownership terms are documented in a written addendum	Coordinates the disposition of OCP-owned animals; provides advance notice to the CTE Instructor before the planned disposition of designated instructional animals.	Supports animal movement and facility transitions as directed by Livestock Coordinator
Facilities & equipment	Uses designated facilities and equipment consistent with confirmed annual and monthly plans; no independent facility or equipment changes	Coordinates use of livestock facilities and equipment	Manages scheduling and operational decisions for farm facilities, equipment, and grounds; primary contact for facility and equipment requests
Student supervision	Responsible for all student supervision during all farm activities at all times; students do not access farm areas independently	Does not direct student instruction; addresses animal-related chore quality concerns through CTE Instructor	Does not direct student instruction; addresses facility or equipment chore quality concerns through CTE Instructor
Planning	Submits Annual Program Overview by September 1 and monthly activity overview 5 days before each monthly coordination meeting; attends monthly coordination meeting	Provides a general livestock management plan to the CTE Instructor at the annual planning meeting to inform instructional planning. Reviews and confirms facility and operations-related planning submissions; co-leads monthly coordination meeting

Escalation	Refers unresolved issues to BHS CTE Program Administrator, who determines whether to engage the MSUE District Director directly	Refers unresolved issues to MSUE District Director and OCP Chief of Health and Wellness Activation	Refers unresolved issues to MSUE District Director and OCP Chief of Health and Wellness Activation

4. Animal Care, Biosecurity, and IACUC Compliance

All animal care, biosecurity, disease prevention, handling, and welfare practices at Bowers Farm at Discovery Oaks are governed by MSU Extension Standard Operating Procedures (SOPs) as established and maintained under the authority of the Michigan State University Institutional Animal Care and Use Committee (IACUC).

The MSUE IACUC-governed SOPs supersede all other documents, guidelines, and protocols at this site with respect to animal care and use. All parties — OCP, MSUE, BHS staff, students, volunteers, and visitors — must comply with applicable SOPs at all times while on site.

MSU IACUC will perform periodic inspections of Bowers Farm to verify compliance with applicable animal care and use standards. OCP and MSUE will cooperate fully with IACUC inspections. BHS instructional activities and student access are subject to IACUC compliance requirements and may be modified as necessary to maintain compliance.

Key Compliance Responsibilities

- The MSUE Livestock Coordinator is responsible for ensuring that all animal care, handling, and use activities at the site comply with applicable IACUC-approved SOPs.
- The MSUE Farm Manager supports SOP compliance for facility conditions, biosecurity infrastructure, and operational practices.
- The BHS CTE Instructor is responsible for ensuring that students and instructional activities comply with all applicable SOPs and any IACUC-imposed conditions on educational use of animals.
- Any activity involving animals that is not addressed in an existing SOP must be reviewed and approved through the IACUC process before it proceeds.

Emergencies

In a genuine animal health emergency where the Livestock Coordinator is unreachable and immediate veterinary intervention is necessary to prevent serious animal suffering or death, any authorized staff member present may contact emergency veterinary services. The Livestock Coordinator, Farm Manager, and MSUE District Director must be notified as soon as practicable. Emergency action taken in good faith to protect animal welfare is not a protocol violation.

5. Annual Program Plan

Prior to the start of each school year, the BHS AFNR CTE Instructor will submit an Annual Program Overview to the Livestock Coordinator and Farm Manager no later than September 1. The Annual Program Overview establishes the baseline for all monthly planning and farm activity coordination for that program year. An annual program meeting will be held before the start of the school year to review the overview collaboratively and discuss the upcoming program year.

The Annual Program Overview shall include:

- Anticipated designated instructional herds and student project animals for the program year
- School-Based Enterprise SAE animals and enterprises planned for the year, including species, anticipated numbers, facility needs, and the instructional timeline (see Section 6)
- Planned livestock-related curriculum units and key dates (lambing, calving, kidding, livestock exhibitions, fair preparation, etc.)
- Greenhouse programming priorities and production schedule intentions
- After-hours and non-school-day access needs for FFA and SAE activities (see Section 11)
- Anticipated instructional veterinary activities, career exploration days, or outside visitors
- Equipment and facility needs beyond routine access
- Summer internship and SAE supervision requests
- Any BHS financial participation in breeding or reproduction activities proposed for the program year, subject to OCP approval based on facility capacity and public park mission alignment

The Livestock Coordinator and Farm Manager will review the Annual Program Overview prior to the annual meeting and provide written confirmation, modifications, or questions within fifteen (15) days of receipt. The confirmed Annual Program Overview becomes the operational baseline for that program year and is incorporated into OCP's site management planning.

The Annual Program Overview may be updated by mutual written agreement between the CTE Instructor, Livestock Coordinator, and Farm Manager to reflect significant program changes. Minor adjustments are handled through the monthly planning process.

OCP retains operational authority over all site decisions. Where planned OCP or MSUE operational changes will materially affect a confirmed CTE activity, instructional herd, or SBE enterprise, OCP will provide advance notice to the CTE Instructor and consult before implementation when time permits. OCP is equally bound to deliver on commitments made in the confirmed Annual Program Overview.

6. School-Based Enterprise SAE Animals

Definition and Scope

A School-Based Enterprise (SBE) SAE is a group instructional enterprise in which the whole class works together during scheduled class time on a shared agricultural business or production activity. Examples include managing a flock of broiler chickens for an FFA contest, operating a greenhouse flower production enterprise, or raising and caring for a classroom animal project. Individual students track their own hours, roles, and contributions within the shared enterprise as part of their SAE records.

SBE SAE animals are distinct from individually-owned student project animals and from the designated instructional herds managed by the Livestock Coordinator. They are class-based enterprises operated during instructional time under the direct leadership of the CTE Instructor.

Instructor Responsibility

The BHS AFNR CTE Instructor has responsibility for the day-to-day care, oversight, and use of SBE SAE animals during the approved enterprise period, including feeding, watering, health monitoring, routine husbandry, and supervision of students participating in SBE activities. The Annual Program Overview shall identify expected care responsibilities during weekends, school breaks, instructor absences, and other non-instructional periods. Where continuity of care cannot reasonably be provided by the CTE program, BHS and MSUE will establish a documented backup-care arrangement before the enterprise begins.

SBE animal care is to be carried out by the CTE program, under MSUE oversight. BHS will be financially responsible for all feed related to SBE livestock projects. The Livestock Coordinator will conduct periodic welfare and husbandry check-ins at a frequency established in the Annual Program Overview. The CTE Instructor will promptly communicate concerns regarding animal health, husbandry capacity, or continuity of care to the Livestock Coordinator.

Animal Welfare Failsafe

If the Livestock Coordinator determines at any time that the welfare of SBE SAE animals is not being adequately maintained, the Livestock Coordinator will notify the CTE Instructor and document the concern. If the welfare issue is not resolved within a timeframe appropriate to the severity of the concern, the Livestock Coordinator has authority to assume care of the affected animals and notify the MSUE District Director and OCP Chief of Health and Wellness Activation. Repeated or unresolved welfare concerns will be referred to the BHS CTE Program Administrator and may result in modification or suspension of the SBE enterprise for that program year.

In cases of immediate welfare emergency involving SBE animals, the Livestock Coordinator or Farm Manager may intervene without prior notice to protect animal health and safety. The CTE Instructor will be notified as soon as practicable.

Planning and Support

Each SBE SAE enterprise must be included in the Annual Program Overview submitted by September 1, identifying the enterprise type, species, anticipated animal numbers, facility and equipment needs, the instructional timeline, and the expected care responsibilities during non-instructional periods and school breaks.

Monthly planning submissions will include the current status of active SBE enterprises, any animal care needs that extend beyond class time, and any changes to the enterprise that affect facilities, animal numbers, or operational support needs.

OCP and MSUE will make reasonable efforts to support SBE SAE enterprises as part of Bowers Farm's educational mission. Any operational support needed from the Livestock Coordinator or Farm Manager must be identified in the Annual Program Overview and confirmed through the monthly planning process. Support that is not planned in advance cannot be assumed.

IACUC Compliance

All SBE SAE animals and enterprises are subject to MSUE IACUC-approved SOPs. The CTE Instructor is responsible for ensuring that SBE activities comply with applicable SOPs at all times.

7. Authentic Learning Experiences: Chores and Daily Animal Care

A core purpose of Bowers Farm is to provide students with authentic agricultural experiences, including the routine daily work of animal husbandry — feeding, watering, cleaning, health observation, and hands-on animal care. OCP and MSUE recognize the educational value of these activities and will make every reasonable effort to support student participation in chores and daily animal care as part of the instructional program.

All student chore and animal care activities must occur under the direct supervision of the CTE Instructor. Students will not perform chores or conduct animal care independently at any time. The CTE Instructor is responsible for teaching correct procedures before assigning chores, monitoring completion, and ensuring all work is done safely and consistently.

Chore assignments and routines that affect livestock operations must be coordinated and confirmed in advance with the Livestock Coordinator. Chore assignments and routines that affect farm facilities or grounds must be coordinated and confirmed in advance with the Farm Manager. Chore assignments will be reflected in the monthly planning process.

If the Livestock Coordinator or Farm Manager identifies concerns with chore quality or completion, those concerns will be communicated directly to the CTE Instructor, who will provide additional instruction or supervision. Operational decisions about animal care resulting from chore deficiencies remain with the Livestock Coordinator.

The Livestock Coordinator and Farm Manager are responsible for maintaining current chore instructions and communicating planned changes to animal care or management

in advance through the planning process or direct communication, allowing the CTE Instructor adequate time to prepare students for upcoming livestock activities.

8. Monthly Planning

The BHS AFNR CTE Instructor, the Livestock Coordinator, and the Farm Manager will meet monthly during the academic year to coordinate the upcoming month's farm activities. The monthly meeting is a working session that produces a confirmed Monthly Activity Plan aligned to the Annual Program Overview.

Monthly Overview Submission

No later than five (5) days before each monthly coordination meeting, the CTE Instructor will submit a written monthly overview to the Livestock Coordinator and Farm Manager by email. The overview shall include:

- Anticipated student farm activities and animal use
- Status and needs of active School-Based Enterprise SAE enterprises
- Planned lessons, demonstrations, or projects involving livestock or facilities
- Special events, outside visitors, or instructional veterinary activities
- Livestock, facility, supply, or equipment needs beyond routine access
- Any requests that may affect animal care or farm operations

Livestock Coordinator and Farm Manager Preparation

No later than the monthly coordination meeting, the Livestock Coordinator and Farm Manager will be prepared to provide updates on:

- Upcoming livestock management activities and dates — breeding, lambing, kidding, calving, health work, treatments, vaccinations, or animal movement
- Animal care and husbandry priorities that may affect student chores, access, or instructional activities
- Facility, equipment, or maintenance activities that may affect livestock areas or student access
- Planned farm events, visitors, or operational activities that may affect the CTE program or animal use
- Changes in livestock plans or management priorities that may require coordination with the CTE Instructor
- Opportunities for student involvement in upcoming livestock activities, demonstrations, or management tasks

Monthly Activity Plan

During or within three (3) days following the monthly meeting, the Livestock Coordinator and Farm Manager will issue a confirmed Monthly Activity Plan reflecting agreed activities, scheduling, and any operational adjustments. The Monthly Activity Plan is the

operative document for that month's farm activities. Activities not included in the confirmed Monthly Activity Plan require advance communication to and confirmation from the Livestock Coordinator or Farm Manager before proceeding.

If the Monthly Overview Is Not Submitted

If the CTE Instructor does not submit a monthly overview by the five-day deadline, the Livestock Coordinator or Farm Manager will send a reminder. If the overview is not received before the monthly meeting, the Monthly Activity Plan will be developed from the Annual Program Overview and known operational priorities. Activities or requests not reflected in the Annual Program Overview will not be incorporated into that month's plan and may not proceed until the next planning cycle or until a mid-month request is submitted and confirmed. OCP is equally bound to deliver on what the Annual Program Overview commits to, regardless of whether a monthly overview is submitted.

If the Monthly Activity Plan Is Not Followed

Deviation from a confirmed Monthly Activity Plan — including unannounced animal activities, unsupervised student access, or facility use outside confirmed parameters — is a protocol violation. The Livestock Coordinator or Farm Manager will document the deviation and notify the MSUE District Director and OCP Chief of Health and Wellness Activation. Repeated or significant deviations will be referred to the BHS CTE Program Administrator and may result in modification of access and coordination terms for the remainder of the program year.

9. Communication and Confirmation Before Farm Activities

The confirmed Monthly Activity Plan serves as standing confirmation for all activities listed within it. Before any activity outside of the approved monthly plan involving animals, livestock areas, farm facilities, or farm operations, the CTE Instructor will communicate the plan to the Livestock Coordinator or Farm Manager and receive written or verbal confirmation. Without confirmation, the activity will not proceed.

When an unforeseen circumstance related to health, welfare, safety, weather, or logistics prevents the CTE Instructor from carrying out a previously planned activity, the CTE Instructor will communicate the need to pivot as soon as possible and request confirmation for an alternative activity. Such circumstances are the exception; the authentic daily work of the farm is the expectation. Convenience or scheduling preference is not sufficient basis for an unplanned pivot.

The Livestock Coordinator or Farm Manager will acknowledge and respond to routine CTE requests within two (2) business days when practicable. Requests requiring additional review will receive an acknowledgment identifying the expected decision timeline. If the designated contact is unavailable or does not respond within the established timeframe, the request may be elevated to the designated secondary contact or appropriate administrator. A lack of response does not constitute approval.

Activities requiring advance communication and confirmation include but are not limited to:

- Moving, separating, combining, loading, or transporting animals
- Cleaning stalls, pens, barns, or livestock areas
- Changing feeding, watering, turnout, bedding, or care routines
- Using animals for lessons, projects, demonstrations, or events
- Changing animal housing or access to facilities
- Purchasing, acquiring, selling, rehoming, or otherwise transferring animals
- Using or purchasing livestock-related supplies or equipment
- Making facility changes that affect animals or farm operations

Urgent animal welfare or safety concerns must be reported to the Livestock Coordinator and Farm Manager immediately. If neither is reachable, emergency response procedures under Section 4 apply.

10. Veterinary Care and Instructional Veterinary Activities

Routine and Non-Emergency Care

Animal health concerns will be communicated promptly to the Livestock Coordinator. The Livestock Coordinator coordinates all veterinary services to ensure continuity of care, appropriate records, and treatment decisions consistent with IACUC-approved SOPs. The CTE Instructor will not contact, schedule, or engage veterinary services independently for routine or non-emergency care.

Instructional Veterinary Activities

Veterinary professionals may participate in planned instructional activities at Bowers Farm — including career exploration days, demonstrations, classroom visits, and curriculum-integrated farm visits — provided the activity is included in the Annual Program Overview or submitted as a monthly planning request and confirmed by the Livestock Coordinator in advance. Instructional veterinary activities must be consistent with applicable IACUC-approved SOPs.

Veterinary visits involving livestock will be coordinated to support both animal care needs and student learning. Scheduled appointments should, when reasonably practicable, align with CTE student availability and instructional schedules while remaining responsive to staff availability and the condition and needs of the animal. The CTE Instructor and Livestock Coordinator will communicate in advance to identify appropriate opportunities for students to observe or participate in veterinary activities. The supervising veterinarian retains discretion regarding student participation based on animal welfare, safety, and professional judgment.

Confirmed instructional veterinary activities are an appropriate use of Bowers Farm's educational mission and are encouraged where operationally and IACUC-compatible.

Emergencies

See Section 4. Emergency veterinary contact when the Livestock Coordinator is unreachable is not a protocol violation.

11. FFA, SAE, and After-Hours Student Access

General Scope

After-hours and non-school-day access by BHS students for FFA activities, Supervised Agricultural Experiences (SAE), livestock projects, chores, showmanship practice, or related agricultural education activities involves distinct considerations related to supervision, liability, site security, animal welfare, biosecurity, and public park operations that are not present during the regular instructional day.

Bowers Farm barn, livestock, and animal facilities are not open to general public access. Access to these areas at any time — including after hours — requires advance scheduling and approval as described in this section. BHS students, parents, and family members do not have an independent right of access to these facilities outside of approved and scheduled activities.

No Independent Student Access

BHS students are not permitted to access the barn, livestock areas, animal facilities, or farm facilities independently at any time — before school, after school, on weekends, or during breaks. All after-hours student presence on site must be tied to a specifically approved activity with an identified supervising adult, as defined in the access pathways below.

Approved After-Hours Access Pathways

A BHS student may be present at Bowers Farm after hours only under one of the following approved pathways. All pathways require advance scheduling and confirmation through the Annual Program Overview, Monthly Activity Plan, or separate written confirmation from the Livestock Coordinator or Farm Manager.

Pathway 1: 4-H Enrolled Youth Participating in a Scheduled 4-H Activity

Students enrolled as 4-H members may participate in scheduled, MSU Extension-approved 4-H activities at Bowers Farm. Access under this pathway is permitted only during the approved activity window, in the approved locations, and when MSU Extension staff or currently screened and MSU Extension-approved 4-H volunteers are present. Enrollment in 4-H alone does not authorize access to Bowers Farm facilities. Youth, families, and volunteers are not permitted to access farm facilities outside of approved program times, even if enrolled in 4-H.

Pathway 2: Scheduled Activity Supervised by the BHS AFNR CTE Instructor

Students may participate in after-hours farm activities directly supervised by the BHS AFNR CTE Instructor. The CTE Instructor must be physically present and actively supervising for the duration of the activity. Access is limited to the specific time, location, animals, and activities confirmed in advance by the Livestock Coordinator or Farm Manager. No other BHS employee or representative may serve as the supervising adult under this pathway without prior written approval from the Livestock Coordinator or Farm Manager, identifying the individual by name and role.

Written Access Standards

Before the start of each academic year, OCP and MSUE will provide BHS with the applicable written standards for FFA and SAE after-hours access, including eligibility requirements, supervision standards, permitted hours, access procedures, animal care responsibilities, emergency procedures, and applicable liability requirements. These standards will be incorporated into the Annual Program Overview and reviewed annually.

Only students age 18 or older may operate approved farm equipment, and only with prior authorization, training, and direct supervision.

The CTE Instructor may operate designated farm equipment and vehicles/trailers for approved instructional and livestock-management activities, subject to applicable OCP/MSUE training, authorization, and safety requirements, and coordination of use with Livestock Coordinator/Farm Manager.

Biosecurity and Compliance

All after-hours participants — students, supervising adults, and any accompanying individuals — must comply with MSUE IACUC-approved SOPs and all applicable biosecurity, safety, and facility-use protocols for the duration of their time on site. The supervising adult is responsible for ensuring compliance by all individuals in their group. Individuals who do not comply with biosecurity or facility protocols may be removed from the site and future access may be suspended pending review by the Livestock Coordinator and OCP Chief of Health and Wellness Activation.

12. Working Together

The BHS AFNR CTE Instructor, the MSUE Livestock Coordinator, and the MSUE Farm Manager have complementary and distinct roles. The CTE Instructor leads instruction and student supervision. The Livestock Coordinator leads day-to-day livestock management. The Farm Manager leads day-to-day farm operations and facilities. No party acts unilaterally in another's domain.

Final administrative authority rests with the MSUE District Director and OCP Chief of Health and Wellness Activation. All parties will communicate proactively, respect one another's expertise, and work together in support of students, animals, and the broader mission of Bowers Farm at Discovery Oaks.

All activities at Bowers Farm are conducted in compliance with MSU IACUC-approved Standard Operating Procedures, which supersede all other site-level guidelines and protocols with respect to animal care and use.

STRATEGIC & MASTER PLANNING

3 PHASE PROCESS

Phase 1
Facility & Market Analysis
(Aug – Nov 2022)

Phase 2
Strategic Planning
(Nov 2022 – Jan 2023)

Phase 3
Master Planning
(Jan 2023 – May 2023)

Define our starting point

- Assess current site, facilities and operations
- Assess current market performance
- Identify SWOT

Define our Destination

- Identify goals and vision for next 5 yrs.
- Define the strategies and action plan to reach these goals

Create a Roadmap for Implementation

- Design the program and site plan for Farm improvements
- Identify key stories and overarching messages for guest experience
- Phased diagrams and illustrations to build stakeholder excitement and assist with fundraising efforts

PHASE 1 EXECUTIVE SUMMARY

The Bowers School Farm is a unique and powerful asset for the Bloomfield Hills communities. Originally created in 1967 to support the school district's agriculture education efforts, the facility today not only strengthens the Bloomfield Hills Schools' formalized education program but also provides authentic, hand-on learning opportunities for community residents (primarily up to a thirty-minute drive time). It is a working farm that welcomes all ages seeking to inspire lifelong curiosity and positive change through engaging and meaningful experiences with agriculture, food, and sustainable natural resources.

SITE & FACILITY ANALYSIS

Sited on almost 95 acres, developed areas supporting the farm's operations is primarily focused in one defined area centrally located at the south edge along E. Square Lake Rd. While the location of this 'main village' is advantageous in welcoming students and visitors and acting as a hub for agricultural activities, it is disconnected from the developments supporting events located at the southeast corner of the site. Reconfiguring existing programmatic elements in the master plan will improve farm operations and user experiences if the following are addressed:

- More efficient site layout of existing and new attractions
- Improved physical accessibility and visitor wayfinding
- Clear delineation of user spaces – employees, students, volunteers and visitors
- More effective water management onsite
- Improved and intentional design improvements to make the Farm more aesthetically pleasing and take advantage of the beautiful landscape

Many of the facility's buildings and infrastructure systems are aging or no longer serve the needs of the farm. Of particular concern are the utilization of the historic structures onsite to integrate into the Farm's story, as well as their functionality related to animal wellness and guest accessibility. Additionally, through a team evaluation of the facilities based on age/condition, functionality/efficiency, and guest experience, the sewer infrastructure, production gardens, Academy Café, Root Cellar, Horse & Goat Barn, and Bowers Cottage were all identified as most critical to be improved in the near future.

An Accessibility Evaluation was completed by an Inclusive Recreation and Accessibility Consultant (Cynthia Burkhour) who evaluated the site and all facility spaces for accessibility compliance. The site is currently very limiting for people of varying abilities, especially those with limited mobility. Some key recommendations include:

- Redesigning noted pathways for appropriate slopes and surface materials to facilitate accessibility for all abilities.
- Providing information about accessibility on the Farm's website, at the Visitor Information Center and on signs located across the site.
- Providing all-terrain wheelchairs to help with navigating less accessible routes
- Considering other methods for engaging visitors in areas where accessibility cannot be achieved (e.g. moving animal demonstrations on busy days, using mirrors or photographs to visually communicate concealed areas, etc.)

CURRENT PROGRAMS

While most of the education and community programs currently target K-12 students, Bowers School Farm does offer programs and events focused on engaging the community and adults throughout the year. The Farm Store and Events (Winter Park, Fall Festival, and Bourbon & Brews) were noted by several in the community as effective means of engagement as well as opportunities for the Farm to expand its offerings. Community members also expressed a strong desire for the Farm to expand their capacities related to Camp programs, including expansion into the school year.

PERFORMANCE ANALYSIS

The Felis Consulting team analyzed attendance data and revenue data to understand how the site/facilities and business overall is performing. Our attendance analysis confirmed that the toilet and parking capacities meet the Farm's needs for today, but any increases in attendance will strain these amenities. The business analysis highlights the complications in the current public-private hybrid management and funding structure but showcases the potential for growth in community focused revenue streams. Revenue streams most promising include those related to food, retail, site rentals, events, education programs, and membership programs.

COMPETITION & BENCHMARKING

Competitors for Bowers School Farm include other farm experiences, along with Farmers Markets and businesses providing animal experiences. When looking at the competitive landscape, we highlighted top competitors based on the following categories:

- Education (student programs and field trips)
- Visitor Experience
- Resource for Local Food
- Event Spaces
- Fundraising
- Volunteers

Competition assessment included site visits and online research and was focused on helping the Farm understand what makes them unique. Qualities that differentiate the Bowers School Farm experience from others included the following.

- Authentic, credible, and relatable
- Strong relationships created with visitors and community
- The Farm's unique story

BRAND & PUBLIC PERCEPTION

The Felis Consulting team conducted three stakeholder workshops and a public engagement survey to gather data supporting the perception of the Farm, as well as brainstorm ideas for improvement. The results confirmed that the community recognizes and values the roles the Farm plays, both in supporting the BHS education program and in providing learning opportunities and agriculture experiences for people of all ages. Guests today are visiting the Farm for events, to view or interact with the animals, make purchases in the Farm Store, or participate in programs. Additionally, they are hoping to see more events, programs, interpretation, longer hours and more things to do during Farm visits. One of the most noted barriers for visitation is a lack of awareness especially related to events, programs, and generally what there is to do at the Farm.

While perceptions of the Farm are very positive, many visitors noted a lack of value—particularly wanting more for the price of admission. However, throughout all the public engagement touch points, the community expressed a strong desire to NOT commercialize (i.e. Farm-Amusement) and want the Farm to focus on educational experiences that build community within the BHS market.

SWOT

Using feedback from our public engagement efforts and internal workshops with key stakeholders (Farm Staff, BHS Central Office, Bowers Academy, Friends of the Farm), we outlined the Farm's internal strengths and weaknesses as well as external opportunities (trends/events that the Farm can use to support its growth) and threats (trends/events that can derail growth efforts.) These will be key in Phase 2 as we identify the Strategic Plan goals and strategies for 2027.

STRENGTHS

Farm Features, Programs & Attractions

Unique attraction (a farm in the city/suburbs)

Hands-on, authentic, intimate and educational experiences with agriculture are well received by the community

Large plot of land (93 acres) with diverse features (lake, gardens, pasture, woods)

Easy access from I-75

Historic structures provide additional education opportunities and strengthen story

Unique and engaging animal experiences

Farm Store with popular food offerings – fresh produce, farm raised meat, ice cream and pizza

Team & Internal Culture

Strong, talented, motivated and effective team

Friendly and relatable staff and teachers

Passionate and engaged volunteer groups

Active Friends of the Farm group

Events

Successful events that attract wider and more diverse audiences

“Farm to Table” events have been well received

Brand & Public Perception

Ongoing community support of the Farm is conveyed through the following.

- Strong (and growing) membership program
- Community Garden participation
- Summer Camp enrollment
- Excitement about current food products

Safe & secure environment and other positive perceptions

WEAKNESSES

Team & Internal Culture

Additional staff needed for any future growth

Employee benefits, work-life balance and focus on mental health

Current hiring constraints and limited HR capacity makes hiring new employees for the Farm a difficult process

Farm would benefit from stronger representation and positioning in BHS

Farm Features, Programs & Attractions

Land – more efficient layout for operations and use

Outgrown current facilities esp. kitchen, staff spaces & storage

Maintenance / replacement plan needed for aging facilities

New (and designated) quarantine facility

Production garden is not visible to public

Farm does not function as a community gathering space

Continued growth and efficient management of community and school farm education programs

Longer and more consistent hours for the Farm Store

Growth and retention in Membership

Limited recycling and no composting

Physical accessibility of the site

Limitations in reaching underrepresented and underfunded communities outside of BHS

Brand & Public Perception

Farm story is not told consistently

Stronger marketing strategy for Farm’s current offerings

New PR/Communications plan to communicate the Farm’s story and manage unforeseen events

OPPORTUNITIES

New Markets

Interested public audience presents opportunities for better communication and engagement

Strong demand for community programming and events

Customer and volunteer pools are growing among the following groups

- Retiring Boomers who are looking for something to do
- People looking for a greater purpose in life

Ropes courses could be used to target organizations looking for team building experiences

Moving Membership under Friends of BSF could help shift perception from “customer” to “farm supporter”

- Manages expectations of “what do I get for my membership”
- Strengthens sense of ownership for the Farm

Funding

Economic downtowns result in increased BHS student enrollment

Large pool of potential donors in the BHS area

Grants are available through the Dept. of Natural Resources to assist with improving accessibility issues

Food

Popular food trends could open new revenue sources

Partnership with Aramark to provide food to BHS

Expanded Farm to Table events

Operations

New technology is available today for more efficient farm operations with less staff

Friends of the Farm organization could play a greater role in managing and growing community focused initiatives for maximum success in overcoming current staffing and funding barriers

THREATS

BHS Board & Community

Private school attendance continues to limit the following.

- Financial support
- Students reached through field trips and BHS programs

Aging population in the BHS area and low inventory of homes to attract new families reduces current (primary) target audience.

Operations

The following issues impact staffing.

- Retaining current staff and attracting new staff as many are looking elsewhere for jobs that pay more for less work
- Hiring process and training takes time

Public Perceptions

Community perception that access fees should be “covered by the school taxes they already pay”

Food is typically viewed as a commodity among some audiences.

- People with less disposable income
- Older generations

Animal related diseases negatively impact attendance

Animal deaths and/or animal activist groups could result in negative backlashes that impact attendance, guest perception and brand

SECTION 1:

WHAT IS THE FARM TODAY?

VISION & MISSION STATEMENT

Vision

We are growing a better future by:

- Cultivating community
- Inspiring learners to find purpose & create change
- Engaging visitors through meaningful & memorable experiences

Mission Statement

We welcome every learner to discover and wonder in the world around them. We encourage a lifetime of informed choices in the agriculture, food and natural resource systems.

Both the Farm and the Nature Centers share a common purpose - to inspire authentic learning through hands-on experiences.

DEI STATEMENT

We are committed to building a community focused on health, healing and the sustainability of all life on earth.

- Place: We will cultivate attention to the beauty and wonder of nature, the harvest and the interconnectedness of all living things.

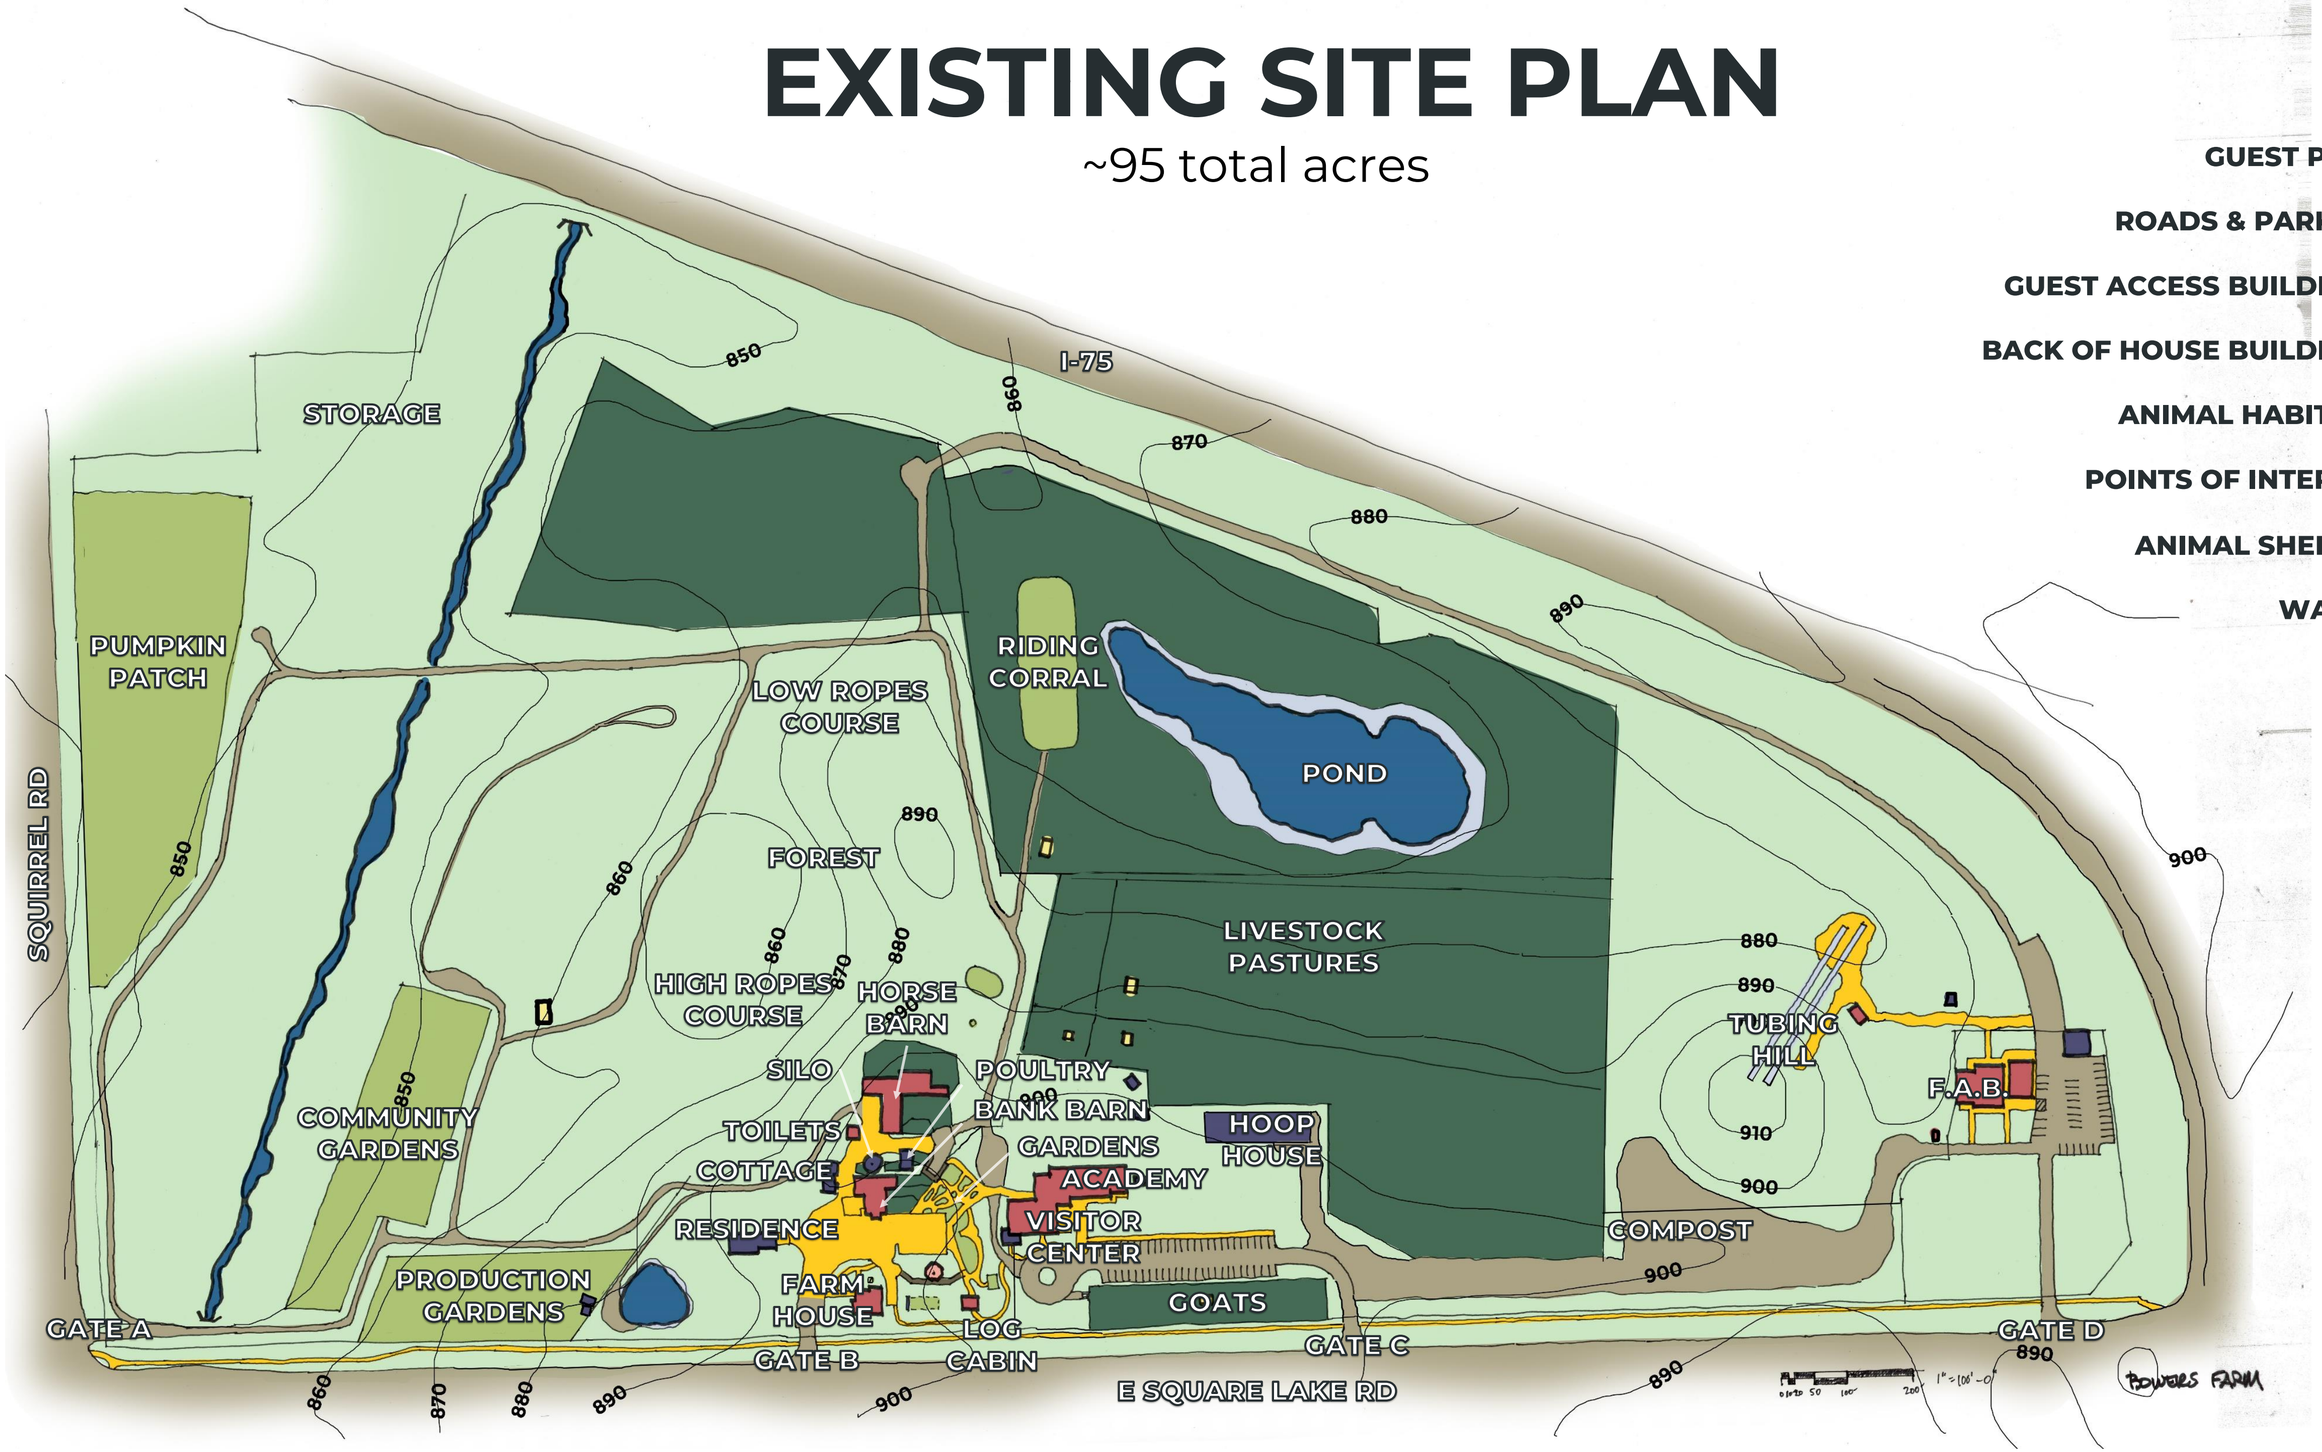
- Inquiry: We will partner with all members of our community to draw in a wide range of strengths and knowledge in order to design and provide educational experiences that promote equity and compassion for all. We will do so through a process that is rooted in inquiry and reciprocity.

- Civic engagement & action: We will develop awareness and inspire positive change by welcoming, engaging and supporting our local community members and visitors.

SITE ANALYSIS

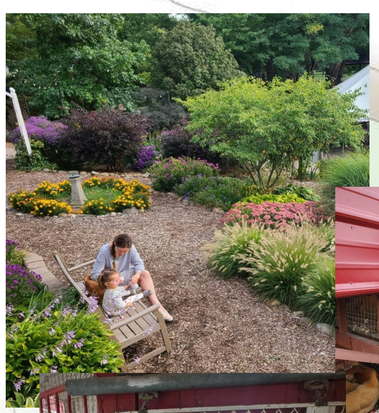
What is the current state of the physical facility?
What are potential opportunities and challenges to development?

EXISTING SITE PLAN



~95 total acres

- GUEST PATH
- ROADS & PARKING
- GUEST ACCESS BUILDINGS
- BACK OF HOUSE BUILDINGS
- ANIMAL HABITATS
- POINTS OF INTEREST
- TREES & VEGETATION
- ANIMAL SHELTER
- WATER



EXISTING SITE PLAN

~95 total acres

- GUEST PATH
- ROADS & PARKING
- GUEST ACCESS BUILDINGS
- BACK OF HOUSE BUILDINGS
- ANIMAL HABITATS
- POINTS OF INTEREST
- ANIMAL SHELTER

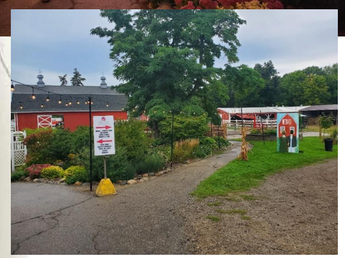
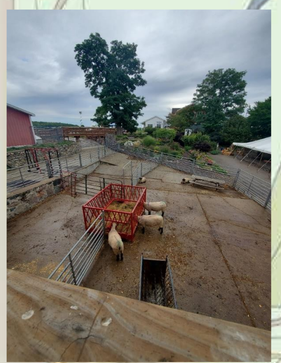
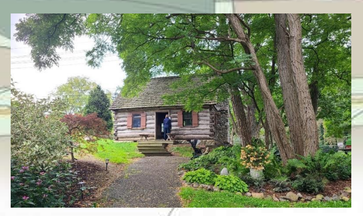
EXPERIENTIAL ANALYSIS

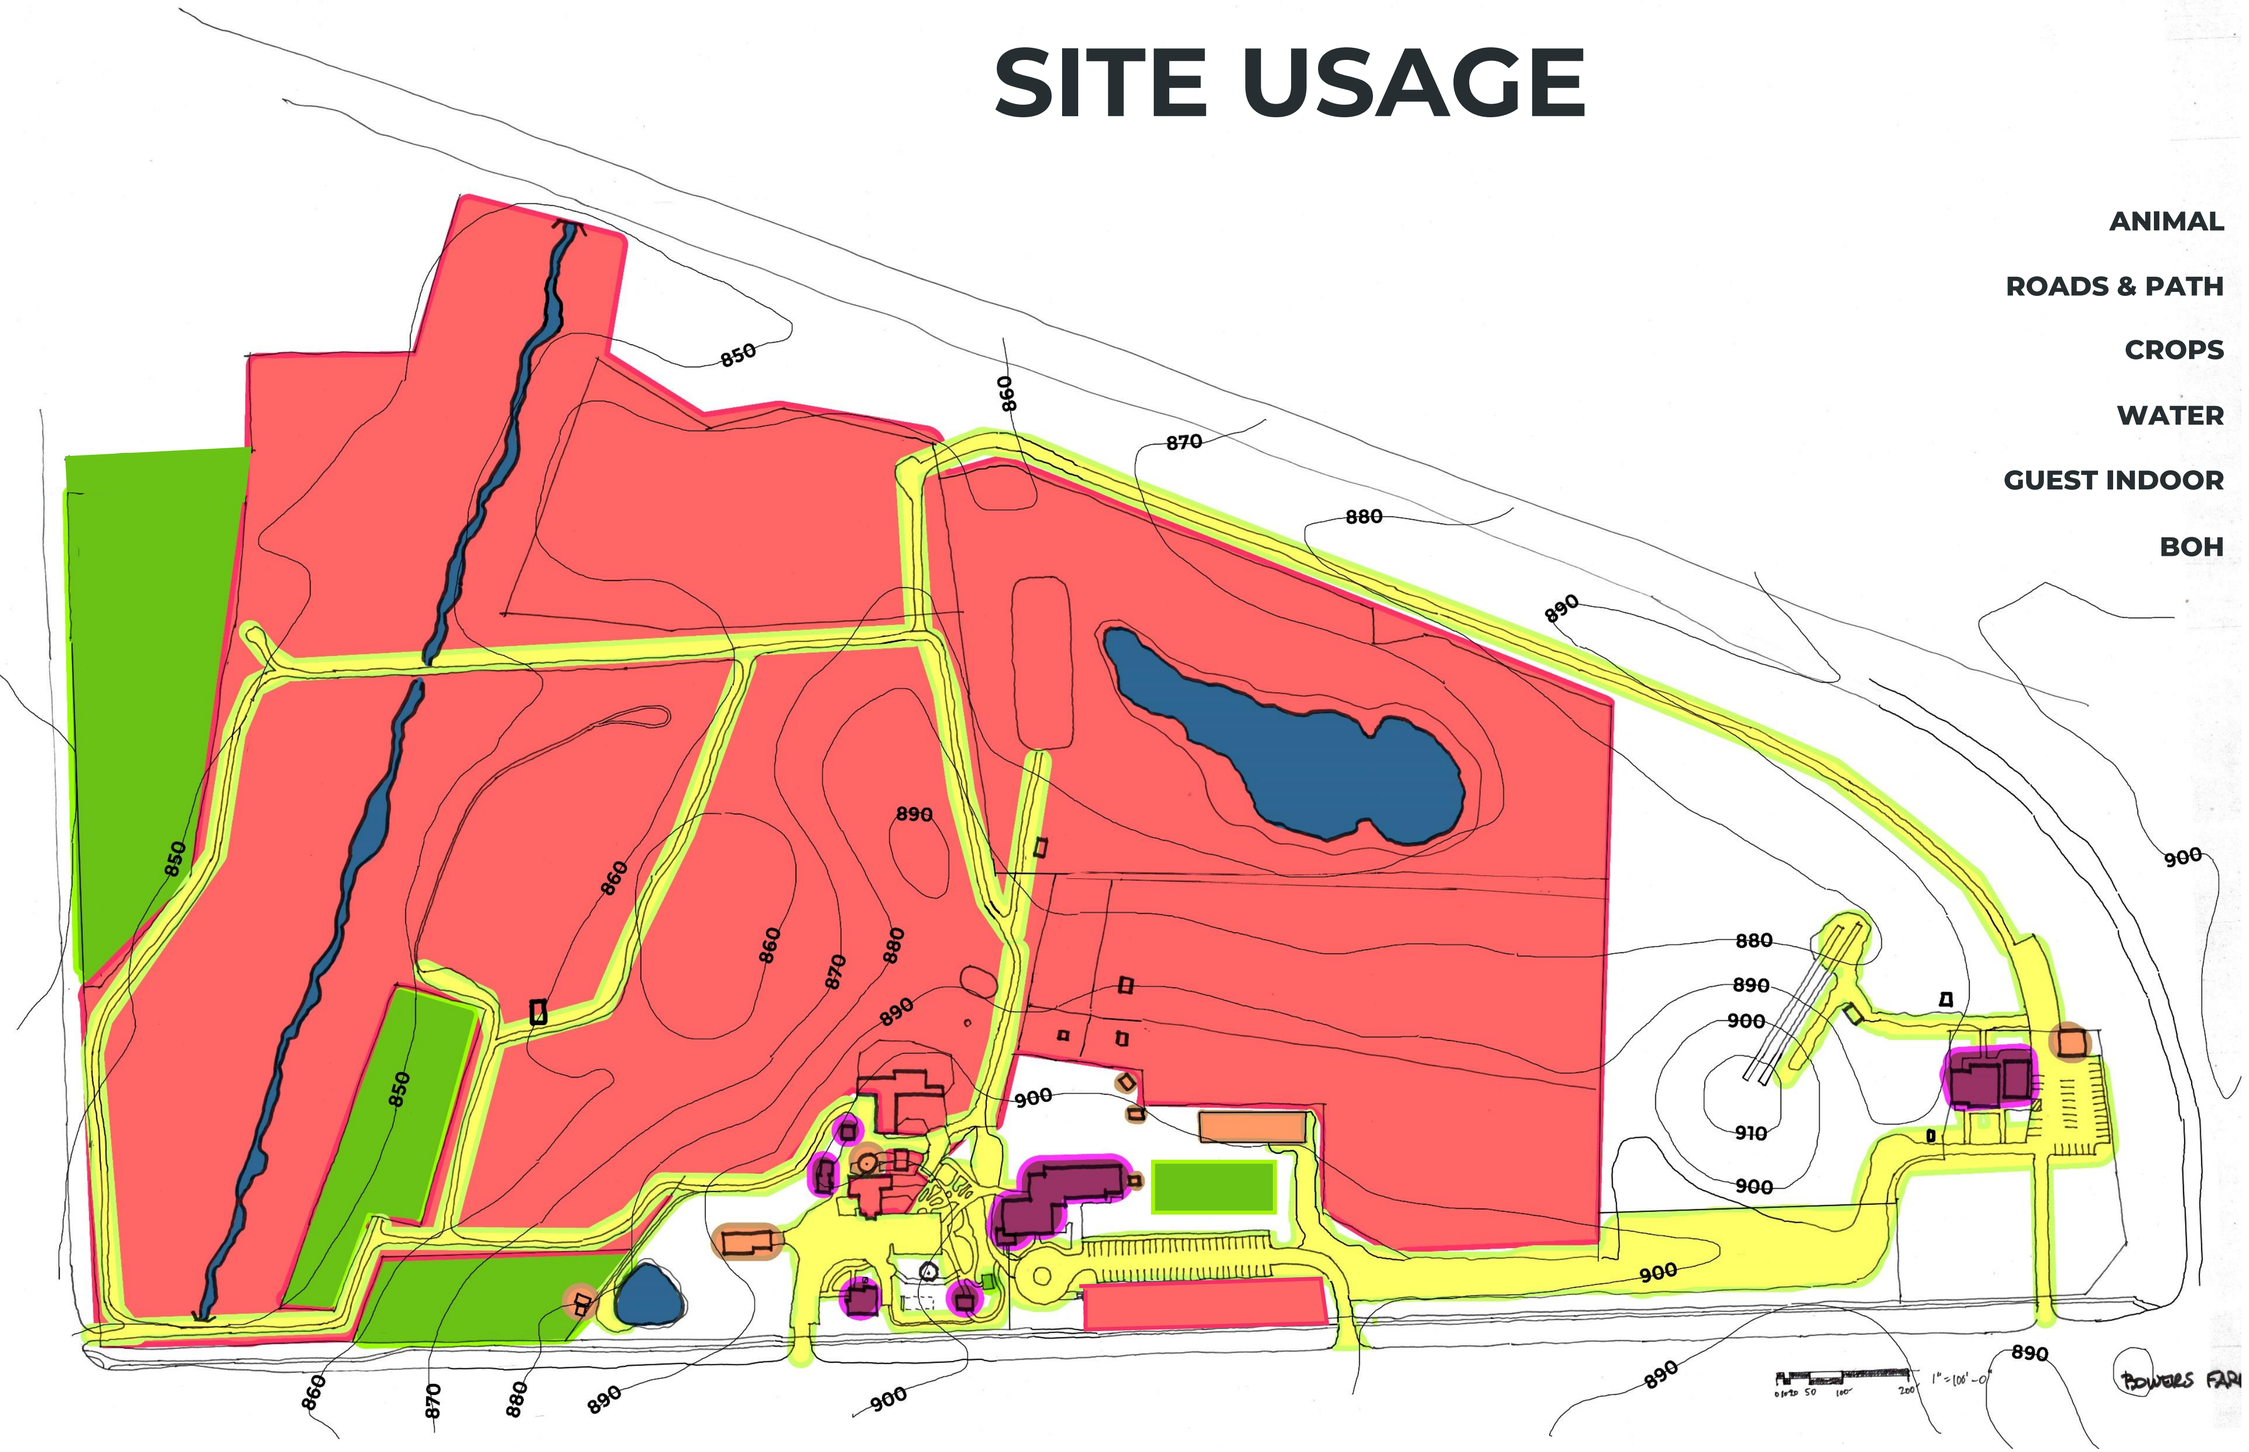






SPECIAL PLACE

GOOD VIEW



NEGATIVE VIEW

CONFUSION

MISSED OPPORT.

NOISE

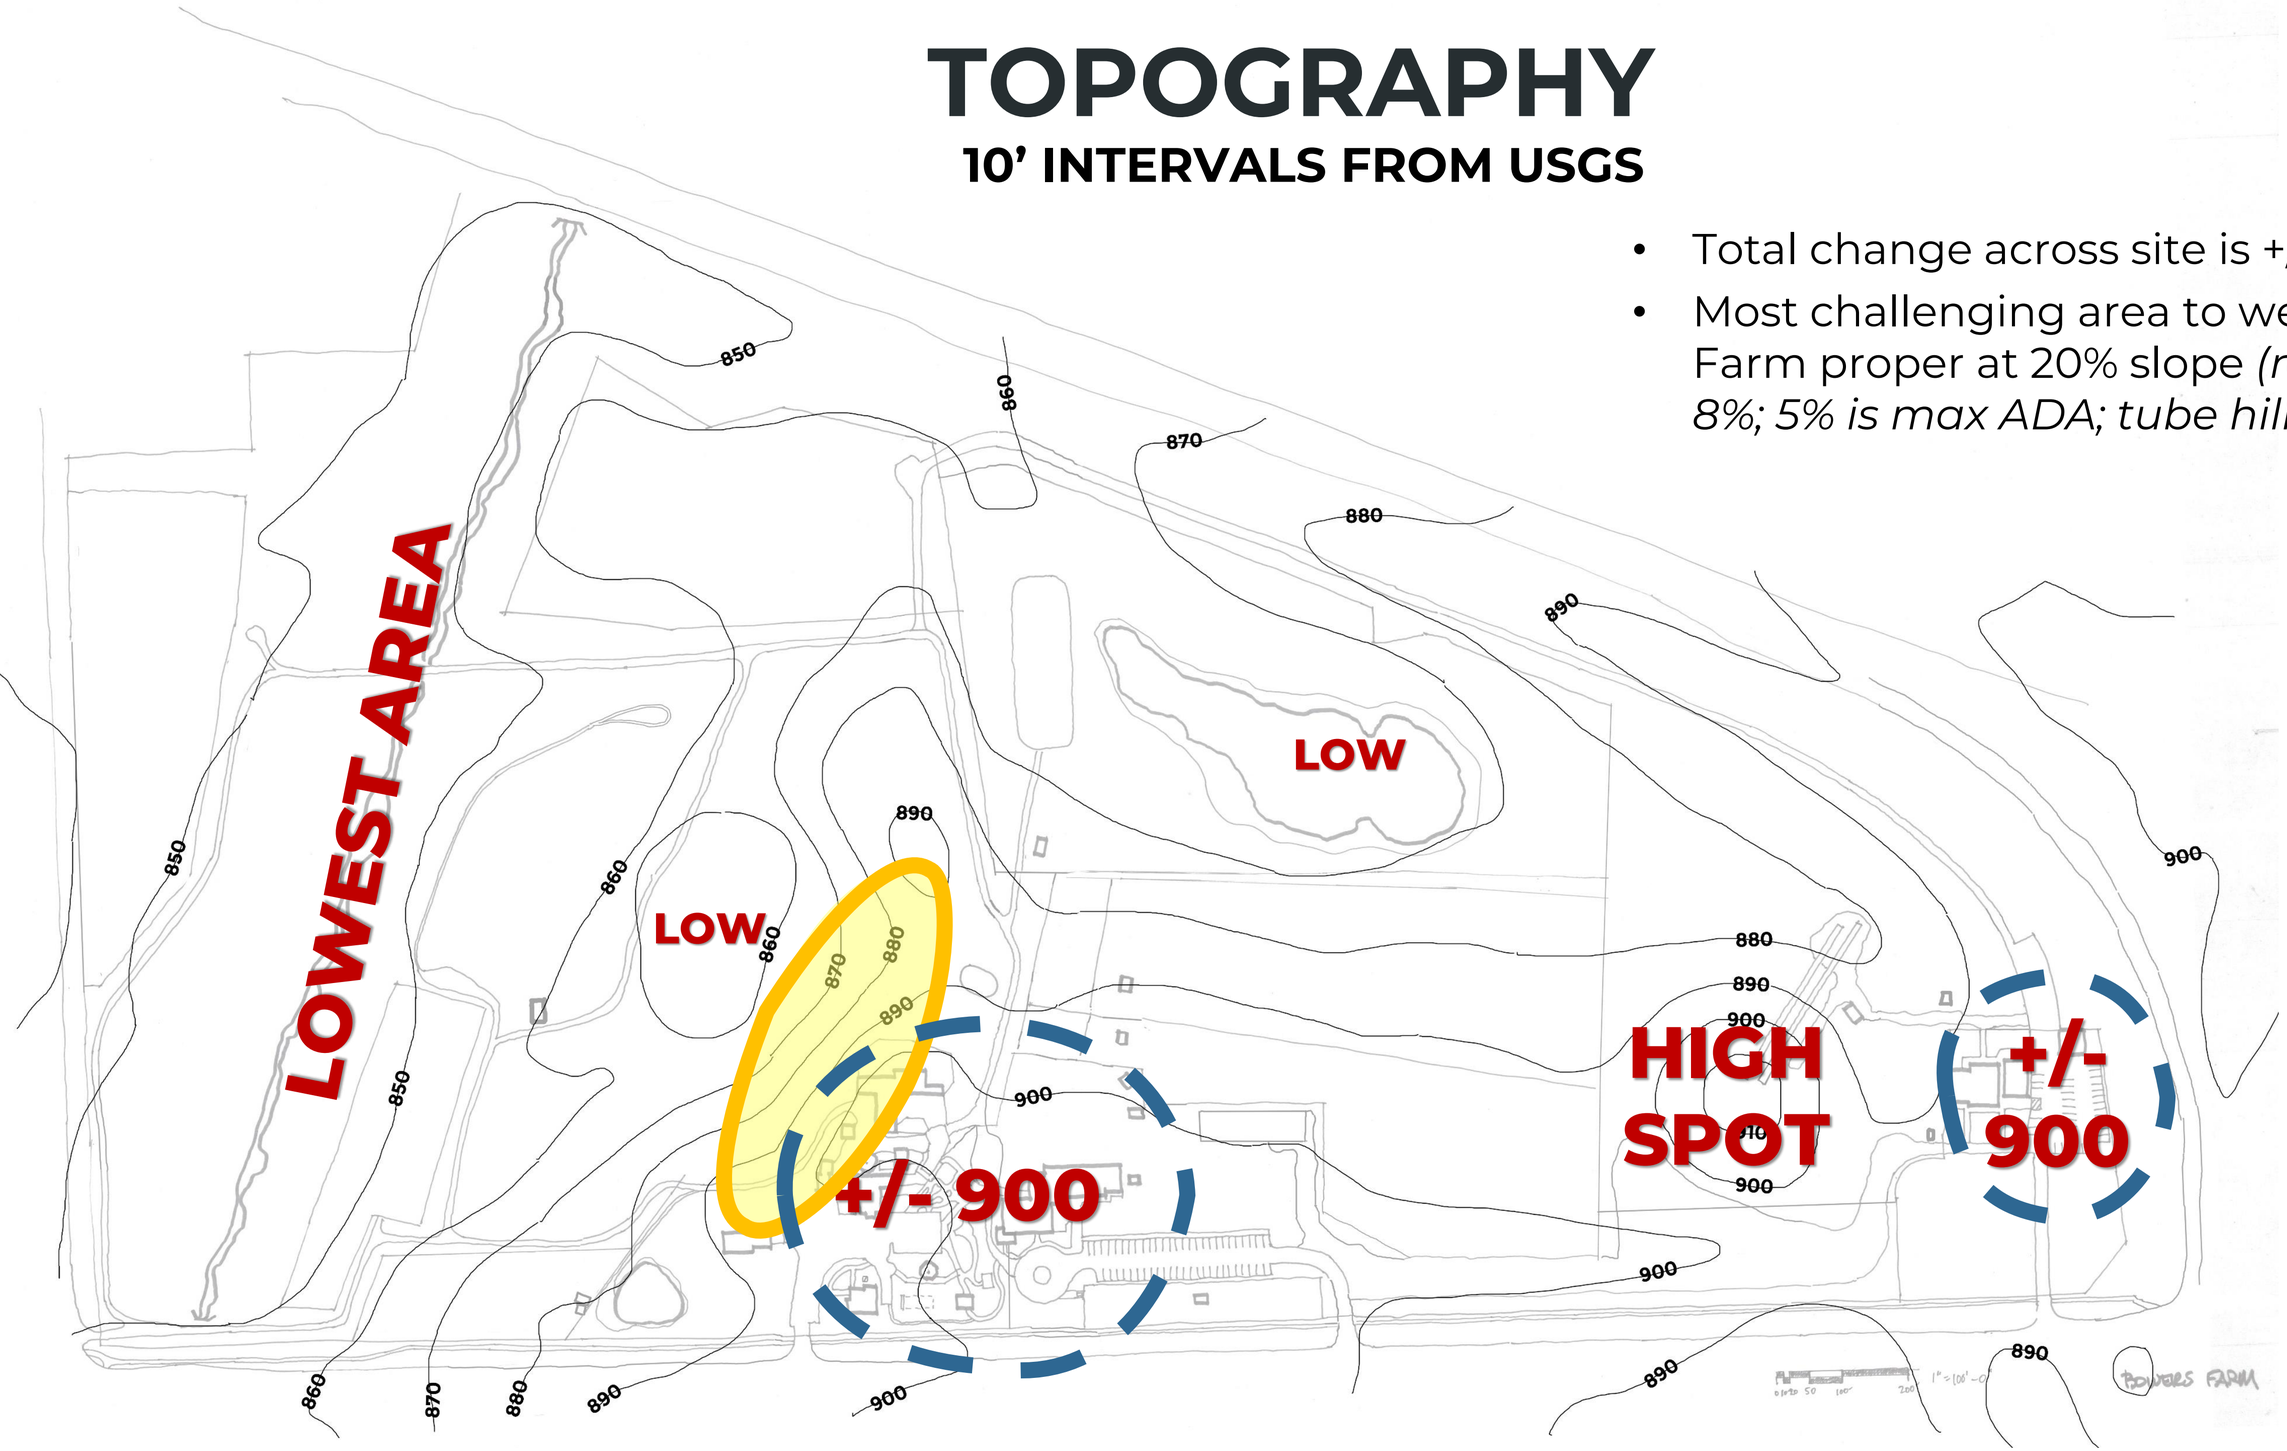
SITE USAGE

	PERCENT OF TOTAL
ANIMAL	57%
ROADS & PATH	8%
CROPS	6%
WATER	3%
GUEST INDOOR	0.7%
BOH	0.5%

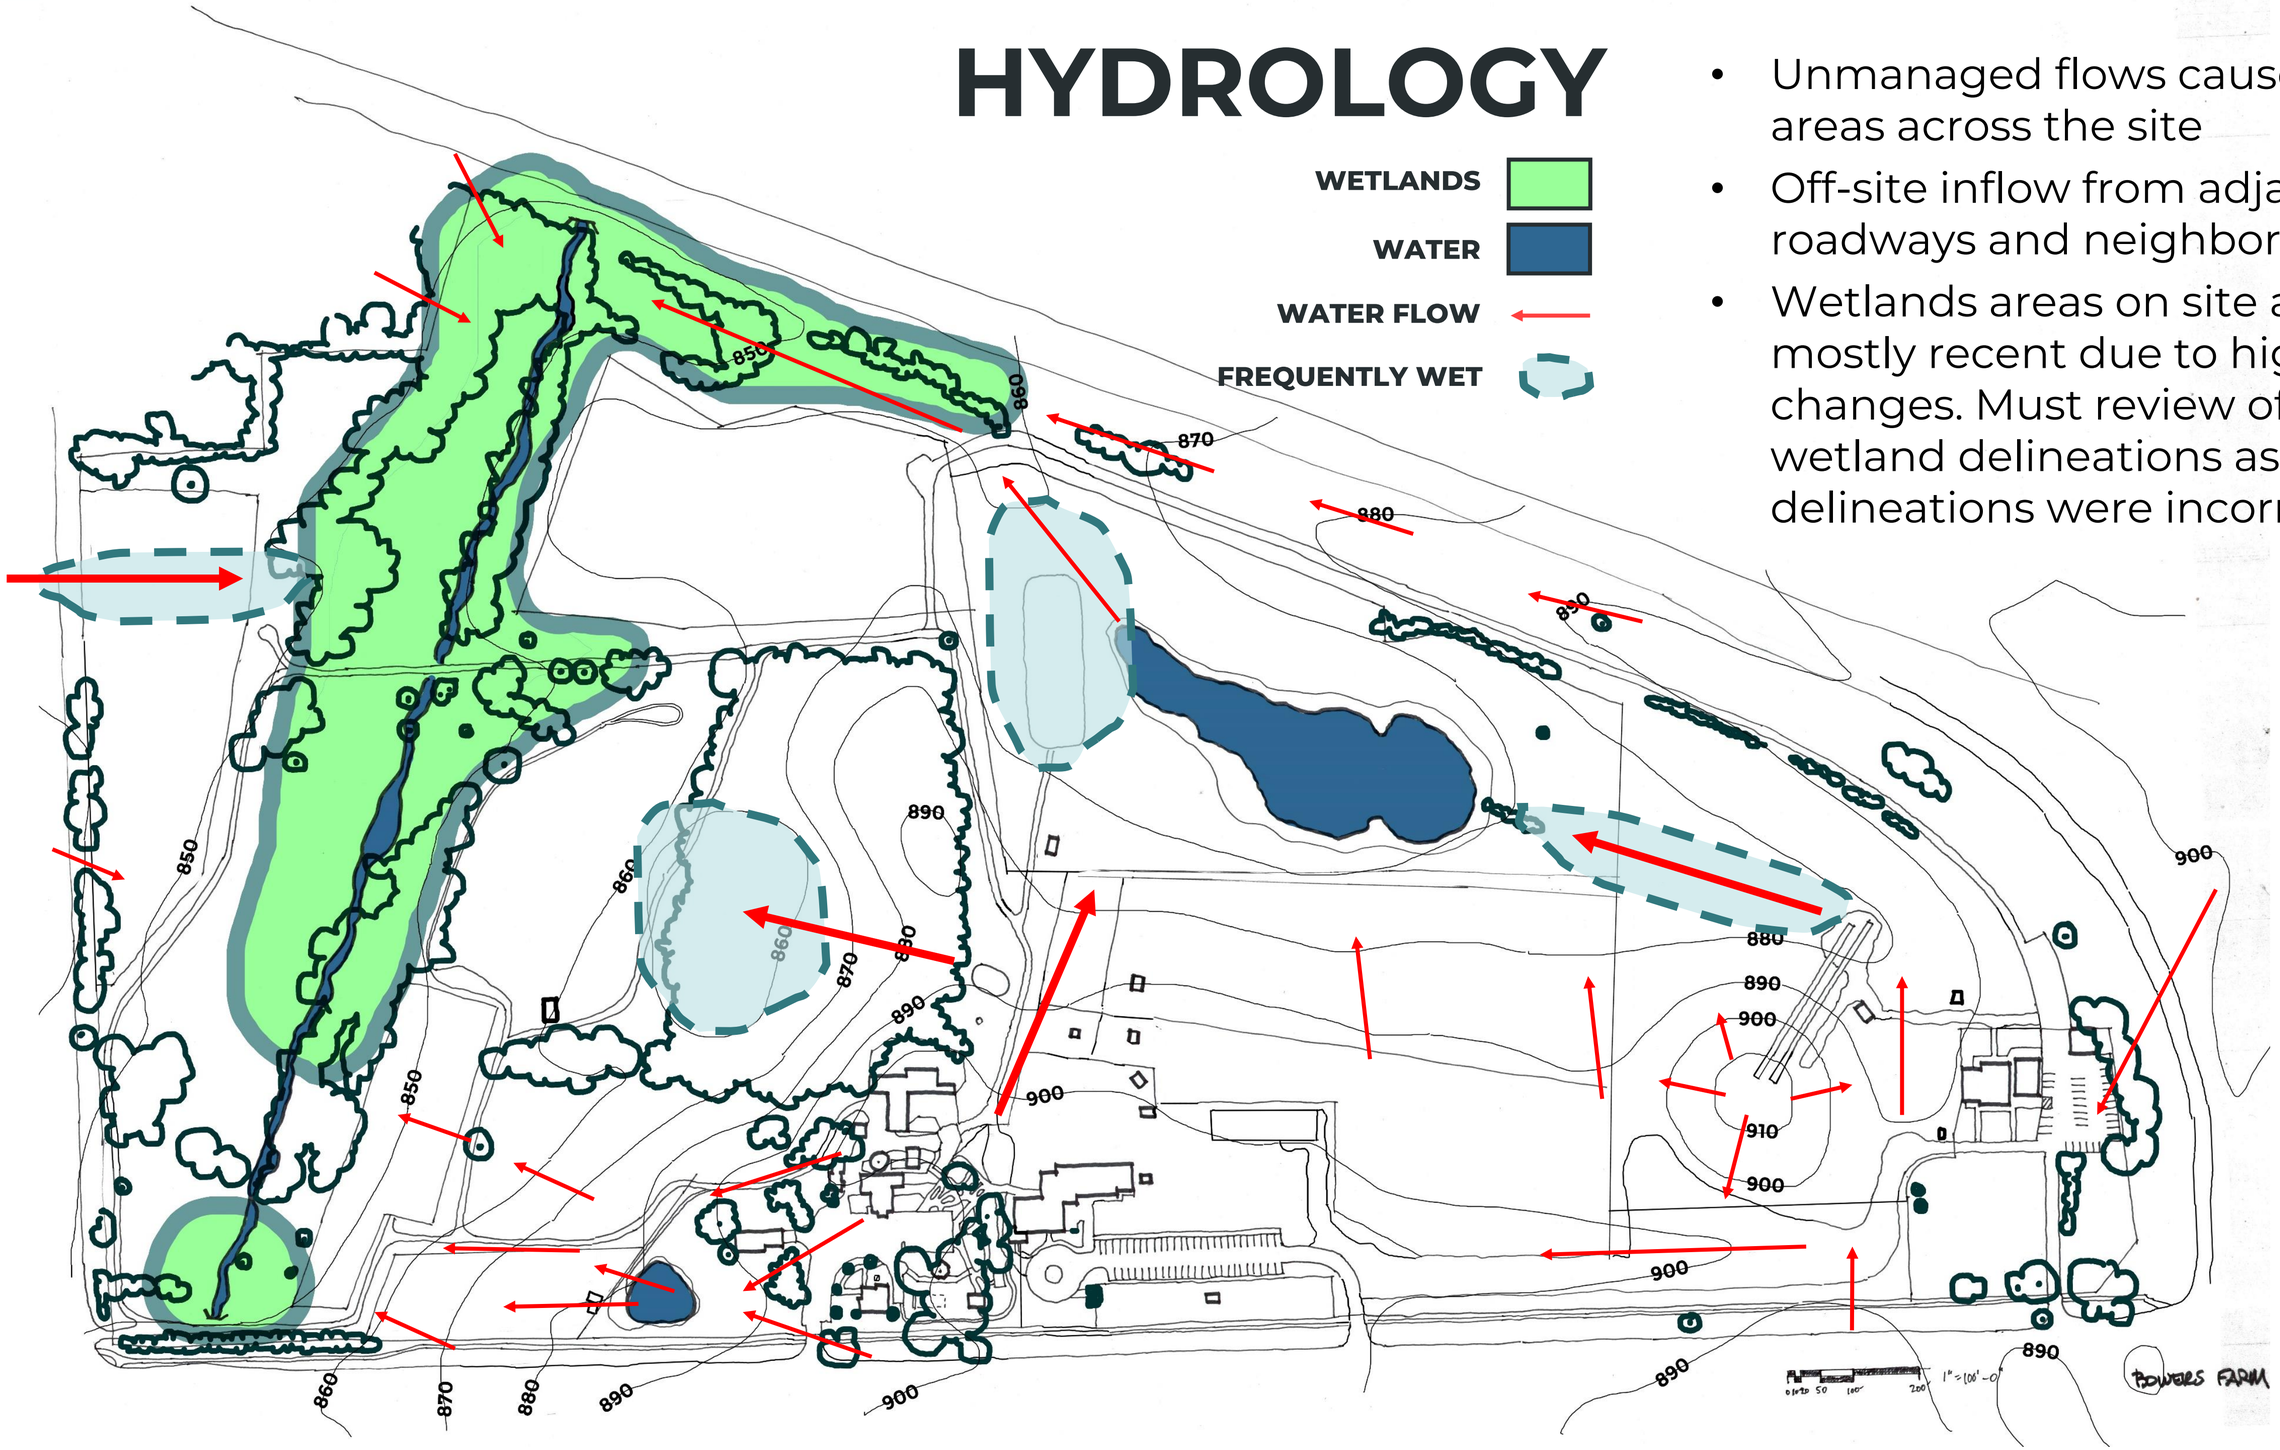
PASTURES

POOR PASTURE

RICH PASTURE



- Majority of site is used as pasture, but is also poor pasture due to wetlands, adjacency to farm pond, and nutrient poor soils
- The best pasture area is currently unused and adjacent to Winter Park site



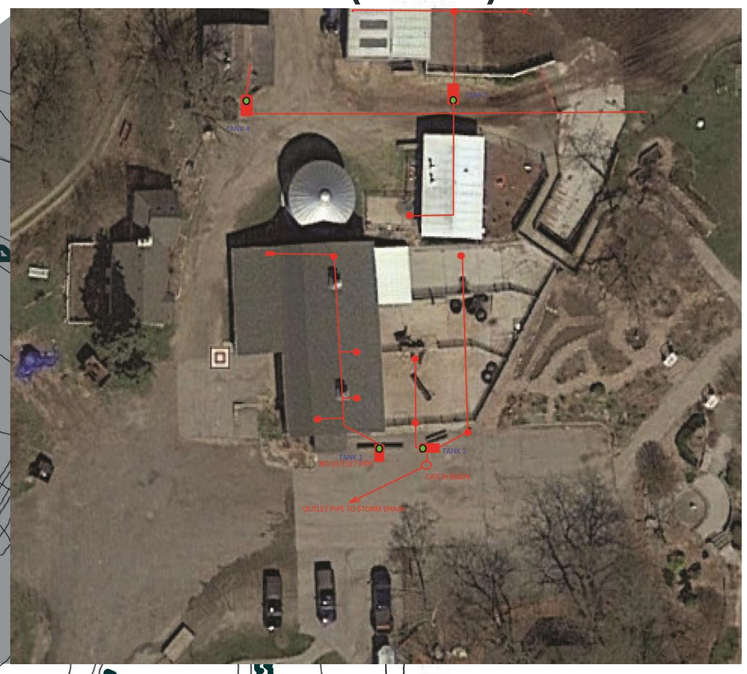
TOPOGRAPHY

10’ INTERVALS FROM USGS

- Total change across site is +/- 60’
- Most challenging area to west of Farm proper at 20% slope *(ramps are 8%; 5% is max ADA; tube hill 16%)*

HYDROLOGY

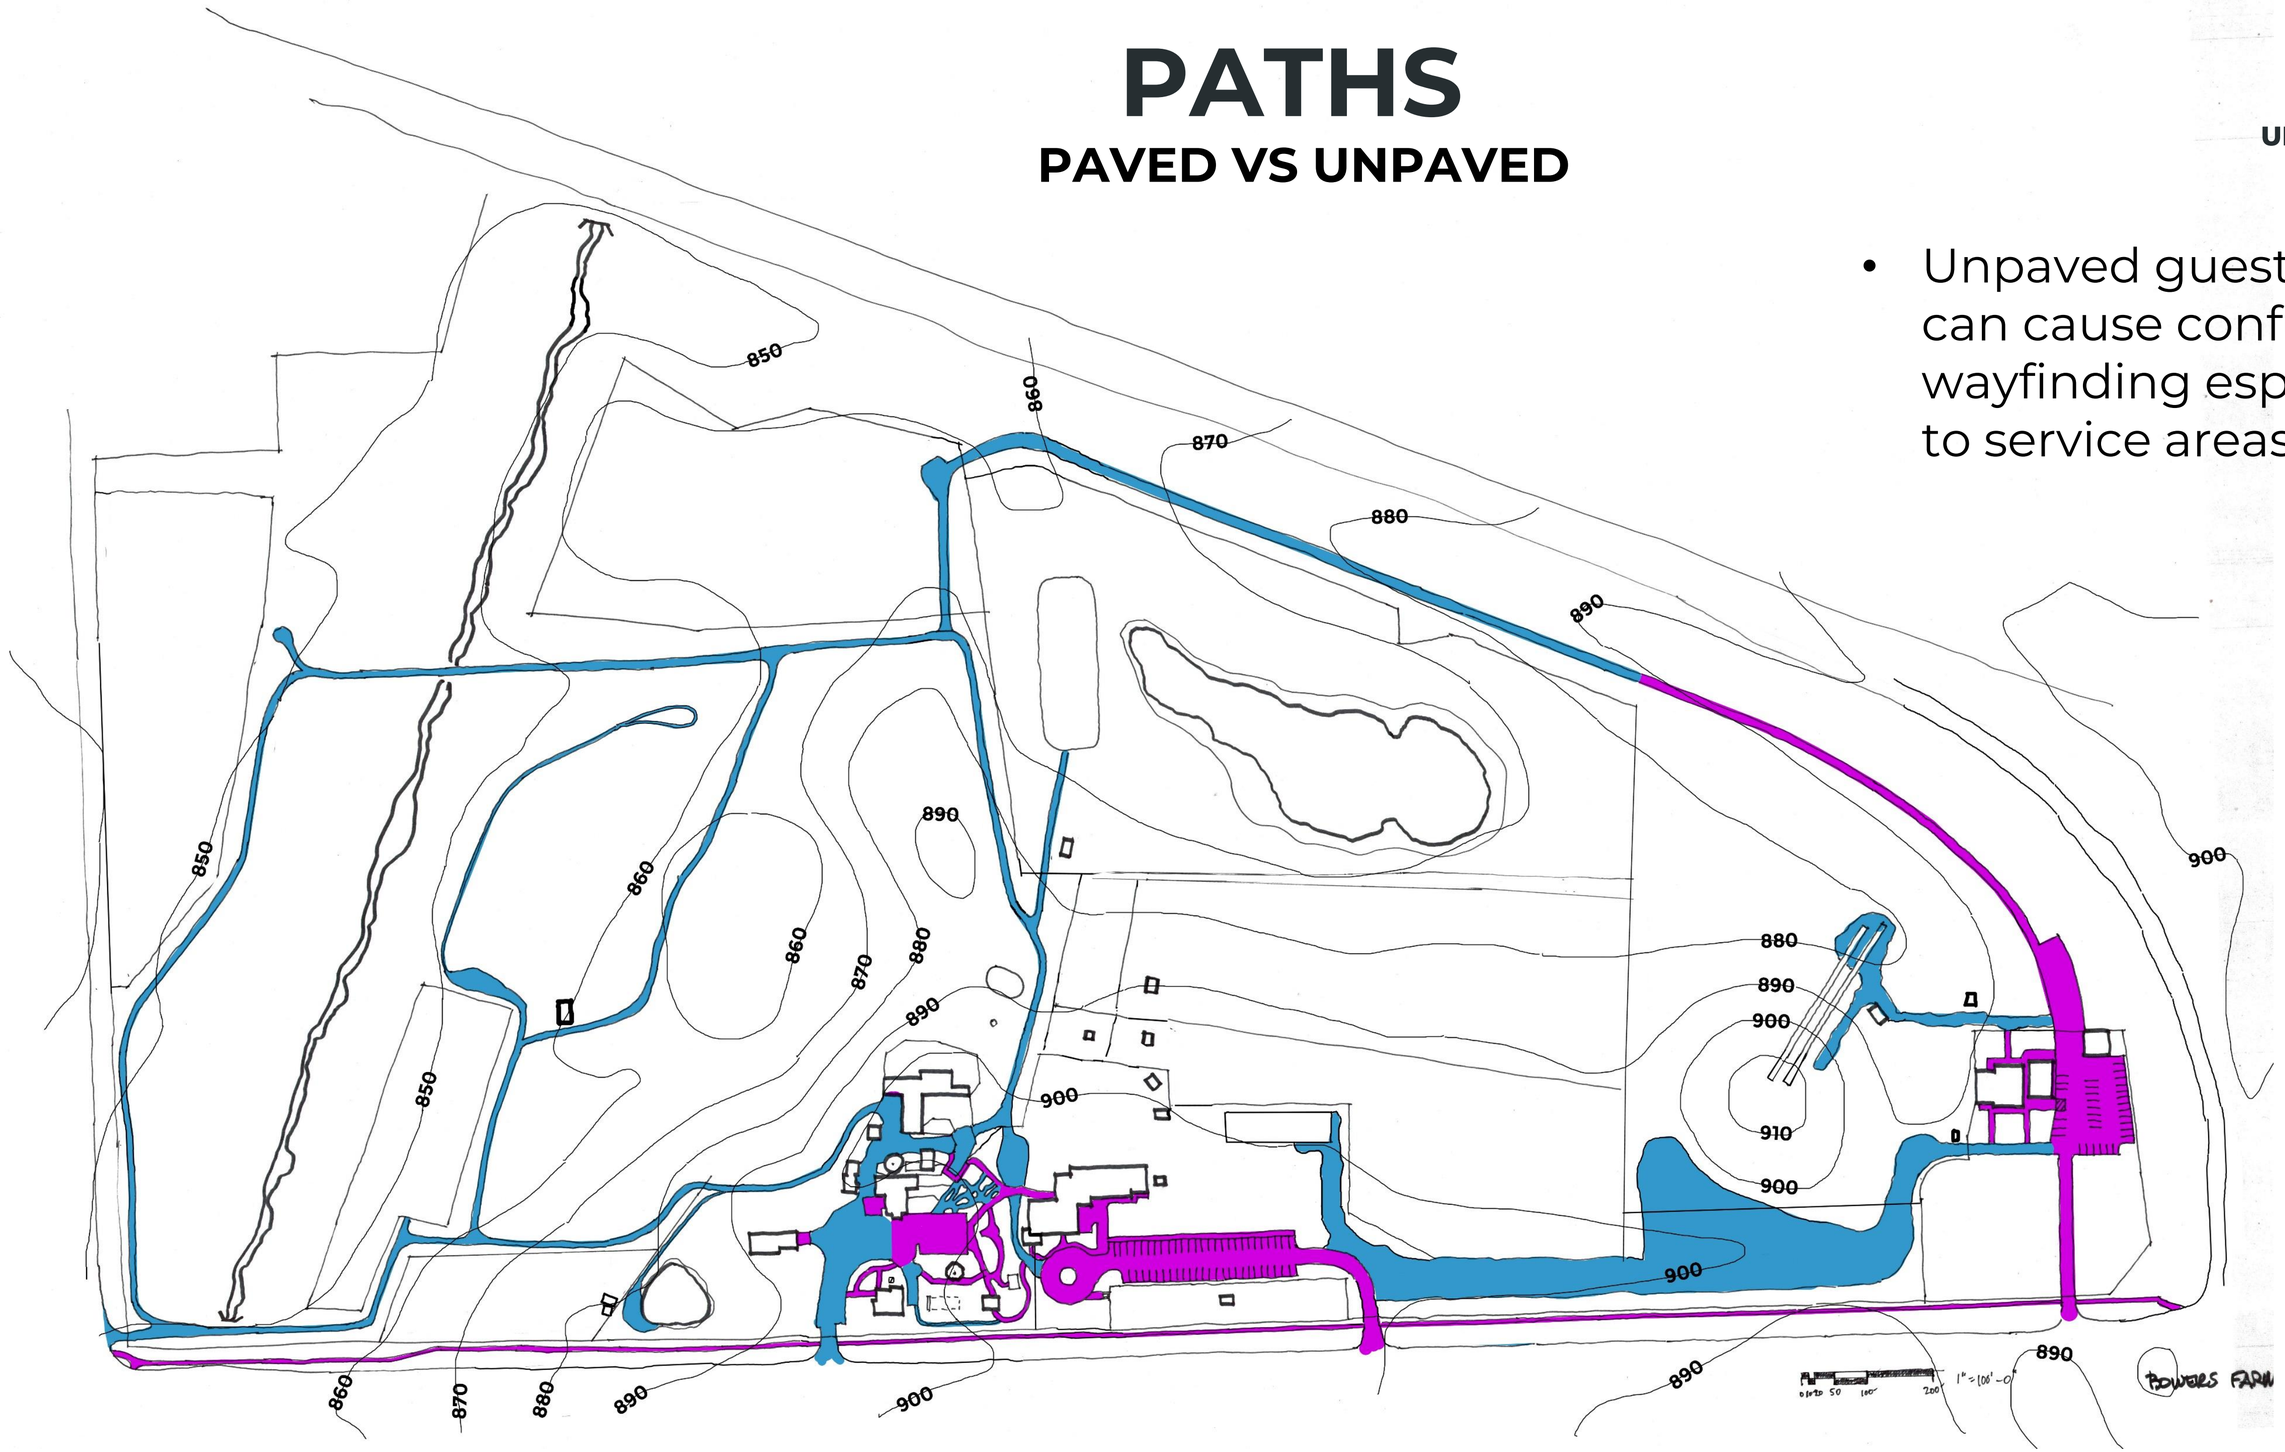
- Unmanaged flows cause wet areas across the site
- Off-site inflow from adjacent roadways and neighborhoods
- Wetlands areas on site are mostly recent due to highway changes. Must review official wetland delineations as USGS delineations were incorrect.



HYDROLOGY

USGS DELINEATED WETLANDS

WATER

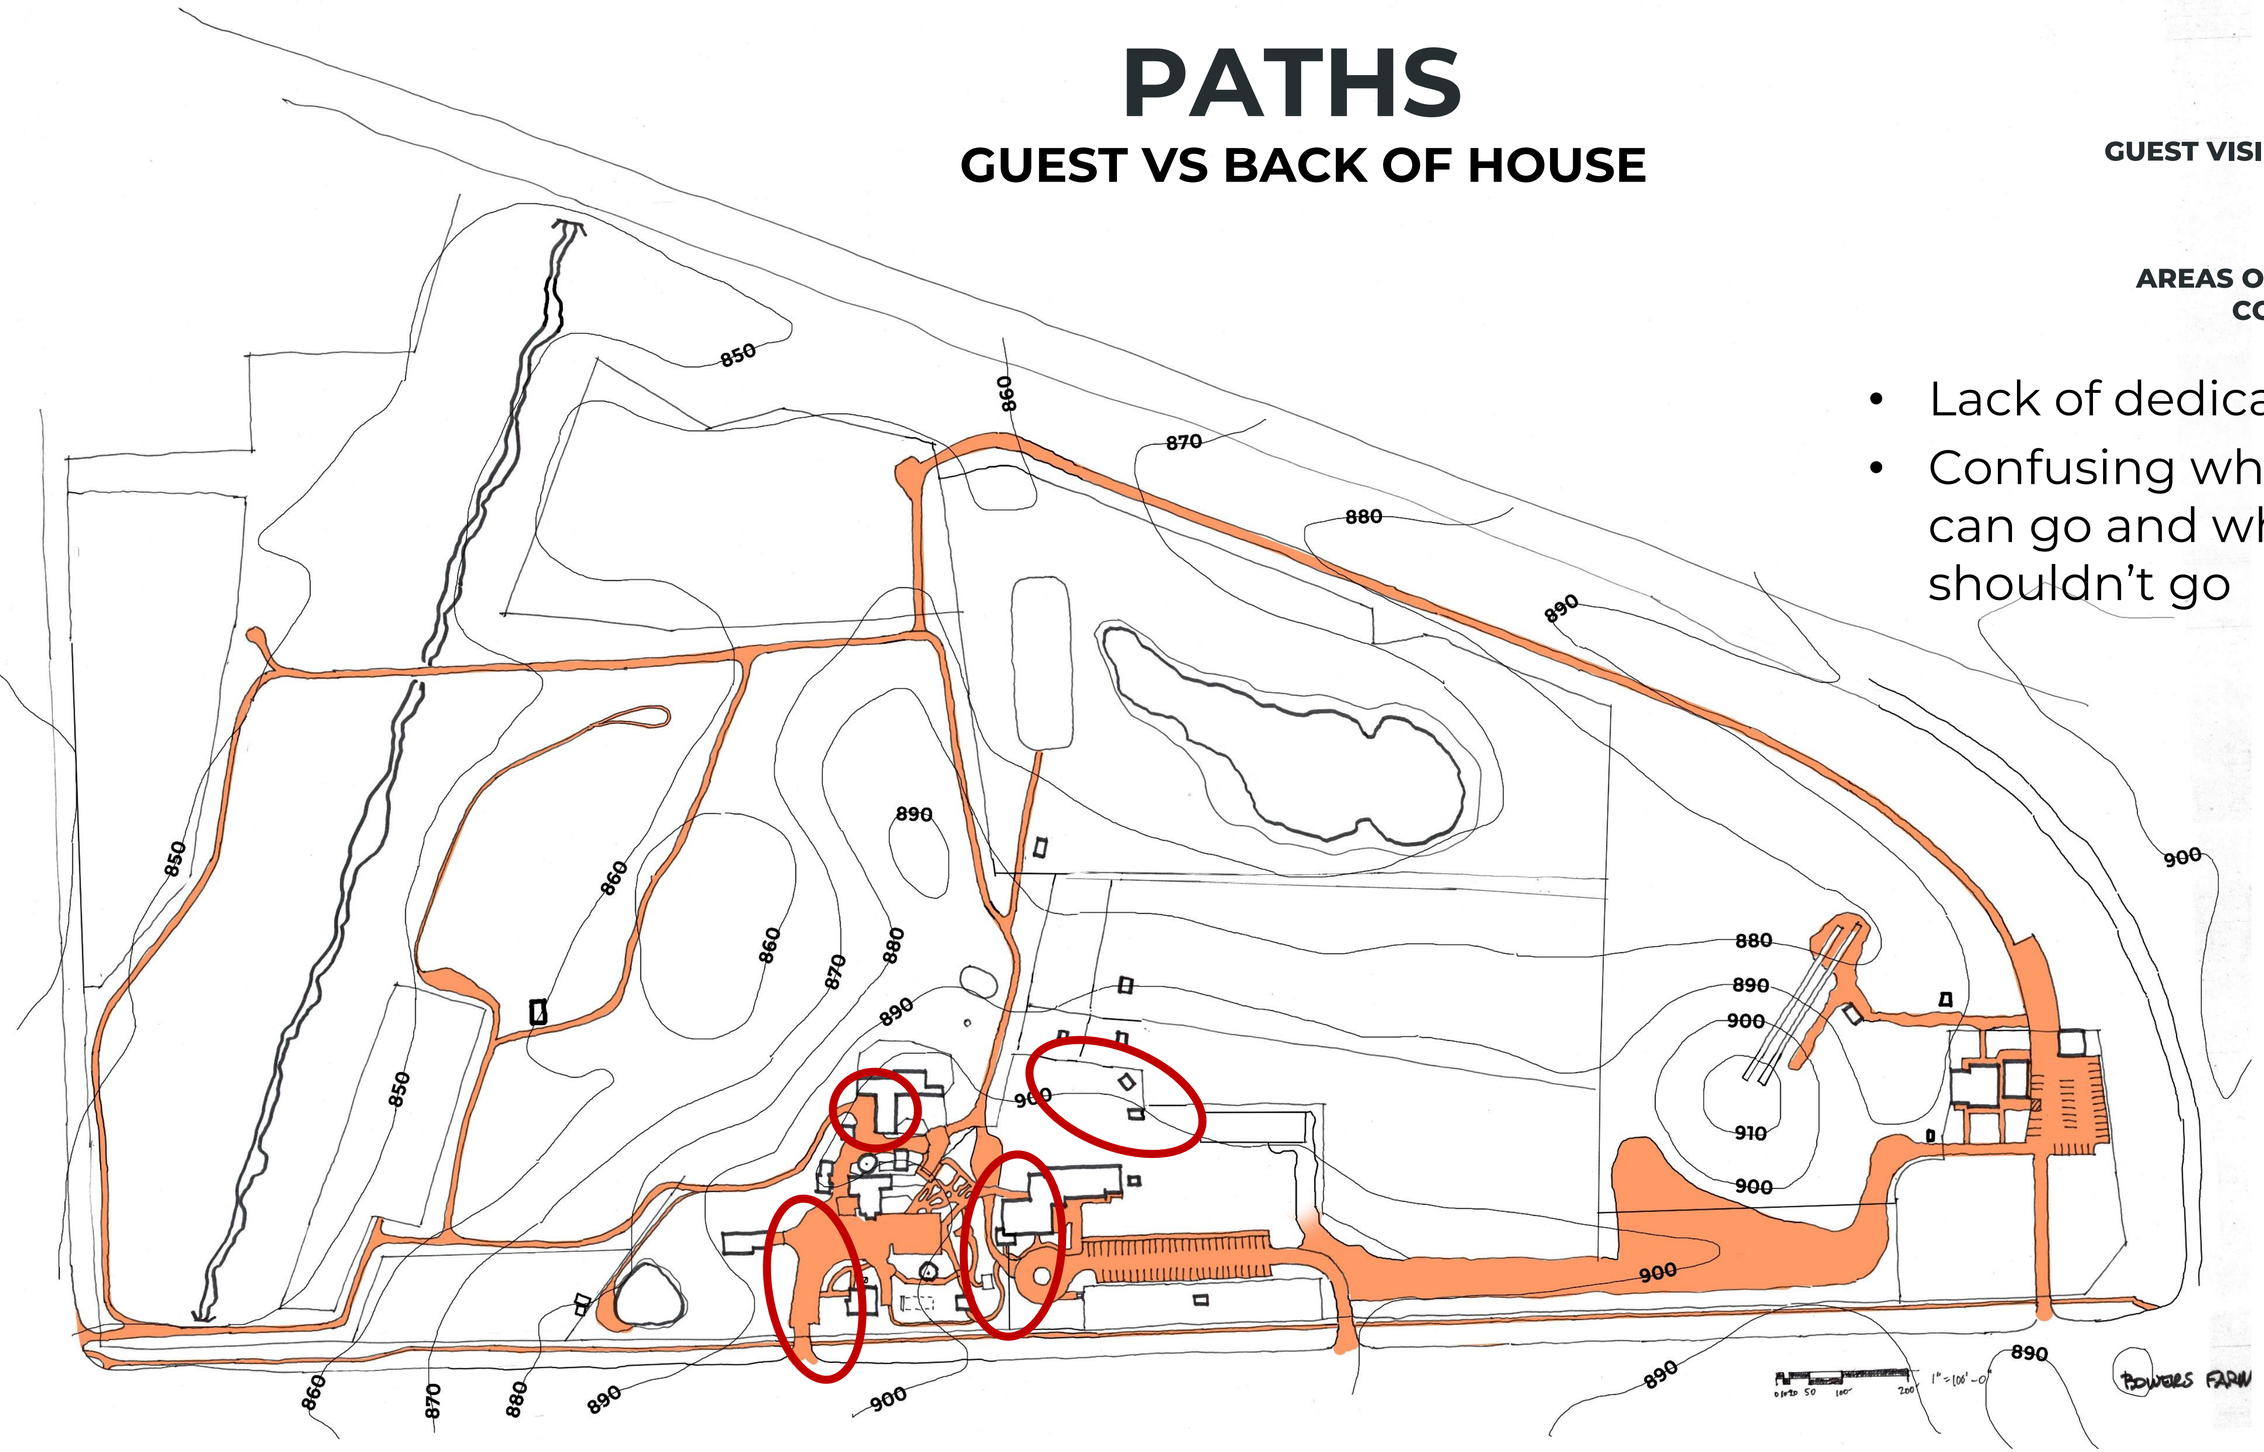


- Lack of sewer infrastructure and aging / unusable systems

SEPTIC LINES & TANKS (PUMPED)

PATHS

PAVED VS UNPAVED



PAVED

UNPAVED

- Unpaved guest paths can cause confusion for wayfinding esp. related to service areas

PATHS

GUEST VS BACK OF HOUSE

GUEST VISIBLE PATH

BOH

AREAS OF VISITOR CONFUSION

- Lack of dedicated BOH
- Confusing where guests can go and where they shouldn't go

FACILITY EVALUATION

	Ave / Priority	Age / Cond.	Function/ Efficiency	Guest Exp.	Known Improvements Needed
Hoop House / New Field Wash Pack	0.0	N/A	N/A	N/A	Needs to be created.
Academy Café	1.0	1	1	1	Café used as social work office space now; Carpeted floor; Storage for food; Too many uses and too small.
Root Cellar	1.0	1	1	1	Leaks. Needs a full space review - needs to be rodent proof. Historic structure.
Horse & Goat Barn	1.0	1	1	1	It's time to replace. Not ideal for any animal. We have made many modifications to work current needs.
Bowers Cottage	1.0	1	1	1	It is a space that has potential. Needs total overhaul.
Toilet Building	1.0	1	1	1	Needs to be replaced.
Laundry Room	1.3	2	1	1	Beat up, older stuff. Not enough lockers or space. Office supplies in there. Need additional washer and dryer for kitchen vs animal stuff. Need biosecure entry for all from Farm.
Toilets Entry / Academy	1.3	2	1	1	All people use the same toilet...need additional and separate areas. Bad toilet, gaps in doors, etc.
Produce Display (in store)	1.3	2	1	1	Since we are growing produce, we need to be able to get it to the customer. Closed coolers, not have to move it back and forth.
Store	1.3	2	1	1	Not intended for retail. Was originally a lunchroom. No secure inventory storage. Lack of power. No wall for display. No water line for ice cream. Sound issues.
Ticketing	1.3	1	1	2	
Livestock Pastures	1.3	1	1	2	Poor ground, poor drainage, and lack of guest experience access.
Event Storage Barn: FAB Garage	1.3	2	1	1	Needs to be organized.
Outdoor Flex Space "parking lot area"	1.3	1	1	2	Use for show ring - use for teaching space - not a parking lot. Used for events - more entertainment vs parking lot. Needs better water management.
Hillside Pasture	1.3	1	1	2	Poor soil. Lack of water access. Fences are patched together. Guests love to say hello. Concern of biosecurity with animals nose to nose with dogs on walks. Too far from core of animal care.
Residence	1.3	1	1	2	Needs major improvements (roof, soffits)
Production Gardens	1.3	1	2	1	Needs new shed roof, ok for growing - hard to get to, lack of consistent management for optimal weed and pest management. Back part is on a big hill - erosion issues. No electricity. Far from everything - especially the store and the cooler. Will benefit with full site deer fencing. Groundhog issues. NO equipment storage.
Wash Pack (area where produce is prepped)	1.3	2	1	1	Currently a car port - no electricity. No rodent proof storage space. One season use. Drainage issues.
I-75 Pond	1.3	1	1	2	When there is water, it is pretty. Water is mostly all run off. Not ideal for animals. Very shallow - attracts unwanted water birds. Not ideal for pasture animals.
Ropes Course	1.3	1	2	1	Was built in 1991 - 4 out of 6 elements will have to be retired by spring and needs a complete rework. Accessibility is a challenge. No site maps. No signage. No electricity. Lots of room for improvements and opportunities.
Staff Break Room (Hall)	1.5	2	1	N/A	Not really a room, old equipment.
Admin 1st Floor Offices	1.5	2	1	N/A	Lacking HVAC, too small.
Loft Offices	1.5	2	1	N/A	HVAC...intended to be guest experience space but is used as offices; No storage; No storage for personal items; Break out space in the open space; Copy and office supplies located here.
Gazebo	1.7	1	2	2	Starting to show age. Needs power. ADA concerns. Slippery when wet.
Academy Staff Office	1.7	3	1	1	Student workspace and staff workspace, storage and copy all together--too small. Storage and copy pulled out as separate.
Academy Common Space (Hall)	1.7	3	1	1	Too many things happening here--lunchroom, storage, office, kitchen, hallway, ticket window.
Academy Library	1.7	3	1	1	Needs to be much bigger--holds 2 kids right now; would like seating, study space, more book storage; 25 kids max.
Academy Science Classroom	1.7	3	1	1	Not designed for science lab (needs plumbing for sinks; overhead electric; lab tables). Furniture change. Needs more storage. Need chemical storage. Eye wash station. Need Exterior access.
Greenhouse	1.7	2	1	2	Mechanics for the temperature controls are unreliable. Too hot in the summer. Control of systems needs a reboot. Too small for current needs.
Kitchen	1.7	3	1	1	Too small right now for teaching... equipment is wrong for use for teaching or for bulk production; Like concession and pizza oven. Storage lacking.

	Ave / Priority	Age / Cond.	Function/ Efficiency	Guest Exp.	Known Improvements Needed
Chicken Mobile Coop	1.7	2	1	2	Needs to be reworked in areas. Water and feed challenges. Inside parts have started to come apart. Animal husbandry? Would like to look at an improved space for care.
Bank Barn	1.7	1	2	2	Needs historical correct repairs. Wood rot. Water drain issues. electrical issues - not enough power. Hard to clean. Functionality is not designed for current methods of use.
Outside Lower Barn (bank barn)	1.7	2	2	1	Could be improved by leveling the concrete and finding a way for a skid steer to enter for cleaning. LOVE the outside animal space.
Community Gardens	1.7	1	2	2	Will benefit with full site deer fencing. Concern of hydrant reliability. Some areas are too wet and should not be used for growing. Needs a dedicated, enclosed compost area.
Chicken / Bee Classrooms	2.0	2	2	2	
Riding Arena	2.0	2	2	2	Does the job - needs shade shelter - look at shade. All cattle shades not adjacent to a horse barn.
Academy Classroom 1	2.3	3	2	2	Too many functions...needs exterior door. Needs storage. Add spaces for gym and office.
Academy Classroom 2	2.3	3	2	2	Connected to #1
Hoop House	2.3	3	2	2	Excited to use this! Still under construction. Need interior tables for production support. Being used as a supplemental space to the existing greenhouse -> this is not ideal but working with what we have.
Farm Activities Building	2.3	3	2	2	Deck needs to be covered to increase space to accommodate a group of 100. Tent is not a permanent solution.
Barton Farmhouse	2.3	2	2	3	Wonderful old home. Needs a care plan for continuing to maintain not owned by BHS.
Horticulture "Master" Gardens	2.3	2	2	3	Beautiful and great community connection with the Master Gardeners.
Pumpkin Patch	2.3	2	2	3	Working on plans for improvement. need a deer perimeter fence around full property. Fun destination for guests. Great for field trips. Use of a porta potty helps each season. Site wide crop rotation plan. Weed issues are great. Groundhog damage.
Tubing / Winter Park Facilities	2.3	2	2	3	People love it - drain on staff. Need to increase capacity, change operational model to reduce staff inputs. Auto snow maker and snow carpet would help.
Cooler (not the freezer)	2.5	3	2	N/A	At times it is not large enough for kitchen and garden use.
Craig Log Cabin	2.7	2	3	3	Love it! Aware of ADA accessibility. What is the plan for long term maintenance not owned by BHS?
Academy Admin Office	3.0	3	3	3	

SITE ACCESSIBILITY

The BSF site and facilities were evaluated for accessibility compliance and recommendations were made to remove barriers for people of all abilities to better use the environment. Recommendations focus on achieving full inclusion – ALL share the same experience at the same time. Refer to *BHS Bowers School Farm ADA Access Barrier-Removal Recomm Rpt Oct '22* for the comprehensive assessment report and recommendations. Top Findings and Top Recommendations are summarized below.

Top Findings

- No accessible routes connecting Visitor's Center / Bowers Academy building and the individual experiences (Gardens, Animal enclosures, Craig Log Cabin, Barton Farmhouse, etc.)

- Many asphalt pathways and boardwalk surfaces need to be replaced/repaired for accessibility and safety.

- There is no accessibility information about the Farm facilities, programs and experiences are posted on the website.

SITE ACCESSIBILITY

Top Recommendations

- Invest in all-terrain wheelchairs to make pathways and routes more accessible; wheelchairs should be available to all students and guests.

- Close pathways or invest in signs noting routes with extreme slopes; offer solutions - alternate routes, staff assistance with navigating, etc.

- Develop a maintenance program to keep route conditions repaired and clear of obstacles (overgrown vegetation, debris, etc.)

- Minimum level of access to inaccessible spaces could include video tours, photographs and strategically placed mirrors to provide visual access.

- Move animals and demonstrations to areas that are accessible for events or high traffic days.

CURRENT PROGRAMS & AUDIENCES

What programs & events does the Farm currently offer?
Who is visiting the Farm today (and which groups are missing?)

EDUCATION PROGRAMS

Date: Year-Round (Differs by Program Type)

Programs / Activities

- Bowers Academy
- AFNR Students and FFA
- Summer Camp
- Field Experience Programs (In-District and Out of District)
- Ropes Courses

Target Audience

- Children ages 3-14 yrs. old
- High school juniors and seniors

Program Goals

- Support formalized education with hands-on agriculture experiences
- Provide non-traditional learning opportunities for students

OPEN BARN

Date: April – October (F, Sa, Su)

Programs / Activities

- Farm animal encounters
- Chicken experience
- Goat milking
- Horse/pony grooming
- Crafts
- Wagon rides

Target Audience

- Families with young kids
- Home schooled and parochial students
- Local community residents

Program Goals

- Provide authentic, educational and hands-on farming experiences to audiences outside of the Bloomfield Hills schools
- Increase community engagement

FARM STORE

Date: Year-Round (F, Sa, Su)

Programs / Activities

- Fresh produce, eggs and meat
- Michigan produced items (jams, dips, desserts, popcorn, etc.)
- BSF branded clothing
- Toys and plush
- Pizza
- Ice cream

Target Audience

- Open Barn visitors
- Camp families
- Local community residents

Program Goals

- Generate revenue
- Showcase products grown and raised at the Farm
- Increase community engagement

COMMUNITY GARDEN

Date: Year-Round

Programs / Activities

- 79 plots available for rent
- Only available to Farm members

Target Audience

- Community residents
- Condo/apartment residents
- Families and Baby Boomer generation

Program Goals

- Generate revenue
- Increase community engagement
- Drive Farm membership

COMMUNITY PROGRAMS

Date: Year-Round

Programs / Activities

- 4-H Club
- Scouts & small groups
- Workshops & classes

Target Audience

- Children ages 3-10
- 4-H families
- Local community residents

Program Goals

- Cultivate future leaders
- Provide additional opportunities for children to learn about and engage in farm activities

EVENT: BOURBON & BREWS

Date: September/October (1 Night)

Programs / Activities

- Beverage tastings – bourbon, whiskey, beer, wine and seltzers
- Animal encounters
- Live music
- Wagon ride and BOH Tour (VIP)
- Food available for purchase

Target Audience

- Adults only (21+)
- Festival goers looking for music, drinks & fun close to home
- Bourbon and beer enthusiasts

Program Goals

- Generate revenue
- Attract adult only audience
- Provide unique and fun experience with animals and farm environment

EVENT: FALL FESTIVAL

Date: October (1 Weekend)

Programs / Activities

- Pumpkin picking
- Wagon rides
- Animal encounters
- Live music performances
- Straw tower
- Crafts
- Games
- Food available for purchase

Target Audience

- Families with young kids
- Local community

Program Goals

- Generate revenue
- Increase community engagement
- Celebrate the fall season

EVENT: WINTER PARK

Date: January/February (8 Weeks)

Programs / Activities

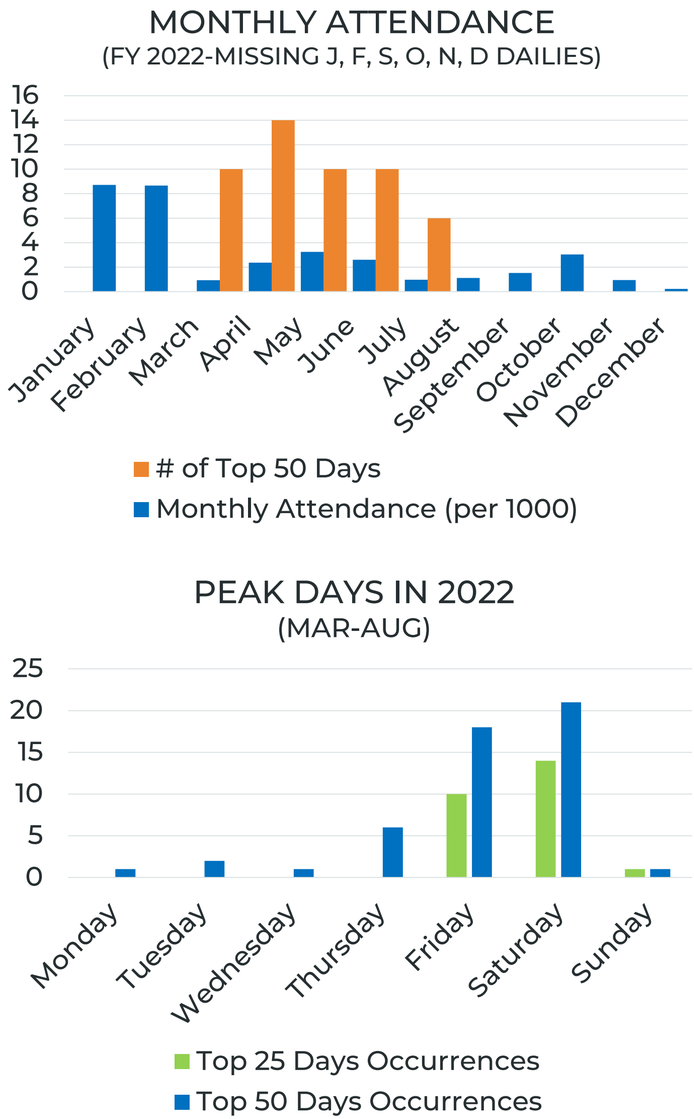
- Snow tubing
- Ice skating
- Bonfires
- Entertainment
- Animal encounters
- Food available for purchase

Target Audience

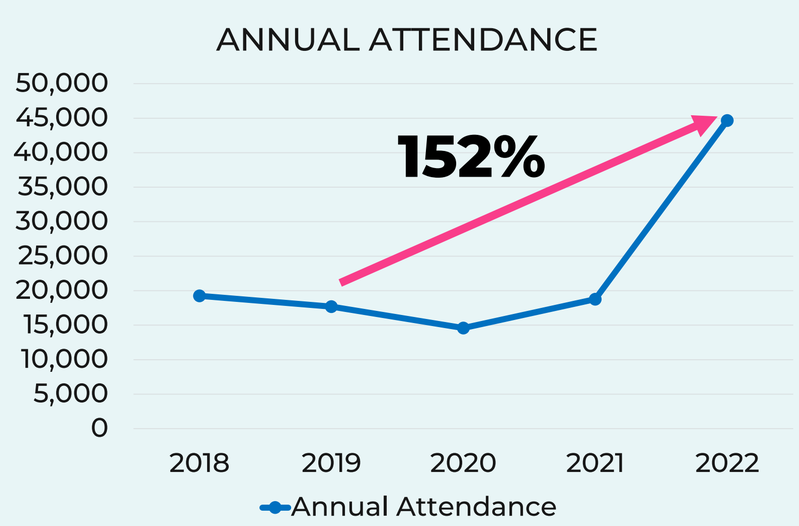
- Residents within a 2-hr. drive market who are looking for a fun and unique winter outdoor experience

Program Goals

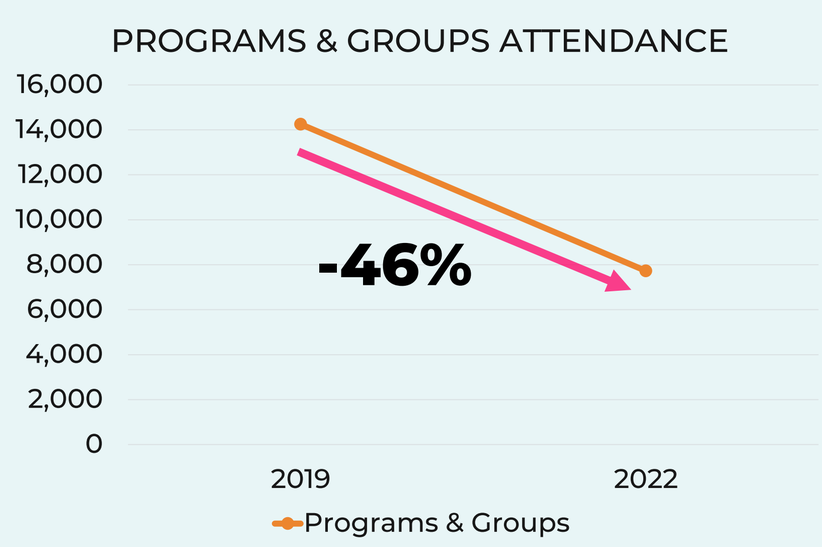
- Generate revenue
- Attract a more diverse audience (age, home location, etc.) to the Farm
- Target untapped markets - birthdays, date nights, corporate parties, teen sports groups, etc.
- Attract visitors during off-season months



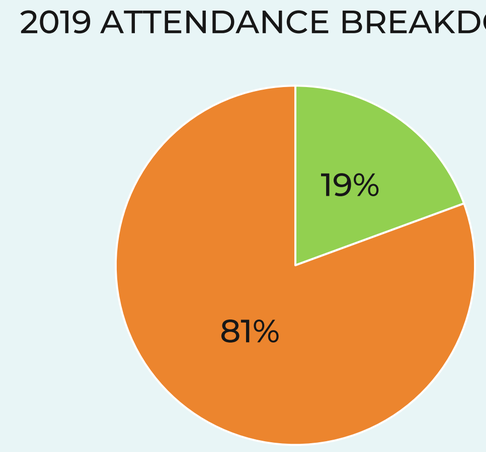
PERFORMANCE ANALYSIS

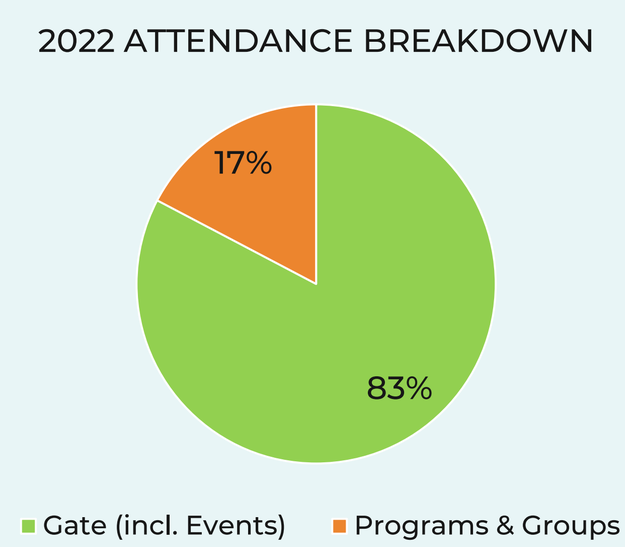


What trends are we seeing with attendance and finances?



What are the successes and potential areas of growth in the market?





ATTENDANCE TRENDS

DAILY ATTENDANCE PATTERNS

Design Day

	Arrival		Departure		In Park

	100%		100%			
Maximums	30%	105	28%	98	40%	140

Between 9am and 10am, students arrive for Pre-K and field trips
Between 11am and 12pm, most of those students depart and afternoon field trips arrive
Between 2pm and 3pm, half of the afternoon students depart and Open Barn begins
Between 4pm and 5pm, the rest of the students depart

Annual Attendance:	**44,660**	FY 2022 (programs & gate)
Ave Peak Day:	**512**	Average of top 10 days
Maximum Day:	**2068**	Fall Fest day 2021: 2580 total
Design Day:	**350**	Average Friday in May
Design Day, Peak in Park:	**140**	
Length of Stay:	**N/A**	

Although these busy days are limited to the month of May, due to the morning influx of Pre-K and field trips alongside Academy students, the highest peak in park for the Farm is experienced on these days. These peaks mostly inform the parking lot, traffic flow, and entry design as most of these visitors are participating in specific formal programs.

A secondary PIP occurs when Open Barn opens in the afternoon.

DAILY ATTENDANCE PATTERNS

Friday Camp & Open Barn

	Arrival		Departure		In Park	
Before 8:00 AM	0%	0	0%	0	0%	0
8:00 AM	25%	84	0%	0	25%	84
9:00 AM	5%	17	0%	0	30%	101

6:00 PM	0%	0	7%	24	0%	0
	100%		100%			
Maximums	40%	134	40%	134	42%	141

Annual Attendance:	**44,660**	FY 2022 (programs & gate)
Ave Peak Day:	**459**	Average of top 10 days
Maximum Day:	**2068**	Fall Fest day 2021: 2580 total
Ave Day:	**336**	2022 Average Friday in June / July
Design Day, Peak in Park:	**141**	
Length of Stay:	**N/A**	

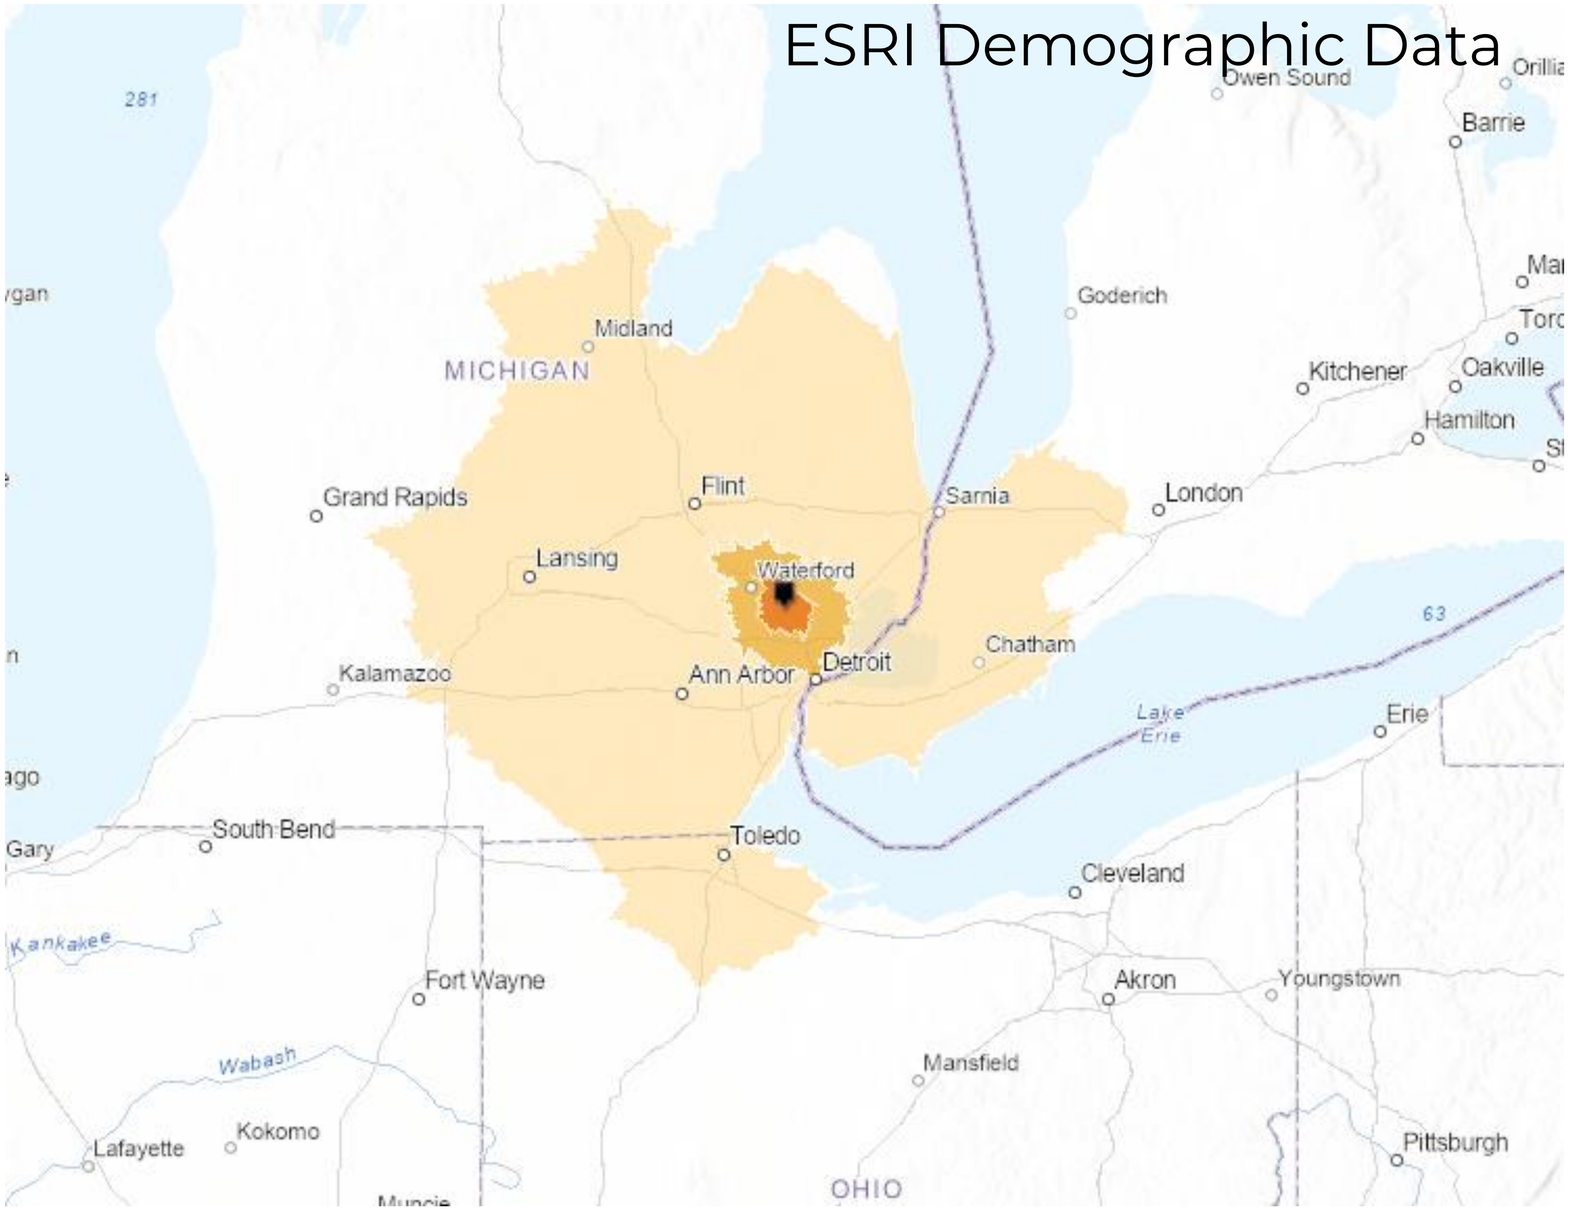
Peak Arrival is at 3-4pm when peak Open Barn meets Camp pick-up. Peak Departure and Peak in Park aligns with this rush.

CAPACITY ANALYSIS

Parking & Toilets

PARKING

54 paved spots at entry (including ADA)
- Design Day Peak in Park = 56 spots needed



32 paved spots at FAB parking
- Sized correctly for max capacity in FAB

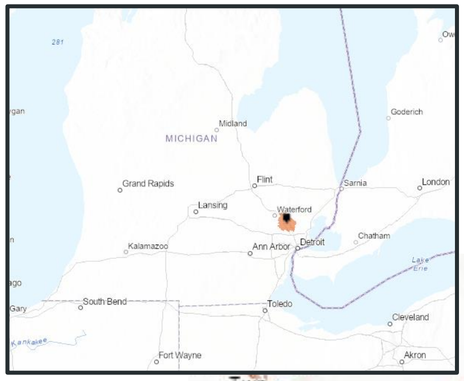
TOILETS

Using 60 guest per fixture ‘comfort’ standard:
- 3 fixtures per gender required in Farm
- 3 fixtures per gender at Entry (max arrival / departure)
- Based on max capacity for FAB, restrooms meet group needs. However, 3 per gender does not meet needs for Winter Park event.

POTENTIAL MARKET

ESRI Demographic Data

15 MIN DRIVE TIME FROM FARM



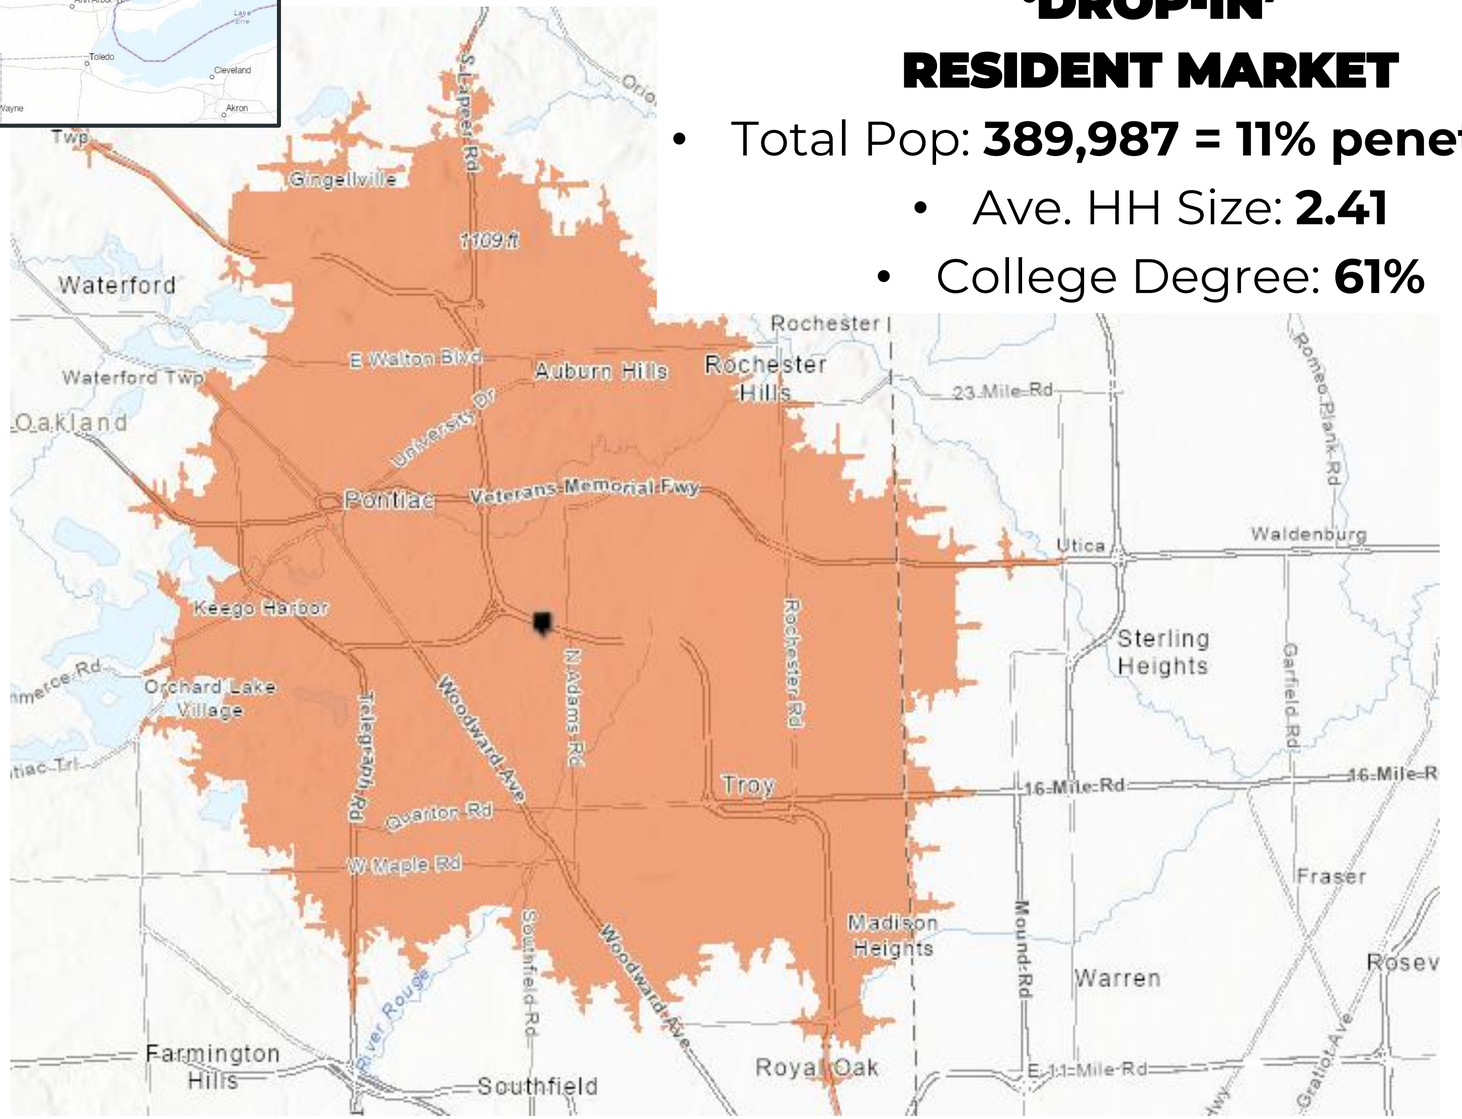
30 MIN DRIVE TIME FROM FARM

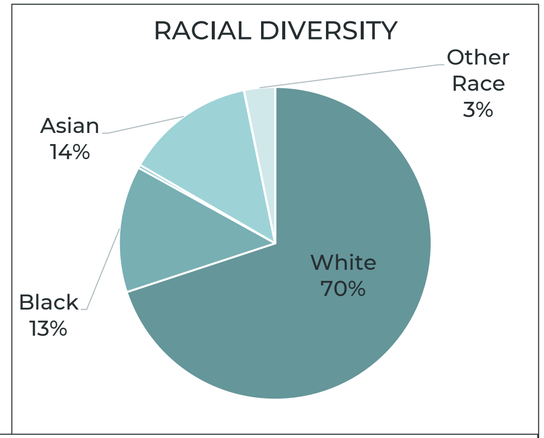
2 HOUR DRIVE TIME FROM FARM

LOOKING FOR GROWTH

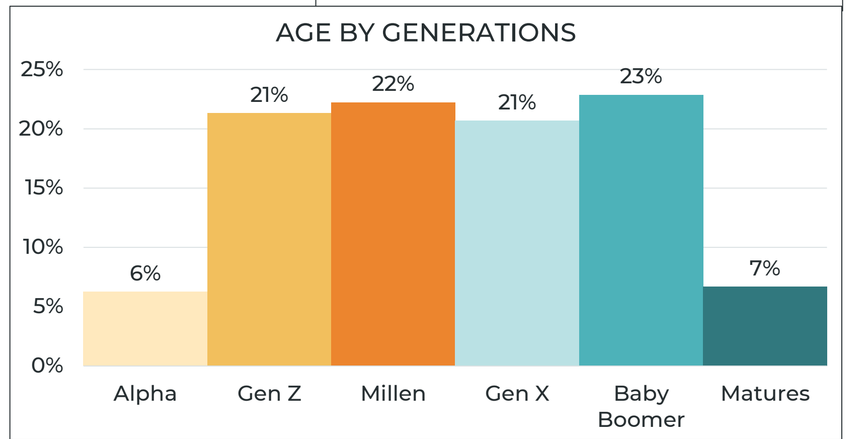
- Residential market 15 & 30 min drive time
- Regional tourism 2 hour drive time
- Who lives here gives insight into expectations and type of experiences to draw more visitors
- Compare to existing attendance / audience to reveal any pockets of growth potential

POTENTIAL MARKET

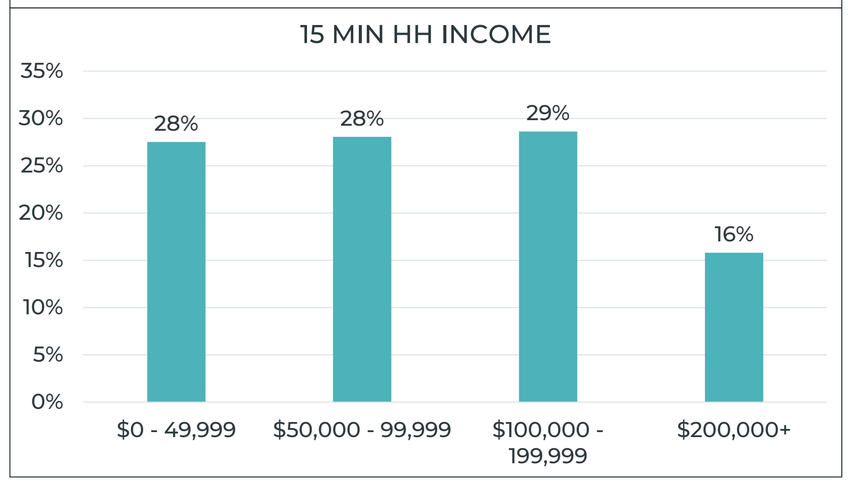




15 Minute Drive Time



‘DROP-IN’



RESIDENT MARKET

- Total Pop: **389,987 = 11% penetration**
- Ave. HH Size: **2.41**
- College Degree: **61%**

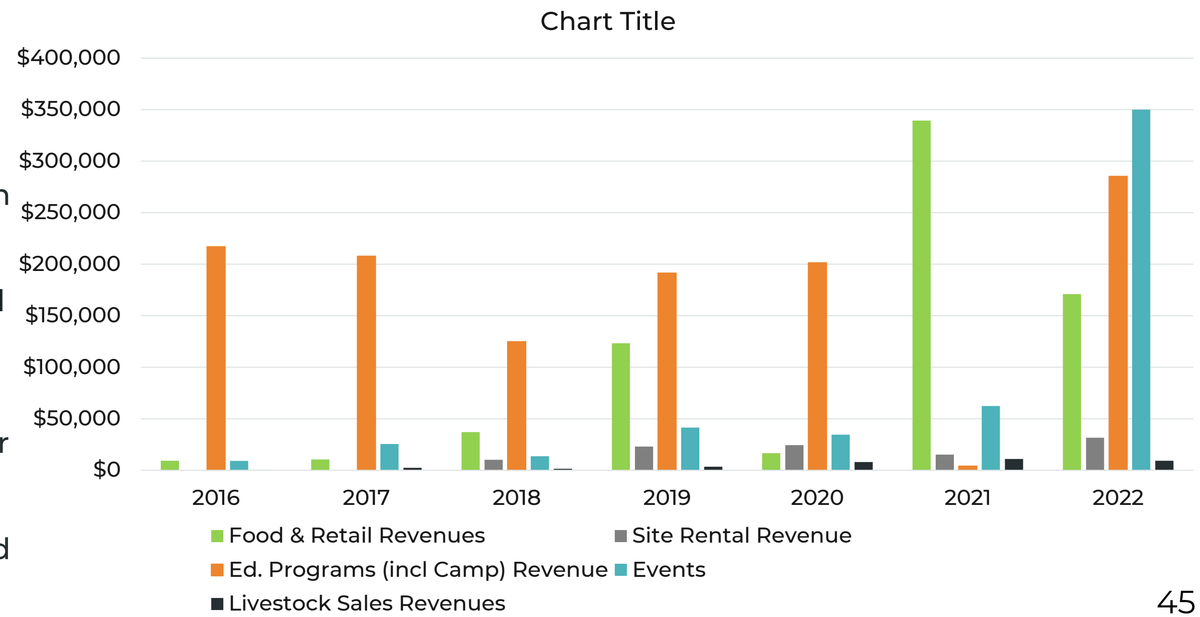
Financial activity is accounted for in two separate funds: General and Community Services.

General Fund: The funding for the educational programs and overall operating costs of the Bowers School Farm is made possible through the General Fund of the district. The General Fund is the district's primary operating fund and spending must comply with Michigan laws. Educational services to students and direct expenses to fulfill the District's mission are covered by the General Fund. Since 2018, in-district schools were no longer charged for Farm programming, which was offset by an expense to the in-district school resulting in a zero net effect for the General Fund. Since then revenue generated relates to livestock sales and a transfer from the Community Services Fund to offset the operating costs of the farm. This means the School Education component is and will always be an expense to BHS; however, a portion of net profits from programs and services to the community will offset the net cost to BHS.

Community Services Fund: 'Community' relates to all out-of-district programs, community programs, camps, site rentals, events, community garden, farm store sales, and Open Barn admissions. Open Barn began in 2020 along with major growth in Camps capacity and store improvements which gave revenues a large boost. 2022 saw the effects of a successful Winter Park, with minor impact by Fall Fest (which began in 2020—adding much needed revenue during COVID that cancelled programs and camps). Expenses across the board have increased significantly since 2019, primarily focused on an investment into future community offerings that necessitated a restructuring of the farm's staffing roles, responsibilities as well as certain capital related costs such as the Winter Park sledding hill.

BHS currently provides funding for all expenses at the Farm and receives all Profit from the Farm. Currently, the Farm is providing negative profit to BHS, but shows potential to increase growth of revenues which fall within the Community Services Fund. The Farm, like the Nature Center are both considered an integral part of our educational programming similar to all cocurricular opportunities and choices provided to BHS students, including arts, music, athletics, clubs and more providing a full experience for our students.



REVENUE ANALYSIS

Revenue Performance

FY Ending	Food & Retail	Site Rental	Ed. Programs (incl Camp)	Events Admissions	Memberships	Livestock Sales	Open Barn Admissions
2016	$9,244	$0	$217,085	$9,087**		$237	
2017	$10,495	$0	$207,855	$25,426**		$2,431	
2018	$37,004	$10,144	$124,820	$13,602**		$1,455	
2019	$123,219	$22,960	$191,344	$41,482**		$3,467	
2020 (Covid)	$16,636	$24,329	$201,430	$34,516		$8,055	$19,670*
2021 (Covid)	$339,338	$15,211	$3,999	$62,346	$72,590	$10,928	$43,000*
2022	$170,947	$31,645	$285,255	$349,948	$98,430	$9,250	$65,960

*Estimated revenue based on Open Barn Non-Member attendance number provided in Annual Report.
**2016-2017: Corn Maze; 2018: Pancake Breakfast only; 2019: Fall Fest + Pancake Breakfast; 2020: Fall Fest only; 2021-2022: Fall Fest + Winter Park

- Education Programs includes in-district (which became free for BHS students in 2018), out-of-district, camps, Pre-K, and other formal learning programs led by Farm staff and volunteers.
- Recording of revenues has been in flux in terms of categorization and COVID had variable impact on programs and experiences, so many of the years' data are not comparable. Also contributing to data confusion are changes to which events occurred and how they are managed.
- Despite these data challenges, revenue is showing clear growth, especially within the Events category influenced by the very successful Winter Park in 2022. Admissions and Memberships are showing growth trends, as well as Food and Retail, although 2020 & 2021 were anomalies.
- Site Rental and Livestock Sales have been variable, but relative to other revenues, are small and showing slow growth.
- Education Program revenue is, besides Events, the major contributor to success with slow, reliable growth since 2016 when Camps increased capacity.

REVENUE ANALYSIS

Per Cap & Revenue Comparative Performance

	Food & Retail Per Cap	Admissions Per Cap	Site Rental Revenue	Ed. Programs (incl Camp) Revenue	Events Revenue	Membership Revenue
Farm 2022	**$3.83**	**$1.48**	**$31,645**	**$285,255**	**$349,948**	**$72,590**
AZA <100k Attendance*	$0.58+$2.05= **$2.63**	**$6.64**	**$54,500**	**$96,370**	**$17,490**	**$77,800**
AZA in Midwest**	$2.32+$1.62= **$3.94**	**$5.71**	**$336,330**	**$553,030**	**$666,500**	**$2,147,000**
AZA Op. Budget $1.75-3.5mm***	$0.83+$1.45= **$2.28**	**$4.62**	**$56,260**	**$218,890**	**$149,175**	**$255,215**

Note: “AZA” stands for Association of Zoos and Aquariums; *20 sample size **58 sample size ***45 sample size

- Food and Retail per cap far exceed any comparable zoo or aquarium.
- Site Rental revenues could feasibly double to be comparative with peer small zoos and aquariums. In comparison to the average from all Midwest AZA facilities, there is a lot of room to grow—showing great potential earnings being left on the table.
- Ed Programs revenues are exceeding expectations based on small zoo peers but have potential to grow.
- The Farm’s Events Revenue is far exceeding its peers in the small zoo category and is on trend with the average from all of the zoo / aquarium facilities in the Midwest. (Note: Compared AZA’s “Catering” against “Events” Revenues, so these numbers may not be apples to apples.)
- Membership revenue appears to be an untapped opportunity for the Farm as compared to other facilities, even as compared to its small zoo peers.
- While Admissions per caps are much lower than the comparable sets and appears to be a potential area of growth, low per caps are due to limited Open Barn hours (and relative newness of the guest experience) as well as the Farm having a disproportionate number of attendees on-site for formal programs compared to a traditional zoo. This proportionality causes revenues from Admissions to be spread across a larger cohort of individuals in calculating per cap. However, if hours are extended (and as the public becomes more aware of Open Barn), this measure will increase.

COMPETITION & BENCHMARKING

Who/what are we competing against for visitation and funding?

How are we performing compared to similar attractions?

Who is your competition?

What can we learn from them?

How is the Bower's School Farm unique?

Competition Criteria

- Appeals to the same local target audiences
- Outdoor activities
- Animal and/or agriculture component
- Strong educational message

COMPETITION

Who do you consider to be your biggest competitor and why?

Education – Student Programs & Field Trips

- Belle Isle Attractions
- Detroit Zoo
- Dutton Farm
- Kensington Metropark Farm Center
- Maybury Farm
- Tamarack Adventure & Retreat Center
- Three Cedars Farm
- Tollgate Farm & Education Center (MSU)
- Upland Hills Farm

COMPETITION

Who do you consider to be your biggest competitor and why?

Visitor Experience

- Belle Isle Attractions
- Blake’s Farm & Cider Mill
- Carousel Acres
- Detroit Zoo
- Domino’s Farm Petting Zoo
- Dutton Farm
- Kensington Metropark Farm Center
- Maybury Farm
- Sea Life Michigan Aquarium
- Three Cedars Farm
- Upland Hills Farm

COMPETITION

Who do you consider to be your biggest competitor and why?

Resource for Local Food

- Blake's Farm & Cider Mill
- Dutton Farm
- Middleton Berry Farm
- Tollgate Farm & Education Center (MSU)
- Westview Orchards & Winery

Event Spaces

- Blake's Farm & Cider Mill
- Detroit Zoo
- Tamarack Adventure & Retreat Center
- Tollgate Farm & Education Center (MSU)
- Upland Hills Farm

COMPETITION

Who do you consider to be your biggest competitor and why?

Fundraising

- Detroit Zoo
- Dutton Farm
- Maybury Farm
- Tamarack Adventure & Retreat Center
- Tollgate Farm & Education Center (MSU)
- Upland Hills Farm

Volunteers

- Detroit Zoo
- Dutton Farm
- Maybury Farm
- Micah 6 Community
- Tollgate Farm & Education Center (MSU)

COMPETITION VISITS

The Felis Consulting team and Bowers School Farm steering committee visited key competitor farms in the area.

4 Local Farms Visited

- Tollgate Farm & Education Center
- Three Cedars Farm
- Upland Hills Farm
- Blake’s Farm and Cider Mill

TOLLGATE FARM & EDUCATION CENTER

Key Takeaways

- Authentic, full working farm
- Gardens used to welcome visitors and direct them to the central gathering space
- Beautifully constructed wetland and pond area used to manage site runoff
- Production crops reserved for CSA program
- No interpretive signs

Very similar to Bowers Farm except

- **Larger and more spread out**
- **More focus on education and programs, less on visitor/guest experience**

THREE CEDARS FARM

Key Takeaways

- Strong donut and cider business
- Lack of authenticity
- No real animals (plastic animals)
- Pumpkin field is available but Farm doesn’t grow pumpkins

People spaces are the primary focus (central commercial village)

UPLAND HILLS FARM

Key Takeaways

- Authentic, less commercialized
- Nimble with focus on reusing/repurposing existing spaces and buildings
- Multi-use gathering spaces available
- Fall Program (October) is the largest public event for the Farm (approx. 30k visitors)
- Buildings and attractions are sited around the site which gives you space, views and reinforces farm feeling
- Great signs for information, interpretation and story overlay
- Pumpkin field available but pumpkins are not grown here

Private and for-profit but agriculture experience and education are primary focus

BLAKE'S FARM AND CIDER MILL

Key Takeaways

- U-pick program
- High quality of products sold & consumed
- Limited educational value
- Focus is on making money – highly commercialized
- Not authentic – many products sold in stores have a Blake's label yet are not made with Blake's Farm products
- Too modern and could be located anywhere

People spaces are the primary focus (central commercial village)

WHAT MAKES US UNIQUE?

Authentic, credible & relatable

- “Messy Nature” (not fake or manicured)
- Organic & sustainable
- Part of a school district
- Long history (55+ years)
- Staff reflects and relates to community culture

Strong relationships created with visitors and community

- Multiple touchpoints through people’s lives
- Multi-generational experience
- Seeing & selling onsite builds an emotional experience with customers

Unique story

- Located in a large suburban area (not rural and easily accessible from adjacent urban developments)
- Historic structures onsite are unique story telling artifacts
- Talented, passionate & mastered staff

SECTION 2:

WHAT DO PEOPLE THINK OF THE FARM?

OUR BRAND

Describe characteristics of the Farm

What are attributes we don’t want associated with BSF?

BOWERS SCHOOL FARM

IS

- Welcoming
- Safe place (physical & emotional)
- Authentic
- Working farm
- Unique
- Operated by BHS
- Educational facility
- Leader in sustainability
- Transparent
- High standards for animal care
- Accessible
- Appealing to a wide audience
- Community building
- Entertaining
- Experiential
- Producers
- Building ties to land, history and animals

IS NOT

- Petting Zoo
- Free childcare
- ADA accessible (today)
- Just for show
- Just for the privileged (BHS students and community)
- Boarding facility for animals
- Rescue facility
- Animal rental facility

PUBLIC ENGAGEMENT

What do other stakeholder groups like/dislike about the Farm?

What ideas do community members have for improving BSF?

PUBLIC ENGAGEMENT STRATEGY

Specific groups were targeted for three in-person workshops for deeper levels of engagement.

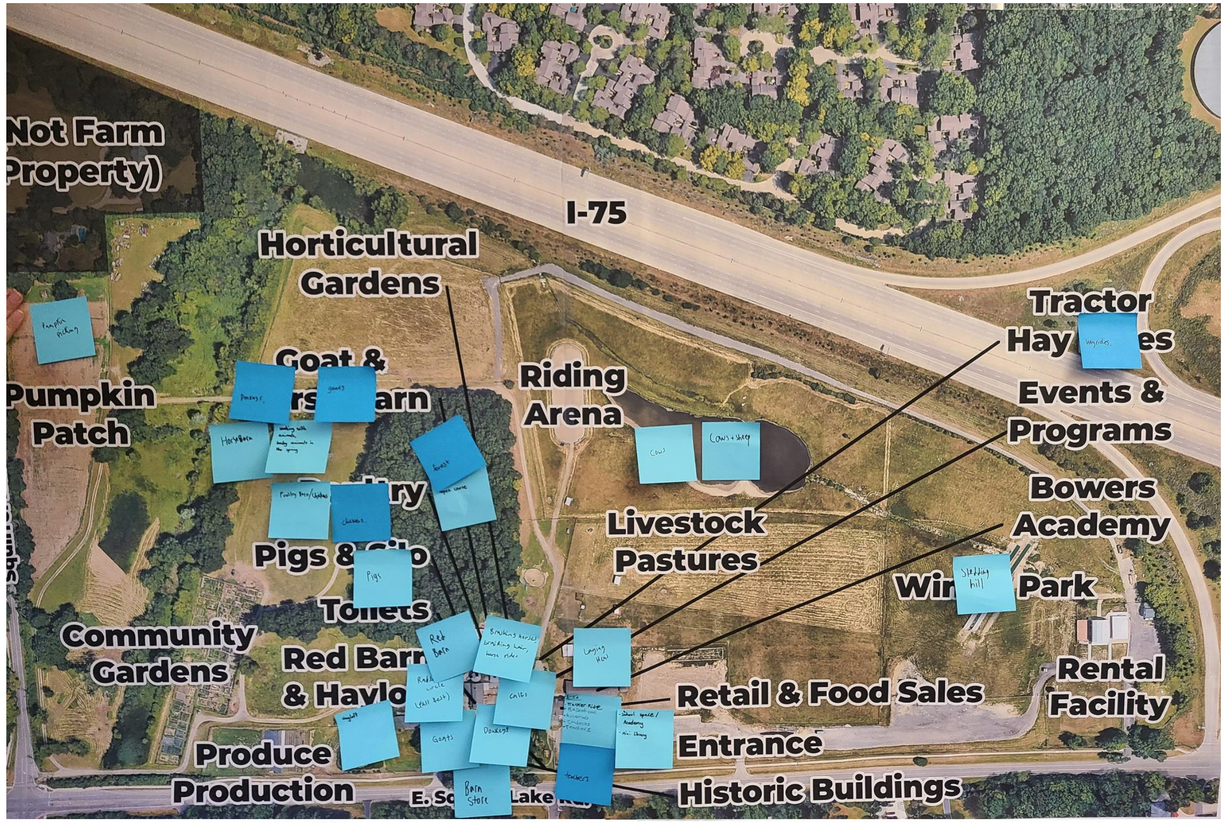
Workshop 1: Farm Volunteers

- Friends of Bowers School Farm
- Preservation Bloomfield
- Historic Society
- Master Gardener's Society of Oakland County
- 4H Club (Parents)

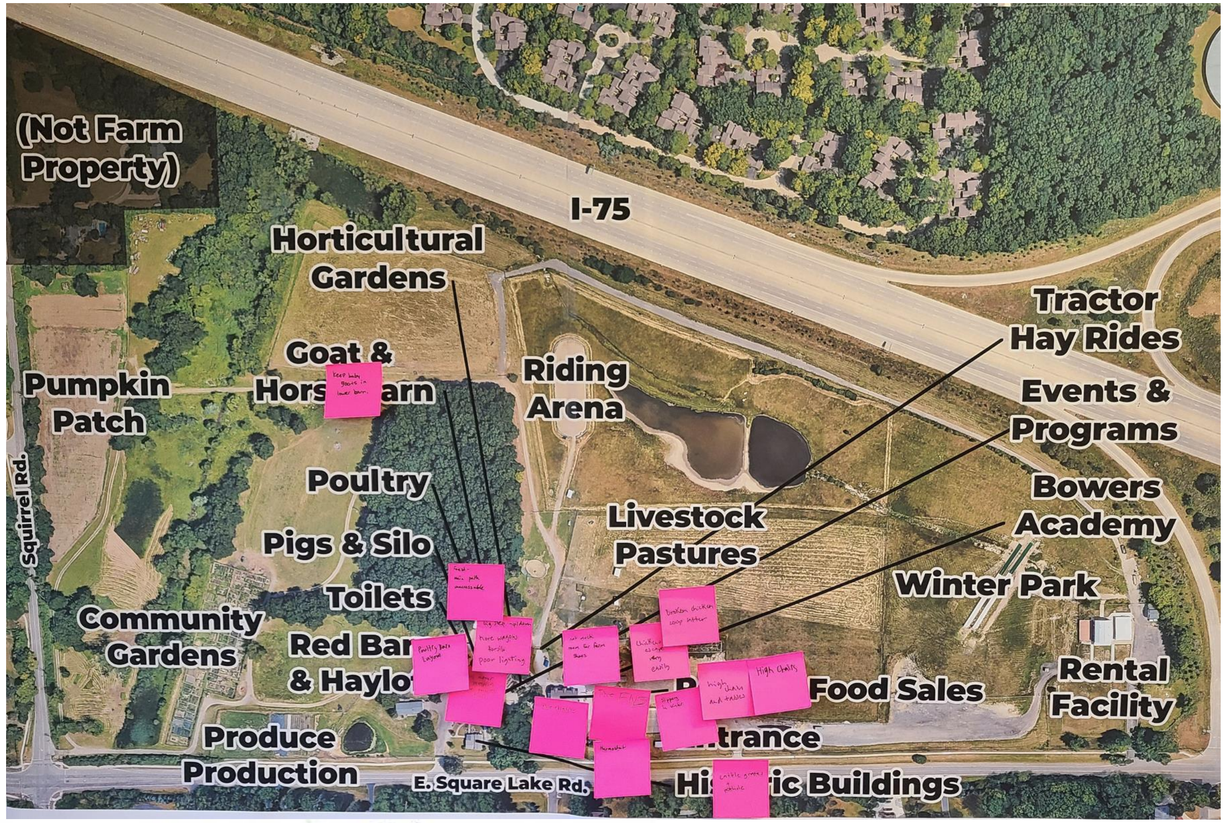
Workshop 2: Students

- Bowers Academy
- BHS Students
- International Academy
- 4H Club (Students)
- FFA Community
- Helpful Hands

PUBLIC ENGAGEMENT STRATEGY



Workshop 3: Key Community Organizations



- Friends of Johnson Nature Center
- BHS PTO Council
- Donors
- JNC Tuesday Group
- Rotary Club
- Community Garden Members
- Optimist Club
- Equestrian Group
- Wild Ones of North Oakland
- MSU Extension
- Oakland Audubon
- Birmingham Bloomfield Chamber
- West Bloomfield Chamber
- Farm Bureau
- Township & Senior Services
- BYA
- Local Libraries

All stakeholder groups were invited to participate in a short survey (administered digitally).

WORKSHOP RESULTS

LIKES

- Variety of Events
- Good Publicity
- Volunteer Opportunities
- Involvement of School Sects. & Community
- Well-organized Events
- Nice & Welcoming Staff
- Girl Power
- Appealing "Look & Feel"

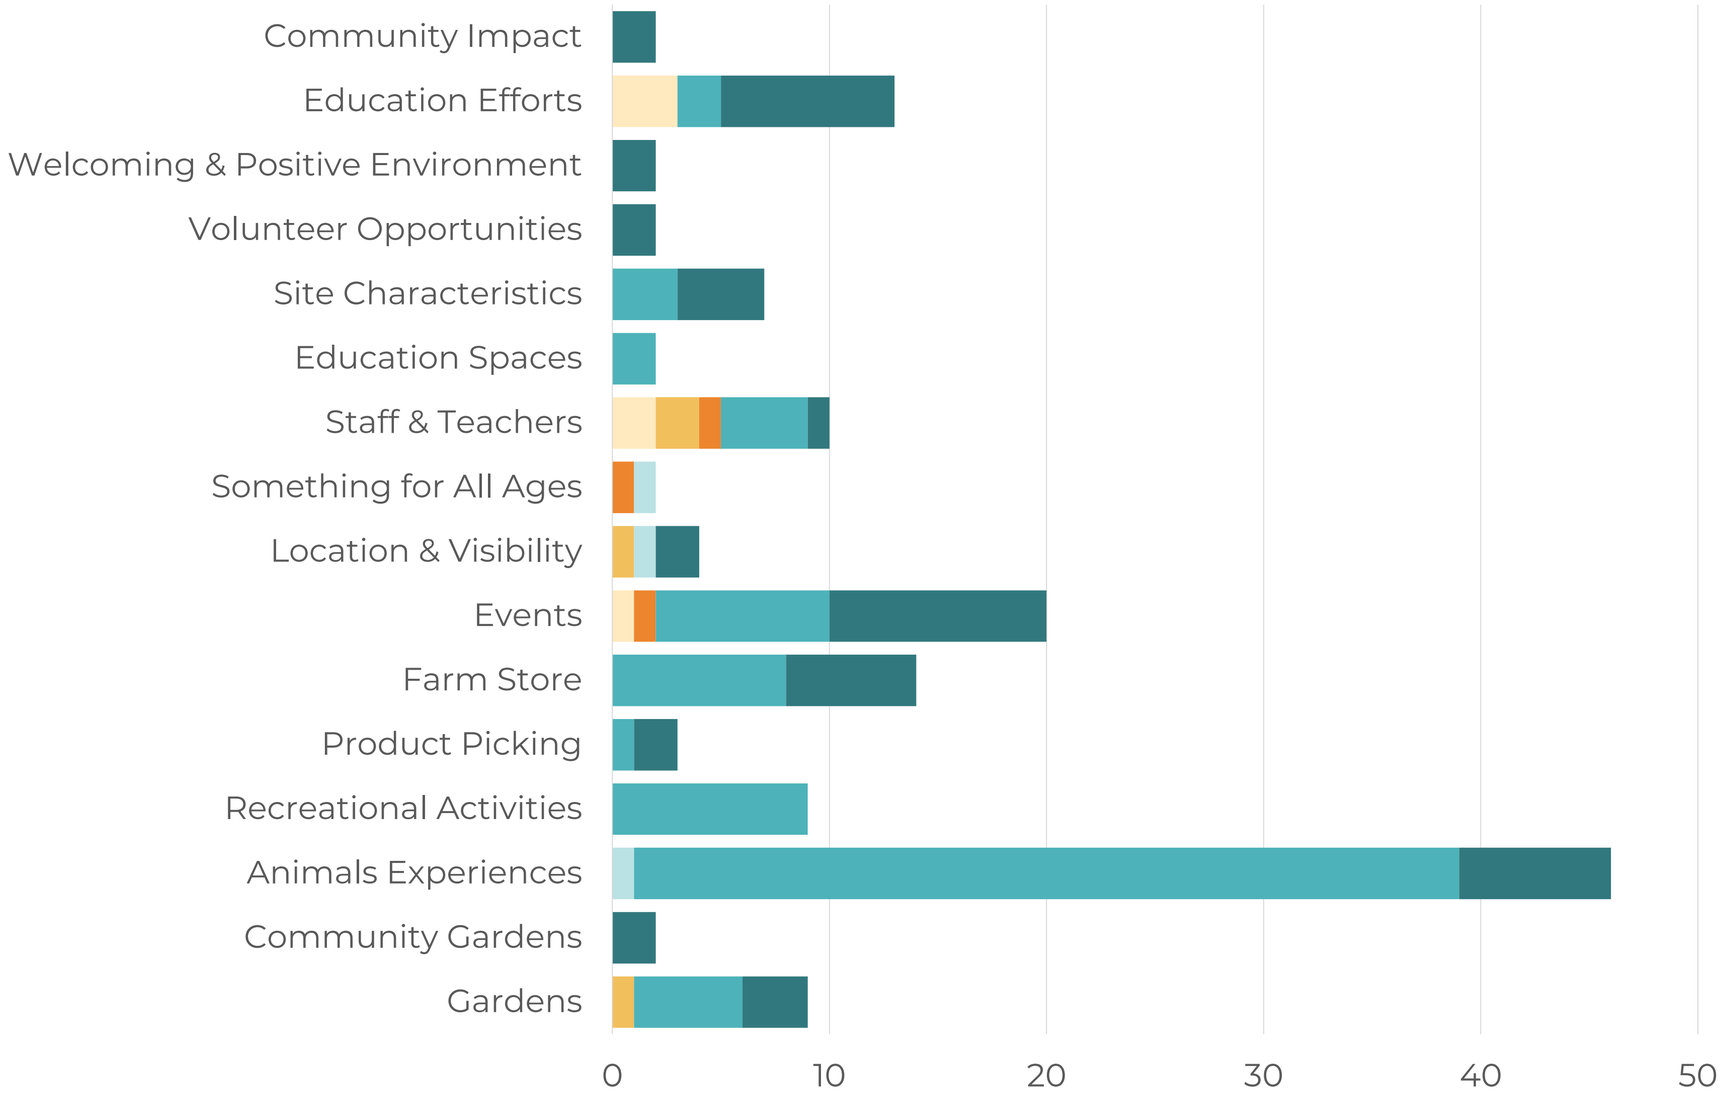
*P. Buckhalter

Likes

Accessible agriculture
Proximity to home
Unique property
Forest (preserved nature)
On site food production
4-H
Community events
Private events
Not a petting farm

Produce Sales
Donuts
Gardens

DISLIKES



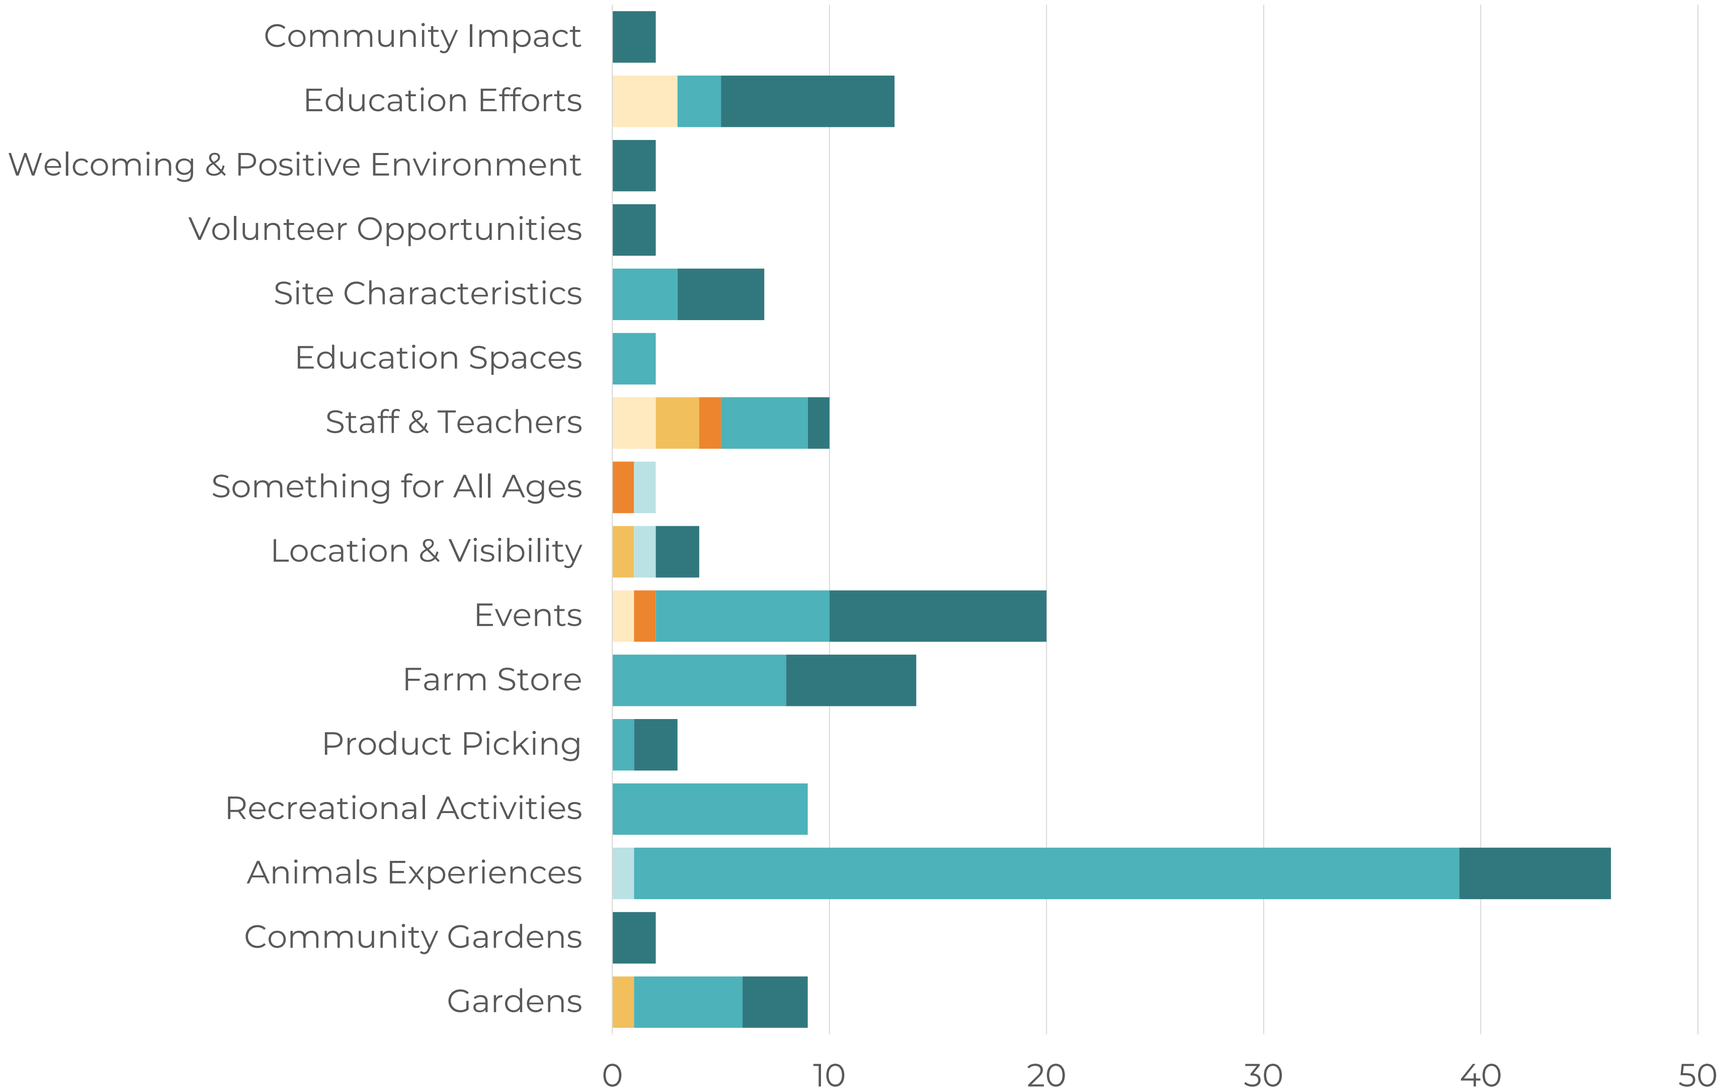
- Lack of Diversity (Have list (Black & White)
- " of store merchandise/ variety
- Event seem "exclusive" vs. "inclusive"
- Lack of "New" Programming: Meet & Greets, Concerts, retreats, Master Classes, Speaker Series, etc.

Dislikes

Restrooms near horse barn
Old facilities - hard to maintain, looks "old"
Horse barn unsafe - cattle stanctions
No grooming stalls (some)
Fencing is not horse appropriate
No indoor arena
Not handicap accessible
Not good flow of traffic
Not stalls for more than 1 horse
No Observation deck / safe space for audience

WORKSHOP RESULTS

What Do You Like About the Farm?

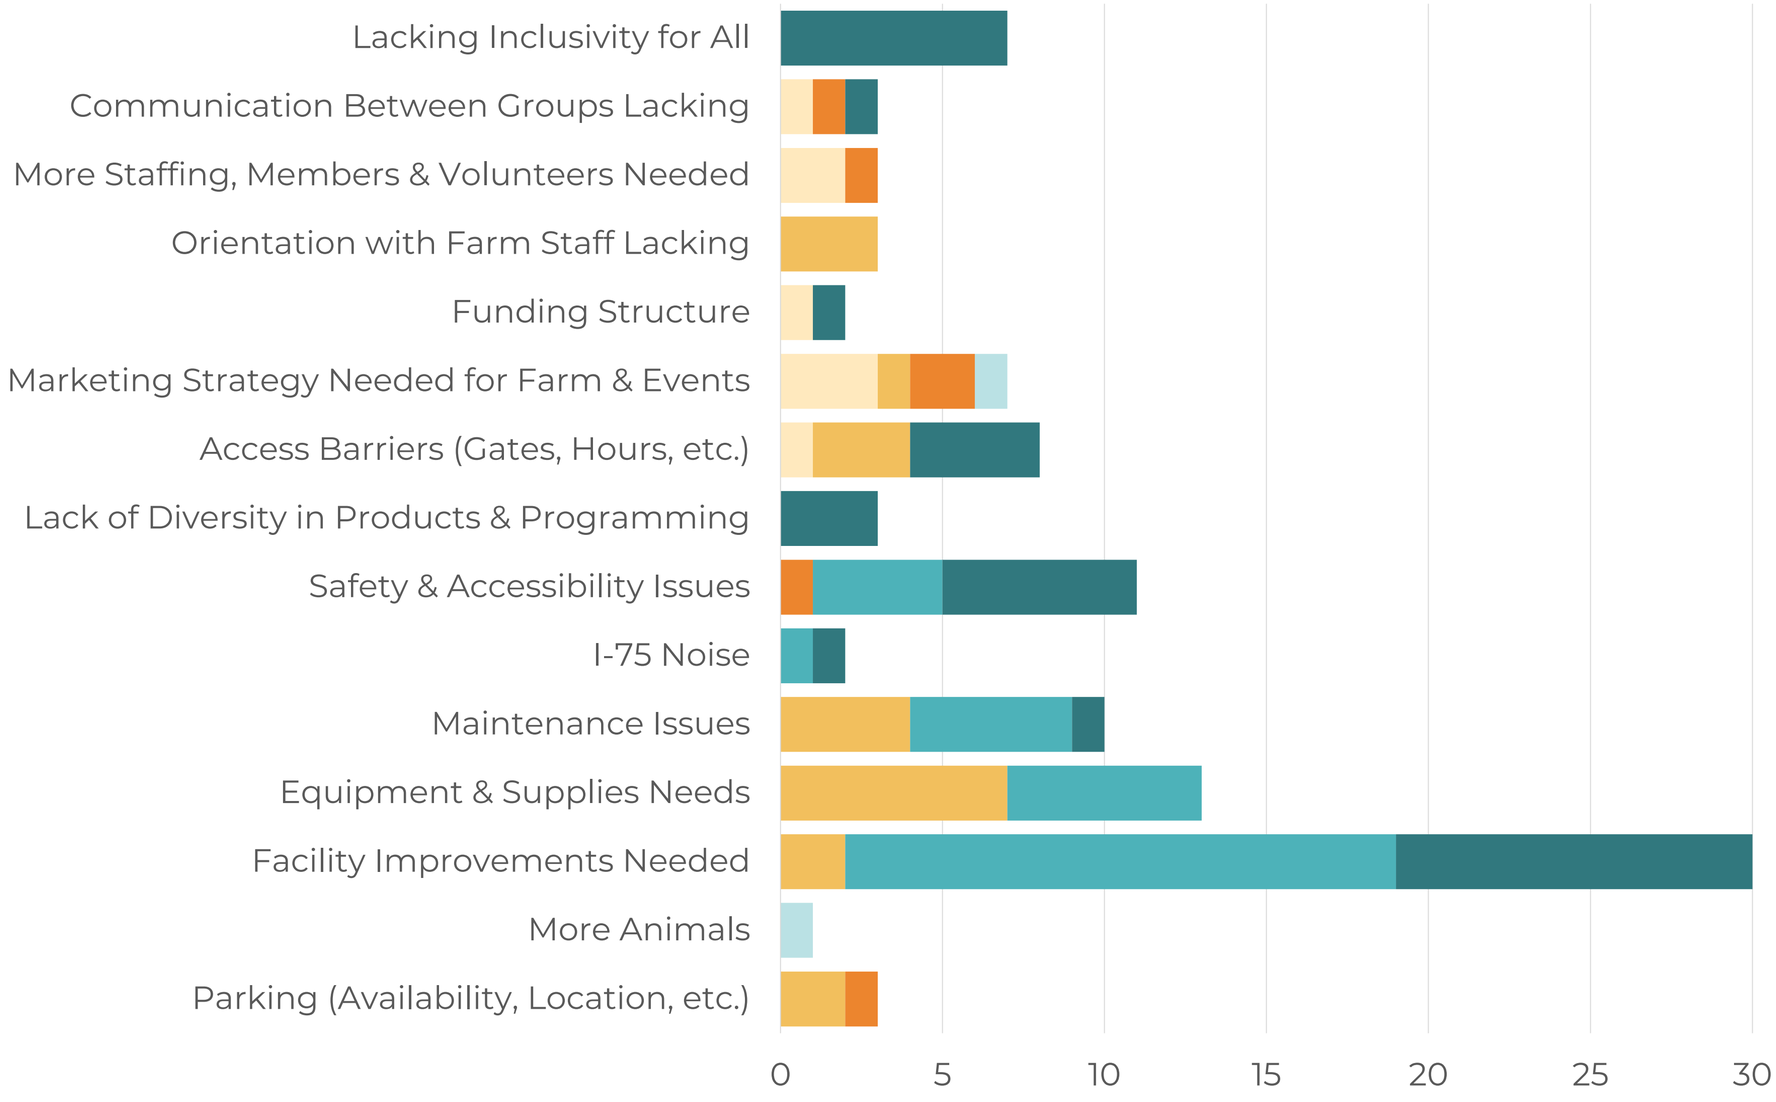


Top Ranking Likes

- Animal Experiences (31%)
- Events (14%)
- Farm Store (10%)
- Education Efforts (9%)
- Staff & Teachers (7%)
- Gardens (6%)
- Recreational Activities (Wagon Rides, Ropes Course, Basketball) (6%)

WORKSHOP RESULTS

What Do You Like About the Farm?

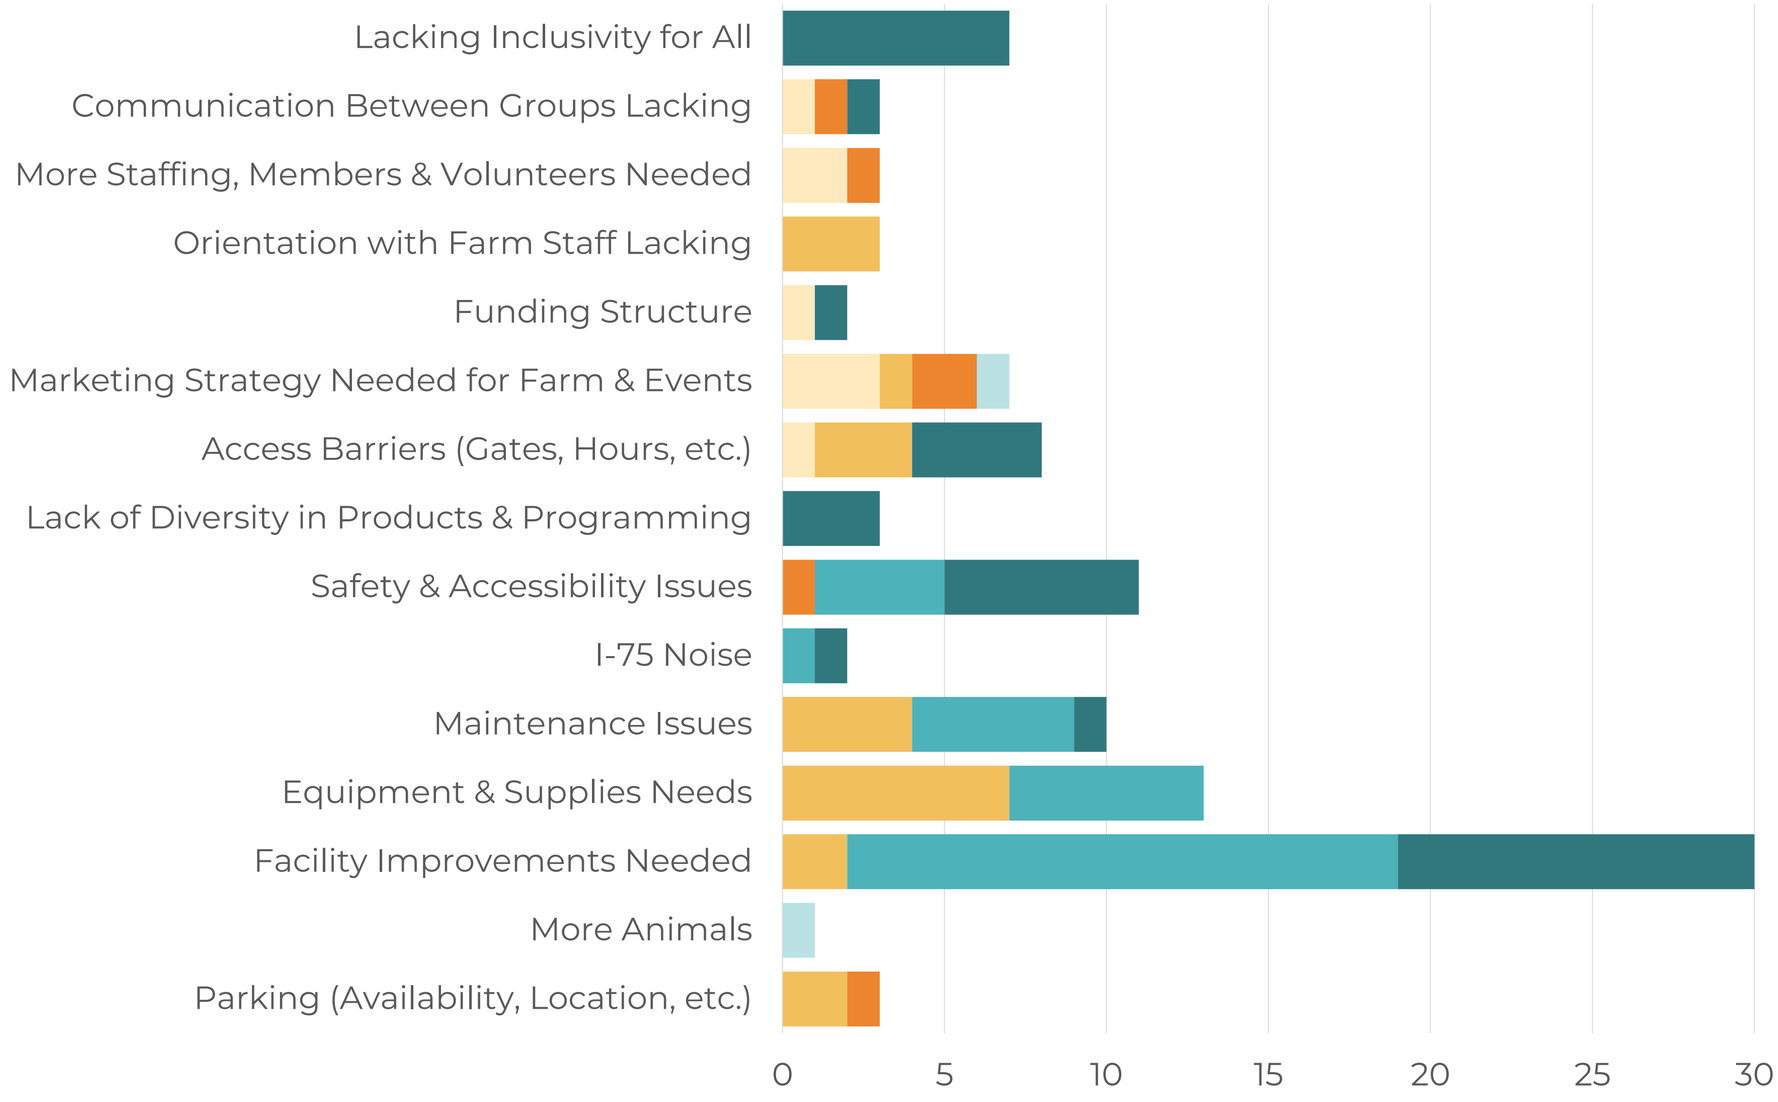


General Notes

- Animal experiences are very popular among students
- Ice cream and pizza were noted favorites, especially among students
- Winter Park was frequently mentioned as a favorite event
- Open House yielded several comments on the visual charm of the Farm
- Open House participants value the role that the Farm plays in educating students and community residents

WORKSHOP RESULTS

What Do You Dislike About the Farm?



Top Ranking Dislikes

- Facility Improvements Needed (28%)
- Equipment & Supplies Needed (12%)
- Safety & Accessibility Issues (10%)
- Maintenance Issues (9%)
- Access Barriers (Gates, Hours, etc.) (8%)
- Marketing Strategy Needed for Farm & Events (7%)
- Lacking Inclusivity for All (7%)

WORKSHOP RESULTS

What Do You Dislike About the Farm?

General Notes

- The perception of lacking inclusivity was noted by Open House community members
- Safety & Accessibility issues were noted by all ages

WORKSHOP RESULTS

Key Takeaways

- Farm volunteer groups (Friends of the Farm, Preservation Bloomfield, Historic Society, Master Gardeners, and 4H) agreed on the following items.
  - Improved communication between groups and with the Farm staff
  - Improved marketing strategy for the Farm, its rental facilities, and events
  - Improved PR strategy for work that volunteer groups are doing onsite and fundraising efforts

- Animal experiences are a strong product for the Farm.

- Students gave honest feedback from operational (BOH), educational and guest experience perspectives.

- There was no mention of the Barton Farmhouse or Craig Log Cabin.

- Many noted positive attributes about the Farm staff and teachers.

- The number (and ages) of people noting perceived maintenance and safety/accessibility issues is telling.

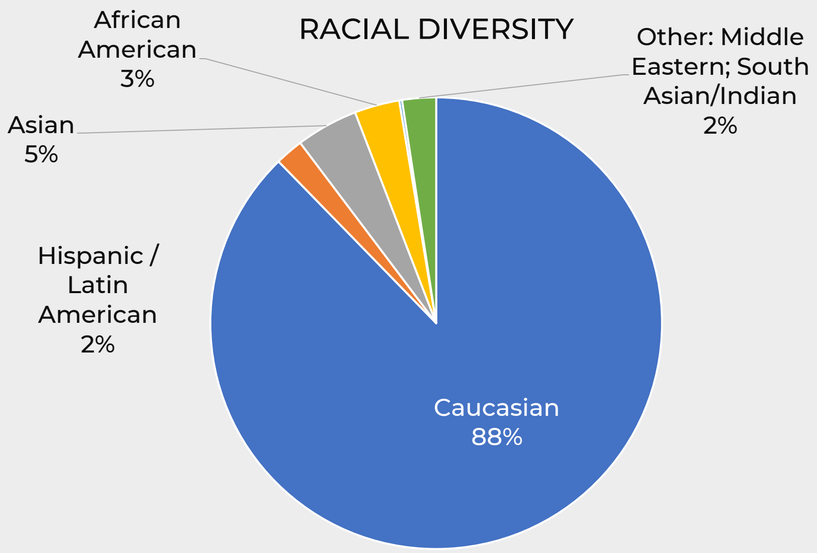
- Inclusivity is another weakness noted by community members; comments highlighted financial barriers for programs and the need for stronger relationships with neighboring school districts & communities.

WORKSHOP RESULTS

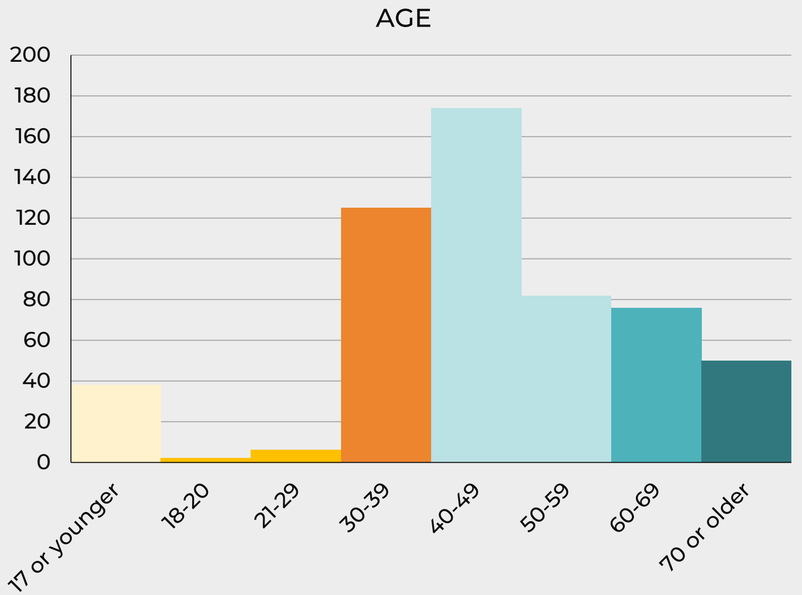
BIG Ideas for Improving BSF

- Bring the Barn and House from Pickering Farm to the property
- More production gardens located in public viewing areas
- Additional gardens for students and 4H organization
- On-site restaurant / Celebrity Chef attraction
- Historical period clothing / Heritage days
- Solar power
- Separation of public viewing areas, education spaces and private BOH areas
- 4H exhibit with photos showing what 4H is, what they do, etc.
- Fundraising / Donation area onsite
- More events – Corn maze, Farm style escape room
- Treehouses, camping, cabins, yurts
- Add a gym to the school
- Farm preschool
- Walking trails around the property
- Green space for informal Farm visits and natural playground
- Indoor horse arena, horse riding classes for all
- Master classes & speaker series
- Wellness retreat
- Water slides on sledding hill in the summer
- Ride experience around the Farm (rollercoaster, trolley train car, etc.)

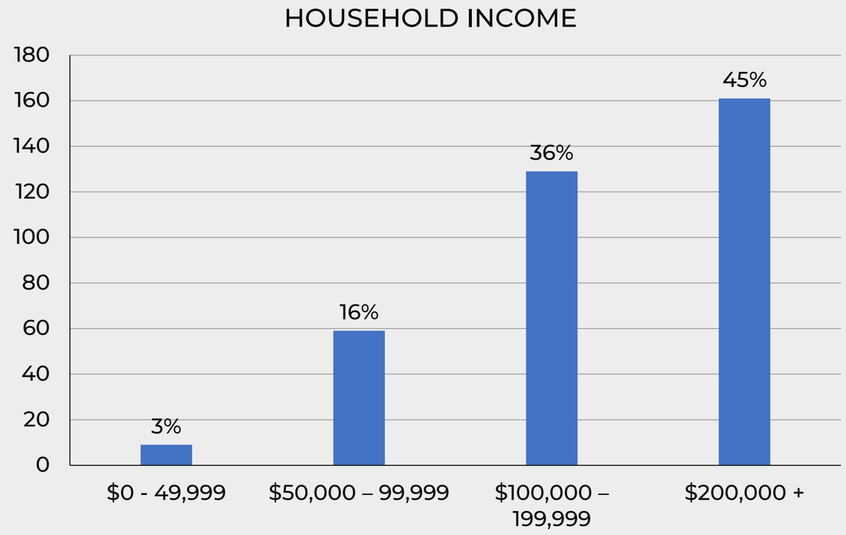
SURVEY RESULTS



Key Takeaways



- The Farm is well-known in the community with the majority of visitors living within 15 min of the Farm.
- Non-visitors who are aware of the Farm have a perception that the Farm is primarily, although not exclusively, for BHS students and their families. These non-visitors tend to be older adults without children in their homes.
- Non-visitors from outside the 30 min drive time are looking for unique programs and activities that would make the drive worthwhile.
- Currently, the Farm suffers from a perception that it is not a value—that admission is not equal to the guest experience or length of stay.
- Strong overall perception of the Farm with many people anticipating increasing their attendance due to the changes they are seeing on-site, especially improvements to the store. Additionally, guests are saying they will visit more because they purchased a membership, or generally want to support a place they love.
- People are visiting for events (collectively), because they love the animals, are making purchases in the store, or are participating in programs.
- Strong desire to NOT commercialize (i.e. Farm-Amusement) AND to focus on educational experiences that build community within BHS market. More programs, more events, more interpretation, and more food options are the most popular suggestions for growth. Surprisingly, more animals / animal experiences were suggested far less.
- Very strong desire for focus or expansion related to horse experiences.



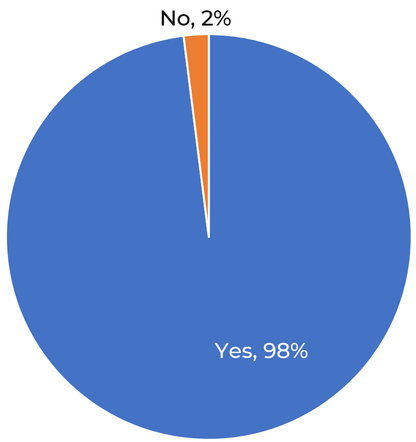
AUDIENCE SEGMENTS

- UNAWARE NON-VISITORS
- AWARE NON-VISITORS
- VISITORS
- 15 MIN DRIVE
- 30 MIN DRIVE
- 2 HR DRIVE
- NON-CAUCASIAN
- ADULTS W/O KIDS
- FAMILIES
- SENIORS
- UNDER 21

DIGITAL SURVEY RESULTS

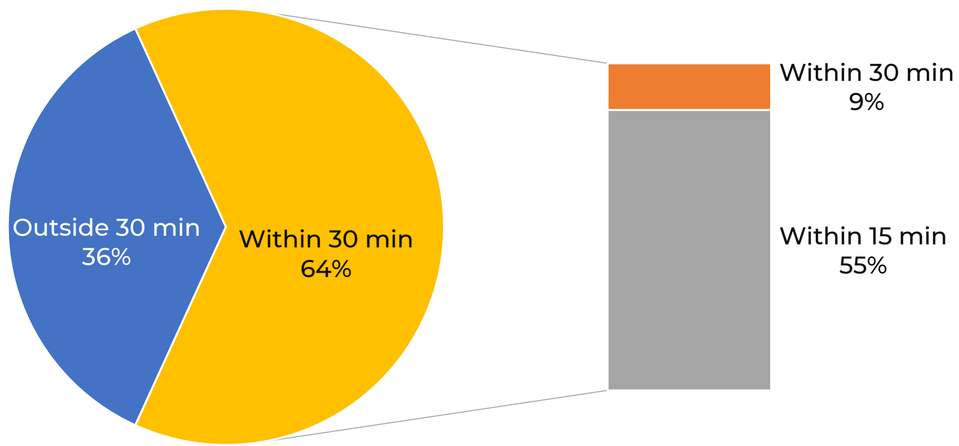
553 TOTAL RESPONSES

Ave. HH Size: **3.4**
College Degree: **89%**
Adults Without Kids At Home: **30%**
93% are previous Farm Visitors
76% are previous Nature Center Visitors



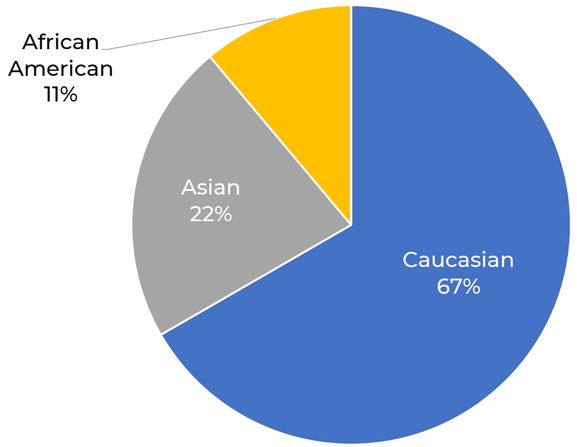
BSF & JNC Visitor Profiles look the same!

KEY POINTS:



- Low responses from Non-Visitor segment
- Heavily Caucasian
- Black / African American underrepresented compared to population at 15, 30, and 120 min segments
- Underrepresented Gen Z segment and overrepresented Gen X segment compared to drive time populations
- Respondents' wealth is greater than drive time segment populations; Underrepresented low income demo

UNAWARE NON-VISITORS

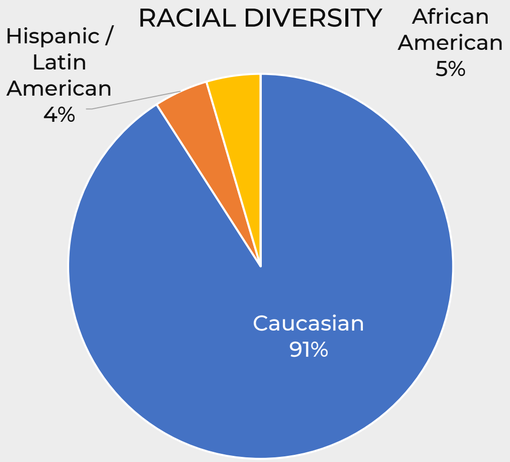


WERE YOU AWARE OF BOWERS SCHOOL FARM BEFORE SURVEY?

DRIVE TIME FOR THOSE UNAWARE

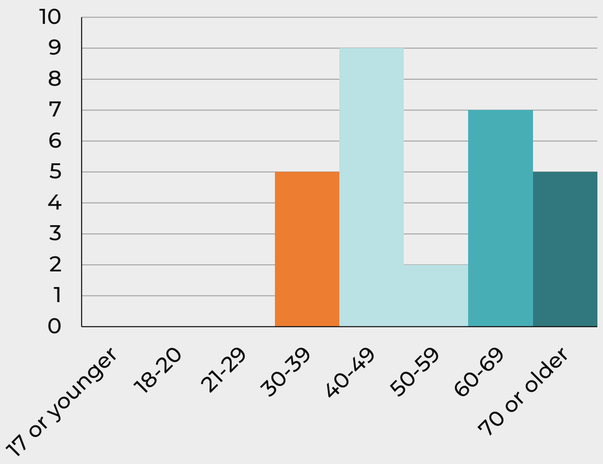
RACIAL DIVERSITY OF THOSE UNAWARE

11 TOTAL RESPONSES



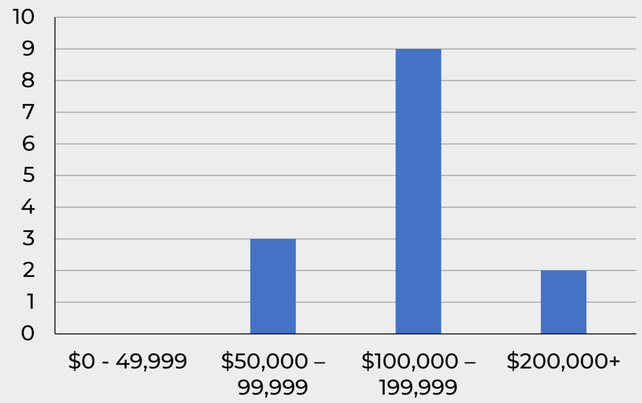
Ave. HH Size: **3.3**
College Degree: **73%**
Adults Without Kids At Home: 35%

KEY POINTS:

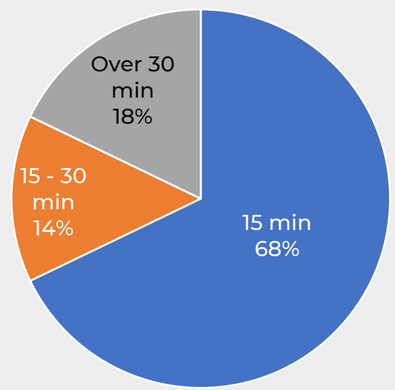


- Very low percentage of respondents unaware of Bowers School Farm
- Of those, the majority live within 15 min of the Farm
- Higher proportion of Asian and African American respondents than overall survey profile (Otherwise, this group reflects the overall respondent profile although more than half chose “Prefer not to answer” for HH income)

AWARE NON-VISITORS



RACIAL DIVERSITY



AGE

HOUSEHOLD INCOME

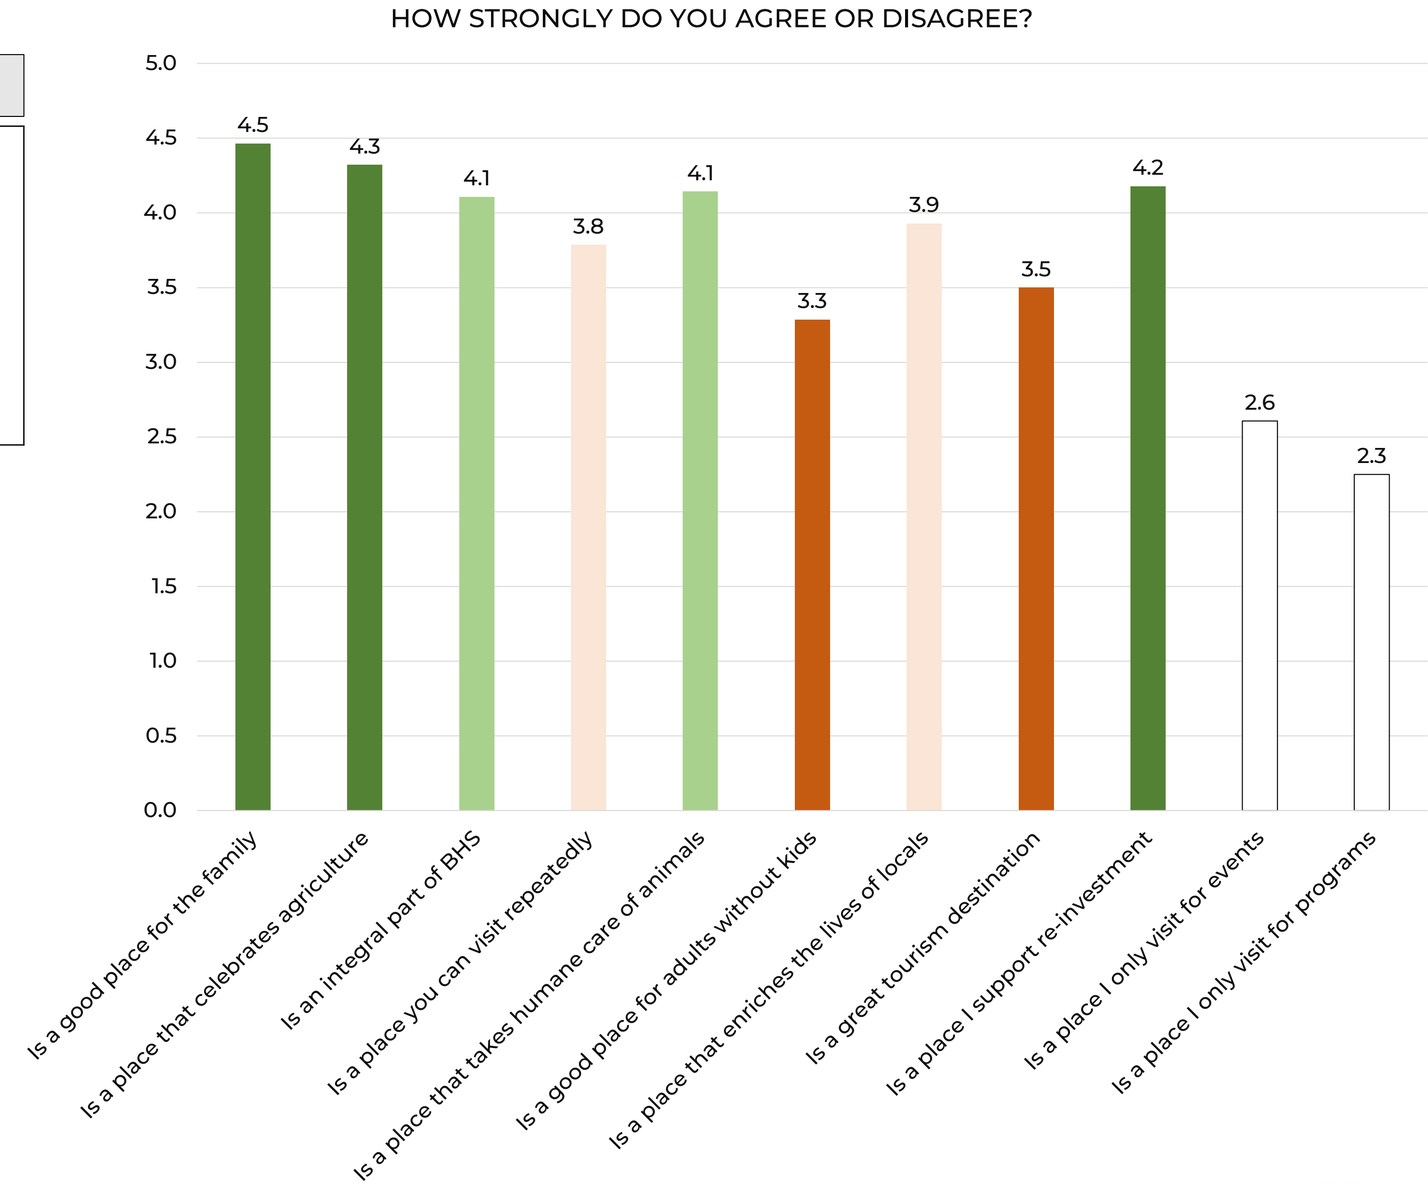
DRIVE TIME

FREQUENTLY VISITED ATTRACTIONS

28 TOTAL RESPONSES

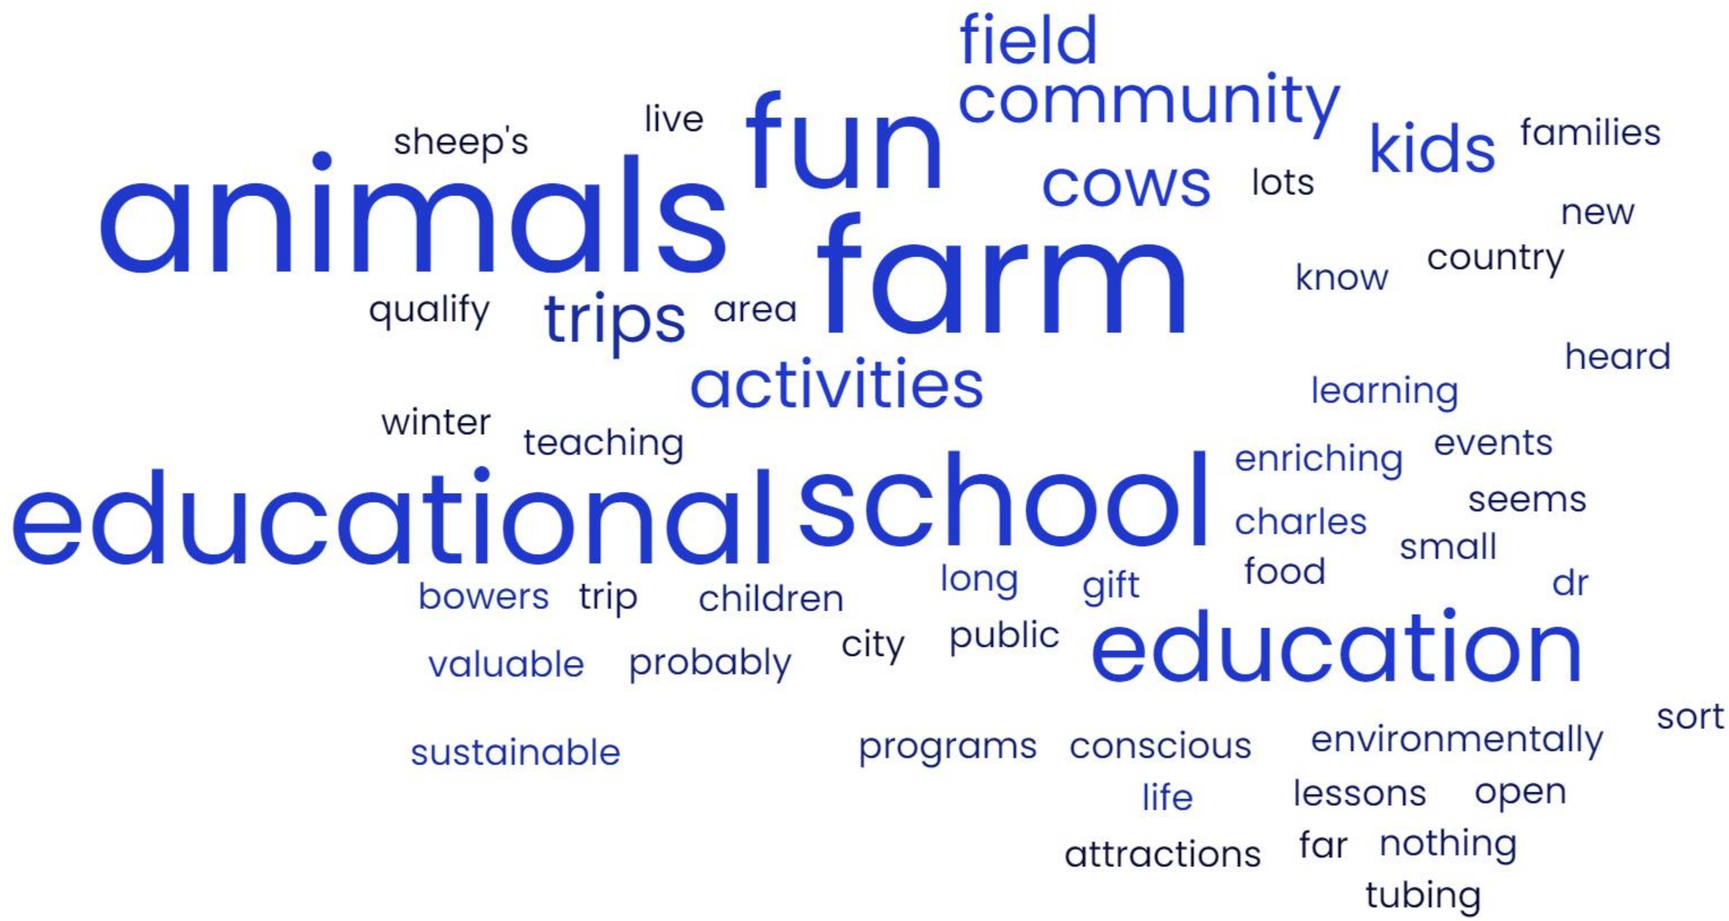
Ave. HH Size: **3.0**
College Degree: **89%**
Adults Without Kids At Home: **53%**

Lower HH Income & Higher Age
More often are within 15 min drive than those Unaware
Less diversity than overall survey, but higher percentage of each represented minority.



AWARE NON-VISITOR PERCEPTIONS

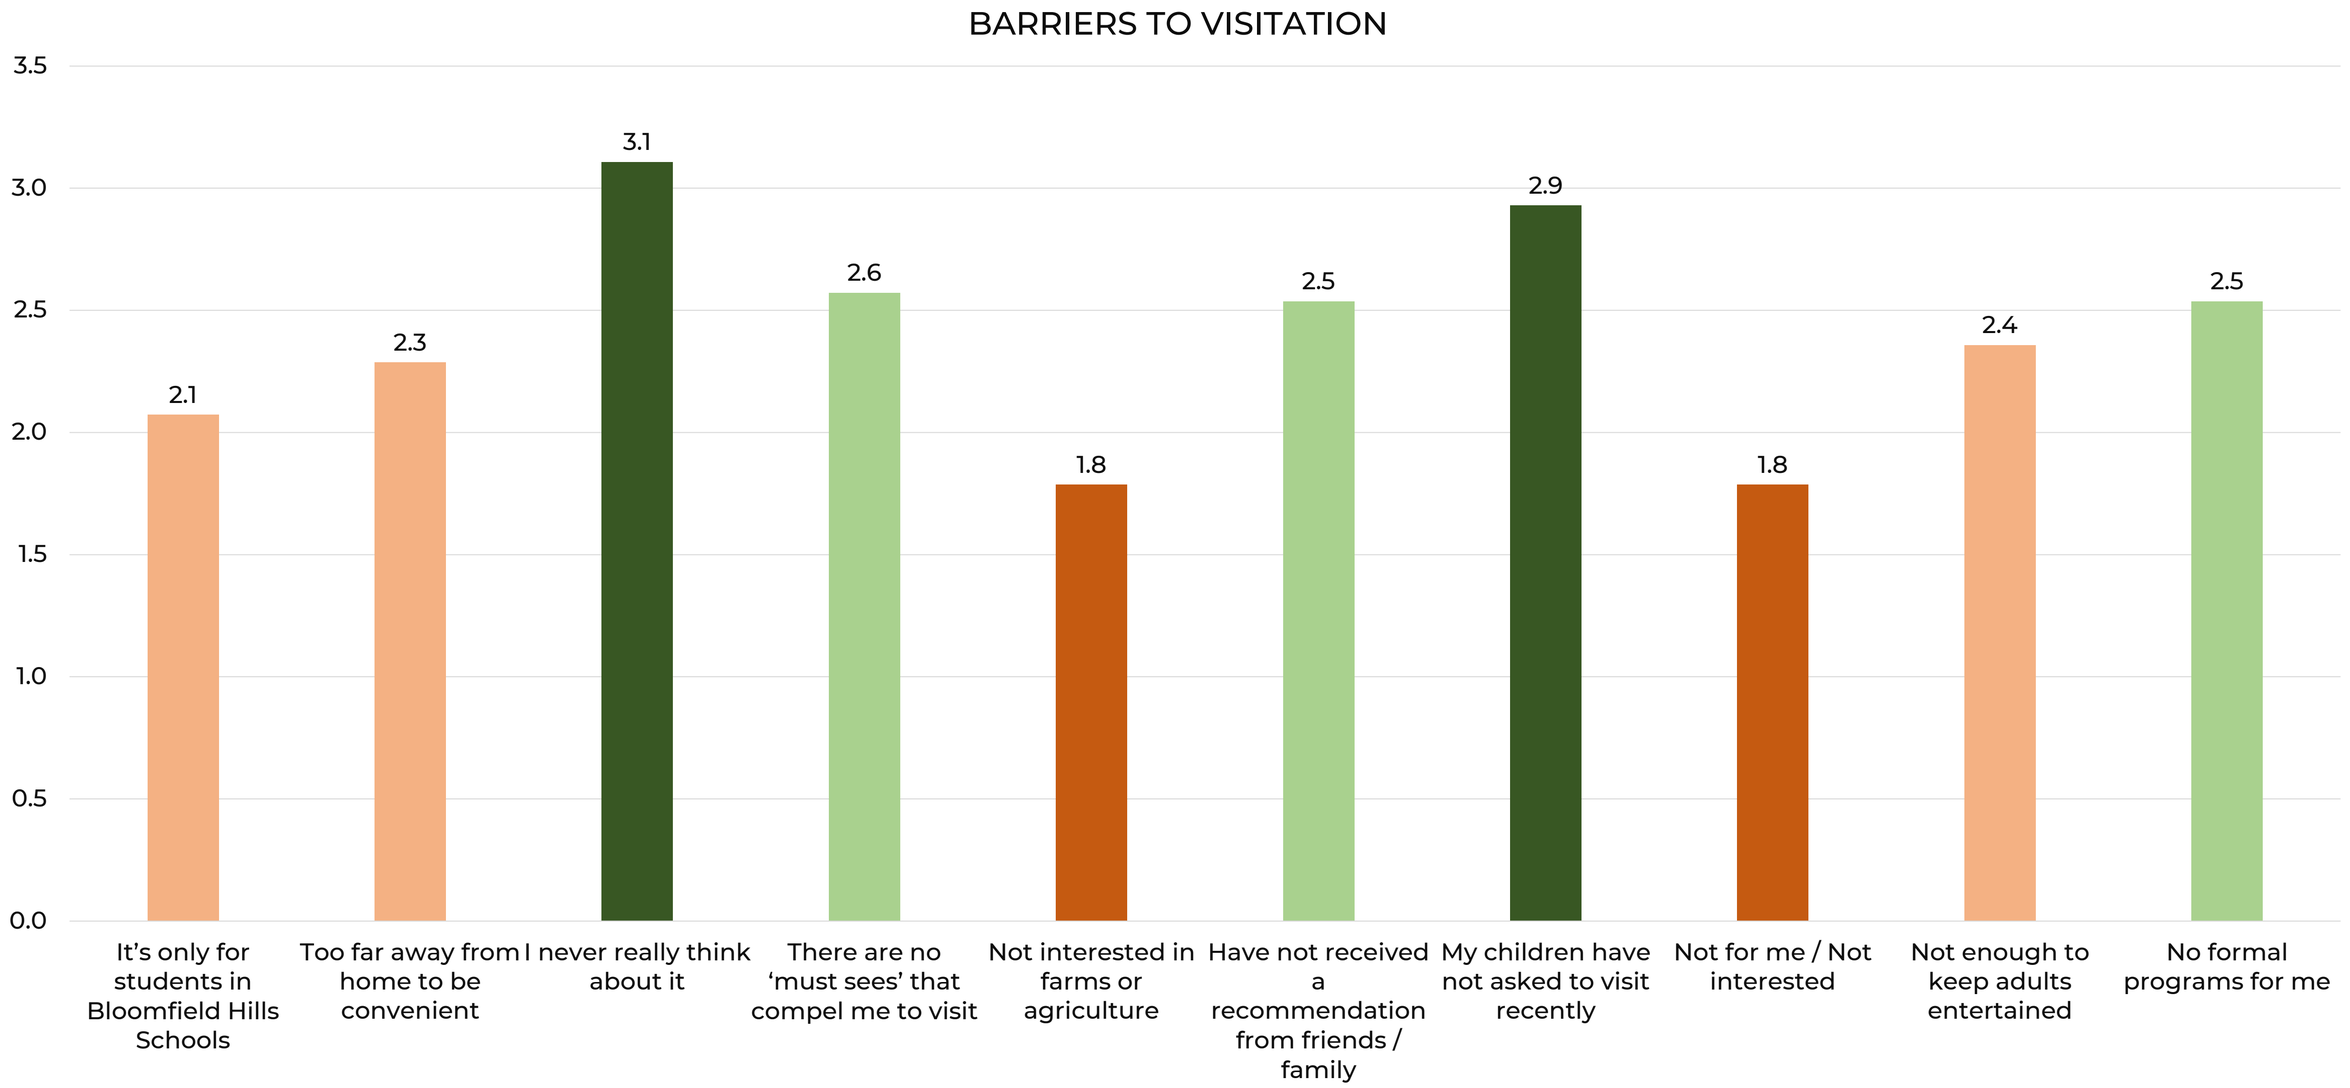
RANK YOUR BELIEF OF FARM PURPOSE:



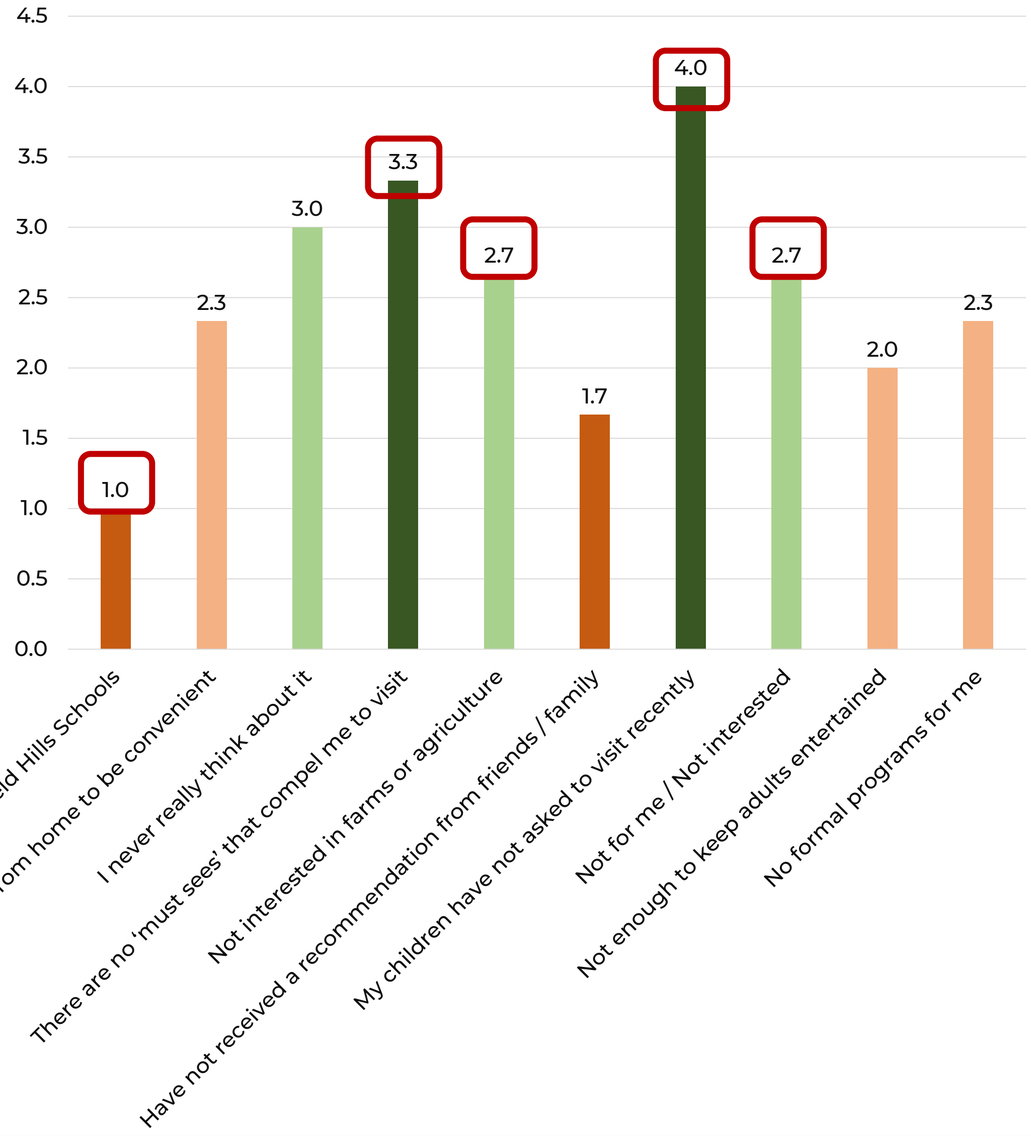
1 Improving student academic outcomes
2 Teaching about responsible agriculture
3 Recreation / leisure
4 Community gathering space
5 Food production
6 Tourism

Non-Visitor perceptions are generally positive, with the least agreed upon statements pertaining to being a good leisure / tourism destination for adults without kids. Top two purposes are related to education.

Reflects strong belief that Farm is for student families.

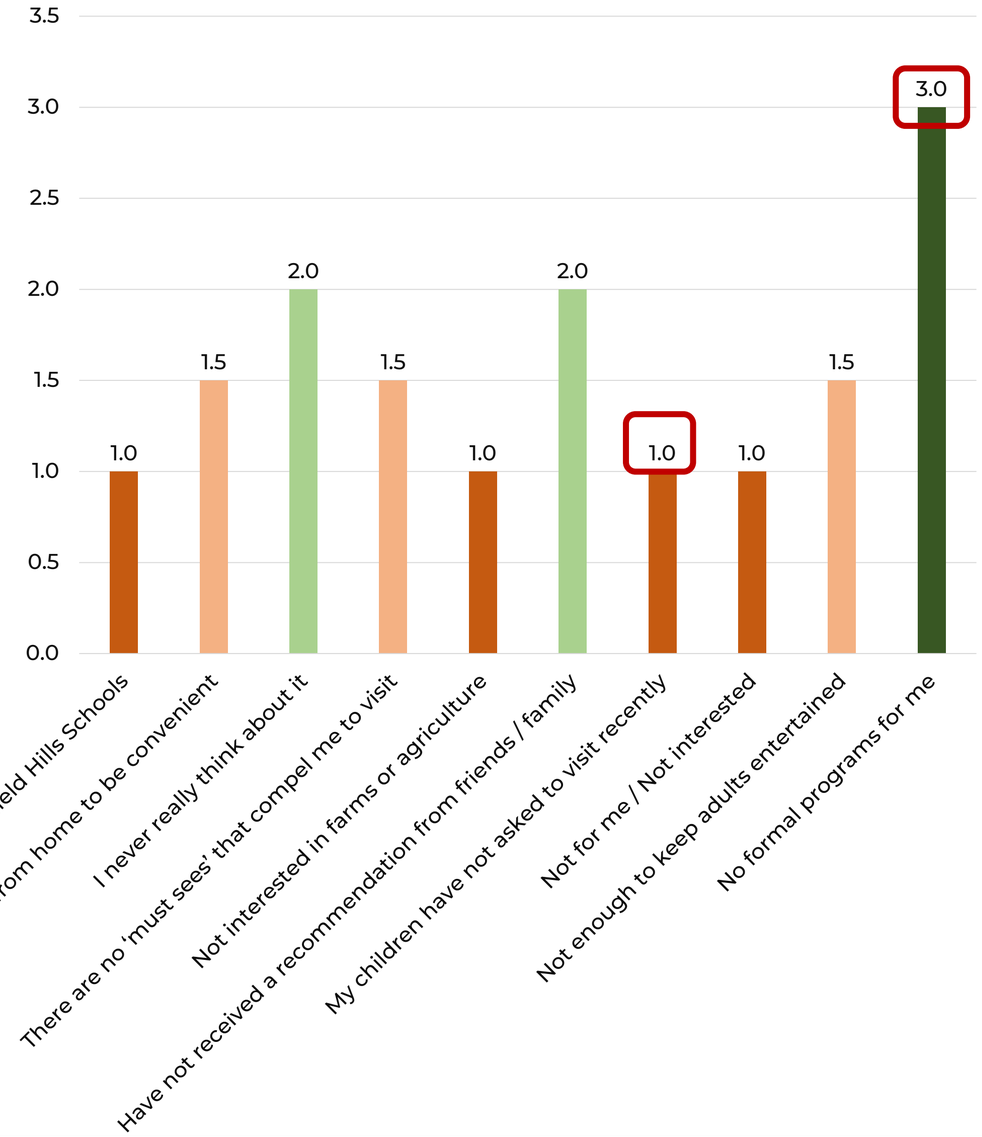


AWARE NON-VISITOR PERCEPTIONS



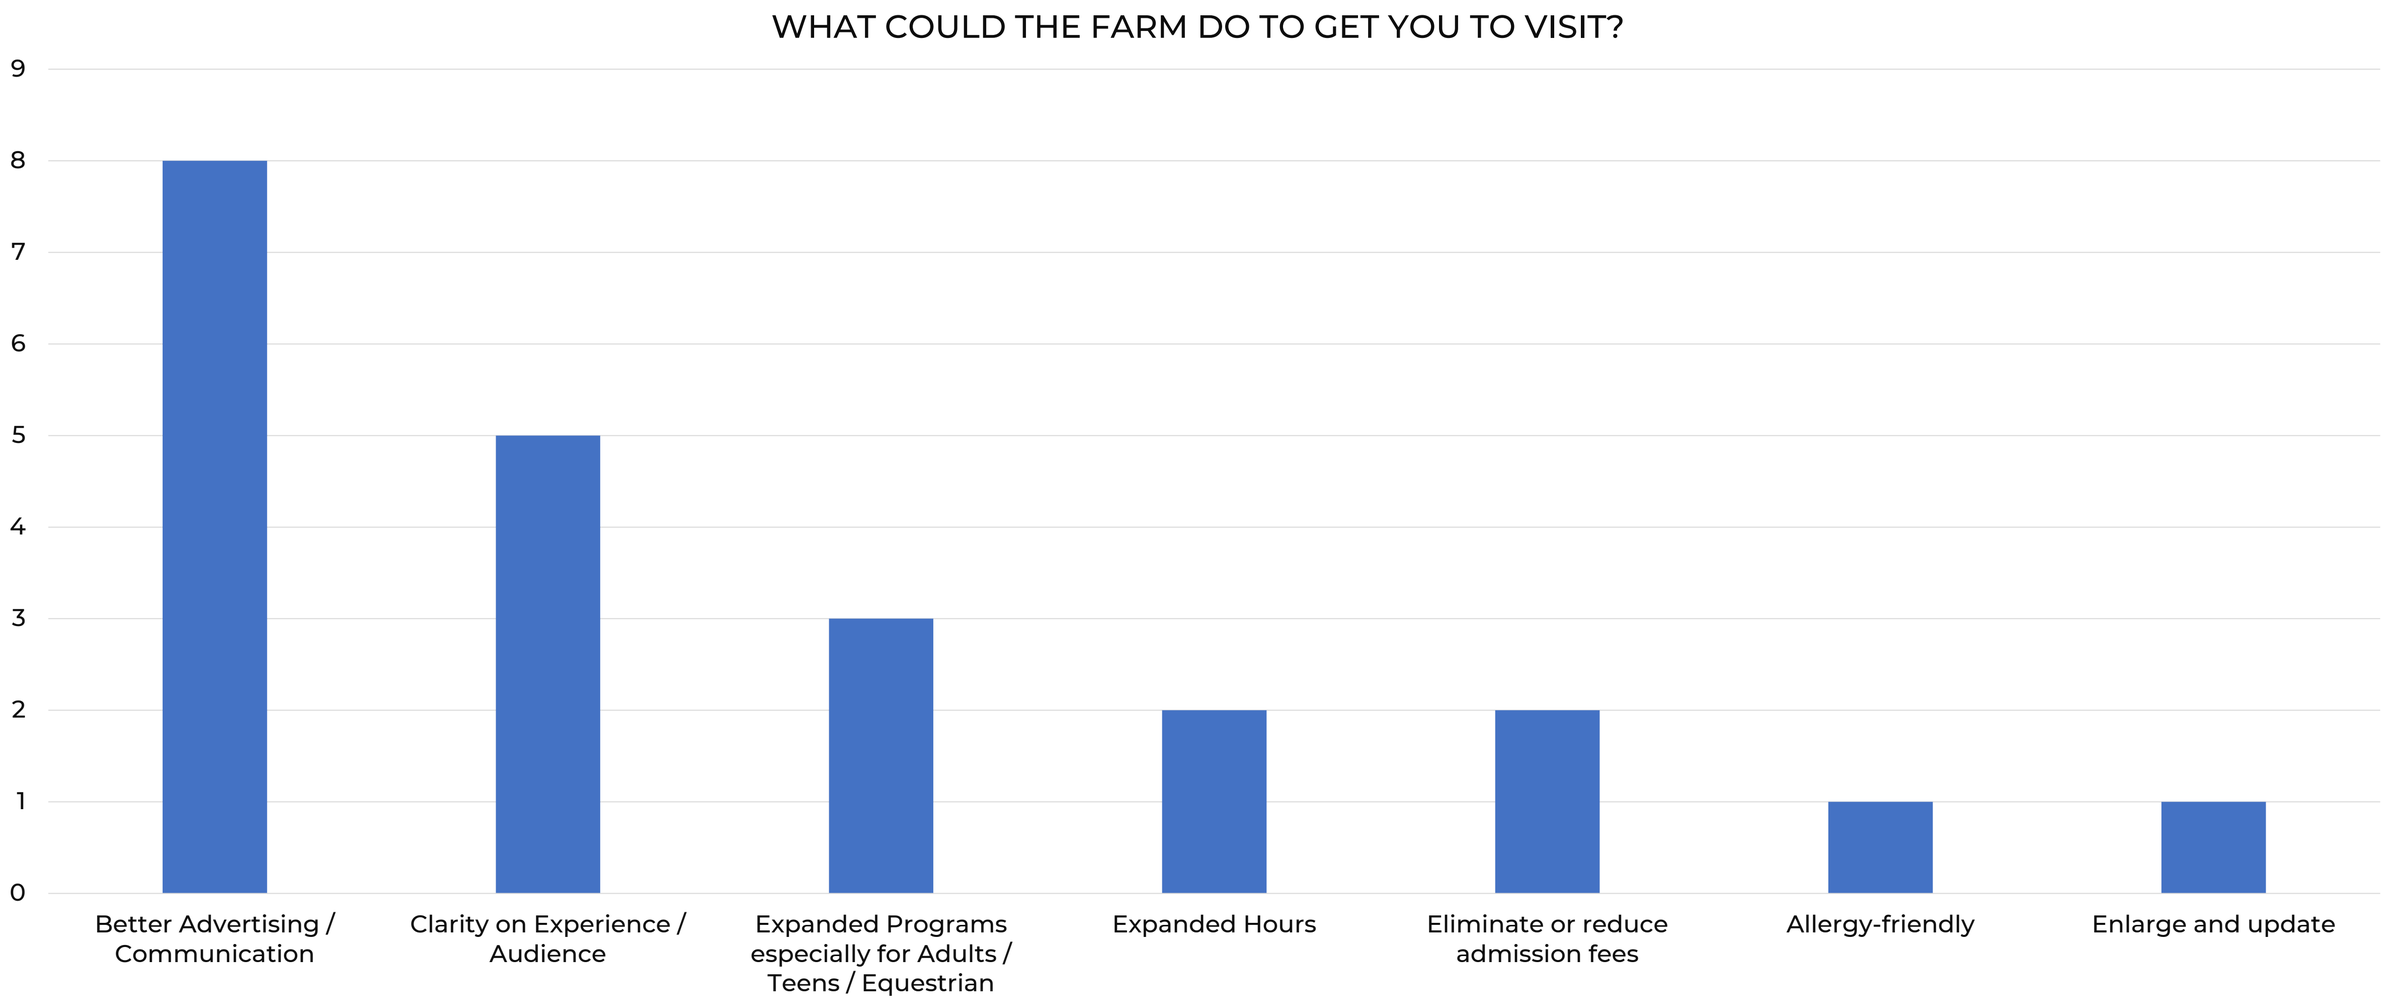
Non-Visitor perception of the Farm is very focused on **EDUCATION, KIDS,** and expected **FARM ELEMENTS** like animals**.**

AWARE NON-VISITOR PERCEPTIONS

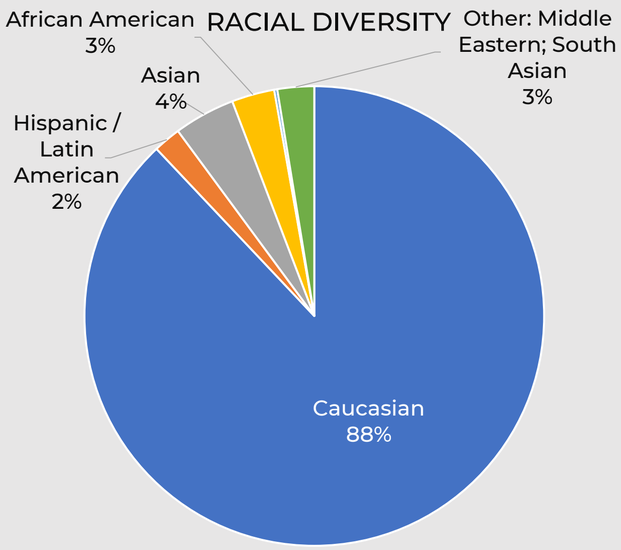


"I never really think about it" is top with **"My children have not asked to visit recently."**
However, none of the responses have strong agreement—most reflect **disagreement.**
What is the true barrier??

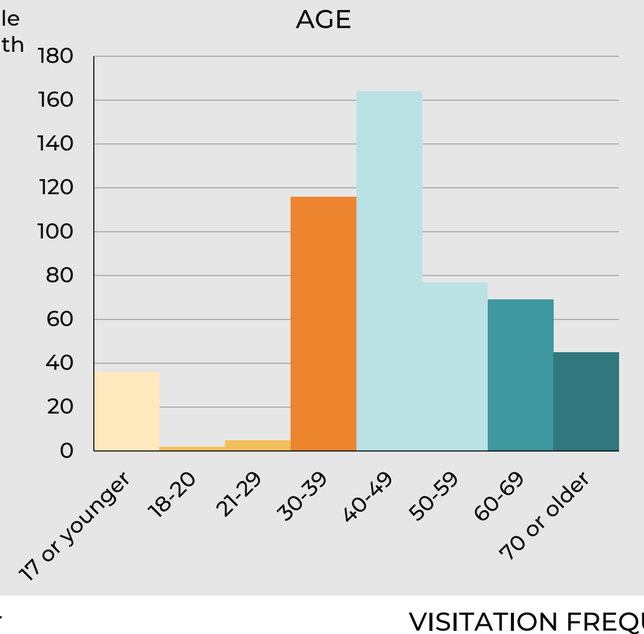
BARRIERS TO VISITATION
15 & 30 MIN DRIVE TIME



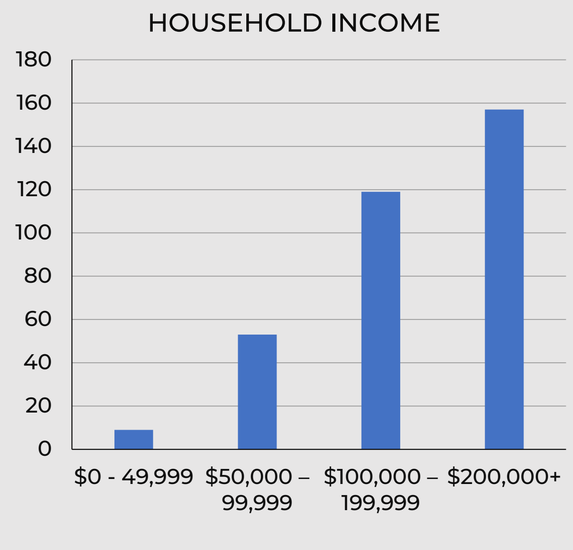
BARRIERS TO VISITATION
OVER 30 MIN DRIVE TIME



Drive time appears to have an impact on why people are not visiting. Non-visitors who live within 30 min drive rely on **children to ask to visit** and say there are **no must-see elements** at the Farm. They are also more likely to cite they **have no interest in agriculture** and its **generally not for them**. People living further than 30 min drive cite a **lack of formal programs** and surprisingly, are not impacted by **children asking to go**. (Segment has only 5 respondents.)

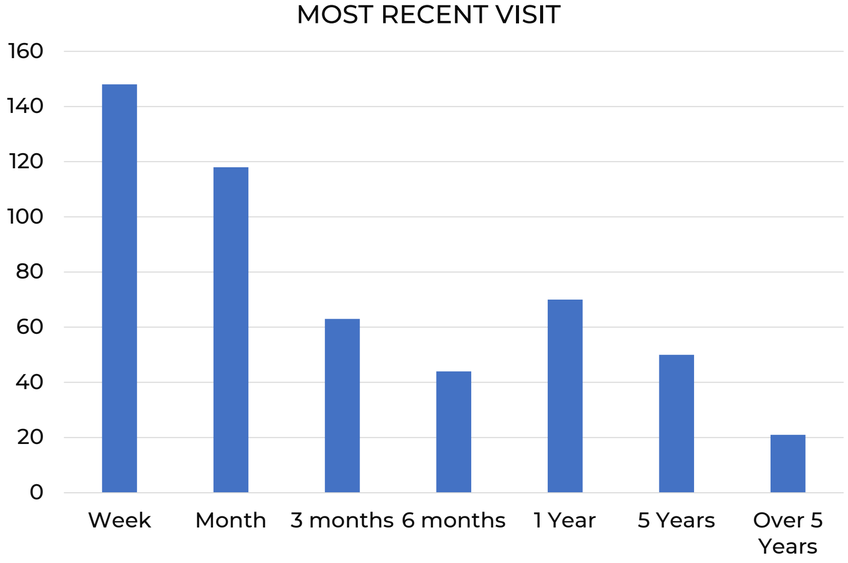


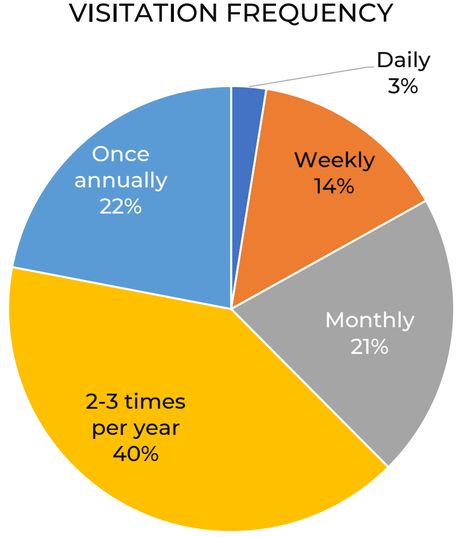
AWARE NON-VISITOR PERCEPTIONS

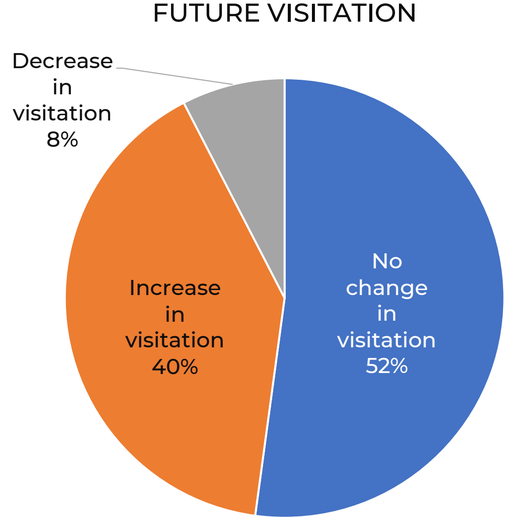


Suggestions reflect a **lack of awareness**—through advertising and word of mouth.
This aligns with “i never really think of it” as a barrier.
However, unprompted suggestions of changes include **expanding hours and programs**.

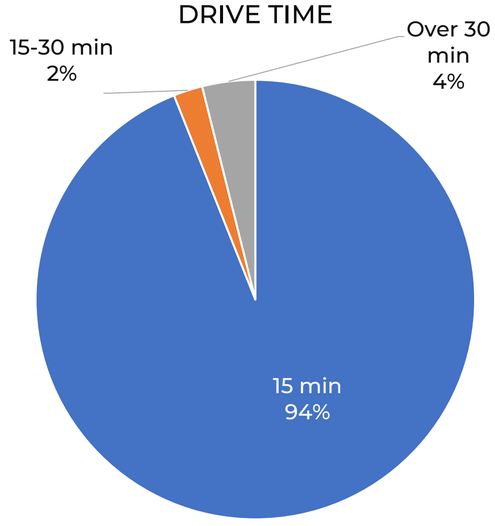
VISITORS





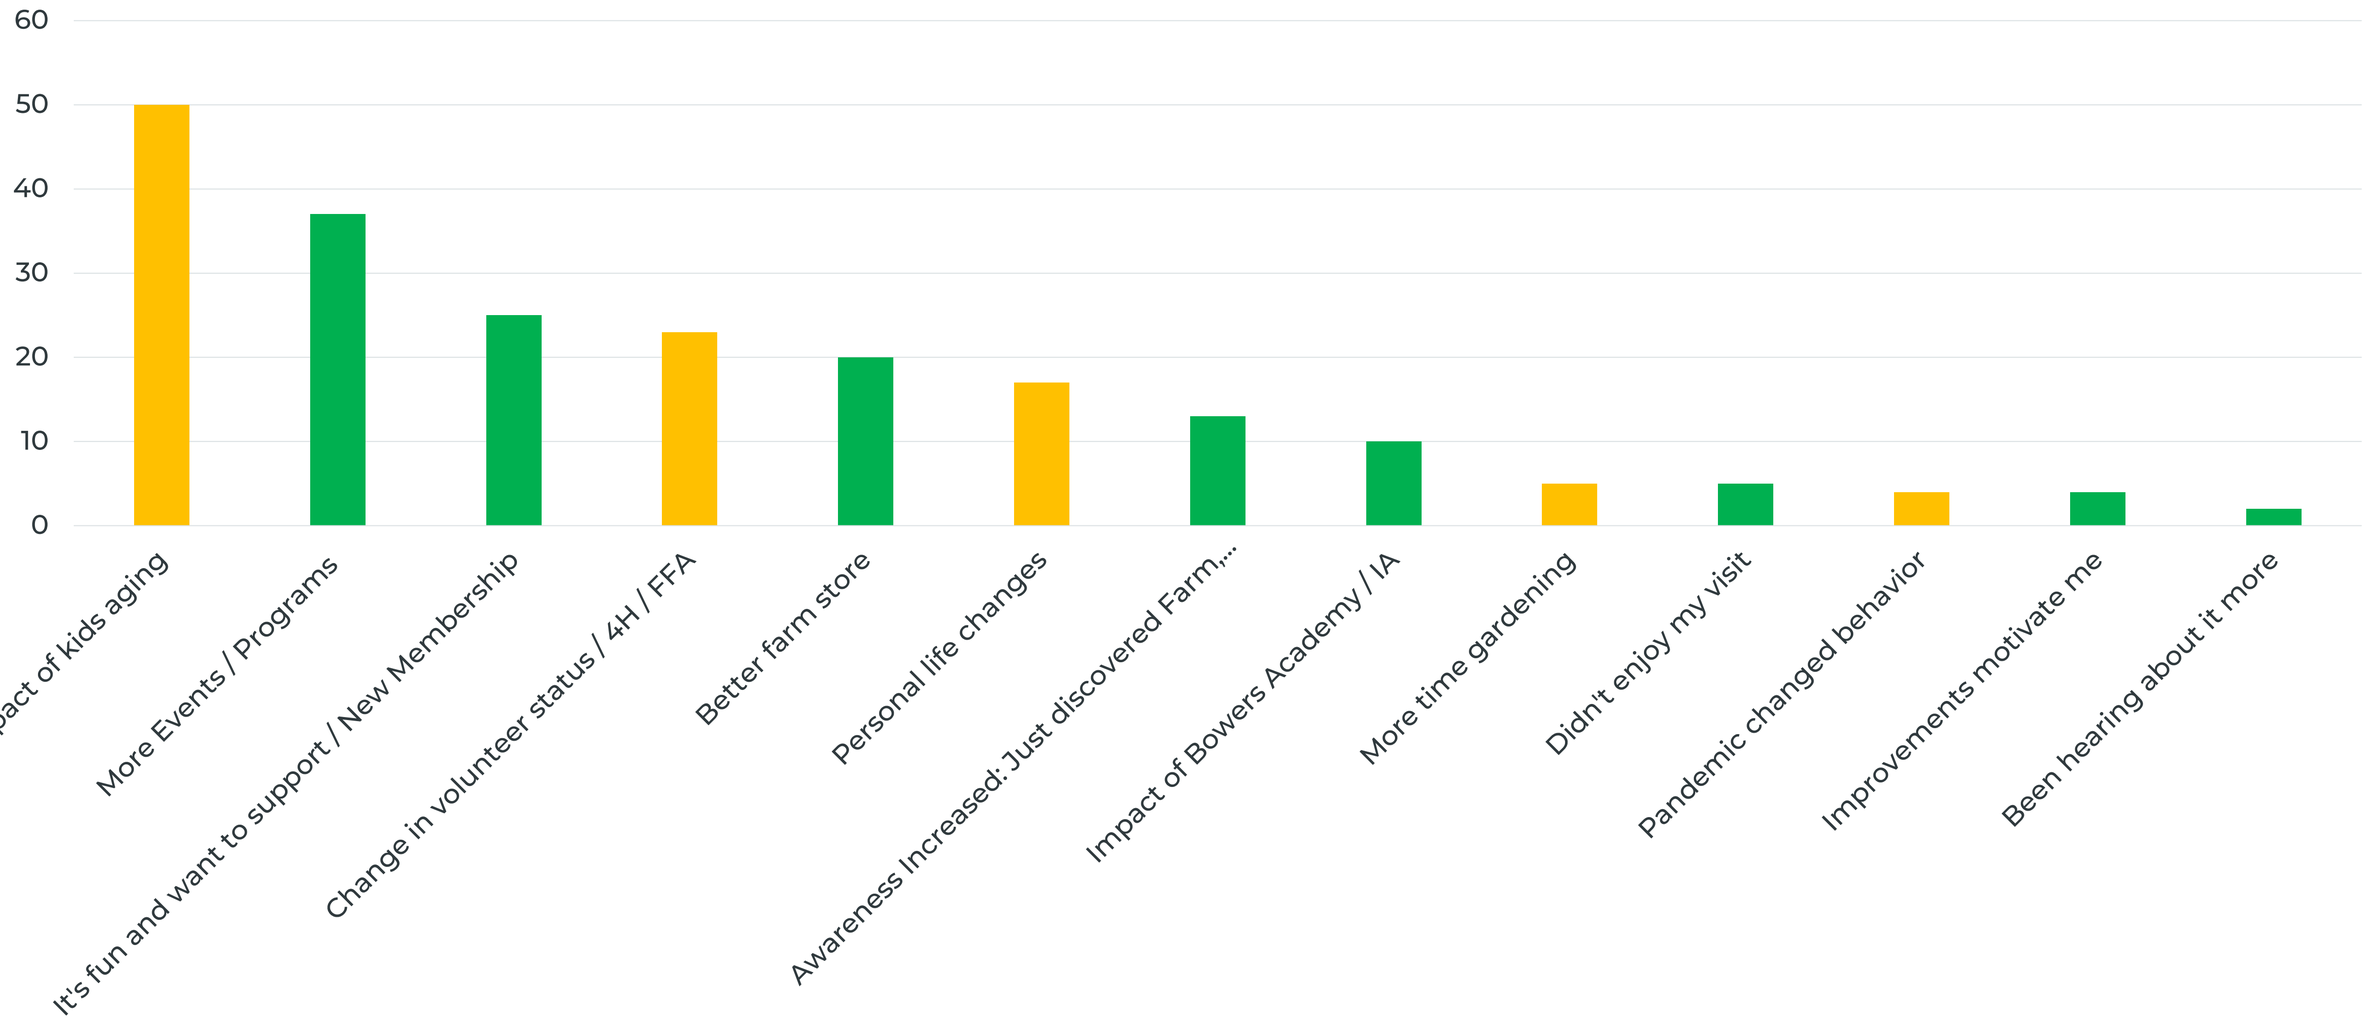


514 TOTAL RESPONSES



Ave. HH Size: **3.5**
College Degree: **89%**
Adults Without Kids At Home: **30%**
Majority are Recent Visitors and Frequent Visitors (~40% monthly+) and expect to increase visits.

Because most respondents are visitors, the profile is the same as overall survey.



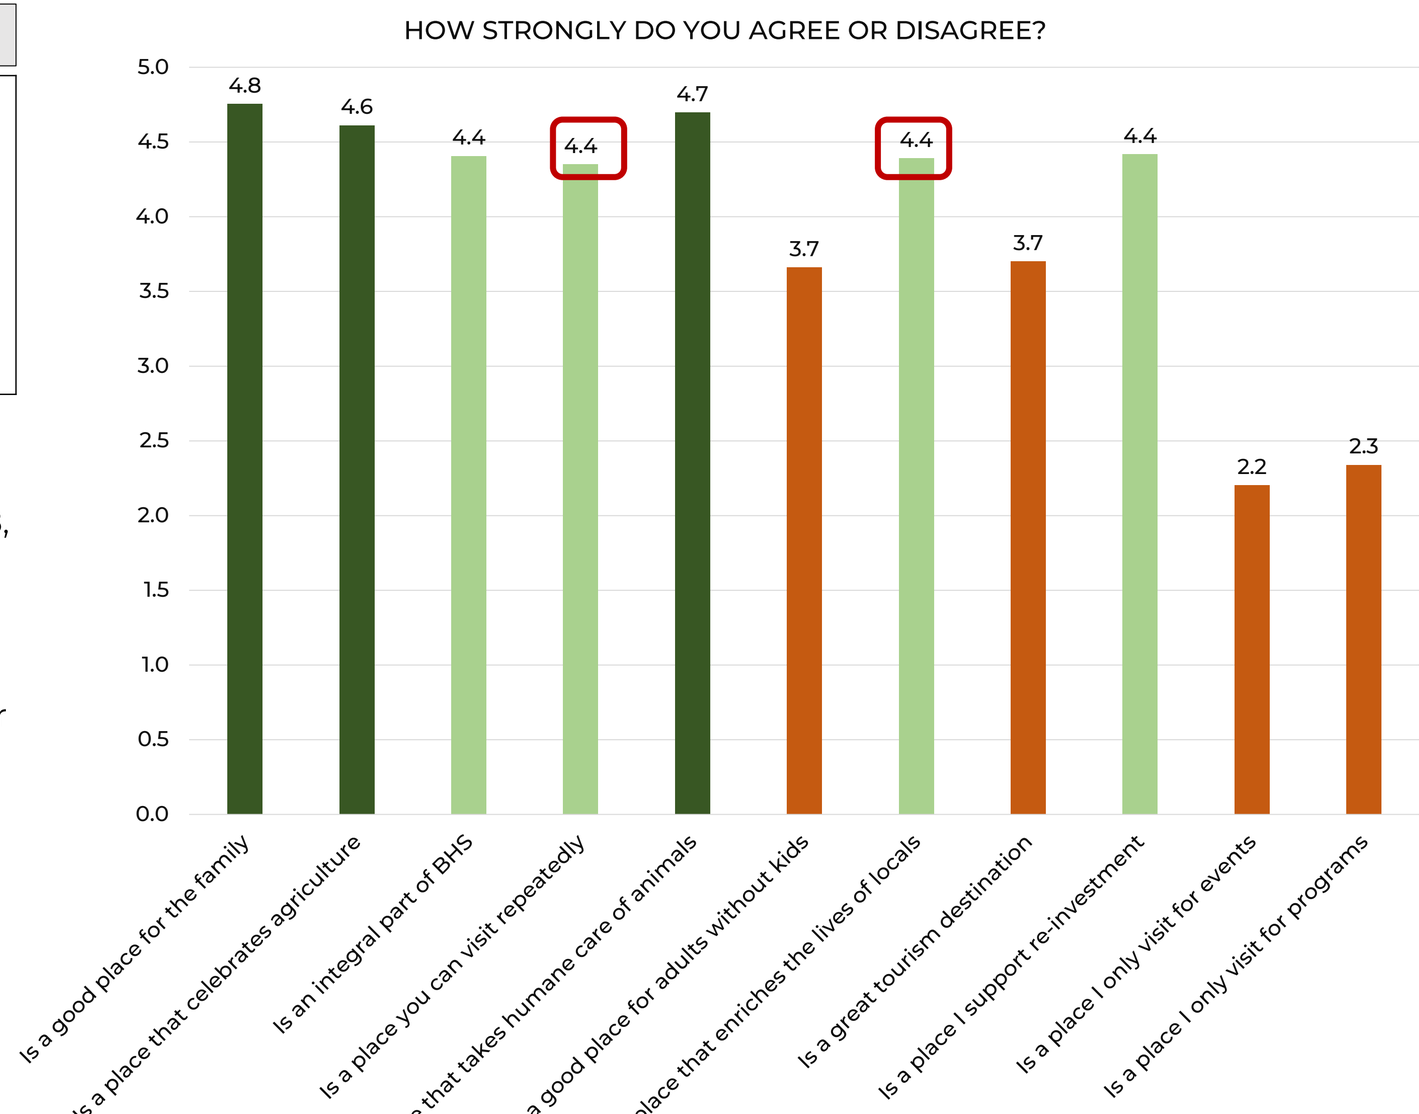
VISITORS

REASON FOR CHANGE IN VISITATION

Many people are excited by **new events and programs** they haven't yet tried, others simply want to **support the Farm** more, or have just **discovered** it. Visitation is most impacted by the **aging of children**: becoming or no longer interested and participation in programs. **Personal changes** including volunteering, schedule, and pandemic are out of the Farm's control. Finally, **improvements to the Farm Store** (and throughout the Farm) are motivating people to come more often.

VISITORS

FREQUENTLY VISITED ATTRACTIONS



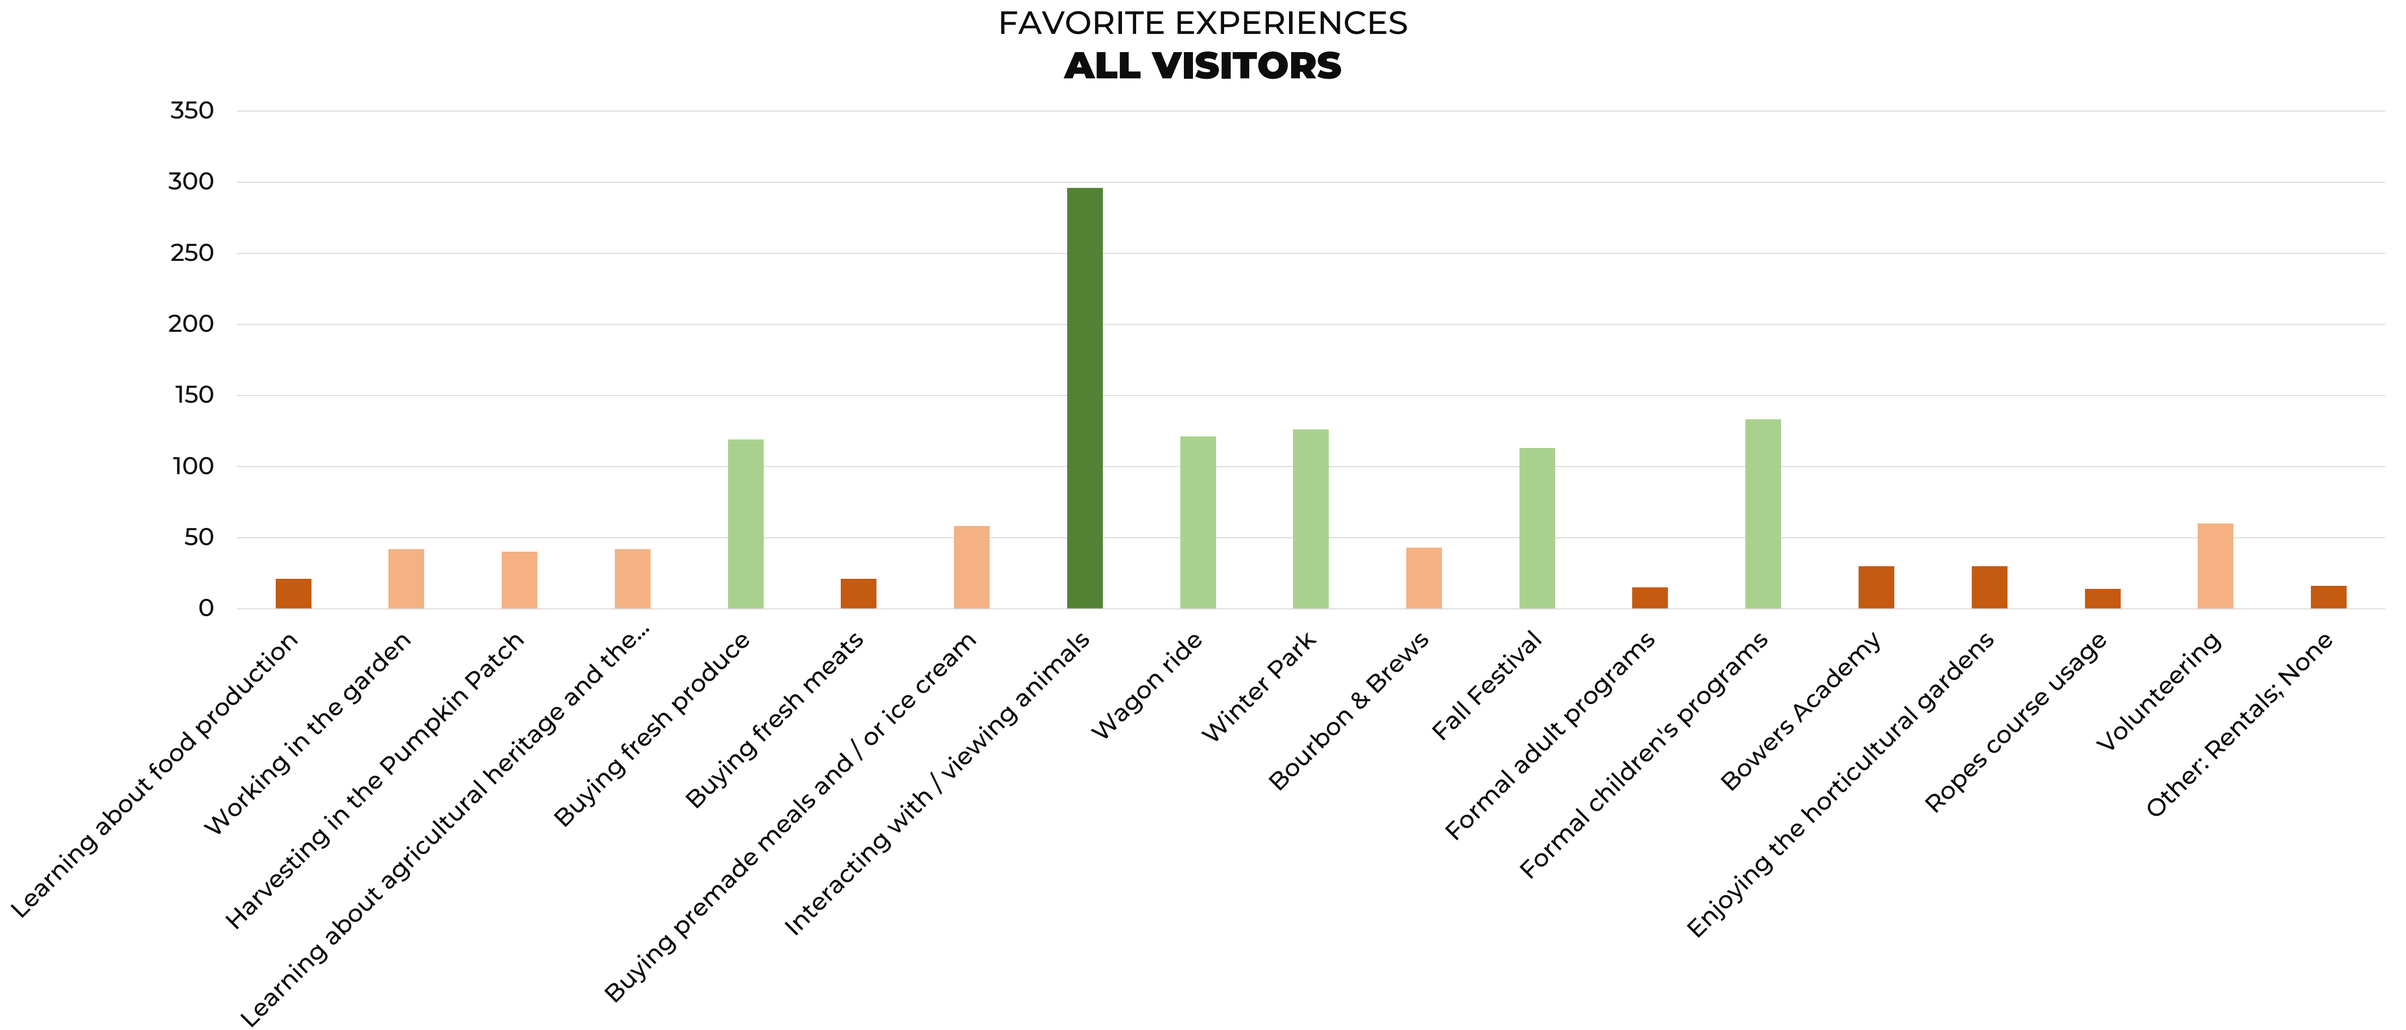
VISITOR PERCEPTIONS

RANK YOUR BELIEF OF FARM PURPOSE:

1 Improving student academic outcomes
2 Teaching about responsible agriculture
3 Recreation / leisure
4 Community gathering space
5 Food production
6 Tourism

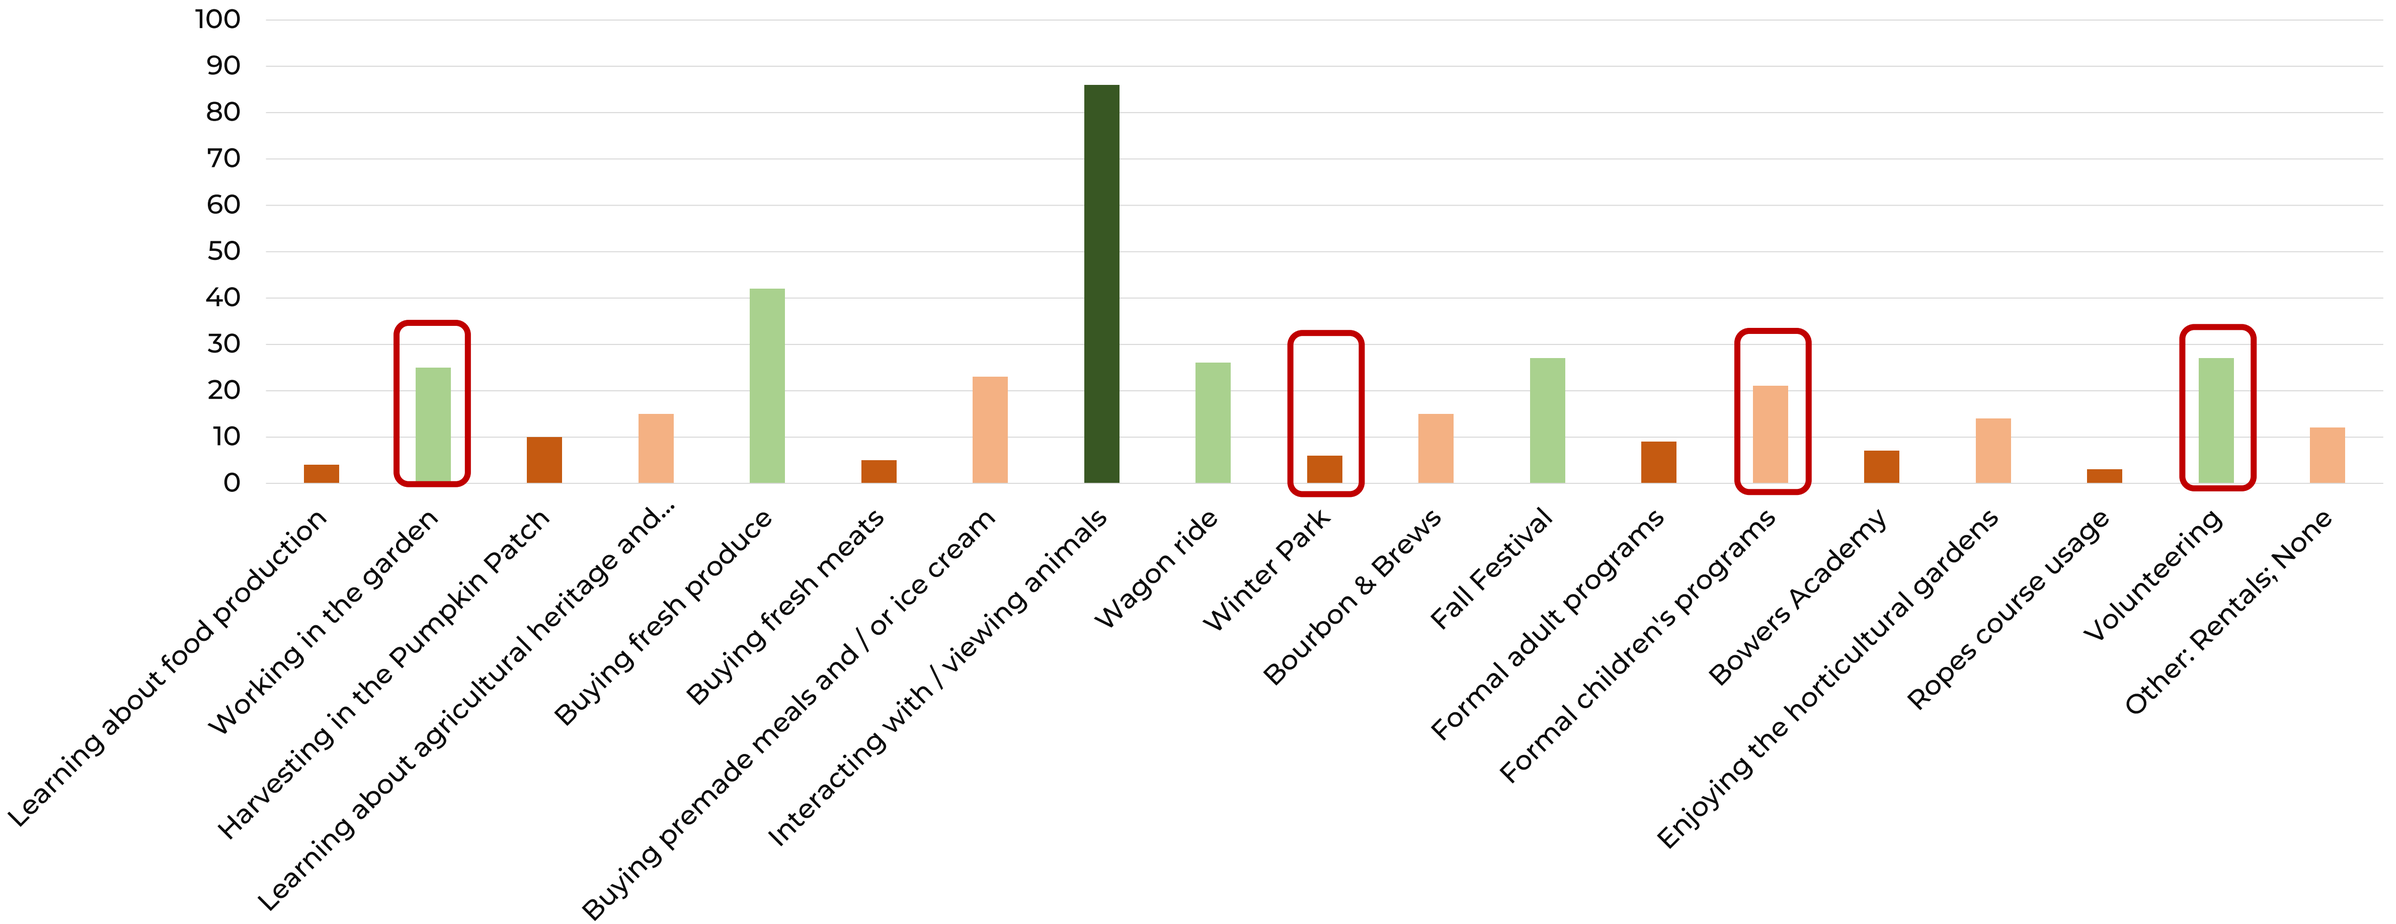
- Visitor perceptions are much more positive than Non-Visitor despite sharing the same MOST agreed upon statement: “Is a good place for the family.” (Visitors at 4.8, Non-Visitors at 4.5.)
- Second most agreed upon ‘Celebrates Agriculture’ and ‘Humane Care of Animals’—both much more strongly than Non-Visitors.
- Least agreed upon—aside from only visiting for events or programs—”Is a good place for adults without kids” and “Great tourism destination” align with Non-Visitors, but more positively.
- Visitors more strongly believe you can visit repeatedly and that Farm enriches lives of locals.
- Same ranking of Purpose as Non-Visitors and all audience segments.

Reflects belief that Farm is an educational experience for families in the community.



VISITOR PERCEPTIONS

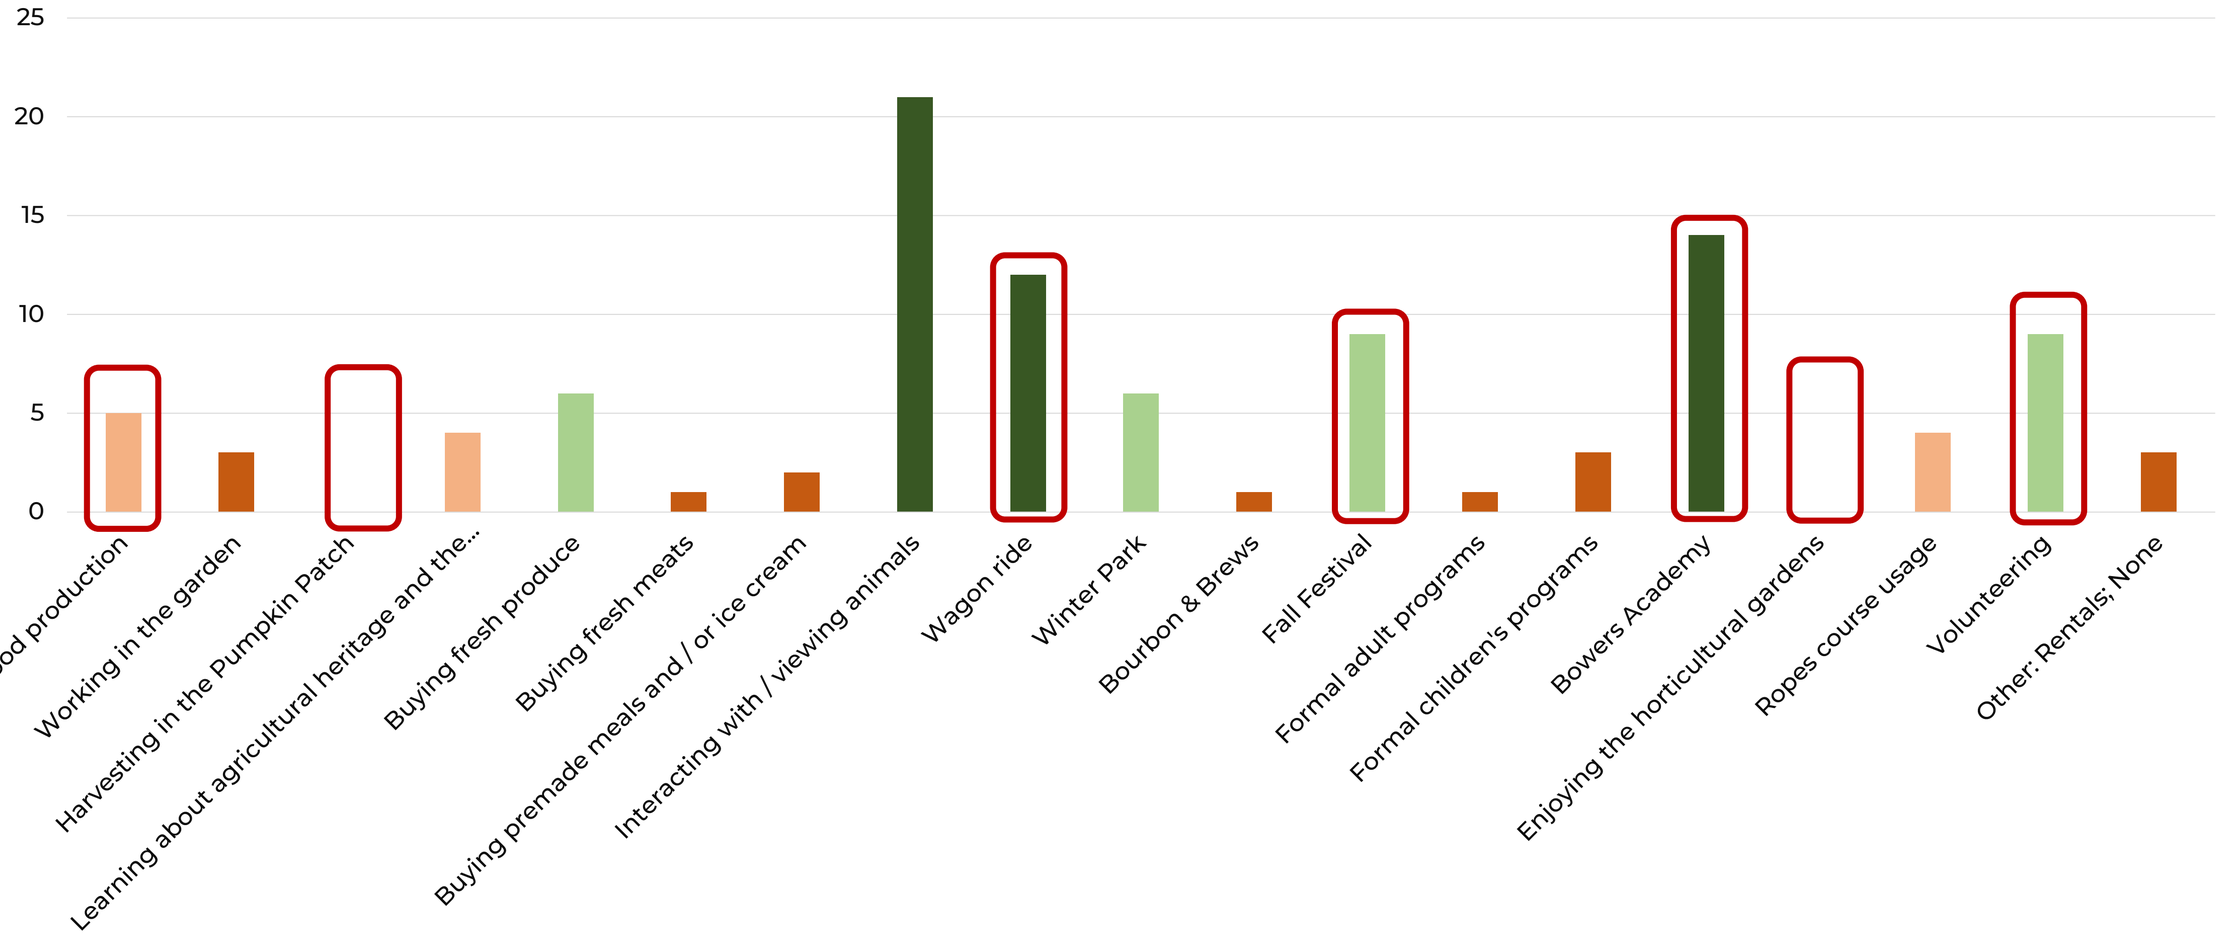
Visitor perception of the Farm is very focused on **ANIMALS, FUN, FAMILY,** and **COMMUNITY** more so than education.



VISITOR PERCEPTIONS

Visitor favorite experience is being with **ANIMALS**. 2nd Favorite is **Children's Programs**, but **Adult Programs** was a least favorite. **Buying Fresh Produce** is one of the favorites, but **Buying Fresh Meat** and **Buying Premade Meals / Ice Cream** were less popular. **Family-friendly events** are also Favorites.

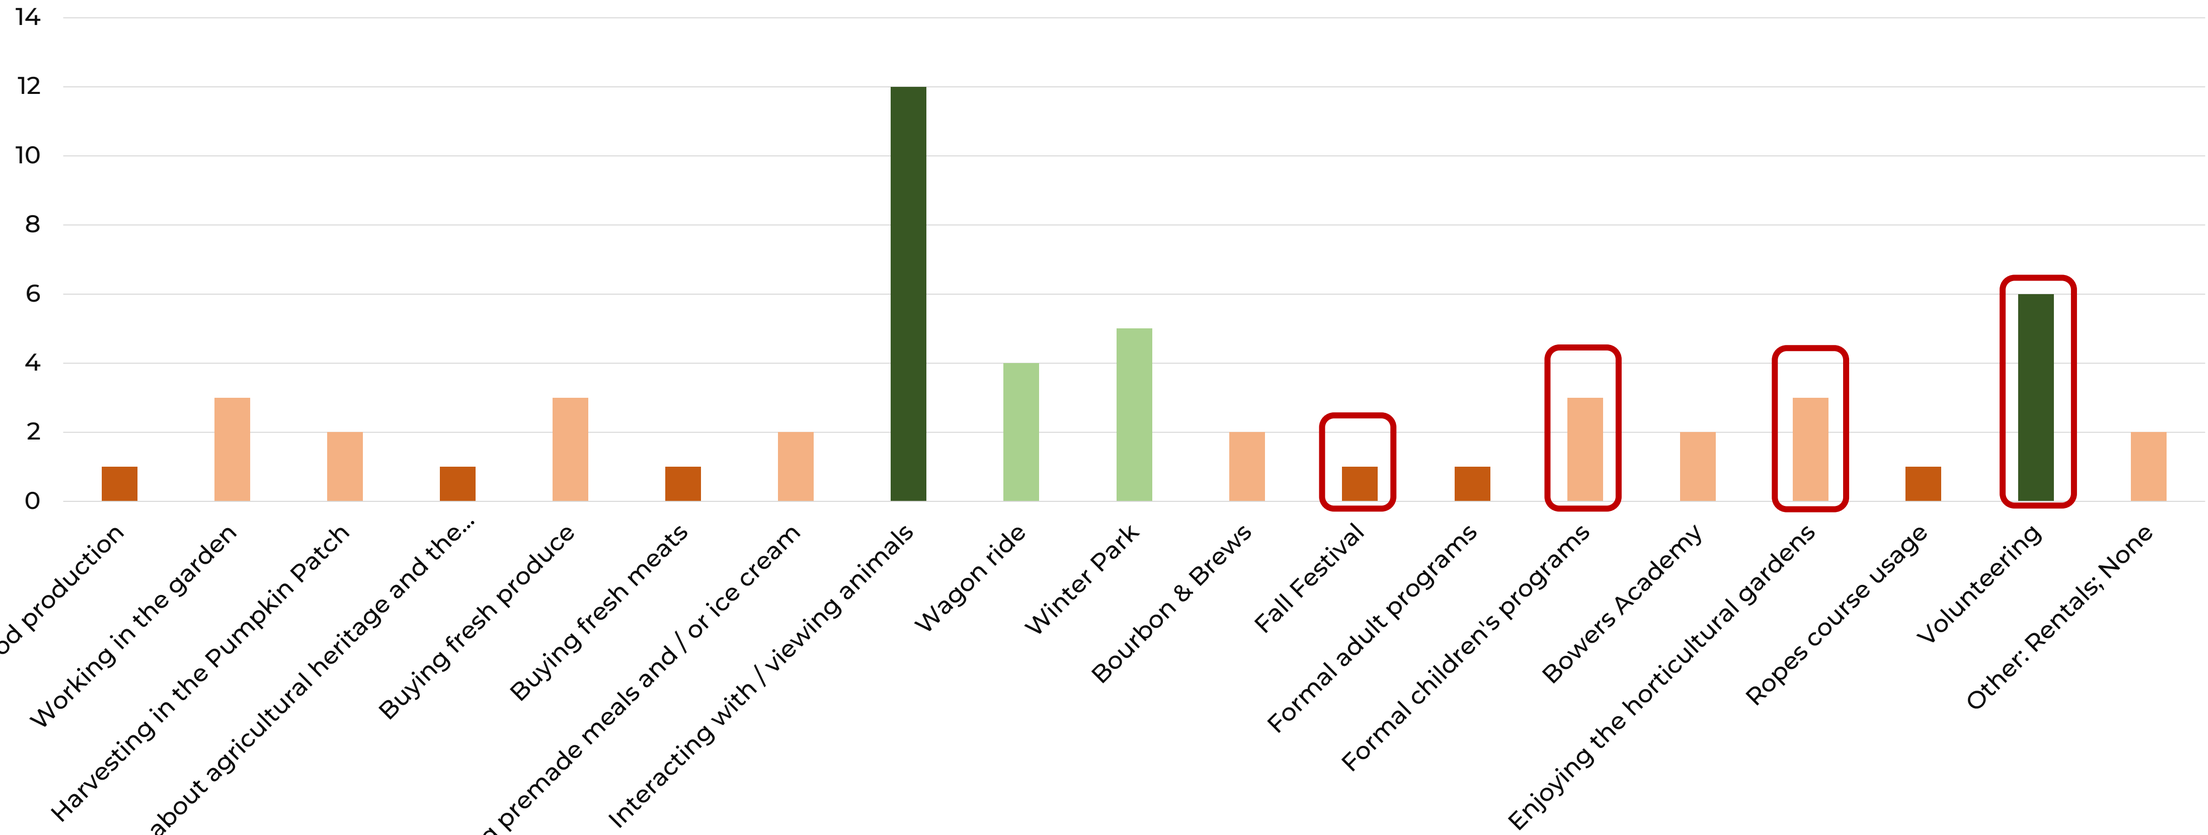
FAVORITE EXPERIENCES



ADULT HOUSEHOLDS WITH NO CHILDREN & 60+

Adults Without Kids and Ages 60+ still love **Animals**! But, they don't love **Winter Park** and have less use for **Children's Programs**. **Adult Programs** are slightly more popular, while **Working in the Garden** and **Volunteering** are important experiences for this group.

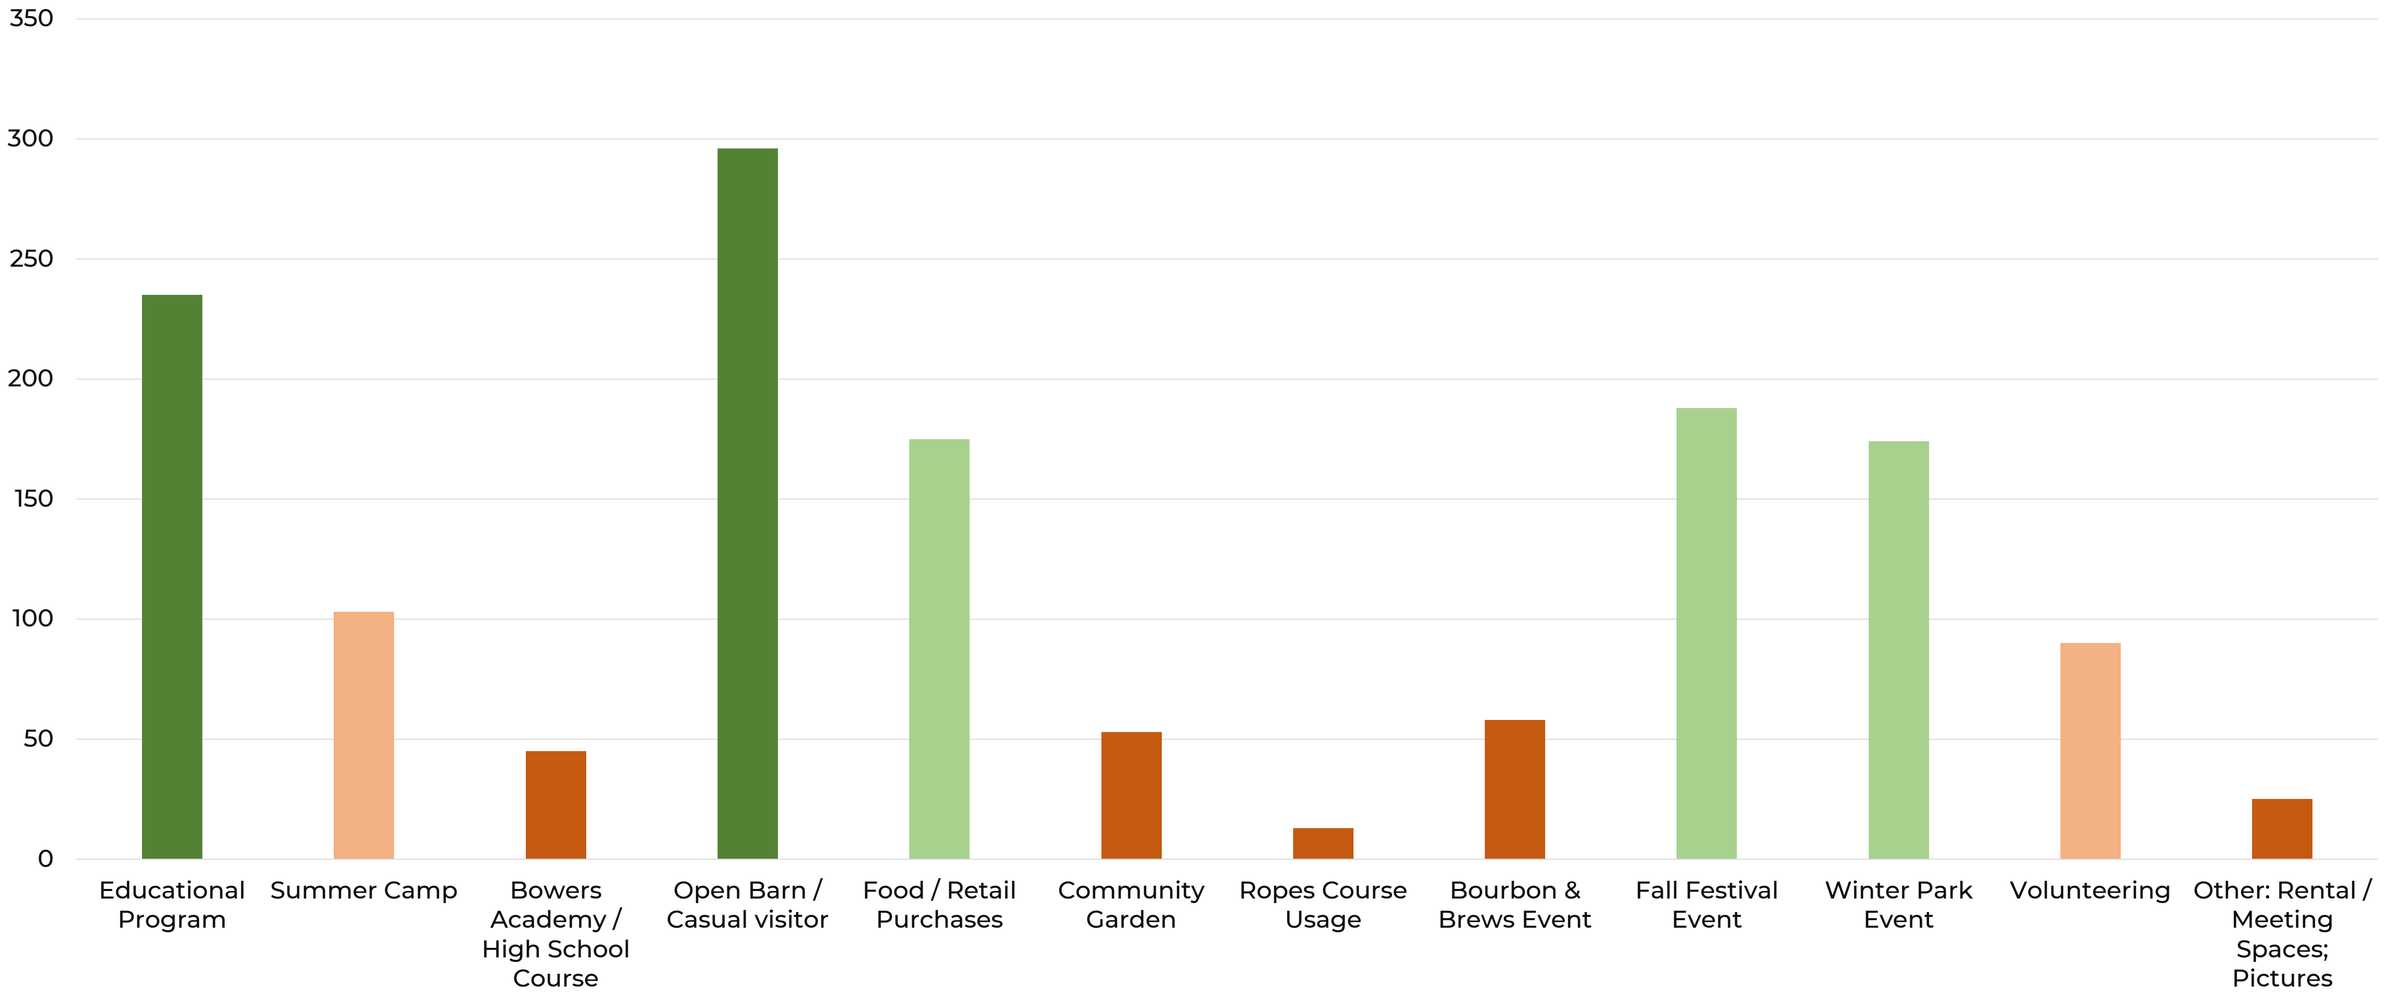
FAVORITE EXPERIENCES



UNDER 21

The Under 21 segment predictably enjoys different aspects of the farm including the strongest affinity to **Bowers Academy** and **Wagon Rides**. They do not like **Harvesting in the Pumpkin Patch** or the **Horticulture Gardens**. **Fall Festival** and **Learning about Food Production** have the strongest connection with this group.

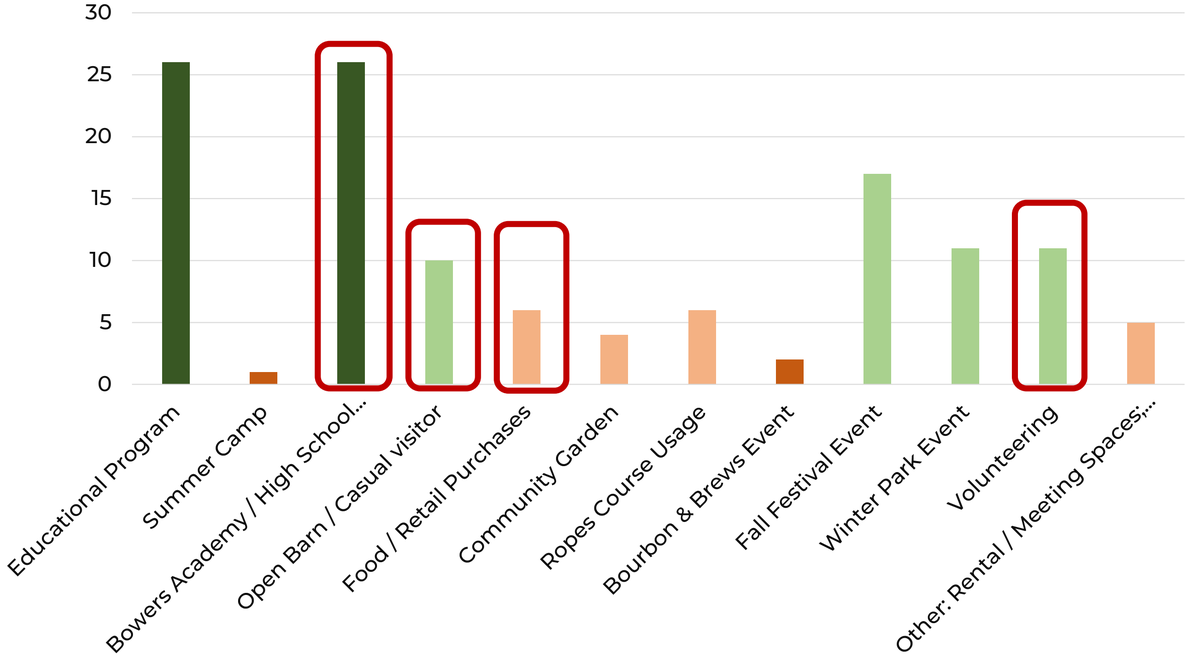
FAVORITE EXPERIENCES



OVER 30 MIN DRIVE TIME

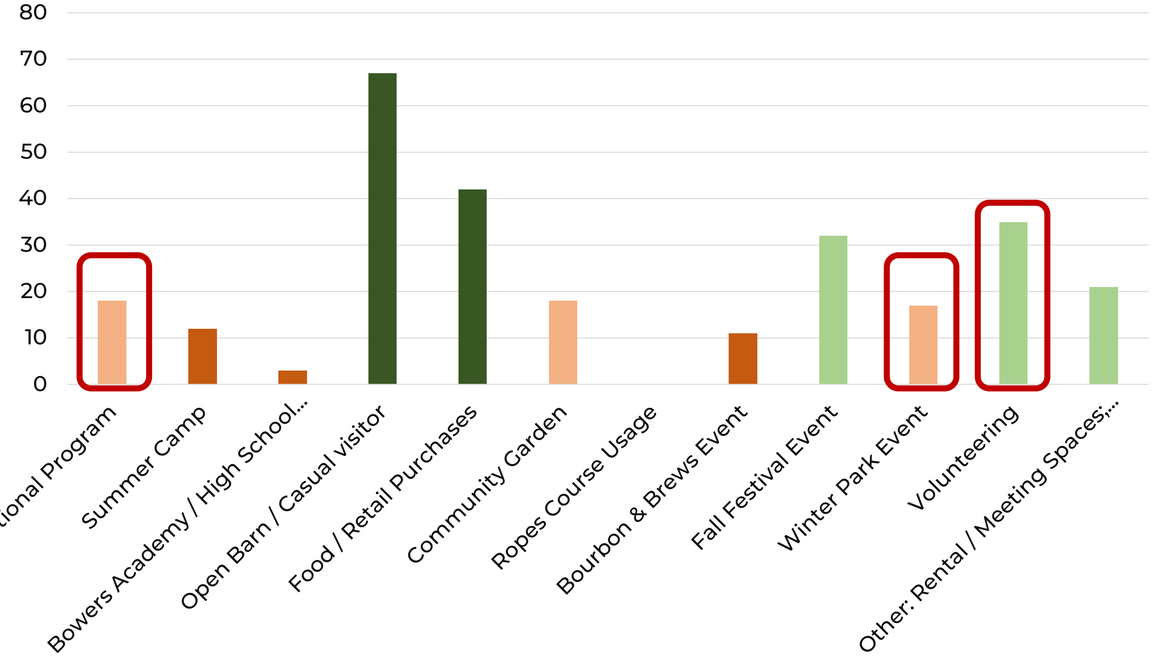
Visitors from further than 30 minutes away have a strong affinity for **Volunteering** and the strongest relative affinity for the **Horticultural Gardens** of all of the segments. However, predictably, **Children's Programs** are less important to them. Surprisingly, **Fall Festival** does not appeal to this segment.

VISITOR PERCEPTIONS



WHY ARE YOU VISITING?
(PURPOSE OF VISITS)

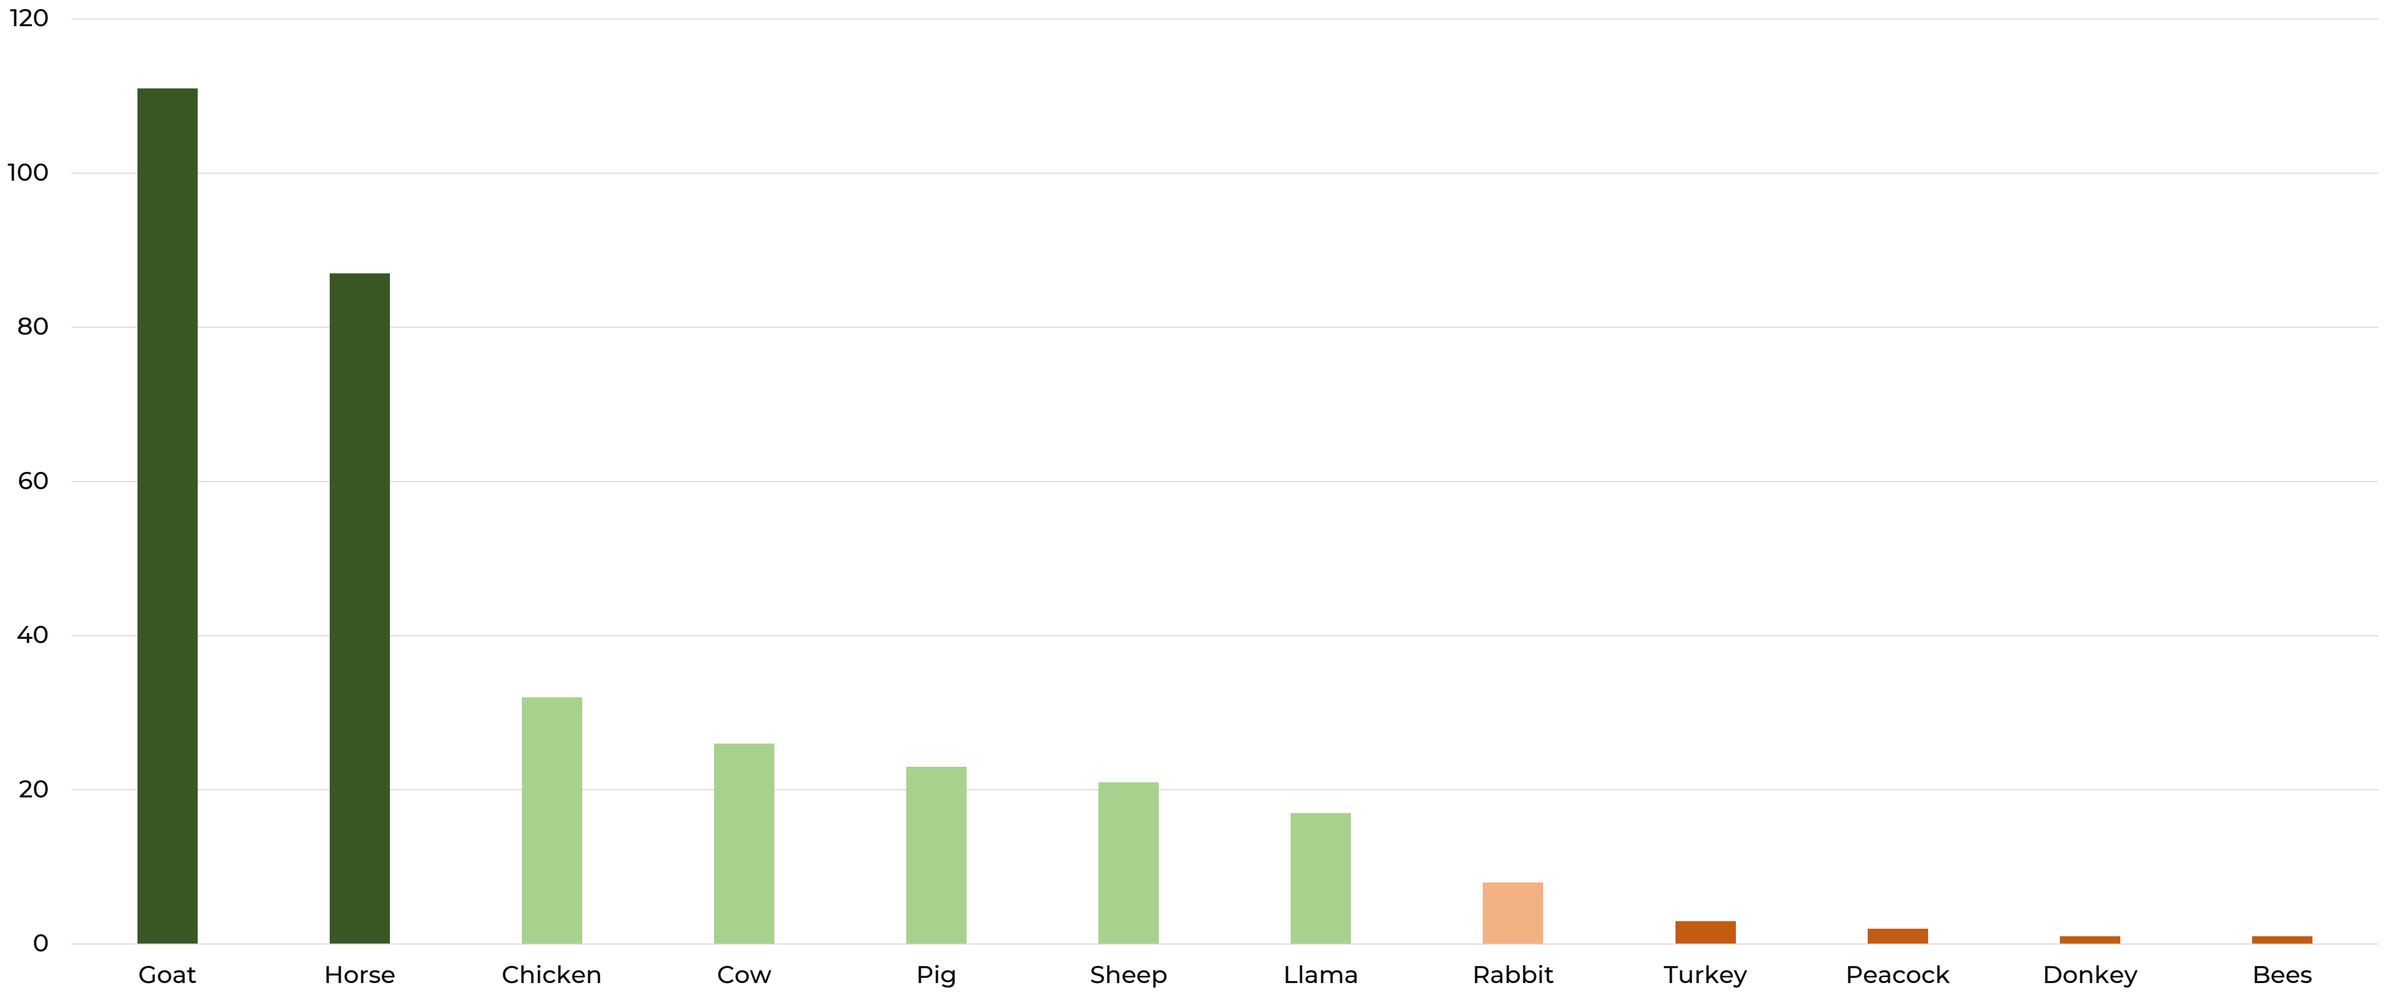
Purpose of visits are not surprising based on attendance data for Open Barn vs Programs and ticket sales at Events. However, the **Food / Retail Purchases** being amongst the highest purposes for visit, above Summer Camp and Volunteering, was somewhat surprising and indicates an opportunity.



PURPOSE OF VISIT

UNDER 21

PURPOSE OF VISIT



HH W/0 KIDS & AGES 60+

Under 21 group is likely comprised of **Bowers Academy** students which, alongside **Programs**, is their primary driver to visit the Farm. They do not make **Food / Retail Purchases** nor visit **Open Barn** casually, but **Volunteering** is a bigger driver than other visitor segments. Similarly, Households Without Kids and Age 60+ come to the Farm to **Volunteer**, but are less likely to attend the **Winter Park** or **Education Programs**.

VISITOR PERCEPTIONS

UNPROMPTED FAVORITE ANIMAL
(Only if selected ‘animals’ as favorite experience)

Goats and **Horses** are the strong favorites. **Chickens**, which are interactive, only third. While not popular, unprompted mentions for **Bees, Donkey, Peacock, and Turkey**.

SUGGESTIONS FOR CHANGE

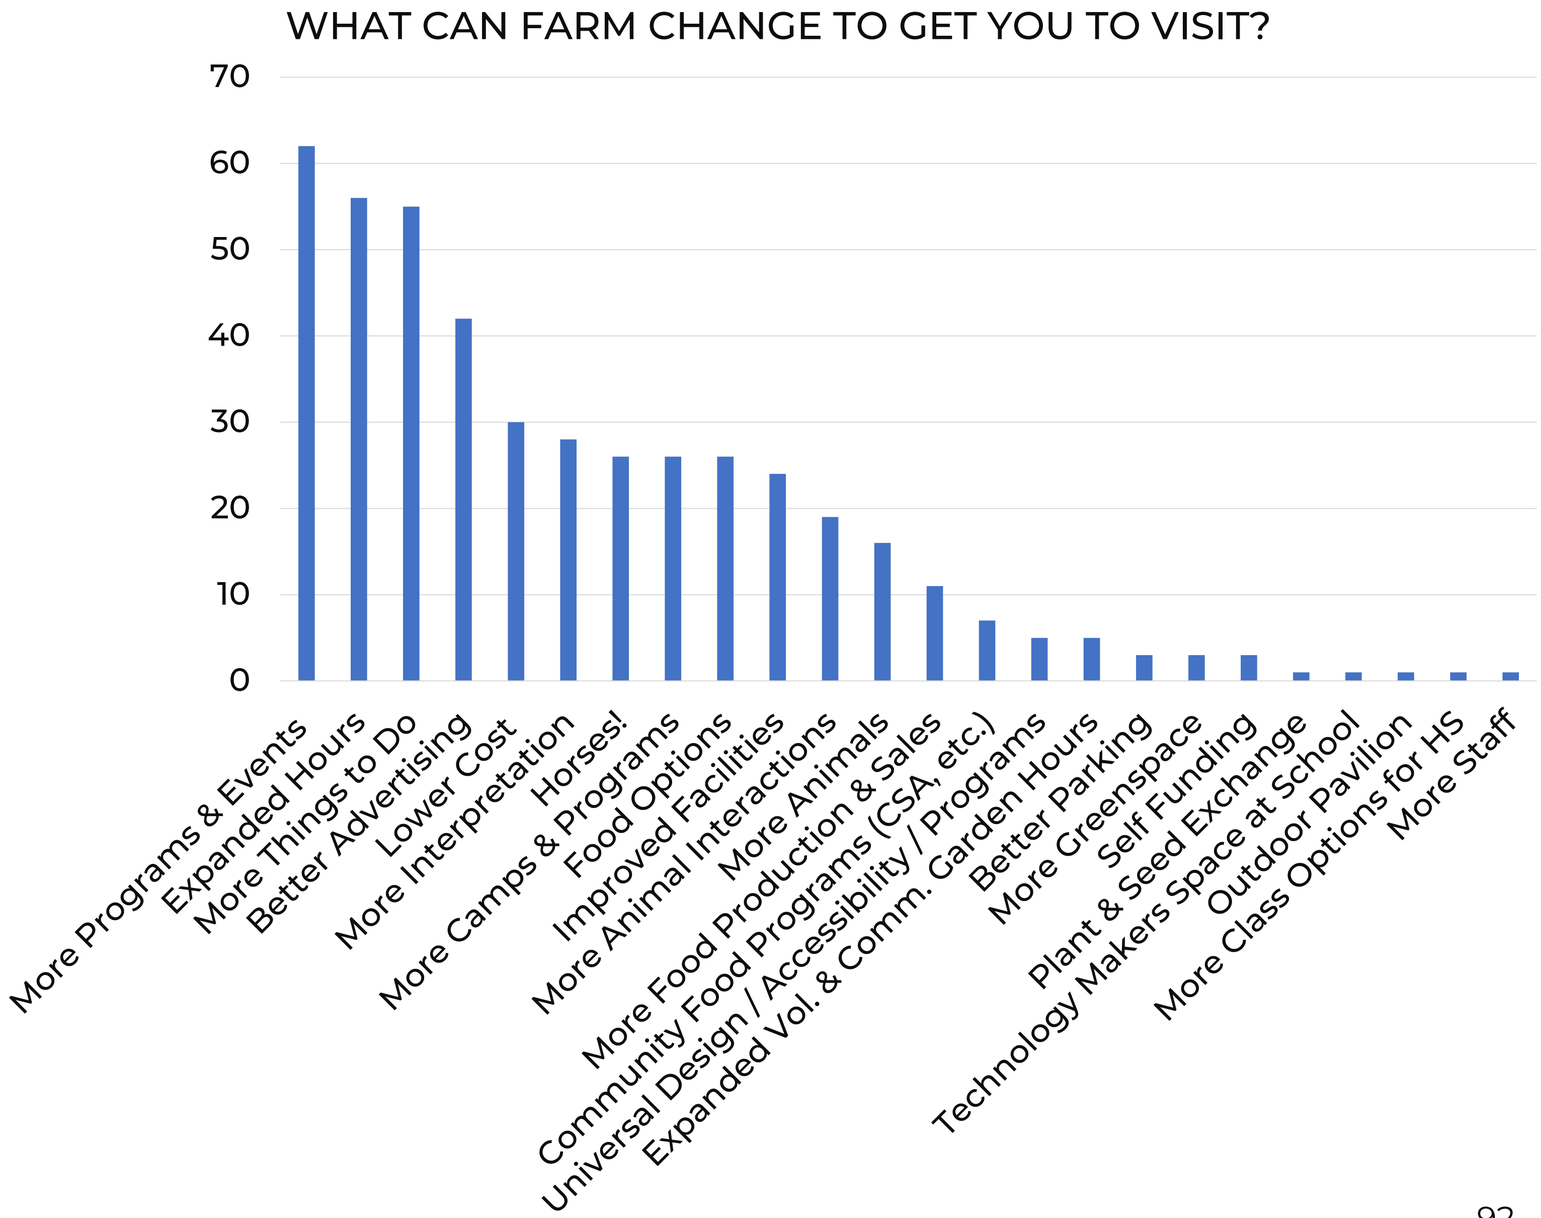
Programs / Events: Teens & Adult focus; Afterhours events; One-time Programs; Short Programs / Classes / Lectures

Expanded Hours: Farm & Store

More to Do: Demos / Presentations; Tours; Walking Trail; Children's Garden; Native Garden; Corn Maze; Cider Mill; Open Historic Buildings; Farmer's Market; Play Area

Advertising: Lack of awareness of events and availability of produce

Price: Cost vs Value?



Interpretation: Self-guided and hands-on

Horses: For all interest levels and abilities

More Camps & Programs: Available slots

Food Options: Variety & quantity at store; Variety for on-site options (allergen & vegan friendly)

Improve Facilities: Clean-up, fix-up, and expand; Animal habitat improvements

SECTION 3:

SWOT

(STRENGTHS, WEAKNESSES, OPPORTUNITIES & THREATS)

STRENGTHS & WEAKNESSES

What do we do well and what can we leverage for future growth?

What are areas that could use improvement?

WHAT ARE OUR STRENGTHS?

Farm Features, Programs & Attractions

Unique attraction (a farm in the city/suburbs)

Hands-on, authentic, intimate and educational experiences with agriculture are well received by the community

Large plot of land (93 acres) with diverse features (lake, gardens, pasture, woods)

Easy access from I-75

Historic structures provide additional education opportunities and strengthen story

Unique and engaging animal experiences

Farm Store with popular food offerings – fresh produce, farm raised meat, ice cream and pizza

WHAT ARE OUR STRENGTHS?

Team & Internal Culture

Strong, talented, motivated and effective team

Friendly and relatable staff and teachers

Passionate and engaged volunteer groups

Active Friends of the Farm group

Events

Successful events that attract wider and more diverse audiences

“Farm to Table” events have been well received

WHAT ARE OUR STRENGTHS?

Brand & Public Perception

Ongoing community support of the Farm is conveyed through the following.

- Strong (and growing) membership program
- Community Garden participation
- Summer Camp enrollment
- Excitement about current food products

Safe & secure environment and other positive perceptions

WHAT ARE AREAS THAT COULD BE IMPROVED?

Team & Internal Culture

Additional staff needed for any future growth including

- New attractions and programs
- Larger production capacity
- Extended Farm Store hours
- More events (e.g. Farm to Table)

Employee benefits, work-life balance and focus on mental health

Current hiring constraints and limited HR capacity makes hiring new employees for the Farm a difficult process

Farm would benefit from stronger representation and positioning in BHS

WHAT ARE AREAS THAT COULD BE IMPROVED?

Team & Internal Culture

Farm would be looking to fill the following positions.

- Horse Program Director
- Human Resources
- Administration Support
- Dedicated Lobby Receptionist
- Grant Writing / Fundraising Support
- Volunteer Coordinator
- Marketing Director
- Facility Maintenance
- Grounds Keeper

WHAT ARE AREAS THAT COULD BE IMPROVED?

Farm Features, Programs & Attractions

Land – more efficient layout for operations and land use

Outgrown current facilities

- Kitchen struggles to support current education, camps and event needs
- Staff spaces and storage areas are limited and at capacity

Maintenance / replacement plan needed for aging facilities

New (and designated) quarantine facility

Production garden is not visible to public

Farm is currently not designed to function as a gathering space for the local community

Continued growth and efficient management of community and school farm education programs

WHAT ARE AREAS THAT COULD BE IMPROVED?

Farm Features, Programs & Attractions

Longer and more consistent hours for the Farm Store

Growing (and retaining) Farm membership is contingent upon the following.

- Conveying membership value to guests
- Fulfilling promises to current members (e.g. camp registration)

Institute recycling and composting programs

Physical accessibility of the site

Limitations in reaching underrepresented and underfunded communities outside of BHS

WHAT ARE AREAS THAT COULD BE IMPROVED?

Brand & Public Perception

Farm story is not told consistently

Stronger marketing strategy needed to inform the community about the Farm's current attraction offerings, programs and upcoming events

New Public Relations/Communications plan to support and strengthen the following.

- Describing "who we are" to the public
- Addressing the "I pay taxes, why should I have to pay for admission" perception
- Managing an injury, criminal, or lockdown event

Perception that the Bowers School Farm is only for school and family use

OPPORTUNITIES & THREATS

What are the opportunities today that could contribute to our success?

What barriers could arise that would hinder our ability to grow?

WHAT ARE POTENTIAL OPPORTUNITIES?

New Markets

Interested public audience presents opportunities for better communication and engagement

Strong demand for community programming and events (more programs targeting wider age ranges and adults-only events)

Customer and volunteer pools are growing among the following groups

- Retiring Boomers who are looking for something to do
- People looking for a greater purpose in life

Ropes courses could be used to target organizations looking for team building experiences

Moving Farm Membership under Friends of BSF could help shift perception from “customer” to “farm supporter”

- Manages expectations of “what do I get for my membership”
- Strengthens sense of ownership for the Farm

WHAT ARE POTENTIAL OPPORTUNITIES?

Funding

Economic downtowns result in increased BHS student enrollment

Large pool of potential donors in the Bloomfield Hills area

Grants are available through the Dept. of Natural Resources to assist with improving accessibility issues

Food

Popular food trends could open new revenue sources

- “Farm to Table” experiences
- Fresh food subscription models (CSA, meat shares, etc.)

Partnership with Aramark to provide food to BHS

WHAT ARE POTENTIAL OPPORTUNITIES?

Operations

New technology is available today for more efficient farm operations with less staff

Friends of the Farm organization could play a greater role in managing and growing community focused initiatives (events, programs, Farm Store, etc.) for maximum success in overcoming current staffing and funding barriers

WHAT ARE POTENTIAL THREATS?

BHS Board & Community

Private school attendance continues to limit the following.

- Financial support
- Students reached through field trips and BHS programs

Aging population in the BHS area and low inventory of homes to attract new families reduces current (primary) target audience.

Operations

The following issues impact staffing

- Retaining current staff and attracting new staff as many are looking elsewhere for jobs that pay more for less work
- Hiring process and training takes time

WHAT ARE POTENTIAL THREATS?

Public Perceptions

Community perception that access fees should be “covered by the school taxes they already pay”

Food is typically viewed as a commodity among some audiences.

- People with less disposable income
- Older generations

Animal related diseases negatively impact attendance

Animal deaths and/or animal activist groups could result in negative backlashes that impact attendance, guest perception and brand

STRATEGIC & MASTER PLANNING

3 PHASE PROCESS

Phase 1
Facility & Market Analysis
(Aug – Nov 2022)

Phase 2
Strategic Planning
(Nov 2022 – Jan 2023)

Phase 3
Master Planning
(March 2023 – July 2023)

Define our Starting Point

- Assess current site, facilities and operations
- Assess current market performance
- Identify SWOT

Define our Destination

- Identify goals and vision for next 5 yrs
- Define the strategies and action plan to reach these goals

Create a Roadmap for Implementation

- Design the program and site plan for Farm improvements
- Identify key stories and overarching messages for guest experience
- Phased diagrams and illustrations to build stakeholder excitement and assist with fundraising efforts

PHASE 2 EXECUTIVE SUMMARY

THE 20 YEAR VISION

Phase 2 Strategic Planning kicked off with a visioning workshop to describe the Farm in 20 years. During this workshop, we created vision boards for the following topics, describing how each contributes to our envisioned future.

- User groups: What will a day at the Farm look like for various user groups?
- Guest experience: What are the different experiences that one will encounter?
- Education: What role(s) will education play?
- Animals & Insects: What role(s) will animals & insects play?
- Food: What role(s) will food play?
- History: What role will history play and how does each component (site features, buildings/ structures, animals, farming operations, and gardens) support this story? How do visitors experience this story – observation only or highly interactive and immersive?

Also included in this visioning exercise were a review of the Farm's strengths, opportunities, unique characteristics, and stakeholder ideas for improvement identified during Phase 1. This enabled the group to build on things the Farm does well and include feedback from stakeholder engagement meetings.

The result of this workshop uncovered five major themes for our future vision – Learning, Experiences, Sustainability, Inclusivity and Impact.

GOALS AND STRATEGIES FOR 2027

Next, the group crafted three goals to define what the Farm will be doing to achieve this outcome. Each goal serves to move the Farm towards this envisioned future yet is achievable in the next 5 years. Each also has a specific focus (education, community and sustainable operations) and is supported with objectives to describe how we are defining and measuring success. The goals are as follows:

Goal 1: Become a Leader in Experiential Learning Using Innovative Practices Rooted in Agriculture, Food and Sustainability

Goal 2: Become The Place For Community Agriculture & Food Experiences

Goal 3: Build a Sustainable Operating Model

Each goal was broken down into strategies and includes steps to address organizational weaknesses and reduce the impact of environmental threats identified in Phase 1. Similar to the goals, the team considered the metrics for measuring completion as well as groups involved in implementation, individual action tasks and overall duration for each strategy. Strategies were then organized into an action plan (or road map) that builds on current efforts, maximizes success and outlines the path forward for achieving these three goals over the next five years.

SECTION 1:

WHAT DOES THE FARM LOOK LIKE IN 2027...AND BEYOND?

STRENGTHS

Farm Features, Programs & Attractions

Unique attraction (a farm in the city/suburbs)

Hands-on, authentic, intimate and educational experiences with agriculture are well received by the community

Large plot of land (93 acres) with diverse features (lake, gardens, pasture, woods)

Easy access from I-75

Historic structures provide additional education opportunities and strengthen story

Unique and engaging animal experiences

Farm Store with popular food offerings – fresh produce, farm raised meat, ice cream and pizza

Team & Internal Culture

Strong, talented, motivated and effective team

Friendly and relatable staff and teachers

Passionate and engaged volunteer groups

Active Friends of the Farm group

Events

Successful events that attract wider and more diverse audiences

“Farm to Table” events have been well received

Brand & Public Perception

Ongoing community support of the Farm is conveyed through the following.

- Strong (and growing) membership program
- Community Garden participation
- Summer Camp enrollment
- Excitement about current food products

Safe & secure environment and other positive perceptions

WEAKNESSES

Team & Internal Culture

Additional staff needed for any future growth

Employee benefits, work-life balance and focus on mental health

Current hiring constraints and limited HR capacity makes hiring new employees for the Farm a difficult process

Farm would benefit from stronger representation and positioning in BHS

Farm Features, Programs & Attractions

Land – more efficient layout for operations and use

Outgrown current facilities esp. kitchen, staff spaces & storage

Maintenance / replacement plan needed for aging facilities

New (and designated) quarantine facility

Production garden is not visible to public

Farm does not function as a community gathering space

Continued growth and efficient management of community and school farm education programs

Longer and more consistent hours for the Farm Store

Growth and retention in Membership

Limited recycling and no composting

Physical accessibility of the site

Limitations in reaching underrepresented and underfunded communities outside of BHS

Brand & Public Perception

Farm story is not told consistently

Stronger marketing strategy for Farm’s current offerings

New PR/Communications plan to communicate the Farm’s story and manage unforeseen events

OPPORTUNITIES

New Markets

Interested public audience presents opportunities for better communication and engagement

Strong demand for community programming and events

Customer and volunteer pools are growing among the following groups

- Retiring Boomers who are looking for something to do
- People looking for a greater purpose in life

Ropes courses could be used to target organizations looking for team building experiences

Moving Membership under Friends of BSF could help shift perception from “customer” to “farm supporter”

- Manages expectations of “what do I get for my membership”
- Strengthens sense of ownership for the Farm

Funding

Economic downtowns result in increased BHS student enrollment

Large pool of potential donors in the BHS area

Grants are available through the Dept. of Natural Resources to assist with improving accessibility issues

Food

Popular food trends could open new revenue sources

Partnership with Aramark to provide food to BHS

Expanded Farm to Table events

Operations

New technology is available today for more efficient farm operations with less staff

Friends of the Farm organization could play a greater role in managing and growing community focused initiatives for maximum success in overcoming current staffing and funding barriers

THREATS

BHS Board & Community

Private school attendance continues to limit the following.

- Financial support
- Students reached through field trips and BHS programs

Aging population in the BHS area and low inventory of homes to attract new families reduces current (primary) target audience.

Operations

The following issues impact staffing.

- Retaining current staff and attracting new staff as many are looking elsewhere for jobs that pay more for less work
- Hiring process and training takes time

Public Perceptions

Community perception that access fees should be “covered by the school taxes they already pay”

Food is typically viewed as a commodity among some audiences.

- People with less disposable income
- Older generations

Animal related diseases negatively impact attendance

Animal deaths and/or animal activist groups could result in negative backlashes that impact attendance, guest perception and brand

WHAT MAKES US UNIQUE?

Authentic, credible & relatable

- “Messy Nature” (not fake or manicured)
- Organic & sustainable
- Part of a school district
- Long history (55+ years)
- Staff reflects and relates to community culture

Strong relationships created with visitors and community

- Multiple touchpoints through people’s lives
- Multi-generational experience
- Seeing & selling onsite builds an emotional experience with customers

Unique story

- Located in a large suburban area (not rural and easily accessible from adjacent urban developments)
- Historic structures onsite are unique story telling artifacts
- Talented, passionate & mastered staff

STAKEHOLDER IDEAS FOR IMPROVEMENT

- Walking trails around the property
- Green space for informal Farm visits and natural playground
- More programs
- More events – Corn maze, Farm style escape room
- Expanded hours (Open Barn, Farm Store)
- More things to do
- Better advertising
- More interpretation signs
- More and consistent food offerings
- Community food programs
- More production gardens located in public viewing areas
- Additional gardens for community, students and 4H organization
- More animals
- Universal design / accessibility improvements
- On-site restaurant / Celebrity Chef attraction
- Bring the Barn and House from Pickering Farm to the property
- Historical period clothing / Heritage days
- Solar power
- 4H exhibit with photos showing what 4H is, what they do, etc.
- Fundraising / Donation area onsite
- Treehouses, camping, cabins, yurts
- Add a gym to the school
- Farm preschool
- Indoor horse arena & horse-riding classes
- Master classes & speaker series
- Wellness retreat
- Water slides on sledding hill in the summer
- Ride experience around the Farm (rollercoaster, trolley train car, etc.)

THE VISION FOR THE FARM IS ROOTED IN...

Learning

- Free Choice
- Strongly Integrated into K-5, Middle & High School Curriculum
- Agriculture & Community Based Learning
- Technical Education Offerings in Agriculture & More

Experiences

- Hands-on and Authentic
- Fun
- Creative
- Curated Paths
- Increased Animal Interactions
- Education & Food as Common Threads
- Immersive Education Programs Meeting a Wide Spectrum of Student Needs

Sustainability

- Leader in Sustainable Practices
- Value Driven (Time & Money)
- Technical Integration for Efficient Operations

Inclusivity

- Farm for All - Inclusive of All Ages, Abilities, Non-students, etc.
- Highlights Community Diversity
- Easily Accessible & Navigating Seamlessly
- Equity through Funding Sources and Program Pricing

Impact

- Experiences and “Take Aways” Beyond the Farm
- Increased Educational Reach
- Curiosity Inspiring Additional Learnings
- Adoption of More Sustainable Lifestyle Choices
- Supporting Under Resourced Students

2027 GOALS

What are we doing over the next 5 years to move the Farm towards this 20-year vision?

2027 GOALS

Become a Leader in Experiential Learning Using Innovative Practices Rooted in Agriculture, Food & Sustainability

Focus is on leading ag-based learning and sustainability efforts to educate and inspire change and action for all ages

Initiatives will focus on BHS Students first, but also include the BHS Community and other students

Metrics of measurement for leadership impact include:

- Increase in BHS student enrollment
- Increase in standardized test scores
- Increase in ag-based interest topics (student projects, clubs & interest groups, career & college education choices)
- Increase in life skills development

Efforts are led by BHS

Become The Place For Community Agriculture & Food Experiences

Focus is on building and strengthening relationships with the community

Metrics of measurement for engagement include:

- Increase in return visitation and touchpoint engagement
- Increase in BSF volunteerism (numbers and hours served) representing a larger age range
- Increase in revenue generated (sales, programs, events, etc.)
- Expanded membership program rooted in sense of ownership
- New partnerships with community businesses and organizations

Efforts are led by Friends of BSF in collaboration with BHS

Build a Sustainable Operating Model

Focus is on improved operations for environmental, economic and social successes today and with future growth

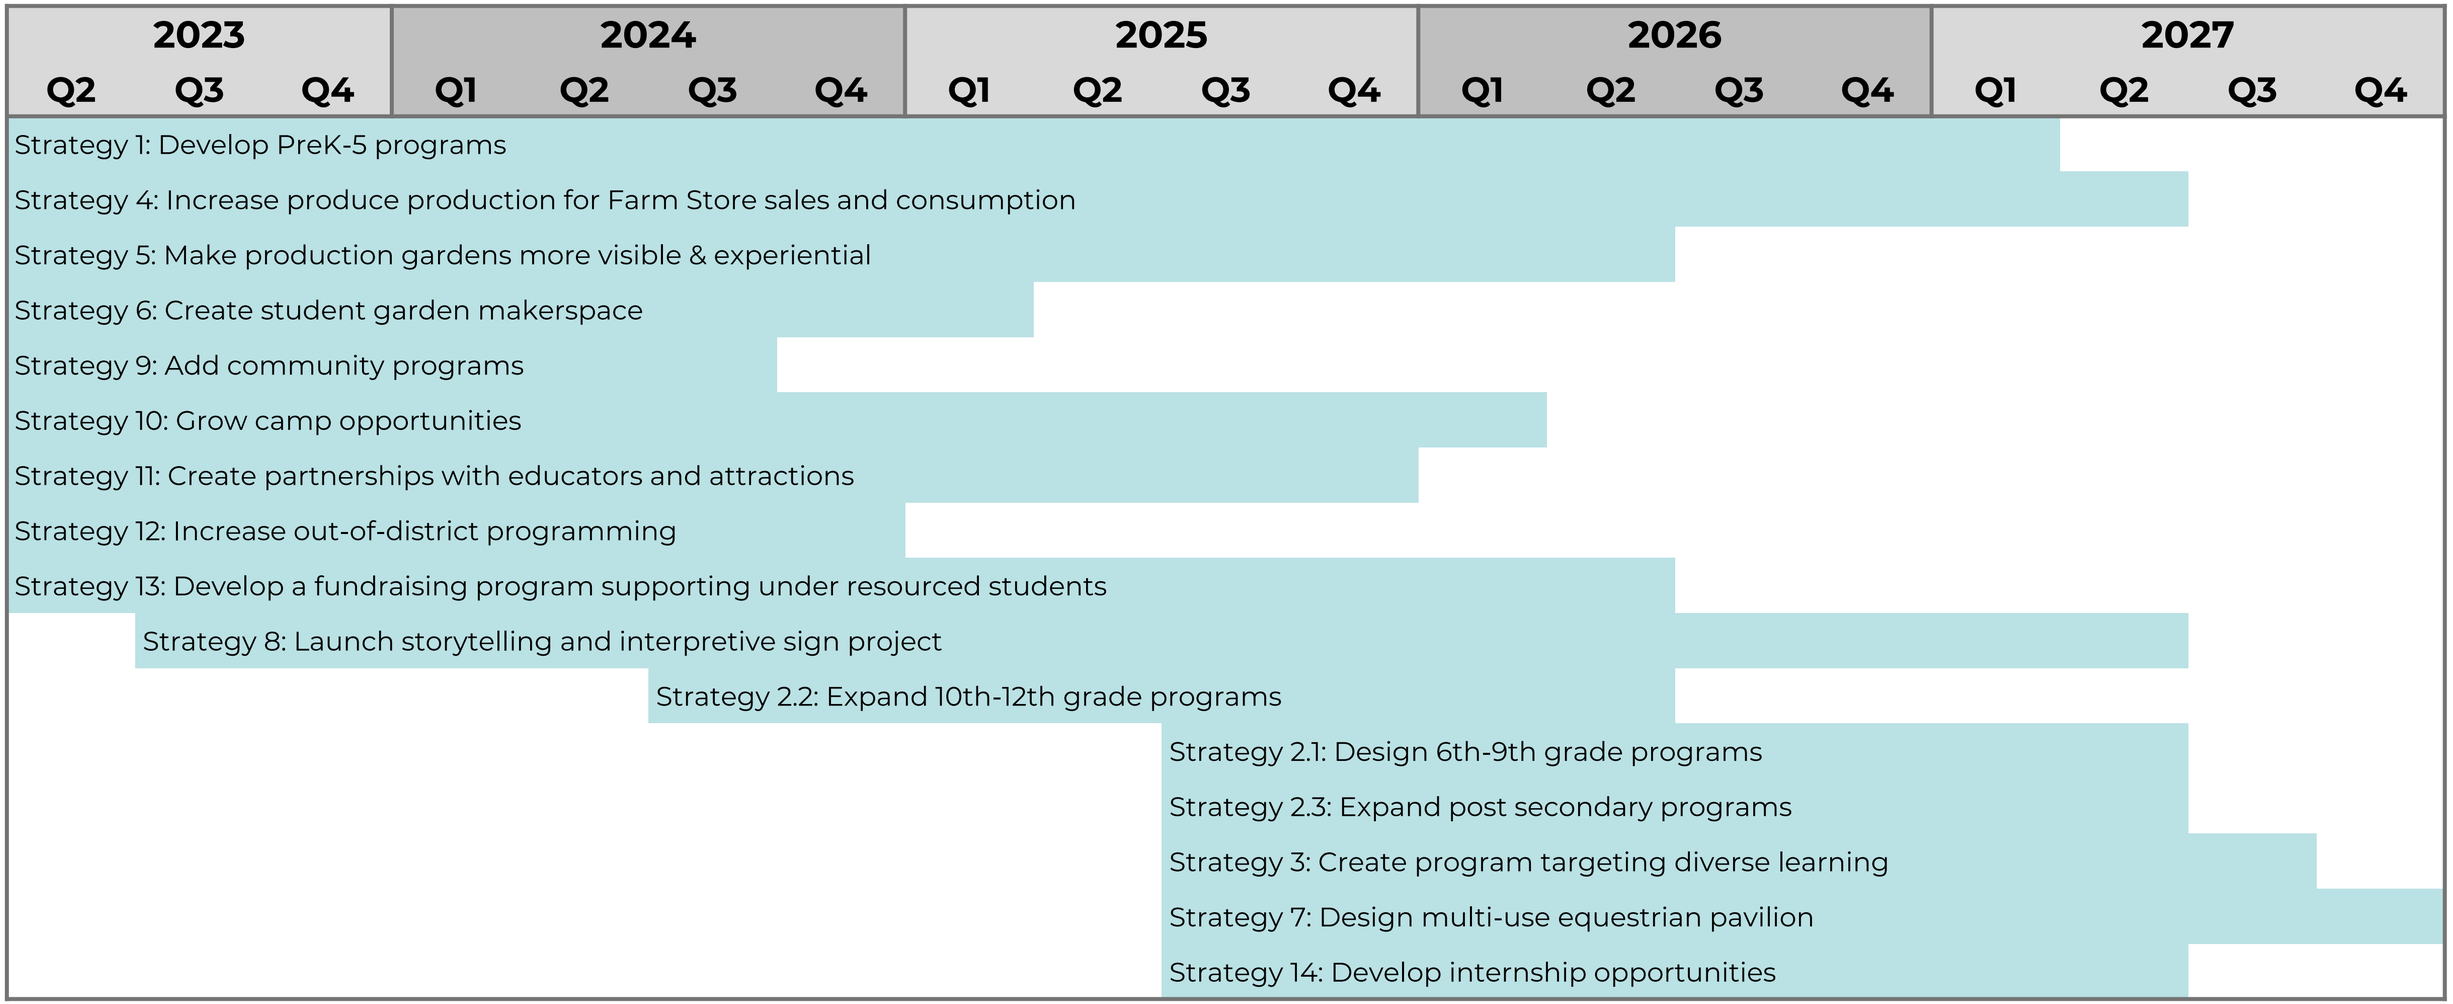
Metrics of measurement for sustainability include:

- Increase in BHS and BSF employment and volunteer numbers
- Strong and diversified funding sources and donor development
- Demonstrate practices that support sustainable philosophy
- Year-round opportunities for agriculture and food-based experiences

Joint effort between BHS and Friends of BSF

SECTION 2:

HOW WILL WE ACHIEVE OUR GOALS?



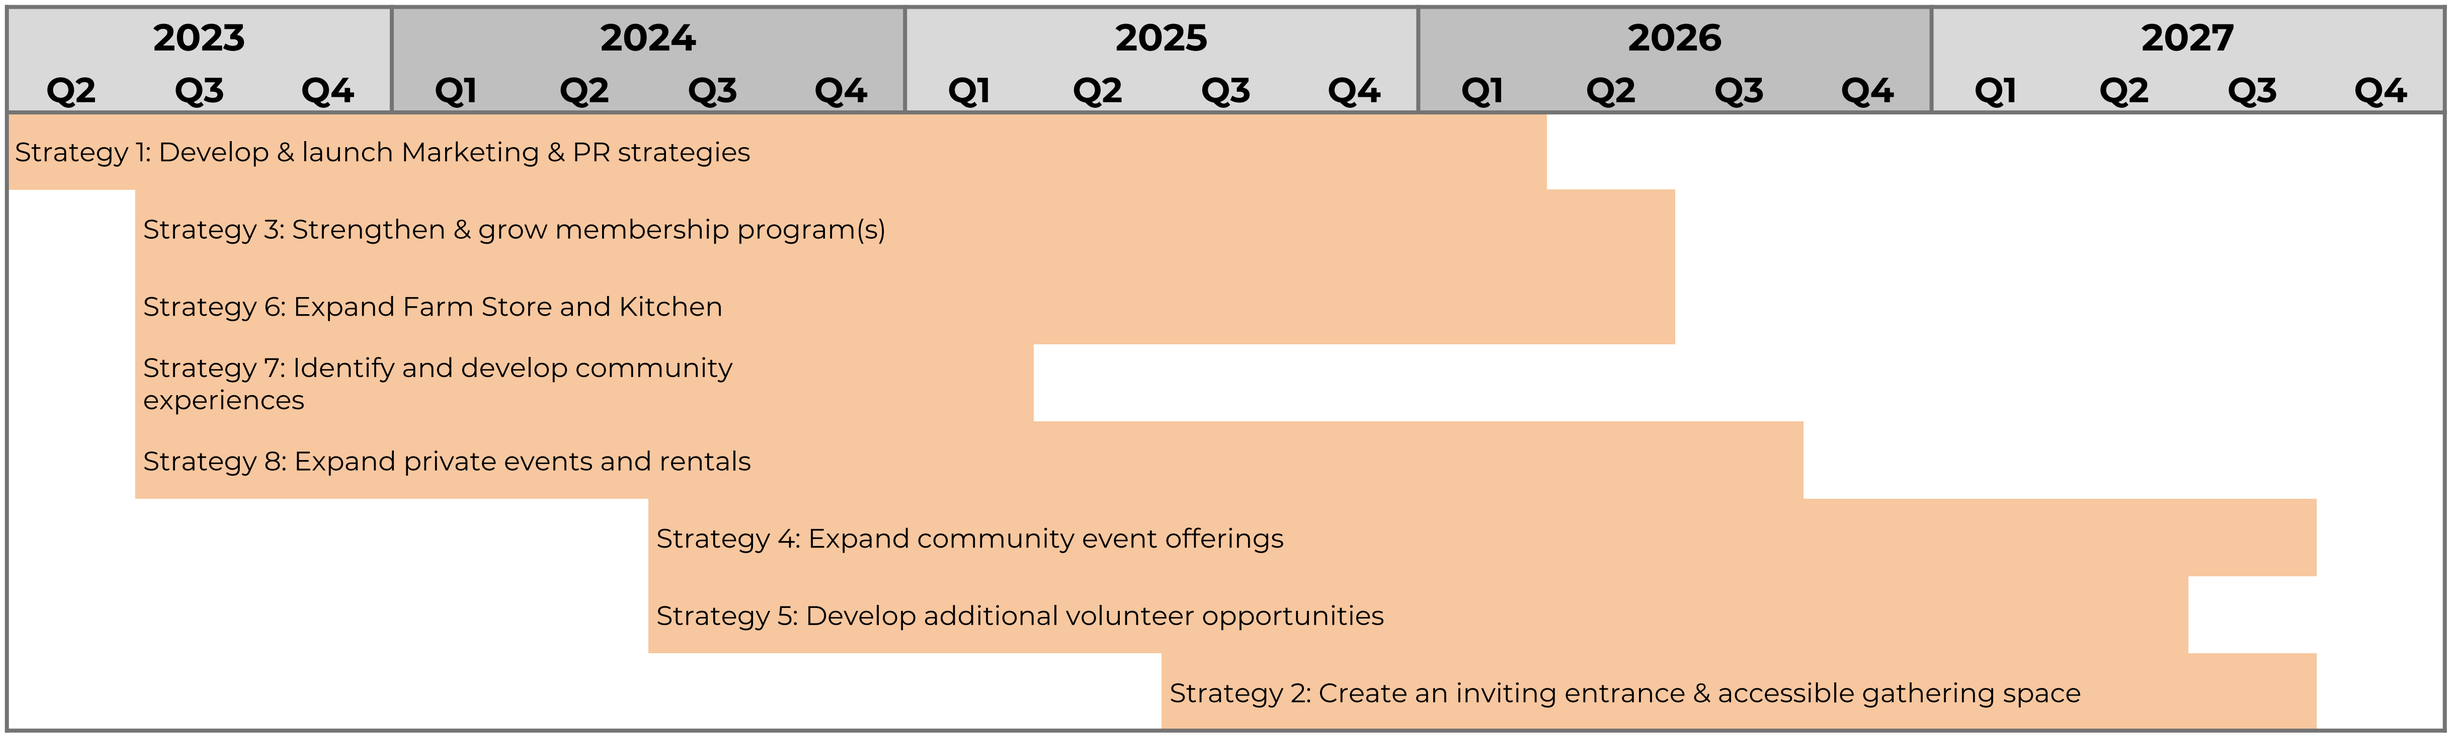
STRATEGIES & TIMELINE

Goal 1: Become a Leader in Experiential Learning Using Innovative Practices Rooted in Agriculture, Food & Sustainability

1) Continue developing PreK-5 programs
2) Expand education programs targeting:
   - Middle school students
   - High school students
   - Post secondary students
3) Create specific program for students with diverse learning needs
4) Increase produce production for:
   - Farm Store and onsite consumption
   - Student onsite consumption
5) Make production gardens more visible & experiential to the public and retail areas
6) Create student garden makerspace to support student learning and experimentation
7) Design multi-use equestrian pavilion (using bond funding) and horse program
8) Launch storytelling and interpretive sign project connecting animals, production gardens, gardens, and historic structures to the Farm story
9) Offer community programs for all ages
   - Different & seasonal topics
   - Agriculture & expanded
   - Technical & hobbies
10) Grow camp opportunities
    - Expand seasonally
    - Expand audiences (all ages)
    - Expand targeted interests/hobbies
    - Work on licensing requirements
11) Create partnerships with educators and area learning-based attractions to supplement learning objectives and expand educational opportunities
12) Increase programs targeting out-of-district schools
13) Develop a fundraising program to support under resourced students
14) Develop additional internship opportunities

STRATEGIES & TIMELINE

Goal 1: Become a Leader in Experiential Learning Using Innovative Practices Rooted in Agriculture, Food & Sustainability



STRATEGIES & TIMELINE

Goal 2: Become The Place For Community Agriculture & Food Experiences

1) Develop & launch a Marketing/PR strategy targeting BHS community and communicating the BSF story and offerings (attractions, programs, events, etc.)
2) Create a more inviting entrance and an accessible gathering space with no admission fee & consistent hours
3) Strengthen & grow membership program(s)
4) Expand community event offerings
5) Develop additional volunteer opportunities
6) Expand Farm Store and Kitchen and align with sustainable operating model
   - Sell more food grown at BSF through the production and community gardens
   - Expand farm store and daily operating hours for all seasons
   - Create a plan to feature products from local businesses and partnerships that compliment the Farm's story / values / mission
   - Expand kitchen to support consistent food service operations (menu, operating hours, etc.)
7) Identify and develop types of experiences that community members are looking for
   - Add value to Open Barn through differentiated experiences
   - Increase casual and formal offerings
8) Expand private events and rentals that align to the philosophy and principles of sustainable agriculture

STRATEGIES & TIMELINE

Goal 2: Become The Place For Community Agriculture & Food Experiences

STRATEGIES & TIMELINE

Goal 3: Build a Sustainable Operating Model

1) Define sustainability through an agroecological philosophy and adopt a set of principles to guide all operational practices
2) Develop an accessibility plan (based on consultant's ADA evaluation) for improving areas that are unsafe and/or not accessible for mobility challenged guests
3) Develop a maintenance plan/replacement plan for aging facilities and equipment
4) Develop a technology systems & software investment plan to support more efficient farm operations
5) Create a communication strategy between staff and volunteer groups that facilitates improved internal communications and externally showcases volunteer work
6) Create new internship & volunteer opportunities (outside of Agriculture)
7) Develop a program that builds awareness of relationship with Johnson Nature Center
8) Create employee programs to provide benefits and growth opportunities for all employees
    - Continuing education funds or opportunities
    - Gestures of appreciation
9) Define & grow the Farm structure to allow Friends of the Farm to better support community focused initiatives and help eliminate funding and staffing barriers
10) Conduct staffing assessment that reviews current and future needs
    - Add Staff to fill current gaps
    - Evaluate workload and position responsibilities for better work/life balance
    - Increase future capacity through strategic hiring (example: Horse Program Coord., Admin Support, Volunteer Outreach Coord., Marketing Coord., Facility Events Manager, Guest Experience Staff, Groundskeeper, Fundraising and Grants Manager)

STRATEGIES & TIMELINE

Goal 3: Build a Sustainable Operating Model

2023			2024				2025				2026				2027			
Q2	Q3	Q4	Q1	Q2	Q3	Q4	Q1	Q2	Q3	Q4	Q1	Q2	Q3	Q4	Q1	Q2	Q3	Q4
Strategy 1: Define sustainability																		
	Strategy 2: Develop an accessibility improvement plan																	
	Strategy 3: Develop a maintenance plan Strategy 5: Create an internal comm. strategy																	
	Strategy 9: Grow Friends of the Farm Strategy 10: Conduct staffing assessment																	
					Strategy 4: Develop a technology investment plan Strategy 7: Develop a program that builds awareness of JNC Strategy 8: Create employee programs													
											Strategy 6: Create new internship & volunteer opportunities (outside of Agriculture)

Master Planning
(March 2023 – July 2023)

Define our Starting Point

- Assess current site, facilities and operations
- Assess current market performance
- Identify SWOT

Define our Destination

- Identify goals and vision for next 5 yrs
- Define the strategies and action plan to reach these goals

Create a Roadmap for Implementation

- Design the program and site plan for Nature Center improvements
- Identify key stories and overarching messages for guest experience
- Phased diagrams and illustrations to build stakeholder excitement and assist with fundraising efforts

PHASE 3 EXECUTIVE SUMMARY

BRAND EXPERIENCE

After the results of Phase 1 and Phase 2 were compiled, the stakeholders met to discuss how the Goals and Strategies outlined in Phase 2 could be implemented at the Bowers School Farm site to achieve the 20 year (i.e. long-term) vision. From this detailed discussion, which included facility and site programming, design styles, architectural materials, service and guest circulation, animal needs and visitor experiences, we concluded that our master plan should focus on creating stronger and more meaningful visitor experience connections between these two sister sites (Bowers School Farm and Johnson Nature Center.)

By defining the shared experiential characteristics of both facilities alongside the unique attributes that make each special, a shared brand experience was created. Entitled “Nourish,” the brand experience seeks to create a framework upon which all guest experiences shall be formulated. Messaging and experiences fall within categories which are easily marketable and understandable by the general public and can even guide wayfinding design. These four categories include: Mind, Body, Soul, and Land.

For Bowers School Farm, the Nourish brand is expressed as experience zones within which physical elements that support each message are organized. For example, the Land zone focuses on farming and management techniques in historic and modern agriculture and includes experiences highlighting green practices, the historic Michigan farm, and farm machines including the earliest farm machine—the horse!

IMPLEMENTING THE VISION

In order to define initial projects, the holistic long-term site vision was created. This long-term vision plan is the fully realized and implemented brand experience.

Challenges to current guest, student, staff, and volunteer access to the site are addressed by creating three dedicated-use entries: the Soul zone is the casual visitor entry which includes ticketing, restaurant, farm store, teaching kitchen, outdoor kitchen, indoor and outdoor seating, wagon ride loading, and space to gather and play; the Mind zone featuring an expanded Academy building and staff offices includes a dedicated lobby to provide secure access for staff, students, and volunteers; the Land zone includes a secondary entry point with direct access to the Equestrian center and main West Service area.

From their dedicated entry point, guests, students, staff, and volunteers have more efficient and clear access to areas of the Farm they need to utilize most via redesigned wayfinding and ADA-accessible circulation across the site. For the casual visitor, the experience is defined via the brand experience zones (Mind, Body, Soul, Land) making their visit much more meaningful and educational.

The first step in achieving this long-term plan is defined via a 5-year Master Plan subdivided into five phases. Many of the long-term vision elements will be accomplished in this short-term plan. The key exceptions include fully redesigning and paving the parking areas and entries, the new Soul zone (i.e new entry), the farm machines outdoor play museum, and the indoor equestrian center (a clear-span tensile structure over a new outdoor arena is included in the 5-year plan).

Those items included in the short-term plan address immediate needs related to capacity for students and educational programs and revenue-generation for the Farm. Also included in the short-term plan is a temporary, yet exciting and well-designed entry experience utilizing retrofitted trailers and / or shipping containers for food and beverage sales, ticketing, and retail.

The estimated budget of the short-term plan is $13.6 million (which accounts for inflation). In conjunction with added programming targeting students and community visitors and a marketing strategy, these improvements are projected to increase attendance to the Farm by nearly 30% (from ~52,000 to ~66,000).

SECTION 1:

DEFINING THE BRAND EXPERIENCE

“WHAT DO YOU WANT TO NOURISH TODAY?”

DIFFERENTIATORS

OVERARCHING BRAND

Authentic

Southeast Michigan Focused

Approachable

Comfortable

Land Stewardship

Lifelong Personal Growth Focused

‘Get Yer Hands Dirty’ Experiential

Dynamic (Seasonally & Experientially)

THE FARM

- Agricultural Settings & Experiences
- Blending Historic & Modern
- Supportive
- Sustainable (Human Centered Stewardship)
- Colorful & Bold
- Concise and Clear (Efficient?)
- ‘Buzzing with Activity’ / Directed Activity

THE NATURE CENTER

- Nature Experiences
- Rustic & Timeless
- Nurturing
- Nature-first Stewardship
- ‘Of the Earth’—Subdued, Earth Tones
- Safely ‘Lost’ in the Woods
- Self-Reflective, Contemplative, Informal Rec.

SHARED BRAND EXPERIENCE

The NOURISH Project

The Farm

The Nature Center

LAND (Sustainability)	BODY (Health)	MIND (Learning)	SOUL (Connection)
• Facilities as Stewards • Ecosystems • Animal Exhibits • Our Roots (History w/ land)	• Food • Physical Fitness	• Formal Programs • Academy, Early Childhood & MS / HS • Learn a New Skill	• Connect to Land, Animals, Nature (Feed the Soul) • Artfulness • Mental Wellness • Community-focused spaces / events

BRAND EXPERIENCE

The Nourish FARM

LAND

- {Sustainable} agriculture interpretation
- Pastures & animal homes with modern husbandry
- “Our ROOTS” zone / trail; historic farm & heritage breeds

BODY

- “Where does your food come from” interpretive focus
- Ropes course
- Physical play
- Production, community & U-pick gardens

MIND

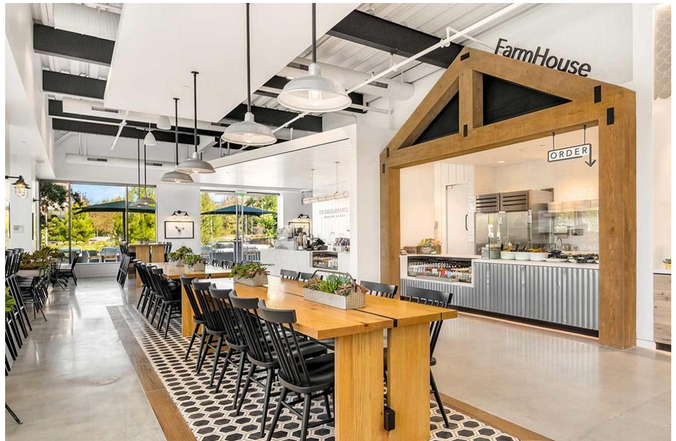
- Spaces for formal programming
- Academy facility needs
- Staff support spaces
- Learning Gardens: “Messy Garden” & Children’s Garden

SOUL

- Entrance (“The Farm is good for the soul”)
- Unstructured walking trail
- Horticultural gardens
- Animal interactions
- Art in landscape
- Community gathering & events

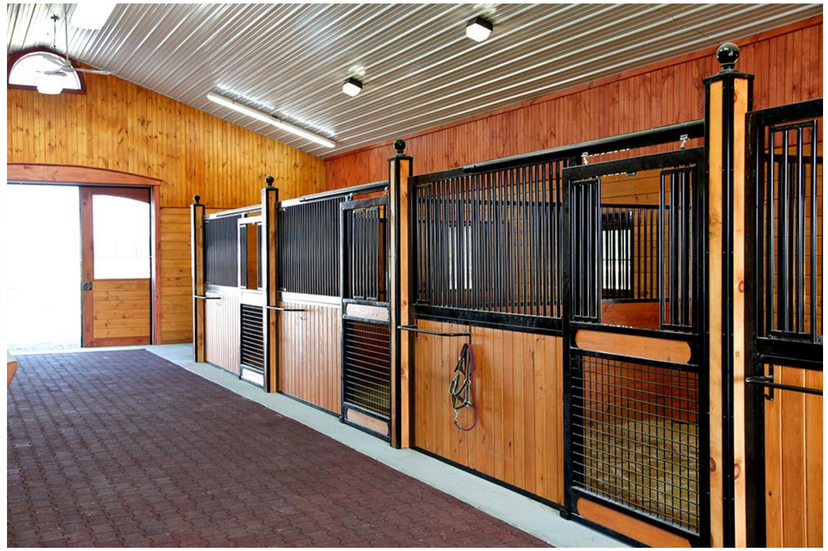
BRAND EXPERIENCE

The Nourish FARM



DESIGN INSPIRATION:

Contemporary Modern meets Authentic Barn (i.e. Industrial Farmhouse)



ATTRIBUTES:

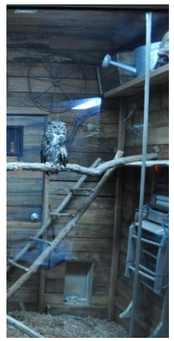
- Local / green materials like wood natural stone alongside durable metal roofing & siding
- Many windows w/ bird protection to connect indoors to outdoors; thoughtful lighting design
- Rustic, authentic & operational farm materials and elements like aluminum and steel reused in creative ways
- Shapes inspired by historic barns but simplified in the modern style
- Cultivated, not manicured landscaping
- Simple, clear, bold, oversized fonts and bright colors on directional and wayfinding signs

NOURISH FARM

LAND

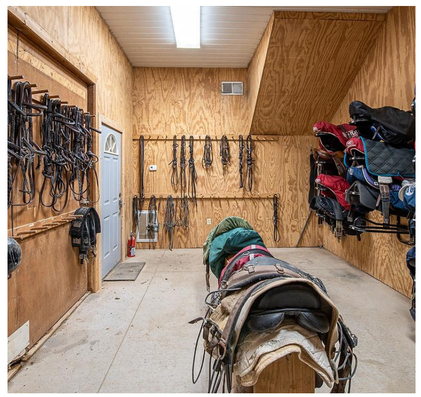
KEY MESSAGE:

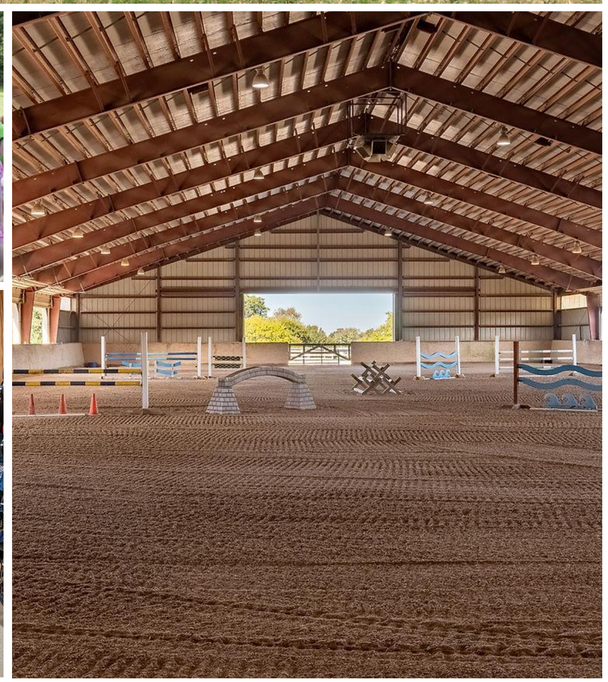
Farmers are stewards of the land.



KEY EXPERIENCES:

- Outdoor interpretive experience explaining responsible pasture & livestock management, water quality, crop production, and sustainable things you can do at home
- Outdoor “Farm Machine” interactive / play museum highlights the evolution of farm equipment—from horses to today
- “Our ROOTS” zone / trail highlights how we have learned from the past to make a better ag future featuring historic farm buildings & artifacts and heritage breeds & garden
- State of the art equine facility for programs and events with interpretation for casual visitors





Our Roots

Equine Facility

NOURISH FARM

BODY

KEY MESSAGE:

Farms make healthy bodies through healthy food and physical exertion.

KEY EXPERIENCES:

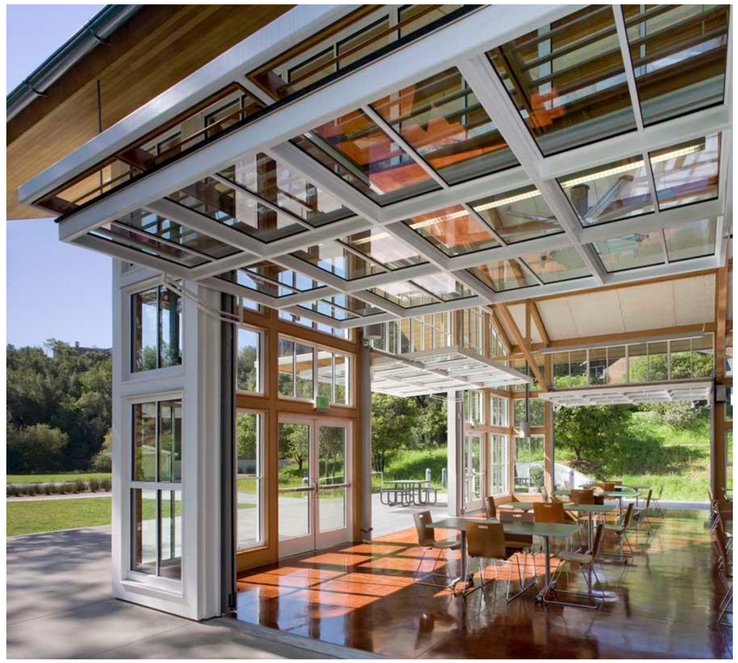
- “Where does your food come from” outdoor interpretive experience with food production (gardens, livestock, swine, poultry, etc.) including state of the art livestock learning labs
- Improved and expanded ropes courses for physical fitness
- U-Pick gardens allow hands-on ‘straight from the garden’ experience
- Play equipment throughout allows physical and imaginative play for kids of all ages
- Bigger, better community gardens more deeply connecting people to their food

NOURISH FARM

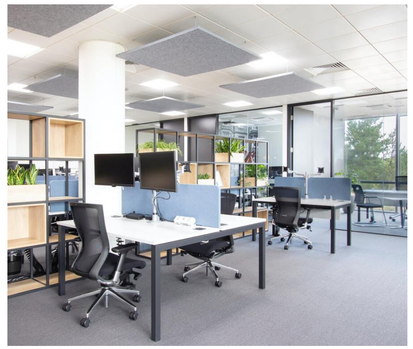
MIND

KEY MESSAGE:

The Farm is a place for learning and growth.

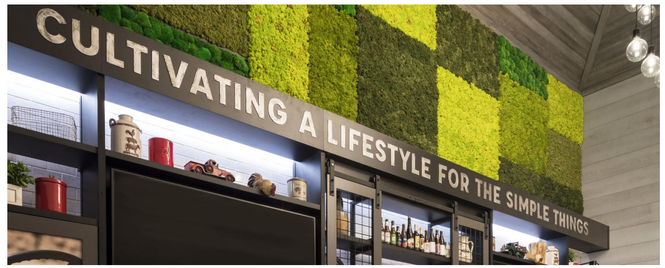


KEY EXPERIENCES:



- Learning gardens (messy, experimental garden and formal Children's Garden) allow kids of all ages hands-on and imaginative opportunities for learning about agriculture
- Improved and expanded Academy better integrates formal learning with the hands-on and outdoor opportunities of the Farm
- Improved and expanded Education and Administration building improves efficiency and capacity for critical programs and support at the Farm

NOURISH FARM



SOUL

KEY MESSAGE:

The work of a farm—connecting with animals, growing crops, and the bodily exertion—is work of the soul.

KEY EXPERIENCES:

- New welcoming visitor entrance includes a beautiful farm store highlighting local products, a farm restaurant with indoor and outdoor seating, a teaching kitchen, ticketing and membership sales, and orientation interpretives explaining focused experiences on-site
- Beautiful horticultural gardens for the joy of gardening
- Building community with gathering spaces and out of gate experiences

Casual Visitor Entry

Farm NC Equipment Inventory updated May 2026 - th.xlsx

Worksheet Farm Equip | Columns 1–8 | Printed cached source values

Original workbook is embedded in the PDF binder. Formula definitions, objects and source formatting remain available in that file. Blank cells are preserved within displayed rows. Entirely blank or zero-only rows are omitted from this print view; original row numbers are shown. For the shared master-plan workbook, this print view covers BSF and shared worksheets; JNC worksheets remain in the embedded original.

Source row	1	2	3	4	5	6	7	8
1			Bowers School Farm Equipment Information (updated 01-2026 KW)					
5	Equipment	Ownership - Transfer to OCPRC (Y/N)?	Equipment Type	Brand	Model	Uses	Notes	Condition
6	Air compressor		Air compressor		Pro 4000	Air up tires, blowing off projects		Good
7	Kubota Sprayer		Attachment	Fimco	Fimco Industries - 50 gallon	Spraying small pastures and fields	Purchased in 2018	Excellent
8	Boss UTV Snow Plow		Attachment	Boss	Boss	Plowing walks/paths		Operational
9	Boss UTV Salt Spreader		Attachment	Boss				Operational
10	Various Automotive Tools		Automotive Tools			Equipment Repair	VariousbSpecialty tools for repairs	
11	Generator - Unleaded		Generator		Honda	Power Supply		Good
12	6 Foot Tiller		Grounds Equipment	Woods	Woods	Tilling gardens	Needs servicing	Non-Operational
13	4 Foot Tiller		Grounds Equipment	Bad Boy	Bad Boy	Tilling gardens fields	Donated by Bad Boy 2024	Operational
14	4 Row Corn Planter		Grounds Equipment	John Deere	John Deere 7000	Planting field and sweet corn.	Purchased used 7 years ago.	Operational
15	Brush Hog 7'		Grounds Equipment	Woods	BD840 Woods Brush Hog	Mowing brush, corn, and grass.	Purchased new in 2008	Operational
16	Finishing Cutter		Grounds Equipment	Woods	RDA400	Mowing grass	Needs servicing	Non-Operational
17	Brush Hog 5'		Grounds Equipment	Bad Boy	Bad Boy	Rough field mowing	Purchased new 2025	
18	Post Hole Auger		Grounds Equipment		Woods PHD 65	Digs holes for building fences.	Purchased new in 2011	Operational
19	Hay Spike		Grounds Equipment			Moving Round bales		Good
20	3 Prong Hay Spike		Grounds Equipment			Moving Large Square Bales		Good
21	Tractor Forks		Grounds Equipment			Moving grain and other loads		Good
22	Tractor Buckets-Large &Small		Grounds Equipment			Moving dirt and other loads		Good

Source row	1	2	3	4	5	6	7	8
23	Scraper Blade		Grounds Equipment	Ford	Ford Back Blade	Scraping behind tractor, moving snow		Poor
24	Cultivator		Grounds Equipment	John Deere	John Deere Sweep Style	Field Work	Operational	Good
25	Disc		Grounds Equipment	John Deere	John Deere	Field Work	Operational	Fair
26	Plow		Grounds Equipment	John Deere	John Deere 3 Bottom	Field Work	Poor	Fair
27	Plow		Grounds Equipment	Pittsburgh	Pittsburgh 282 3 Bottom	Field Work	Need to Scrap	Poor
28	Sprayer		Grounds Equipment		Boom Type 200 gallon PTO	Spraying liquids/herbicides	Excellent, Purchased new 2025	Good
29	Tractor Rake		Grounds Equipment	Ford	Ford-rear rake	Finish work in field.	Non-Operational	Poor
30	Planter		Grounds Equipment		1 Row	Planting Crops	Good	Poor
31	Subsoiler		Grounds Equipment		3-shank	Field Work	Good	Fair
32	Harrow		Grounds Equipment	John Deere	John Deere 6'	Field work		Good
33	Tiller w/ Depth Roller		Grounds Equipment		For BCS	Small scale vegetable production	Purchased in 2020	Excellent
34	No Till Drill		Grounds Equipment		Saya 507	No Till Planter	Purchased New 2024	Excellent
35	Box Blade		Grounds Equipment		County Line	Used for grading dirt lot/trails	Purchased New 2024	Good
36	Power Harrow		Grounds Equipment		For BCS	Small scale vegetable production	Purchased in 2022	Excellent
37	Agri-Fab UTV Tow Spreader		Grounds Equipment			Small seed or salt spreading		
38	2-Small sprayer-Backpack		Grounds Equipment		Chapin	Yard work		Good
39	Log Splitter		Grounds Equipment		County Line	Firewood processing	Purchased new 2025	
40	Hay Elevator		Grounds Equipment		MYD-HAN-D	Moving hay from lower floor in hayloft to higher raised area		Good
41	Trash Pump		Grounds Equipment		Predator	Pumping Water		Great
42	Various Hand Tools		Hand Tool			Repairs		
43	Flail Mower		Mower		For BCS	Small scale vegetable production	Purchased in 2021	Excellent
44	Riding Mower		Mower		John Deere R70	Mow lawns	Not used since 2019; needs mtc	Non-Operational
45	Riding Mower		Mower		Toro 520-H	Mow lawns	Not used since 2019; needs mtc	Non-Operational
46	Exmark Zero Turn Mower (small)		Mower		IH500V	Mow, building lawns	Moved to farm from NC; fall 2019	Good

Source row	1	2	3	4	5	6	7	8
47	Weed Trimmer		Power Tool		Stihl FS90R	Trim weeds around pond and property		Good
48	Dewalt Cordless Mower		Power Tool			Mowing small areas around buildings		Fair
49	Stihl Chain Saw		Power Tool		MS311	Wood cutting/processing	Purchased new 2026	
50	Backpack Blower		Power Tool		Echo PB-580T	Leaf Blowing		Great
51	Titan Post Driver		Power Tool		PGD3200XPM	4 Cycle T Post Driver	Purchased New 2024	Excellent
52	Weed Whacker		Power Tool		Stihl FS 110R	Trim fencelines		Good
53	Post-Hole Auger		Power Tool		Predator	Drill holes		Good
54	Post Driver		Power Tool		Unknown	2 Cycle post driver	Gasoline	Good
55	Grinder Wheel		Power Tool		Duracraft 5hp	sharpening tools and blades, cleaning up hardware from rust		Good
56	Metal Chop Saw		Power Tool		Ryobi-5hp	Cutting metal	Donated	Good
57	Chop Saw		Power Tool		Dewalt Double Bevel	Cutting wood/plastic and other materials for projects	New in 2019	Good
58	Table Saw		Power Tool		Dewalt	Cutting plywood and other materials as needed	New in 2019	Good
59	Power Washer		Power Tool		Dewalt 3600	Washing equipment and buildings		Good
60	Drill Press		Power Tool		Craftsman 15in- 12 speed	Drilling holes in poles and wood		Poor
61	Power MIG Electric		Power Tool		Lincoln Power	Welding		Good
62	Power MIG Pressurized Gas		Power Tool		Lincoln Power	Welding		Good
63	Nailer		Power Tool		Dewalt - Battery powered	Nailing	New in 2020	Good
64	(4) Angle Grinders		Power Tool		(2) Dewalt (2) Makita	Metal cutting, fence cutting		Good
65	Reciprocating Saw		Power Tool		Dewalt			Good
66	Circular Saw		Power Tool		Dewalt	Cutting		Good
67	Finishing Nailer		Power Tool		Air powered Porter Cable	Nailing trim and other small pieces		Good
68	Dremel Saw		Power Tool		Dewalt	Making small cuts in objects		Good
69	Impact Wrench		Power Tool		Milwaukee	Electric powered		Good
70	Hammer Drill		Power Tool		Miwaukee	Electric powered		Good

Source row	1	2	3	4	5	6	7	8
71	Router Kit		Power Tool		Hitachi	Electric powered		Good
72	Bench Grinder		Power Tool		Jet	Electric powered	Purchased 2021	
73	Power Pack		Power Tool		Pittsburgh	Hydraulic		
74	Dewalt 20 Volt Batteries		Power Tool		Dewalt	Cordless Power Tools	Various sizes and ages	
75	Dewalt Cordless Blower		Power Tool		Dewalt	Blowing out shop/horse barn		
76	Orbital Sander		Power Tool		Dewalt			
77	Belt Sander		Power Tool		Ridgid			
78	Shop Vac		Power Tool		Rigid 5hp	Vaccumming		Good
79	Tractor with loader		Tractor	New Holland	TNG65	Main Tractor for Farm Operations	Multiple repairs each year due to age. Beyond useful age for daily use.	Operational
80	Tractor		Tractor	New Holland	TC35	Tilling and Hauling Wagons / Trailers	Has had many repairs and typically breaks down several times a year. Electrical issue - blows fuses.	Operational
81	Tractor		Tractor	Ford	3910	Used as an accessory for kids to play	Unsure of purchase date. Tractor was made in the mid 80’s to 90’s.	Non-Operational
82	Tractor		Tractor	New Holland	TN55D	Hauls Manure Spreader	Has turf tires- unsuitable for most farm work, aquired from PPS in 2014 likely purchsed in early 2000's	Non-Operational
83	Tractor W/Loader		Tractor	Bad Boy	Bad Boy	Farm Chores, Brush Hog Work, Tilling	Donated from Bad Boy 2024	Excellent
84	Tractor with Loader		Tractor	New Holland	Boomer 50	Pulling wagons & light farm work	Purchased in May 2020, hydrostatic for safety	Operational
85	Walk Behind Tractor		Tractor	BCS 749	BCS 749	Vegetable Production	Purchased from Earth Tools in 2020	Operational
86	Manure Spreader		Trailer	H & S	Model 175 2-speed-2117	Spreading animal waste material on fields	Purchased new in 2016 $9,000	Operational
87	Aluminum Four horse slant Gooseneck trailer		Trailer	Exiss	Exiss CX/400	Transports livestock and horses.	Unknown purchasing date	Good

Source row	1	2	3	4	5	6	7	8
88	Titan HitchTrailer		Trailer	Challenger	Challenger	Transports livestock and horses to programs.	Rebulit onsite 2025, used only onsite, not om road.	Fair
89	Delco Stock Trailer		Trailer		S816	Transports livestock	Purchased new 2025	Excellent
90	K Trail Equipment Trailer		Trailer		2RYKBCG27PM037989 SS#	Equipment/feed transport	Purchased new 2025	
91	28' Flatbed Trailer		Trailer			Decomissioned	Not in Use	Poor
92	Red Gooseneck Horse Trailer		Trailer			Decomissioned	Not in Use	Poor
93	Gray flatbed trailer		Trailer		2-Wheel hitch trailer	Used for putting water tank and moving around site, hauling things onsite	Replaced wood deck 2021 needs license plate to be road ready	Poor
94	Concessions trailer 18 ft		Trailer					
95	Kubota RTV 900		Utility Vehicle	Kubota	RTV 900	Transports equipment and people around the farm.		Fair
96	Turf Gator		Utility Vehicle	John Deere	W00Turf003665	Transporting people and items around the Farm.	Broken Frame	Non-Operational
97	Kubota RTV-X1100		Utility Vehicle	Kubota	RTV-X-1100	Personel transport, plowing, salting		Operational
98	Farm Truck		Vehicle		GMC- 3500	General Farm Work and Traveling Farms	Purchased new in 2012	Operational
99	(4) Tractor Drawn Wagons		Wagon			Transport visitors around the farm during programs including the Corn Maze	Rebuilt in 2012, new wooden decks and covered tops. Rusting.	Fair
100	Mobile Chicken coop wagon		Wagon			Houses and Transports Chickens around the farm for daily foraging	April 2020 delivered-custom built TC Construction	Great
101	Horse Drawn Wagon		Wagon			Hauling people on wagon rides (specialty)	Not found on Site	Good condition

EXECUTIVE SUMMARY

OVERVIEW

All 5 buildings / structures visited inside and out appear to be in need of deferred maintenance over the past several years. These facilities are currently being used by the Bloomfield Hills school district for some activities and events.

Even though these buildings are currently in use, any future change in occupancy or program will require immediate improvements to meet current codes, zoning, and requirements from local building and engineering officials.

The site infrastructure evaluation by GMB Architects prepared in August 2024 should be consider and included in all future CIP programming and project needs.

Deferred maintenance is the initial area of concern at each facility. It is apparent that no capital improvement projects have been undertaken in the past 5 to 10 years or longer at these buildings and in many areas the existing conditions look to be near original in vintage and likely nearing their expected serviceable life cycle.

While some items have been repaired or replaced when critical failure (stop working) events require immediate repair and / or replacement it appears that these items have not always been completed in code compliance approach.

In addition to the typical maintenance items noted, there are a few critical areas of concern which will need to be addressed before these facilities can be repurposed and occupancy for new programming and open to public occupancy.

1. Electrical improvements for replacement of old or missing systems and various components.
2. Mechanical requirements for ventilation per current coded and public occupancy are not present in any of these buildings and will be required for new programming.
3. Structural improvements of public occupancy and building use group along with repairs of damage systems.
4. ADA and barrier free accessibility inside and outside of each building to meet current codes and requirements.
5. Life safety improvement and building occupancy exiting will need to be improved at each facility before public occupancy and building use group.

As many of these items are specific or minor in nature there are numerous locations / projects which need attention which can add to a larger scope of work to be planned for in future capital improvement planning. Along with the repairs and corrections of the concerning items, these project work scopes may expand to the level of requiring other improvements to become code compliant, much of this will need to be determined as programming is finalized and full work scopes and CIP budgets are planned.

LEGEND

PRIOIRTY RANKING

This column is an estimated identification of importance for when a various project or correction action should be planned and budget for in future OCPR capital improvement programs.

1	Critical Importance and immediate corrective action should be completed.
2	Important works associated with this deficiency, necessary tasks should be planned for and completed within 1 year or less.
3	Current conditions are at the end of their usable life and need to be scheduled for repair, removal, and replacement within the next 2 to 3 years.
4	The work associated with this item is nearing the end of its use and needs to be considered in future improvement plans in the next 4 to 6 years.
5.	Current conditions are acceptable and should be monitored and maintained as necessary, no immediate or near future action is anticipated.

WORK CATAGORY

This column is a descriptive interpretation of where the work scope importance for each individual corrective action item is considered in relationship to the building governing requirements.

A	Life safety element regarding the building occupants or the public interacting with the building and site amenities.
B	Code requirements for the building and site which may have been acceptable at the time of original construction and occupancy may not be allowed under new code interpretations. These items would be recommended or may be required for improvements with any future renovations, maintenance or expansion of the facility.
C	Building integrity are items which need to be repaired and / or replaced to maintain the existing building's physical attributes, function, and operation.
D	Accessibility compliance are items which need to be repaired, improved, or replaced for compliance and the minimum standards for universal accessibility for all building occupants.
E	Appearance are items which may not rise to the level of "building's integrity" although are in need of attention and repair or replacement before they become detrimental to the physical building assests.

ESTIMATE CLARIFICATIONS

This is an opinion of construction cost conceptual estimate. This is a working document that should be reviewed by the project team with necessary revisions duly raised and documented as part of the design process when each task and item is prepared for actual construction.

- It is assumed the building area will be occupied during construction with work done during normal business hours.
- The estimate assumes no single sourcing of materials, three manufactures required.

1. The project is estimated for construction at winter of 2026 / 2027 construction.

2. Escalation is difficult and near impossible to predict in the current construction environment.
   a. Prior to the onset of COVID 19 construction escalation in Southeast Michigan was holding steady at 3% - 4% per year.

   b. During the 2020 and 2021 years at the onset of COVID 19 escalation was running at 18% - 21%, along with long led items and supply chain disruption budgeting was impossible to accurately predict.

   c. From 2022 and through 2024 the current market has seen reduction in escalation down to 7% - 8% and has held steady for most building items in our local marketplace.

   d. From 2025 through 2026 and project into 2027 markets have been variable and prices can rapidly increase and decrease without notice, once again making the ability to accurately estimate construction projects difficult.

   e. It's anticipated that future budget escalation should reduce to about 4% - 6% per year, although the pre 2020 rates are not anticipated or expected to return in the foreseeable future due to market inflation.

3. Inclusions in" Conceptual Estimate Number"
   a. Specific construction item as listed or specified.
   b. Associated work that may be required but is not specifically listed or stated to complete each individual listed item.
   c. Construction insurance and bonds from a general contractor
   d. General contractors Overhead and Profit
   e. Labor is based on Southeast Michigan prevailing labor wage rates.
   f. Design contingencies
   g. Sales tax.

4. Exclusion in the "Conceptual Estimate Number"
   a. AHJ plan review Fees
   b. Permit application and fees.
   c. The owner furnished equipment, fixtures, and products.
   d. Technology and IT infrastructure
   e. Construction cost for relocation of spaces / departments during construction
   f. Moving costs
   g. Removal of contaminated and / or hazardous materials such as asbestos, lead, PCBs, and other hazardous materials.

BUDGET OPINION SUMMARY

1. Horse Stable Barn

Architectural	$112,500.00
Mechanical	$21,000.00
Electrical	$23,200.00
Total Budget Opinion	**$156,700.00**

2. Barn and Underground Animal Shelter (Bank Barn)

Architectural	$136,500.00
Mechanical	$18,500.00
Electrical	$71,000.00
Total Budget Opinion	**$226,000.00**

3. Toilet Room Barn Building

Architectural	$187,500.00
Mechanical	$52,000.00
Electrical	$21,100.00
Total Budget Opinion	**$260,600.00**

4. Cottage

Architectural	$289,500.00
Mechanical	$69,500.00
Electrical	$22,000.00
Total Budget Opinion	**$381,000.00**

5. Underground Shelter Storage Building

Architectural	$52,500.00
Mechanical	T.B.D.
Electrical	$19,000.00
Total Budget Opinion	**$71,500.00**

HORSE STABLE BARN

BUILDING DATA

- Unknown original building construction
- Possible 3 building additions

- 4,979 total approximate square feet

West maintenance shop	=	776 sqft
North barn	=	1,183 sqft
South bran	=	1,280 sqft
East open stables	=	1,735 sqft

- Use Group ‘U’ Utility – Barns

- Construction is 5-B combustible materials.

- Pre-engineered metal siding and roofing post-framed “pole barn” building type.

EXECUTIVE SUMMARY

The existing building is a typical pre-engineered “pole” barn structure and is currently being used as a barn for animals.

The building appears to have been built in possibly 4 different phases or additions. The age of the building is unknown, but it is assumed to be a minimum of 30 - 35 years in age, which would place this structure at the end of its anticipated usable life cycle.

Maintenance has been deferred and damaged areas of the building appear to have been left damaged without necessary repairs as needed during the past several years. The building appears to not be weather tight and has various areas of holes in the walls, and roof and leaks throughout the structure. There are areas of damaged structure which question the integrity of the building without immediate repairs and replacement of damaged post and beam construction.

The horse stable is limited to only two gravity relief vents located on the roof and one outdoor wall mounted circulating fan. The repair shop consists of two gravity relief vents located on the roof and one gas fired unit heater. The repair shop does not consist of any code required mechanical ventilation. The repair shop also consists of one air compressor, one ceiling mounted compressed air hose reel and trench drain. No fire protection systems exist in the horse stable/repair shop.

The electrical system in the stable part needs some updates. The shop area’s main panel has a number of items to address. There were no GFI receptacles noted in the building. The building had few exterior lights. The stable area interior lighting needs to be replaced with tight lighting with guards. Emergency egress lighting should be installed in the shop area.

The building is used as a barn for animals and a learning center for the public and students, the building does not appear to be currently code compliant for human occupants. Based on the preliminary rough estimates for necessary repairs in comparison with new construction cost of new “pole: barn pre-engineered structures it might be consider having this building planned for and schedule for replacement vs. making necessary repairs and improvements.

IMMEDIATE ACTION ITEMS

1. Repair the structural elements such as trusses, columns and framing that are required for structural integrity.
2. Repair the holes and leaks in the building and make the structure secure for human and animal occupants.
3. Provide code compliance with life safety elements with lighting, exits and power throughout the structures.
4. Provide ADA access and functionality.
5. Electrical lighting and power in the building needs repairs and replacement

MECHANICAL, PLUMBING and FIRE PROTECTION NOTES

Mechanical

The horse stable is limited to only two gravity relief vents located on the roof and one outdoor wall mounted circulating fan. The gravity relief vents simply provide air movement by natural means within the indoor portion of the horse stable. The outdoor circulating fan simply provides air movement by mechanical means within the outdoor portion of the horse stable.

The repair shop consists of two gravity relief vents located on the roof and one gas fired unit heater with intake and exhaust flues. The gravity relief vents simply provide air movement by natural means within the attic space of the repair shop. The unit heater is controlled by a wall mounted thermostat and cycles as necessary to maintain space temperature during the heating season. The repair shop does not consist of any code required mechanical ventilation.

Plumbing

The repair shop consists of one floor mounted air compressor and one ceiling mounted compressed air hose reel. Compressed air piping penetrates the ceiling and connects to the ceiling mounted hose reel.

Fire Protection

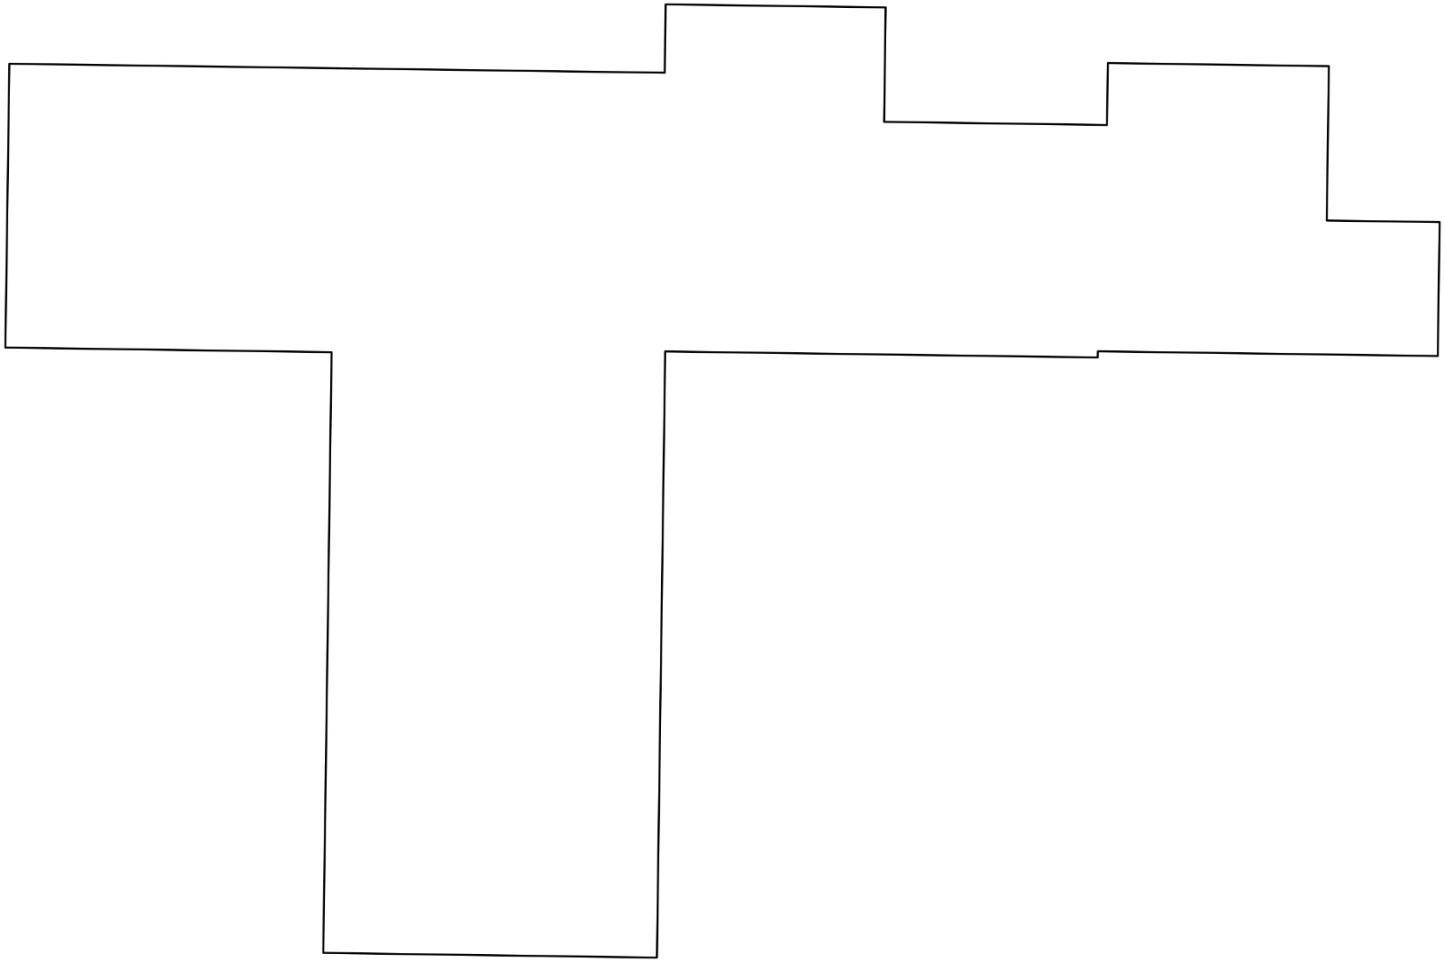
The horse stable/repair shop does not consist of any fire protection systems.

ELECTRICAL NOTES

Power

The Horse stable main panel (in the shop area) is fed with 100Amps from the wireway outside of the Cottage. This main panel had multiple issues that need to be corrected. There were items wired in the panels wire way, there was no evidence of a ground rod or a tie to the building water piping, and the panel had no dead front installed. All these issues need to be addressed.

The sub panel in the stable area is fed with 60Amps from the shop area main panel. This sub panel is in bad shape and needs to be replaced with a NEMA 3R panel due to its exposure to the outside.



The panel and the sub panel's schedule were not complete. Loads should be traced and the panel schedules updated. Arc flash labels need to be installed on the panels.
The existing receptacles in the stables were not GFI type nor weatherproof. The receptacles in the stable area should be replaced with weatherproof GFI type.

Lighting

The exterior of the building lacked any exterior lighting on two sides of the building. The shop area and the main stable door had exterior lights. It is recommended to add more exterior lights at the back of the building for security reasons. It is recommended to add egress lighting (exit sign and EBUs) to the shop area.

Auxiliary systems

There was no fire alarm system in the building. It is not required by code, but it may want to be considered because of the shop area and the items that are stored.

BARN and UNDERGROUND ANIMAL SHELTER

BUILDING DATA

- 1926 or older
- 6,079 total approximate square feet

Lower-level barn	=	3,229 sqft
Upper-level barn	=	2,309 sqft
Outdoor stable	=	541 sqft

- Use Group ‘U’ Utility – Barns
- Construction type is 5-B combustible materials
- Historical building type post-framed “pole barn”

EXECUTIVE SUMMARY

The existing building is a typical historical barn and currently needs to be programed for future use and events.

If the barn is to be used for assembly spaces on the upper level the structure will need several major improvements similar to the Ellis bran has undergone over the past 15 years.

If the lower level is to be used as an animal shelter and classroom for learning of visitors, these areas will need some minor improvements from egress and exit signs for the public.

Several areas are in need of attention for the exterior siding, painting, windows and doors and foundation repairs to provide general yearly maintenance and weather tightness to the structure for future preservations.

Electrically this facility needs a lot of work on the electrical distribution system. It is recommended that two of the panels be replaced and one relocated to get code required access. GFI receptacles should be installed thru out. The interior lighting needs to be replaced with appropriate lighting. Emergency egress lighting should be installed.

There is little mechanical system in the barn which is limited to only two gravity relief vents located on the roof. The underground animal shelter consists of one electric water heater and associated domestic hot and cold-water piping, two compartment sink, floor drain and trench drain. No fire protection system exists in the building.

The building future programming will dictate necessary improvements and requirements that will be needed for occupancy and use.

IMMEDIATE ACTION ITEMS

1. Repair the structural elements such as trusses, columns and framing that are required for structural integrity.
2. Repair the holes and leaks in the building and make the structure secure for human and animal occupants.
3. Provide code compliance with life safety elements with lighting, exits and power throughout the structures.
4. Provide ADA access and functionality.
5. Provide replacement and updates to all electrical systems in the building

MECHANICAL, PLUMBING and FIRE PROTECTION NOTES

Mechanical

The barn is limited to only two gravity relief vents located on the roof however it appears as though both gravity relief vents are blocked and are not currently operational. The gravity relief vents simply provide air movement by natural means within the indoor portion of the barn when they are not blocked and are operational.

Plumbing

The underground animal shelter consists of one electric water heater and associated domestic hot and cold-water piping, two compartment sink, floor drain and trench drain. The water heater capacity is 40 gallons and appears to be in fair condition. Domestic hot and cold-water piping is routed to the two-compartment sink and hose bibbs.

Fire Protection

The barn and underground animal shelter does not consist of any fire protection systems.

ELECTRICAL NOTES

Power

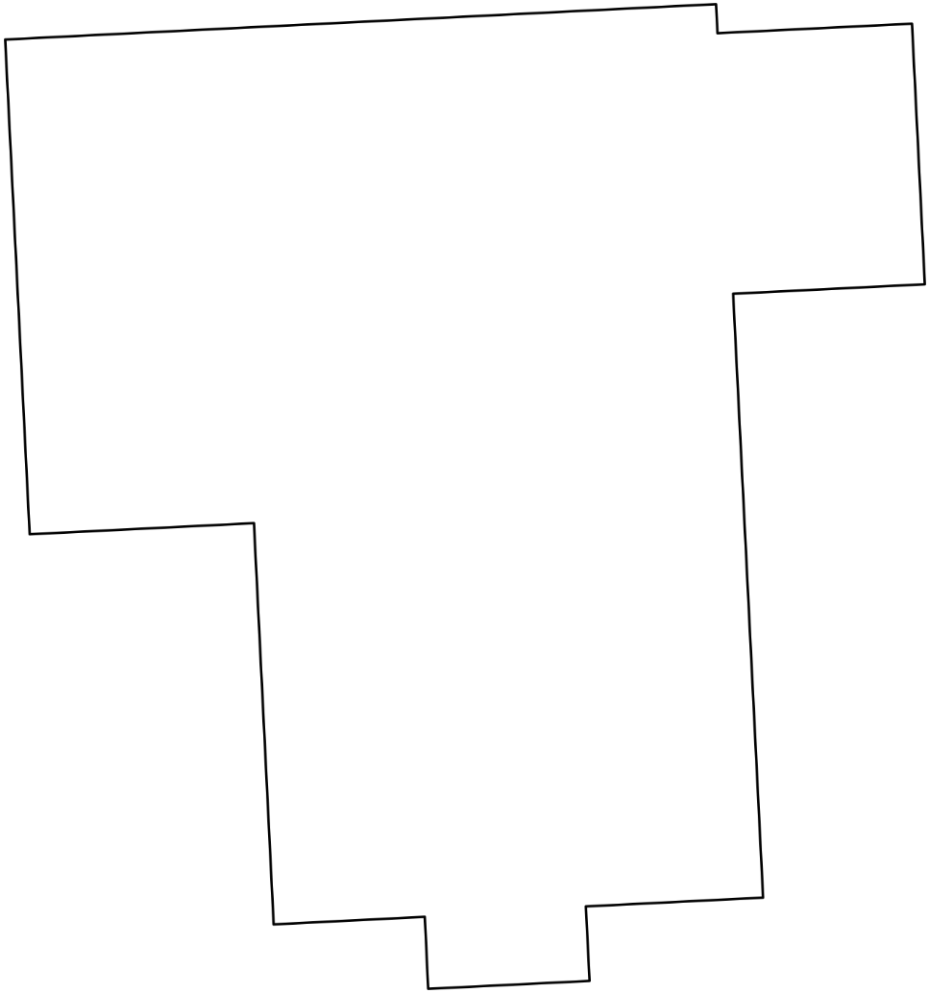
The building is fed from the wireway on the side of the cottage via a 100A fused disconnect to panel B. Panel B (120/240V single phase) then sub feeds two other panels in the lower level. The two sub panels are in bad shape and beyond their recommend life. It is recommended to replace these panels. Panel B is in a niche and does not have proper working clearances. It is recommended to relocate this panel.

The panel schedules were not complete. Loads should be traced and the panel schedules updated. Arc flash labels need to be installed on the panels.

None of the observed receptacles were GFI or weatherproof rated. With the open environment of the barn, it is recommended to replace the receptacles with weatherproof GFI receptacles with in use covers.

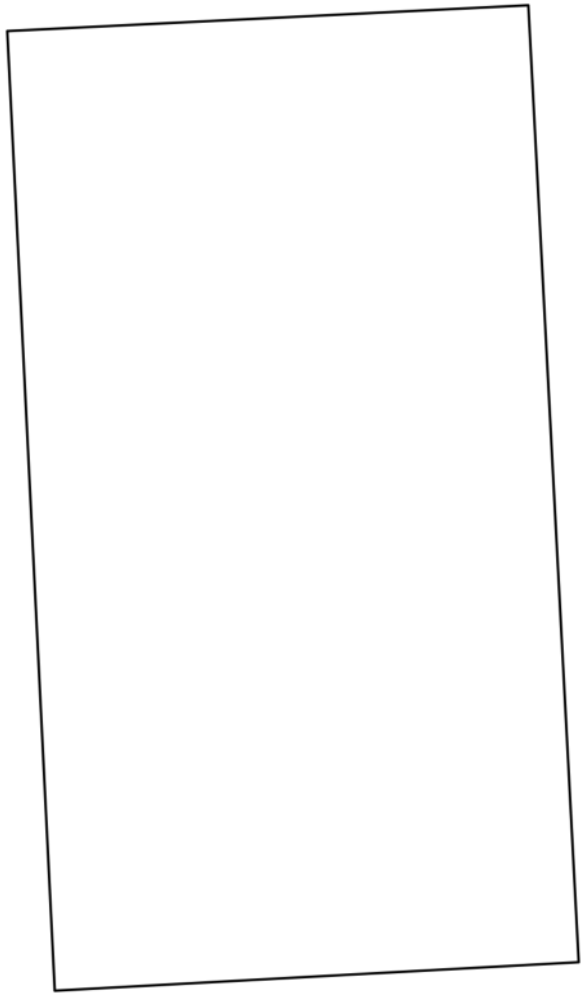
There were instances of permanently used extension cords that should be corrected. Additional receptacles should be installed to feed the required loads.

Lighting



The exterior of the building lacked any exterior lighting on two sides of the building. It is recommended to install exterior lights for security purposes.

Proper egress lighting (EBUs and exit signs) needs to be installed at the lower level. No operational egress lighting is present.



The existing interior lighting should be replaced with weather tight jelly jar type fixtures with guards.

Auxiliary systems

There was no fire alarm system in the building.

TOILET ROOMS BARN

BUILDING DATA

- Unknown original building construction
- 572 total approximate square feet
  Second floor attic / storage / mechanical loft space
- Use Group ‘U’ Utility – Barns
- Construction type is 5-B combustible materials.
- Post-framed “pole barn” building type (possibly a prefabricated “shed” structure)

EXECUTIVE SUMMARY

The existing building appears to be a “shed” type of building that has been converted into the use of toilet rooms to service the various areas of the outdoor barns and park.

The use of this toilet building does not meet ADA barrier free requirements there forth are not to code or law for compliance. The health department requirements for septic and water of this building should be verified for approval as temporary use.

Maintenance has been deferred and damaged areas of the building appear to have been left damaged without necessary repairs as needed during the past several years or more. This structure and function have passed its useable life cycle by more than 10 – 15 years and should be consider for removal and replacement all together.

The bathrooms and barn building consist of one gas fired furnace, one roof mounted exhaust fan, one water heater, water closets, urinals, lavatories and floor drains. The existing gas service enters the back of the building. No fire protection system exists in the building.

The panel that feeds this facility should be replaced. The toilet room receptacles should be replaced with GFI type. The building has no exterior lighting on three sides of the building. The interior lighting needs to be replaced with LEDs with more lumens. Emergency egress lighting should be installed in each toilet.

An improved toilet room facility that increases the number of fixtures for Men’s and Women’s should be consider. The new restrooms can be designed with universal design and full accessibility for all public users.

IMMEDIATE ACTION ITEMS

1. There are no immediate architectural or structural action items recommended for this building as it should be considered for immediate removal and replacement to build larger ADA barrier free universal design restrooms.
2. The electrical panel, lighting and egress exits should be repaired or replaced immediately for safety reasons.

MECHANICAL, PLUMBING and FIRE PROTECTION NOTES

Mechanical

The bathrooms in the barn are divided up into one men's bathroom and one women's bathroom. The heating system serving the bathrooms consists of one ducted gas fired furnace located in the attic. The furnace provides heat for the bathrooms to allow for year-round use of the toilets. Ducted outdoor ventilation air passes through the furnace and is distributed to the bathrooms through a supply air ductwork distribution system.

The men's and women's toilet rooms also consist of one roof mounted exhaust fan. The exhaust fan, however, does not appear to be operational.

The overall mechanical system is recommended to be reviewed and re-engineered accordingly to comply with current typical industry design standards and codes for toilet rooms in the event of any significant upgrades to the toilet rooms.

Plumbing

Domestic cold water enters the bathrooms and barn building in an unknown location. The domestic cold-water service serves one water heater and plumbing fixtures in the building. The domestic cold-water system does not include a code required backflow preventer. Backflow preventers ensure that water flows only in one direction and prevents contaminated water from reversing flow and polluting clean, potable water supply in both the building and public water system.

The domestic cold water is distributed to plumbing fixtures located in men's and women's bathrooms consisting of manually operated water closets, urinals and lavatories. All plumbing fixtures appear to be in good working condition. The domestic cold water is also distributed to one shelf mounted electric water heater located in the boy's bathroom. Domestic hot water is distributed to lavatories in the men's and women's bathrooms. The lavatories do not consist of code required tempering valves. Tempering valves ensure that tempered water is delivered to the faucets to prevent potential scalding from hot water.

Floor drains exist in the men's and women's bathrooms.

The furnace utilizes natural gas as its fuel source. The existing gas service enters the building, is routed up to the attic and connects to the furnace. No gas meter is located in the bathrooms and barn building.

The overall plumbing system is recommended to be reviewed and re-engineered accordingly to comply with current typical industry design standards and codes for bathrooms in the event of any significant upgrades to the bathrooms.

Fire Protection

The bathrooms and barn building does not consist of a fire protection system.

ELECTRICAL NOTES

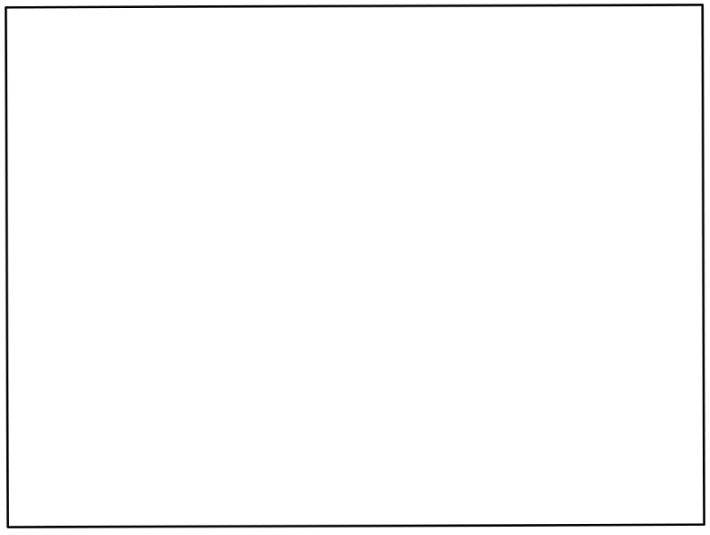
Power

The Barn toilet's panel is from the Cottage panel with 60Amps. The panel is very badly corroded and should be replaced. A main breaker should be included in the new panel.

The panel schedule was not complete. Loads should be traced and the panel schedule updated. Arc flash labels need to be installed on the panel. There was no evidence of a ground rod, bonding, or any tie to the building water pipe.

The existing receptacles in the toilet rooms are not GFI type and should be replaced.

The Silo was adjacent to the Barn toilets, and it was noted that an extension corn was tied to the stringer lights and one of the sockets had no bulb in it next to the Silo's ladder. A GFI receptacle should be added towards the top of the Silo for the stringer lights. A bulb or a cap should be installed in the empty socket.



Lighting

The exterior of the building lacked any exterior lighting on three sides of the building. The only exterior light was the alcove entrance area of the toilets. It is recommended to install exterior lights for security purposes.

Proper egress lighting (EBUs) should be installed in the toilet rooms.

Auxiliary systems

There was no fire alarm system in the building.

COTTAGE BUILDING

BUILDING DATA

- Unknown original building construction
- 932 total approximate square feet
  Possible cellar basement
  Under the North end room addition = t.b.d. sqft
- Use Group ‘B’ Office (small conference room with less than 50 occupants)
- Construction type is 5-B combustible materials.
- Stick / balloon framed building on stone and cement foundation / cellar.

EXECUTIVE SUMMARY

The existing cottage building has potential to be used a small group meeting center and conference rooms, although currently the building would not be considered occupiable for public use without complete renovations and updating.

There is a great deal of water damage on the exterior and interior of the building, which has been deferred maintenance and currently is in immediate need of repair and protection. The North addition of the building may be to the point beyond repair true to the eater damage, sloping interior floor, sloped roof decking and foundation exposure and damage.

The exterior doors and windows are to be replaced and updated to provide weather tight building envelope.

The building also is not ADA accessible and before use would by public would need to have entrance doors, flooring and toilet rooms upgraded for accessible accommodation.

The interior plumbing, lighting and mechanical systems are in need for removal and replacement.

The mechanical and plumbing systems in the cottage appear to be either in poor condition or abandoned. One original toilet room is not functional and appears to have been converted into a storage room and cat litter room. One wall mounted wall heater does not appear to be operational. One domestic water heater has likely been abandoned since there are no plumbing fixtures in the building requiring domestic hot water. One wall mounted air conditioning unit does not appear to be operational. The domestic cold-water service enters the building in a closet and appears to serve only one outdoor spigot. No fire protection system exists in the building.

This facility needs a lot of work on all of electrical systems. The main panel is relatively new and is in good shape. The electrical wiring in the building should all be replaced, along with replacing the receptacles with tamper proof receptacles The interior lighting needs to be replace with appropriate lighting. Emergency egress lighting should be installed.

The building depending on future programming has great potential, near complete historical renovation would be recommended to make the building safe for occupants and public use.

IMMEDIATE ACTION ITEMS

1. Repair the structural elements such as floors, roof deck, foundation walls.
2. Repair the leaking and water damage on interior and exterior of the building.
3. Update the MEP services and equipment in the building for commercial use and compliance.
4. Provide code compliance with life safety elements with lighting, exits and power throughout the structures.
5. Provide ADA access and functionality.
6. Plumbing replacement of everything

MECHANICAL, PLUMBING and FIRE PROTECTION NOTES

Mechanical

The cottage does not appear to consist of any mechanical heating, cooling and code required ventilating systems. Any heating, ventilating and air conditioning upgrades which may be considered in the future will likely not be efficient due to the age and construction of the building. Properly sealed buildings and proper wall and roof design and construction are critical for preventing outdoor air infiltration and indoor air exfiltration and maintaining acceptable indoor environmental control. The type of heating, ventilating and air conditioning system best suited for the building would be analyzed and determined in the future based on programming of the building.

Plumbing

The domestic cold-water service enters the building in a closet. The domestic cold-water system does not include a code required backflow preventer. Backflow preventers ensure that water flows only in one direction and prevents contaminated water from reversing flow and polluting clean, potable water supply in both the building and public water system.

Domestic cold water is distributed to one exterior spigot and one water heater which appears to be abandoned. Plumbing fixtures located in the toilet room have either been removed or are abandoned.

Fire Protection

The cottage does not consist of a fire protection system.

ELECTRICAL NOTES

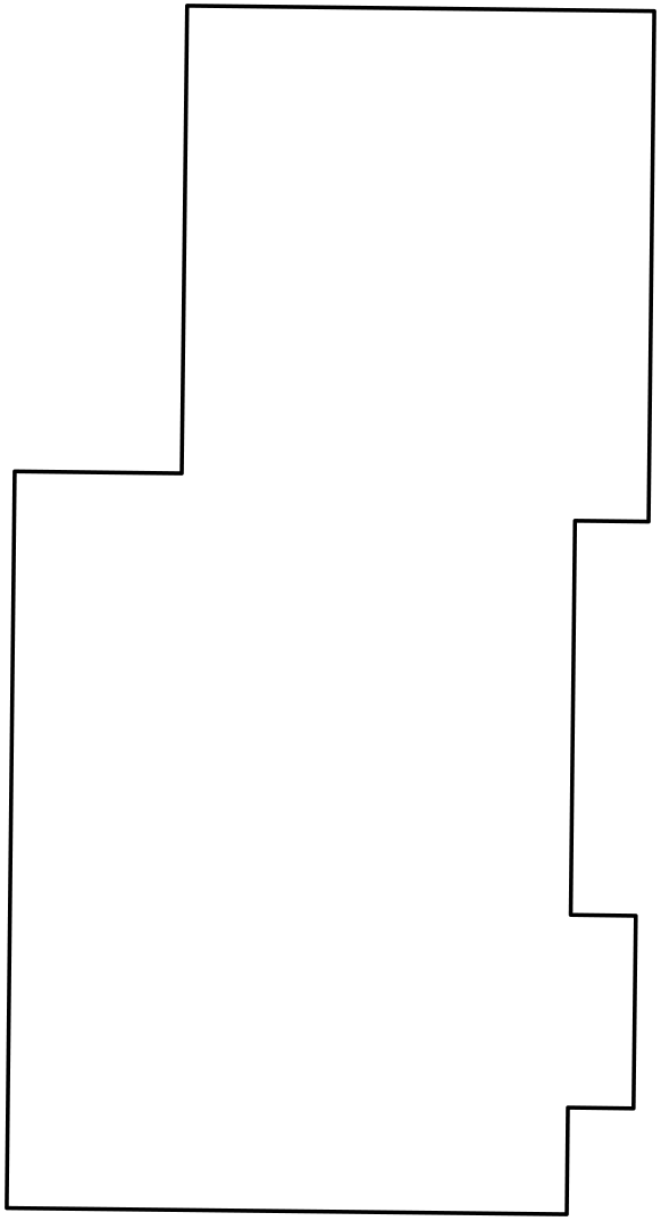
Power

The building is fed from the wireway on the side of the cottage. This panel has a main breaker.

The panel schedules were not complete. Loads should be traced and the panel schedule updated. Arc flash labels need to be installed on the panel. There was no evidence of a ground rod, bonding, or any tie to the building water pipe.

The existing receptacles appear to be in poor shape and should be replaced with tamper proof receptacles since the Cottage is used as a classroom with children.

The back-room area in the cottage needs to have all of the electricity replaced due to possible water damage to wiring and devices.



Lighting

The exterior of the building lacked any exterior lighting on three sides of the building. The only exterior light was near the main door. It is recommended to install exterior lights for security purposes.

Proper egress lighting (EBUs and exit signs) should be installed because of its classroom use with children.

Auxiliary systems

There was no fire alarm system in the building.

UNDERGROUND SHELTER STORAGE BUILDING

BUILDING DATA

- 1926 or older
- 1,036 total approximate square feet
- Use Group ‘S-2’ Low Hazard Storage
- Construction type is 2-B non-combustible materials
- Historical building poured in placed and stone cement concrete floors, walls and ceiling

EXECUTIVE SUMMARY

The building structure appears to be in solid condition as its build from poured in place concrete walls, ceiling and columns.

The water tightness of the structure is of concern as it appears the roof vents are leaking and allowing water to come inside and damage the stored materials and equipment.

Being used for an storage / maintenance building this structure is in acceptable condition. Electrical lighting and existing should be upgraded along with ventilation. The doors should be secured and tight to keep critters out. The entry foundation walls need to be secured.

The underground shelter storage area is limited to only two gravity relief vents located on the roof.

No plumbing or fire protection systems exist in the underground shelter storage area.

The electrical system in this building has only one or two circuits with newer non-corroded conduit. There are lights on the ceiling with LEDs lamps. There were two receptacles at the front, with one having an extension cord running outside and into the garden area dirt.

The main incoming service comes from a utility pole transformer (120/240V single phase) near the road. This feeds most of the buildings except the Learning Center.

IMMEDIATE ACTION ITEMS

1. Replace the entry doors that are rotting
2. Replace the ventilation stacks with tight weather fixtures
3. Provide secure storage of flammable materials
4. Provide improved lighting and existing signage.

MECHANICAL, PLUMBING and FIRE PROTECTION NOTES

Mechanical

The underground shelter storage area is limited to only two gravity relief vents located in the roof. The gravity relief vents simply provide air movement by natural means within the underground shelter.

Plumbing

The underground shelter storage area does not consist of any plumbing systems.

Fire Protection

The underground shelter storage area does not consist of any fire protection systems.

ELECTRICAL NOTES

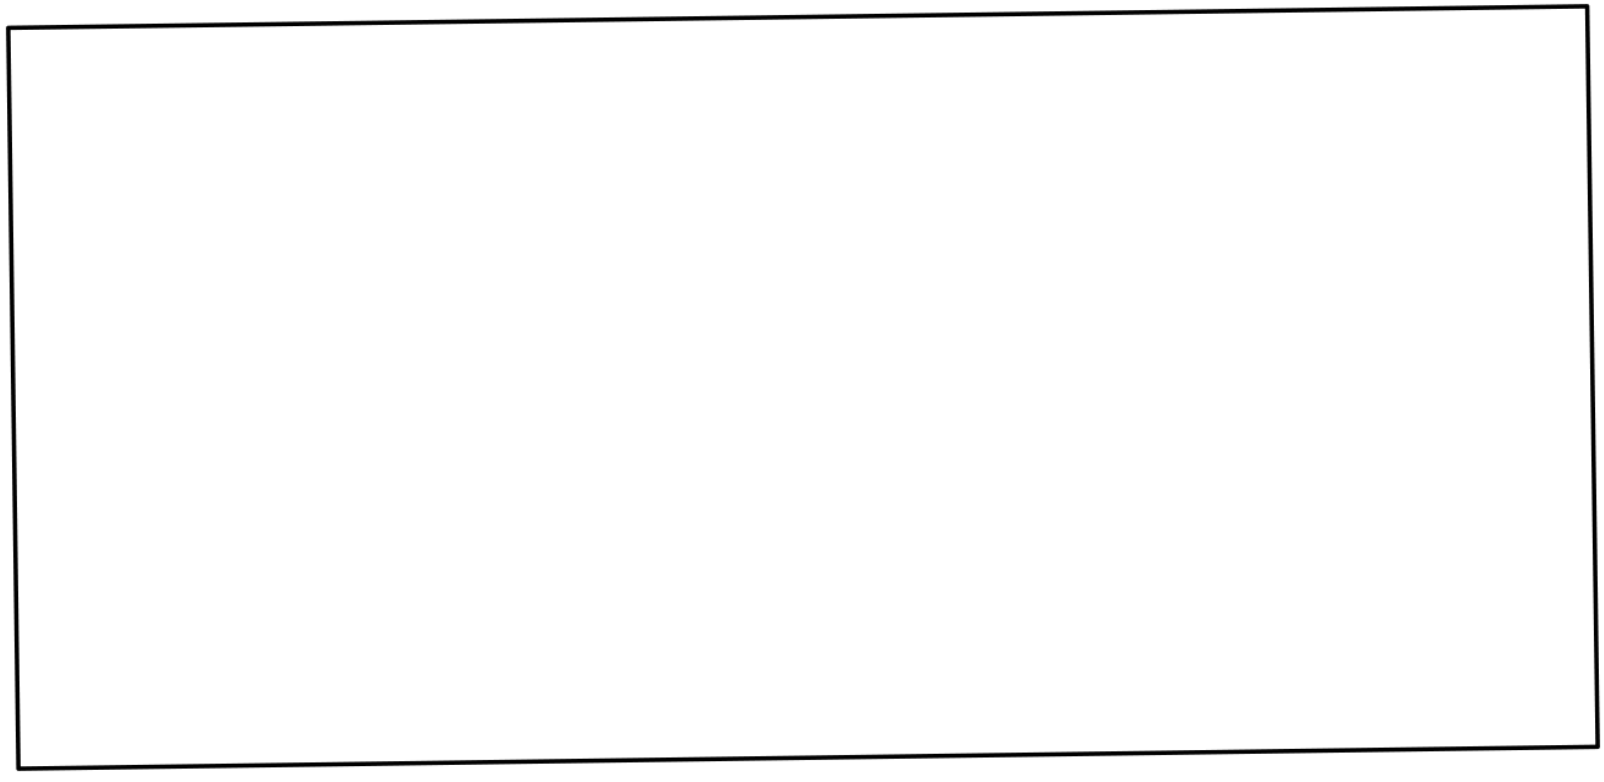
Power

The Underground Storage area is believed to be fed out of the Barton Historic house. There are one or two circuits feeding the storage area. The conduit and wiring in the storage area appear to be newer and are in good shape.

There is an extension cord that comes out of the underground storage that runs into the garden dirt. This extension cord needs to be removed and be replace with properly buried conduit and wire with weather proof GFI receptacle mounted in a cast box.

The Main incoming service is in good shape. The main service splits into two. The one side has a 400A panelboard that feeds Barton historic house, the gray house, and a couple of receptacles. The other side is a 400A fusible switch. This switch feeds the wireway on the side of the Cottage. This fusible switch does not have matching fuses, one is 300A and the other is 400A. The 300A fuse should be removed and replaced with a 400A fuse.

The 400A panel board has one 50A plug that a large extension cord running along the fence and then into the dirt over the top of the underground storage and feeds temporary event receptacle box. This 50A extension cord needs to be replaced with conduit and wire buried in the ground. The existing 50A extension cord is a big hazard due to lawn mowers and digging in the garden area.



Lighting

The lighting in the building is adequate. It would be recommended to replace the existing fixtures with weather tight jelly jar fixtures with metal guard to prevent breakage.

There are no exterior lights outside the underground storage area. It is recommended to add one exterior light for security reasons.

Auxiliary systems

There was no fire alarm system in the building. It is not required by code.

Executive Summary

The purposes of this study are to assess the existing infrastructure at Bloomfield Hills Schools Bowers School Farm along with associated upgrades to be made that would harmoniously be incorporated into the proposed Children's Garden and new Livestock Learning Lab. We have evaluated the information provided by the Owner during this study and have prepared the following Engineering Report and associated Appendices to describe the work that would be necessary to achieve the objectives of this study.

The growth and utilization of the Farm School for both educational and community use has grown significantly over the course of the past 15 years, resulting in the existing infrastructure being inadequate to reliably handle the demands of the facility. The Owner has discussed the inadequacies with the Township and learned that the public sanitary sewer system downstream of the site has reached capacity. Following our review of the completed Design Documentation, the Master Plan and Summary Documents that have been prepared and updated over the past several years, we have identified a phased approach to upgrade the infrastructure over time as the campus is developed.

Design drawings for the Children's Garden have been completed, as well as design studies related to the barrier free access route and the new entrance drive. We have reviewed the proposed location of the Children's Garden and have given consideration to the topographic constraints of the site. We have also assessed infrastructure upgrades that will serve future phases of work to reduce or eliminate conflicts and re-work that could otherwise be encountered as the site is built out. The Phasing of work described in the following Engineering Report identifies the Children's Garden as being the initial project based on the status of the design documents that have been prepared and the relatively small amount of infrastructure improvements required.

Our review of the Owner provided documentation affirmed the drainage related issues around the original farm buildings (The Farm) and near the Farm Activities Building (FAB). We have analyzed the sanitary sewer design documentation along with the attendance records to define conclusions related to the operational and maintenance issues with the sanitary lift station. We have also reviewed the Township plan review and entitlements procedures related to the project as well as those requirements of the other agencies having jurisdiction to conclude that the review and approval process will take upwards of 16 months from the start of the design phase. The current level of detail prepared for the Children's Garden is likely to save time on the initial phase of construction, however there are many factors affecting the construction start date that are subject to the review agencies and their interpretation of the phased approach presented in this report.

Bloomfield Hills School District has allocated approximately $3M of bond money for improvements to the Bowers Farm School. The estimate prepared in 2020 defined lump sum costs for various construction activities, however our review of this document has found that it does not define costs associated with the infrastructure improvements we have identified in this report. The Phasing recommendations provided in this report sequence the work in a way that seems logical from a construction activities perspective. Following the development of an updated budgeting by the Owner and Construction Manager, we should collectively review which improvements could be shifted to effectively utilize the available funds while continuing to meet the objectives for development of the site.

We recommend the Construction Manager provide an Opinion of Probable cost for each of the main phases of construction for further evaluation of which activities described in this report could be included in the initial phase of construction. In preparation for the initial phase of construction, the Owner should obtain soil borings, ground penetrating radar surveys of the geothermal field, drain fields and other buried cabling, as well as pipe inspections of the roof drains and floor drains in and around the Farm. Meanwhile, the Master Plan should be refined and updated to include the site and infrastructure improvements associated with each phase of work and further define the scope of construction to be performed in each phase. Understanding there is a strong desire to begin construction on the Children's Garden, the Construction Documents that the Owner has had developed should be further refined to include the additional engineering and site design components required for local permitting and submitted to the Township. In person meetings should be held with the Township to discuss phasing, logistics and permitting requirements associated with the multi-phase approach to the development of the site.

Site Infrastructure Evaluation Report

BOWERS SCHOOL FARM
1219 EAST SQUARE LAKE ROAD
BLOOMFIELD HILLS, MI 48304

Bowers School Farm is located on E. Square Lake Road, west of Adams Road in Bloomfield Hills Township, MI. The school campus consists of Bowers Academy and Visitor Center, original farm facilities as well as the historical Barton farmhouse, root cellar and log cabin. A single-family residence used as the caretakers residence (ranch style single family construction) is located west of the staff entrance and event space. The Farm Activities Building (FAB) is located at the easterly end of the site. Of note, the names used to identify each building or area of the Bowers School Farm may vary from how they are labelled in this report and how they are named in the appendices. The disparity in nomenclature is a function of the duration of the planning process as well as the array of individuals that have contributed to the documents that have been incorporated into the report.

Access to the site is provided through one of three distinct entrances from E. Square Lake Road. A gated entrance drive on E. Square Lake Road at the west end of the farm provides paved access for deliveries and barrier free access to the Farm. The majority of Visitors enter the site through Gate C and use the main gravel parking lot and walk to the building along the gravel drive separating the parking lot and building. A third entrance drive is located at the east end of the site. This gated entrance provides entry to the site for staff and deliveries to the FAB.

A topographic survey of the site is provided in *Appendix A1* and a Site Plan graphic is provided in *Appendix A2* for reference throughout the Preliminary Engineering Report. The Owner has performed an evaluation of the facilities on the site to identify areas of concern throughout the Farm and for use in prioritizing projects. A copy of the Facility Evaluation is located in *Appendix A3*.

Existing Conditions

Water Supply

The water supply to the existing educational buildings on the Farm School Campus are connected to the municipal water supply through an 8” main extension to the site from Kentmoor Road on the south side of E. Square Lake Road. A domestic water supply is connected to the 8” main. A fire hydrant is located in the circular drop-off loop. Based on our review of existing records, plans and conversations with the Owner, the public water supply has been adequate to meet the demands of the facility. The route of the water supply to the building is shown on the topographic survey (Appendix A1).

There are two wells of record on the School property. Well ID#63000067009, is a 210 foot deep well constructed in 2017, located near the existing greenhouse. Well ID#63000044480, is a 218 foot deep well, constructed in 2007, located north of the caretakers residence. Refer to Appendix B11 for the location and well logs for each of the wells on site.

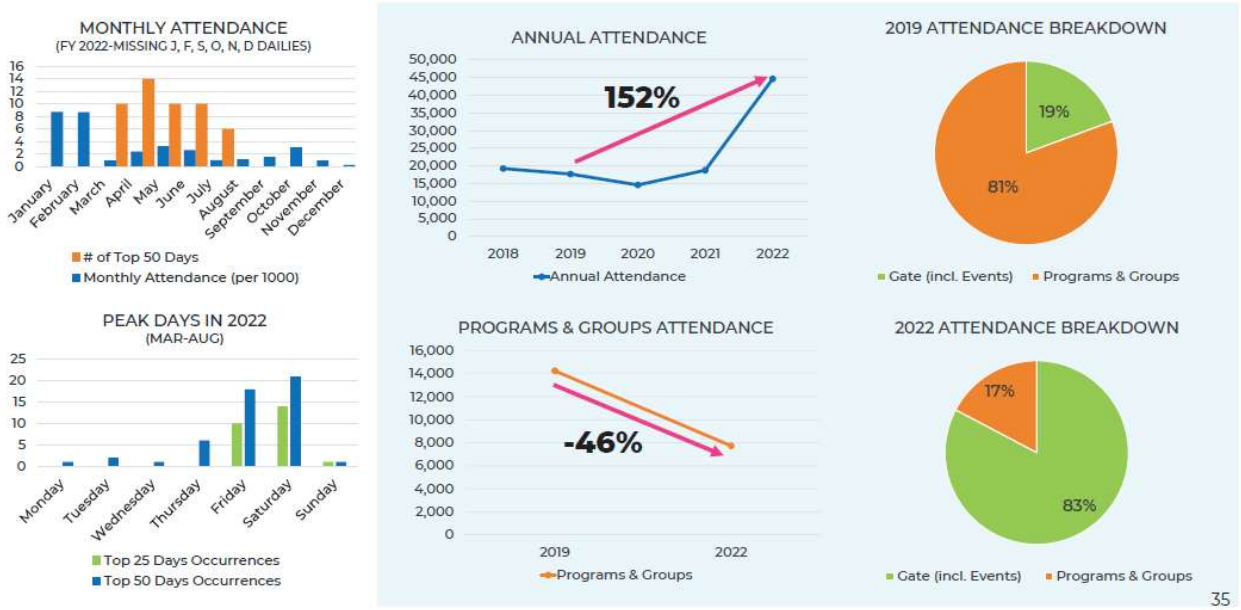
Well ID##63000067009:

Well ID#63000044480:

Sanitary Sewer

There are two existing lift stations that collect and pump wastewater from the site to the public infrastructure in Square Lake Road.

- Lift Station 1 (LS#1) is located outside of the Bowers Academy, near the sidewalk adjacent to the circular drop off loop.
- Lift Station 2 (LS#2) is located near the northwest corner of the FAB. There are also undocumented onsite wastewater disposal systems on the property.



The Toilet Building, located between the Horse Barn and the Cottages is served by a drain field believed to be located north and west of the Academy.

The Caretakers Residence is also assumed to be served by a private on-site wastewater disposal system.

Refer to Appendix B6 for documentation related to the existing lift station and sanitary sewer service from the building.

The growth in attendance at the Farm has resulted in higher usage of the pumps within LS#1, leading to more frequent maintenance and increased need to replace pumps. Appendix B7 provides historical attendance and projected use of the site.

Attendance Trends:

Using the data provided, it can be estimated that the current maximum daily user population breaks down as follows:

Annual Attendance (est. based on "Attendance Trends" PDF)	
Year	**Annual**
2018	20,000
2019	18,000
2020	15,000
2021	19,000
2022	45,000

Monthly Attendance	
January	9,500
February	9,500
March	1,500
April	2,500
May	3,500
June	3,500
July	2,000
August	2,500
September	2,800
October	4,000
November	2,000
December	1,500
Total	**44,800**

Attendance Distribution Curve		
Day	**Value**	**%**
Monday	1	2.0%
Tuesday	2	3.9%
Wednesday	1	2.0%
Thursday	6	11.8%
Friday	18	35.3%
Saturday	22	**Max. @ 43.1%**
Sunday	1	2.0%
Total	**51**	**100.0%**

Estimated Max. Daily	
Weeks / Month	Saturday Peak (@ 50%)
5	950
4	1,188
4	188
5	250
4	438
4	438
5	200
4	313
4	350
5	400
4	250
4	188
Minimum	**188**
Maximum	**1,188**

What does the Lift Station Currently Experience?			
Daily Attendance:	Minimum	Maximum	
	200	1,200	visitors / day
Est. Design Flow:		15	gallons / day / visitor
	3,000	18,000	GPD
Daily Attendance Pattern:		10:00 AM - 4:00 PM	
Peak Hours		6	hours
Equivalent Design Flow:	12,000	72,000	GPD
	8.3	50.0	gpm
Peak Factor:		4	
Peak Flow:	**33.3**	**200.0**	**gpm**

With these projected current user assumptions, it could be reasoned that Lift Station #1 is beyond its capacity.

Furthermore, the Daily Attendance Patterns table shows that the Maximum Day users was 2,068. This would further strain the station's ability to maintain service.

Future State / Operations:

With continued growth anticipated and expansion at Bowers Farm, it should be anticipated that the conditions at Lift Station #1 will continue to degrade. During our review of the plans and documentation we have developed the following alternatives analysis for consideration and discussion during the design phase of the project.

Alternatives Analysis:

A. Status quo:
    - Add Equalization Tank and / or Port-a-Potties for "Peak Days" (pump & haul).
    - Master Plan for proposed grinder pumps / tanks for all future improvement projects.
B. Validate & improve existing Lift Station #1

- Validate capacity in existing 10-inch municipal gravity sewer
- Evaluate new / reconfigured pumps (this will potentially include a larger and/or deeper structure).

C. Build new Lift Station (located further west along E Square Lake Road) & Campus Gravity Sewer
   - Master Plan for new lift station that serves western / central portions of the campus
   - Master Plan for new gravity sanitary sewer that services western / central portions of campus

D. Connect to existing municipal system
   - Evaluate the potential to replace the existing 2-inch force main with gravity sewer service (connecting to 10-inch municipal sewer in Kentmoor Road.
     - Explore realignment of a portion of the 24-inch watermain in E Square Lake Road.

Refer to the Recommendations section of this report for additional information.

Geothermal System

An existing geothermal system is located north of the existing greenhouse. Our review of the record information indicates the geothermal system is potentially located within the footprint of the proposed Animal Barn. To confirm the location of the geothermal field, we recommend that the Owner or CM perform a Ground Penetrating Radar (GPR) survey of the area to define the limits of the system. The results of the GPR survey may impact the planned location of the new animal barn. Refer to Appendix B11 for a satellite image of the disturbed area taken following construction of the Geothermal Field.

Geothermal System Installation Photographs:

Stormwater Management

Runoff from the site drains in the northwesterly direction, with an ultimate discharge to the Rogue River. The farm field contains a number of retention ponds that capture and treat runoff prior to discharging excess runoff overland to the receiving waters at the west end of the site. The largest of the ponds was created by MDOT during construction of I-75 when a large portion of the property was used for construction staging and as a borrow and disposal pit.

The west end of the developed site (a.k.a. The Farm) contains a number of storm sewer inlets and pipes which are connected to four (4) holding tanks. One of the four tanks has a discharge pipe which is believed to be connected to the storm sewer system, however the point of connection is not known for certain. The other three tanks do not have a documented discharge pipe and are believed to infiltrate captured runoff back into the ground. During heavy rainfall events, the storm sewer system surcharges and floods the pavement, animal pens and occasionally inundates the floor of the animal barn. The approximate location of the Farm storm sewer system is shown in Appendix B1.

An abandoned cistern is located approximately 58’ west of the southwest corner of the Dowling House. The cistern was encountered during construction of the staff entrance, which took place in 2009 and was subsequently filled with aggregate and buried. The approximate location and size of the abandoned cistern are shown in Appendix B1 & B-2.

Drainage from the main building and the event/activity space is captured in stormwater collection system and conveyed to a small pond/forebay west of the Caretakers Residence. This forebay also captures runoff from the roadside ditch on the north side of East Square Lake Road., provide initial treatment of the runoff and dissipates energy before discharging the runoff to the Production Gardens and Community Gardens further west in the lower portion of the property adjacent to Squirrel Road.

Drainage from the FAB and easterly portion of the site flow in the northwesterly direction to the pond in the northern portion of the livestock pastures, west of the FAB. An existing storm sewer network of drainage structures and pipes collects conveys runoff from roadside ditch on the north side of Square Lake Road to the pond. This storm sewer pipe also collects runoff captured by a catch basin southwest of the FAB. The video inspection of the existing storm sewer system serving easterly portion of the site shows that the pipes are in poor condition and in need of replacement. Refer to Appendix B4 for a diagram of the storm sewer system west of the FAB and Appendix B5 for the video inspections reports prepared following the investigation.

The previous studies and master plan of the site indicate there are numerous low areas that hold water on the surface for extended periods of time. Some of the localized depressions may be the result of long-term settlement following construction of the original farm buildings and existing infrastructure while others are natural depressions found in the woods or other natural areas. One particular area is located along the pathways within the ropes course.

Wetlands

As documented on the publicly available records, there are wetlands present on the site. We recommend that no work be performed within wetland areas without first having a qualified professional perform a wetland delineation to determine the regulatory requirements

associated with performing work within and around the wetland areas. Wetland maps from EGLE and the U.S. Fish and Wildlife Services are included in Appendix C1 & C2, respectively.

EGLE Wetland Map:

U.S. Fish and Wildlife Service Wetland Map:

Natural Gas

A natural gas service is illustrated on the 2018 Topographical Survey (Appendix A1). The service originates on the south side of Square Lake Road, north of Kentmoor Road, and is routed to the north side of the Academy. There are no concerns with the existing service and it should be protected throughout any proposed construction to avoid any unnecessary cost or outages.

Electrical Power Supply

Primary power is available to the Farm through an underground service to the site from a power pole on the north side of E. Square Lake Road. There are no known concerns regarding the power supply to the site. Site electrical feed lines are located around the site, although there are no record plans showing the approximate route of the cabling. The Owner should have these lines surveyed using Ground Penetrating Radar (GPR) equipment to ensure future construction activities do not interfere with the existing electrical system. Refer to Appendix A1 for a topographical survey of the site, which shows the location of generator, shed and other facilities which are likely served by the site electrical feed lines.

Fiber Optics/Communications

On the north side of the Visitors Center, a buried fiber optics line is located north and west of the Academy and distributed to the various building and facilities through the direct bury fiber lines in conduits and located beneath the surface. The depth of bury on the fiber optics and communications cabling is not known. The Owner should have these lines surveyed using Ground Penetrating Radar (GPR) equipment to ensure future construction activities do not interfere with the fiber optics system. Refer to Appendix B9 for the approximate location of the Fiber Optics feed on the site.

Master Plan Improvements

In 2020, the District evaluated the priority projects at the Bowers School Farm and developed a purpose and general scope for the priority projects. The following summarizes the infrastructure upgrades we anticipate being required to accommodate the improvements to the site. The order of this information follows the order presented in the Owner's document, which is in no specific order of priority.

Accessibility Through Farm Public Spaces

The District has had a Preliminary Plan for the ADA Pathway prepared to provide an accessible route from the upper elevations of the Academy and Visitor Center to the lower elevations surrounding the historical farm house and current animal barn. The route defined on the plan will cross the gas service and be located above the gravity sanitary sewer discharge from the lift station. The Owner/CM should verify the location and depth of the existing gas service prior to final design of the accessible route to more fully understand the potential impacts to the utility. Once a schedule for construction has been established, the Utility Service Provider (DTE) should be notified to ensure that the reduced cover is not a concern. Additionally, the Owner should consider the future maintenance/replacement implications of leaving the utility beneath the accessible route.

Event Barn

The long term plan for the Event Barn space is to hold events with catering for large groups in addition to the educational programming in the updated space. The area of the site where this is planned will require additional sanitary sewer and potable water supply to accommodate the new restroom facilities required. The renovation of this portion of the site will also incorporate the storm water management improvements associated with the renovations to the Lower Barn described below.

Renovate Lower Barn

The highest priority design element related to the renovations to the Lower Barn is to address the stormwater management & drainage issues this portion of the farm currently experiences. A thorough investigation of the existing drainage system will be required. It is likely that this will uncover several 'illicit' connections to the storm sewer system, resulting in the need to provide new separate sanitary sewer service(s).

Separating storm sewer and sanitary sewer will be a well-received concept. There is adequate elevation to work with that would likely require the expansion of the existing forebay immediately west of the Caretakers Residence. The SWM System improvements will also require the design and installation of permanent and temporary control structures in accordance with Oakland County WRC rules.

The separation of the sanitary sewer would also result in the need to provide a separate pressure sewer system (Lift station and forcemain). We have identified the location of the campus lift station west of the Staff/Visitor entrance gate in front of the Caretakers Residence, with forcemain being installed up the hill along the route of the ADA Path identified in Item 1 above. At this time, the on-site septic system serving the Caretakers Residence would have to be abandoned and the sewer lateral from the residence would be tied into the lift station.

Livestock Learning Lab, housing small ruminants and hogs

Although programming for this building has not taken place yet, we can anticipate the need to provide minimal utility infrastructure to serve the building. Since the farmland applies the animal waste and assuming that restrooms will not be included in this structure, a sanitary sewer system connection would not be required. The infrastructure needed for construction and operation of the of the Livestock Learning Lab would be non-potable wash water supply, stormwater cisterns to manage roof runoff and electrical power supply. The water supply could be provided through the permitting and construction of a new agricultural water supply well, or by extending the potable water supply from the Academy and Visitors Center.

Construct an indoor equestrian pavilion

The construction of a new facility of this nature will require the full scope of utility infrastructure associated with an occupied building. Given the proposed location on the site, there will be a new lift station, stormwater management improvements to address flood control, channel protection and water quality concerns, potable water, electrical power supply, natural gas, communications and any other infrastructure required for the building that is deemed necessary once the programming exercise is complete.

Design And Create A Natural Children's Discovery Garden

The District has acquired grant funding that will be applied to the construction of the Children's Garden. The grant stipulates that the funds are to be used by July 2025. The District will confirm if work under contract constitutes 'use of funds ', or if work has to be performed and paid for by the stipulated time. Construction documents have been developed for the Children's Garden. Refer to Appendix E6.

The existing fiber optics service feed to the farm is located within the proposed footprint of the Children's Garden. The Owner should have the location of the fiber line surveyed using GPR technology and verify the location and depth of the utility through exploratory excavation (potholing) to fully understand the impacts the construction of the children garden would have on the utility. The depth and location of the utility may not be of concern with respect to the proposed improvements, we do recommend that the utility be placed in a conduit with appropriately located handholes for access and future maintenance. Installation of a spare conduit is also recommended and consideration should be given to concrete encasement of the conduits for protection of the infrastructure.

Drainage improvements related to the Children's Garden will be necessary to manage the increased runoff generated by the additional impervious surface materials and water quality treatment will be required for the area of disturbance for the project.

Sanitary Sewer system upgrades would be necessary to accommodate the projected increase in attendance following construction of the Children's Garden. Since the sanitary sewer upgrades are necessary throughout the Farm, this portion of the report will only acknowledge these improvements should be planned for.

Create A New Entry Way and Single Point Of Entrance and Replace Aging Fence Infrastructure.

Concept sketches for the improvements to the main entrance to the site have been developed and are located in Appendix E7a and E7b.

Plans for Fencing upgrades and repairs has developed bid documents for fencing repairs and the Owner is taking on small project repairs and minor modifications on their own. Bid Documents are available if desired.

Design and Build A Living Roof Pavilion

A pavilion of the sort described in Appendix E0 would require storm sewer infrastructure to capture and convey runoff from the roof to a nearby system and depending on the desires of the Owner, could result in the need for a potable water supply for a drinking fountain. If the location of the pavilion is known, the necessary infrastructure should be designed and installed during construction of the Children's Garden.

Additions to the Visitor Center and Bowers Academy Space

An addition to the Academy as envisioned on the Master Plan would impact the sanitary sewer service located outside the existing building. It is assumed that the utility services within the existing building could be extended from within to serve the addition. Since the Owner has visions of A grease interceptor would be necessary to manage discharge from the kitchen.

Walking Paths for Weekend Use

The walking paths around the Farm are currently worn pathways that have been developed over years of use, routine mowing and maintenance. The long term plan would be to more formally define the pathways using natural stone, mulch or other nature trail type surface treatments and extend the current pathways throughout the site to provide an interconnected network of paths and trails.

In addition to the surface improvements of the trail network, the work required to achieve the vision outlined in the Appendix E1 would include fence work to differentiate between animal and people spaces as well as an additional stairway leading to the ropes course for safety.

The infrastructure needs associated with these improvements are minor, however, wetland permitting through the Township and potentially EGLE will apply.

Re-organized Barn Parking Lot To Green "Park" Space

Conversion of the existing parking lot to a Park Space would be combined with the renovations to the Barn and Event Barn previously described in Item 2 & 3. In addition to the hardscape, landscape and signage referenced in Appendix E1, the infrastructure associated with this phase of the project would include modifications and improvements to the existing stormwater management, storm sewer and sanitary sewer infrastructure serving the west portion of the Farm.

Update Technology Infrastructure

Infrastructure required to complete this objective of the long-term vision plan may amount to minor trenching adjacent to the pathways. Since a good portion of the trail system is located in or near wetland limits, the construction activities will require wetland permitting through the Township and possibly through EGLE. Installation of cable and associated trenching to provide power to security cameras along with the minor drainage improvements would be performed along with the walking path improvements described in Item 10.

Entitlements & Permitting

Bloomfield Township

Engineering Review and Approval

Bloomfield Township maintains review authority related to the project as it relates to engineering design elements. While local zoning rules do not apply to the construction of School owned projects, the engineering related matters are subject to their review. Improvements to water supply, sanitary sewer systems, and storm sewer systems are subject to review and approval by the Township Engineer.

Engineering review fees are paid from an escrow account that is determined based on a construction cost estimate prepared by the design engineer. The Township Engineer will review the design engineer's estimate as part of the review process. Review timelines for engineering review and approval vary based on complexity of the project, however a good rule of thumb would be to expect comments within 4 weeks of submitting plans and specification. We anticipate no less than 3 rounds of review.

Wetlands

We recommend that a wetland assessment be performed to document the presence of wetlands on the property so that a formal evaluation of the regulatory status of the natural features on the site can be validated.

While there are no anticipated impacts to the existing wetlands on the site as part of the pending/future construction projects, project requirements related to the Township and other regulatory agencies may have more restrictive rules that apply to the protection of wetlands. The Township does have their own Wetland Ordinance, so construction activities that impact wetlands on the site will require approval from the Township.

Soil Erosion & Sediment Control

Projects disturbing more than 1-acre of land require a Soil Erosion and Sediment Control Permit from the Authority Having Jurisdiction (AHJ). Bloomfield Township administers the Local Soil Erosion and Sedimentation Control Program under the provisions of Part 91 of Act 451 of 1994. The Township engineer will review the plans, make comments and recommendations to approve the plans, then the applicant will be responsible for applying to the Water Resources Commissioner through the Citizen Self-Service Portal to obtain the permit.

Oakland County Department of Public Works

There are no proposed improvements that would call for a new water tap, water meter or a new sewer connection. Similarly, there are no proposed disconnections of water or sewer services. As such, permitting through the Department of Public Works should not be necessary. In the event the scope of work changes, the Citizen Self-Service Portal should be accessed to apply for related permits. The self-service portal can be accessed at the following internet address:

WRC Permitting & Soil Erosion Application Portal (tylerhost.net)

Oakland County Road Commission

A Commercial Driveway permit for the improvements to the main entrance will be required from the Oakland County Road Commission. The permit application will need to be signed by the Owner at the time of submittal along with applicable review fees. The current permit rules, specifications and guidelines can be found at the following web address:

Permits/Weighmaster | Road Commission for Oakland County (rcocweb.org)

A copy of the current application and fee structure have been included in *Appendix F3b*

The RCOC is typically capable of completing their review of the submitted applications within 3 weeks from the date they are received.

Oakland County Water Resources Commissioner

Stormwater management for the site must be designed and permitted according to the rules of the Oakland County Water Resources Commissioner. Current regulations dictate that any project disturbing more than 1-acre of land be brought into compliance with the current design standards of the OCWRC.

The application process for review and approval of stormwater management plans takes a significant amount of time and effort to complete. We recommend that the application be submitted early in the design process for discussions with the Water Resources Commissioner review engineer to ensure all the parameters that apply to the project are taken into account.

Recommendations

Update Master Plan to define project phasing and identify utility infrastructure improvements necessary to support the growth of the campus and provide for logical extensions and/or expansion of initial infrastructure upgrades for future phases of work. The phasing envisioned for the development of the Farm divides the campus into three areas (East, Central and West) with multiple projects taking place in each area. While the Master Plan is being updated, the plans and permitting associated with the initial phase of construction would take place in the north half of the central portion of the campus to include construction of Item 6 (Children's Garden). Phase 1 would also include sanitary sewer and technology infrastructure upgrades for Phase 2 & 3.

The second phase of construction would concentrate on Item 1, 4, & 7 (Livestock Learning Lab and Accessibility through Farm Public Spaces and New Entrance Drive) as described in the Master Plan Improvements section of this report. Phase 2 would also include sanitary sewer and technology infrastructure upgrades for Phase 3.

The third phase of construction would focus efforts on the renovations to the Farm and include the activities described in Items 2, 3 & 11 (Event Barn, Renovations to the Barn & Barn Parking Lot) as well as the westerly portion of the walking path improvements.

The fourth phase would include Items 5, 8, 9 (Indoor equestrian pavilion, Living roof pavilion, Additions to the Visitor Center & Bowers Academy Space) and complete the improvements to the Walking Path along with the Technology Infrastructure to tie the interactive visitor experience together in the final phase of work. As envisioned, Items 10 & 12 would be installed and operational for those portions of the project being served upon the conclusion of each phase of construction.

Note: Many of the fencing repairs described in Item 7 are being performed by the Owner on a small project basis. As such, this minor scope has been removed from the Phasing described in this report. Fencing could be included in one of the phases of work as deemed appropriate through the Master Planning and Phase specific Plan Development.

Phase 1

Children's Garden

The infrastructure necessary to support the construction of Phase 1 and install the infrastructure to support the future phase of work includes the following main elements:

A. Perform Ground Penetrating Radar Survey in the area of the Phase 1 and Phase 2 improvements with the objective of locating the following:
    1) Geothermal Field
    2) Sanitary Drainfield and piping serving the Toilet Rooms near the Silo
    3) Fiber Optics and Electrical feed lines, as well as any other utility located within 50' of the Children's Garden construction limits.
    4) Sanitary Drainfield for the Caretakers Residence
    5) Storm & Sanitary Sewer pipe located within and around the Farm, Silo and Horse Barn.

6) Natural gas service between the right of way and the Academy

B. Sanitary Sewer Improvements
   1) The initial step to address reliability and maintenance concerns related to existing Lift Station #1 is to upgrade the pumps in the existing lift station.
   2) Master Plan for a “campus-wide” lift station and gravity sewer system that will support your growth projections and future projects (Option C above).
   3) Validate capacity of existing sanitary sewer with the Township.
   4) Back calculate the pump capacity/duty and select new pump
   5) Provided that the initial study has positive results, and the Township is agreeable to the proposed improvements, design and construction of the Children’s Garden would include installation of manholes and sanitary sewer pipe through the footprint of the Children’s Garden to provide for conveyance of wastewater from Phase 3 to the campus wide lift station.

C. Drainage and Stormwater Management Improvements
   1) Re-grade the gravel drive/walkway from the east end of the gavel parking lot toward the FAB to address standing water issues and localized ponding of surface runoff near the bottom of the hill and along the side of the drive. Construction of a drainage swale or roadside ditch with a cross culvert or grading of the swales to divert runoff to the existing drainage structures will improve the conditions until further modifications and upgrades are necessitated during Phase 4.

D. Water Service Improvements
   1) Extend water service piping to the west side of the construction limits and cap the potable water supply for future service to the Event Barn that will be renovated/developed in Phase 3

Phase 2

Livestock Learning Lab and Accessibility through Farm Public Spaces & New Entrance

The infrastructure necessary to support the construction of Phase 2 and install the infrastructure to support the future phase of work includes the following main elements:

A. Design, permitting and Construction of a lift station near E. Square Lake Road with forcemain to deliver wastewater from the west area of the Campus (Event Barn, Renovated Barn, Caretakers Residence and Historical buildings) to the connect to the existing forcemain on the north side of E. Square Lake Road.
B. Install gravity sanitary sewer from east end of the Children’s Garden further East to a point beyond the Livestock Learning Lab construction limits.
   1) Gravity sewer should be extended as far east as possible to provide an opportunity to connect the Indoor Equestrian Pavilion
C. Construct gravity sewer through the existing garden using trenchless construction technology.
D. Open cut excavation of the sewer service between the garden and the lift station will be required to avoid conflicts with existing utilities in conflict with the gravity sewer installation and temporarily re-route those critical utilities that are in conflict.
E. Perform field investigations (dye testing, cleaning & televising) of the floor drains and existing drainage infrastructure serving the Phase 3 Improvements for use in planning the future improvements and modifications to those systems.

F. Drainage and Stormwater Management Improvements, including but not limited to low impact stormwater management infrastructure (rain cisterns, bio-swales, level spreaders and other similar LID SWM techniques.
G. Water Service Improvements
    1) Permit and construct a new non-potable water well to provide wash water for the Livestock Learning Lab.
H. The construction of the accessible route may have an impact on the existing natural gas service the Academy and Visitors Center. Construction contingency should be set aside for relocation of the gas service.

Phase 3

Event Barn, Renovations to the Barn & Barn Parking Lot

The infrastructure necessary to support the construction of Phase 3 and connection to the infrastructure completed in Phase 1 includes the following main elements:

A. Sanitary Sewer Improvements
    1) Implementation of the improvements and modifications to the existing floor drains serving the existing buildings identified in Phase 2.
B. Drainage and Stormwater Management Improvements
    1) Implementation of the improvements and modifications to the existing storm sewer system serving the existing buildings identified in Phase 2, including but not limited to removal or abandonment of tanks, re-configure of storm sewer system, re-connection of roof drainage to storm sewers (as applicable).
    2) Design, permitting and construction of stormwater management improvements associated with the drainage area affected by the proposed construction activities, including but not limited to:
        a. Expansion of existing forebay pond west of Caretakers Residence
        b. Installation of an outlet control structure and temporary control structure
C. Water Service Improvements
    1) Extend water service to the location of the Event Barn from the westerly limits of the Children's Garden described in Phase 1.

Phase 4

Indoor equestrian pavilion, Living roof pavilion, Additions to the Visitor Center & Bowers Academy Space

The infrastructure necessary to support the construction of Phase 3 and connection to the infrastructure completed in Phase 1 includes the following main elements:

A. Sanitary Sewer Improvements
    2) Install gravity sewer from the Indoor Equestrian Pavilion to the FAB lift station.
    3) Upgrade the FAB lift station to ensure adequate power is available to operate the pumps, replace pumps top handle current and future wastewater flows and install forcemain to gravity sewer at the east end of Phase 2 work.
    4) Re-evaluate pump selection and wastewater flows of campus lift station

a. Make necessary adjustments to campus lift station (swap pumps, adjust floats, etc…)

B. Drainage and Stormwater Management Improvements
   1) Expand stormwater management system for the project area to bring the project drainage area into compliance with Bloomfield Township and Oakland County rules.
      a. Provide water quality, channel protection and flood control

C. Water Service Improvements
   1) Extend water service from the FAB to the new Indoor Equestrian Pavilion.

Note: Phase 3 & 4 are largely independent of one another, and could be flipped.

Schedule

The schedule for the projects will be firmed up as the Master Plan is updated and the Phase 1 design and permitting process is initiated. Start dates for the future phases of construction will be discussed while the Master Plan is being updated. Construction of the Children's Garden is desired to begin in 2025 and the objective is to use the grant dollars that have been awarded and provide the private donors comfort that their donations are being effectively utilized. The Owner is in the process of clarifying the obligations of the grant funding that has been acquired so that we can work to develop design and construction schedules that take those requirements into account.

Budget

We have been informed that bond funds available for the initial project is roughly $3M. The School has also earmarked $50,000 towards construction that is to be used in 2025. The Owner is in the process of defining the terms related to the expenditure of the $50,000.

We recommend that Barton Malow provide updated budgets for the proposed improvements and review the scope of work with GMB as described in this report during the development of the project budgets.

SURVEYOR'S COMMENTS

1. THIS TOPOGRAPHICAL MAP IS BASED UPON A FIELD SURVEY PERFORMED BY SPALDING DEDECKER DURING AUGUST 2018.
2. THE PROPERTY LINES/RIGHT-OF-WAY LINES SHOWN ON THIS TOPOGRAPHICAL SURVEY ARE INTENDED TO BE AN APPROXIMATE GRAPHICAL REPRESENTATION BASED UPON A COMBINATION OF A PROVIDED LEGAL DESCRIPTION, FOUND FIELD MONUMENTATION AND OCCUPATION. A COMPLETE PROPERTY LINE ANALYSIS HAS NOT BEEN PERFORMED AND PROPERTY CORNERS HAVE NOT BEEN SET IN THE FIELD PER THE AGREED TO SCOPE OF SERVICES.
3. THIS SURVEY HAS BEEN PREPARED WITHOUT THE BENEFIT OF A CURRENT TITLE SEARCH AND THEREFORE THIS PROPERTY MAY BE SUBJECT TO EASEMENTS, RIGHT-OF-WAY TAKINGS AND RESTRICTIVE COVENANTS THAT COULD ENCUMBER THIS PARCEL OF LAND.
4. THE BEARING BASE AND COORDINATES OF THIS DRAWING ARE BASED UPON THE MICHIGAN STATE PLANE COORDINATE SYSTEM, SOUTH ZONE, NAD 83, INTERNATIONAL FEET, 2011 ADJUSTMENT. CONTROL WAS ESTABLISHED BY GPS OBSERVATION USING THE AVAILABLE MDOT CONTINUOUSLY OPERATING STATIONS (CORS).
5. THE VERTICAL DATUM OF THIS SURVEY IS BASED UPON NAVD 88. CONTROL WAS ESTABLISHED BY GPS OBSERVATION USING THE AVAILABLE MDOT CONTINUOUSLY OPERATING STATIONS (CORS).
6. THE UTILITY INFORMATION SHOWN ON THIS SURVEY IS BASED UPON A COMBINATION OF RECORD INFORMATION AND FIELD MEASUREMENTS. A MISS DIG DESIGN TICKET NUMBER OF A082180235-00A HAS BEEN REFERENCED TO THIS PROJECT AND A UTILITY PROVIDER CHART IS SHOWN ON THIS DRAWING. THERE ARE NO ASSURANCES THAT ALL PROVIDERS HAVE RESPONDED AND THE SURVEYOR DOES NOT GUARANTEE THAT ALL UNDERGROUND UTILITIES ARE SHOWN AND/OR POSITIONED PROPERLY ON THIS DRAWING DUE TO AMBIGUOUS PLANS AND RECORDS PROVIDED TO US. THE INFORMATION SHOWN ON THIS DRAWING IS INTENDED TO BE USED AS A GUIDE FOR POSSIBLE UNDERGROUND UTILITY CONFLICTS. IT IS THE RESPONSIBILITY OF OTHERS TO RESOLVE THE ACTUAL LOCATION OF ANY UNDERGROUND UTILITY THROUGH THE MISS DIG FIELD VERIFICATION SYSTEM PRIOR TO ANY SITE EXCAVATION. CALL 811 OR 800-482-7171.
7. FOR ADDITIONAL INFORMATION ON THIS SITE SDA JOB #NP09-120 CAN BE REFERENCED AS IT IS THE ORIGINAL SURVEY PERFORMED ON THIS PROPERTY BY SDA. THE VERTICAL DATUM ON THIS OLDER PROJECT IS DIFFERENT AND WAS BASED UPON SANITARY SEWER PLANS BY HUBBELL ROTH & CLARK, INC. HAVING A KNOWN JOB #20010782 DATED AUGUST 19, 2002 WITH A STATED DATUM BEING NGVD 1929.

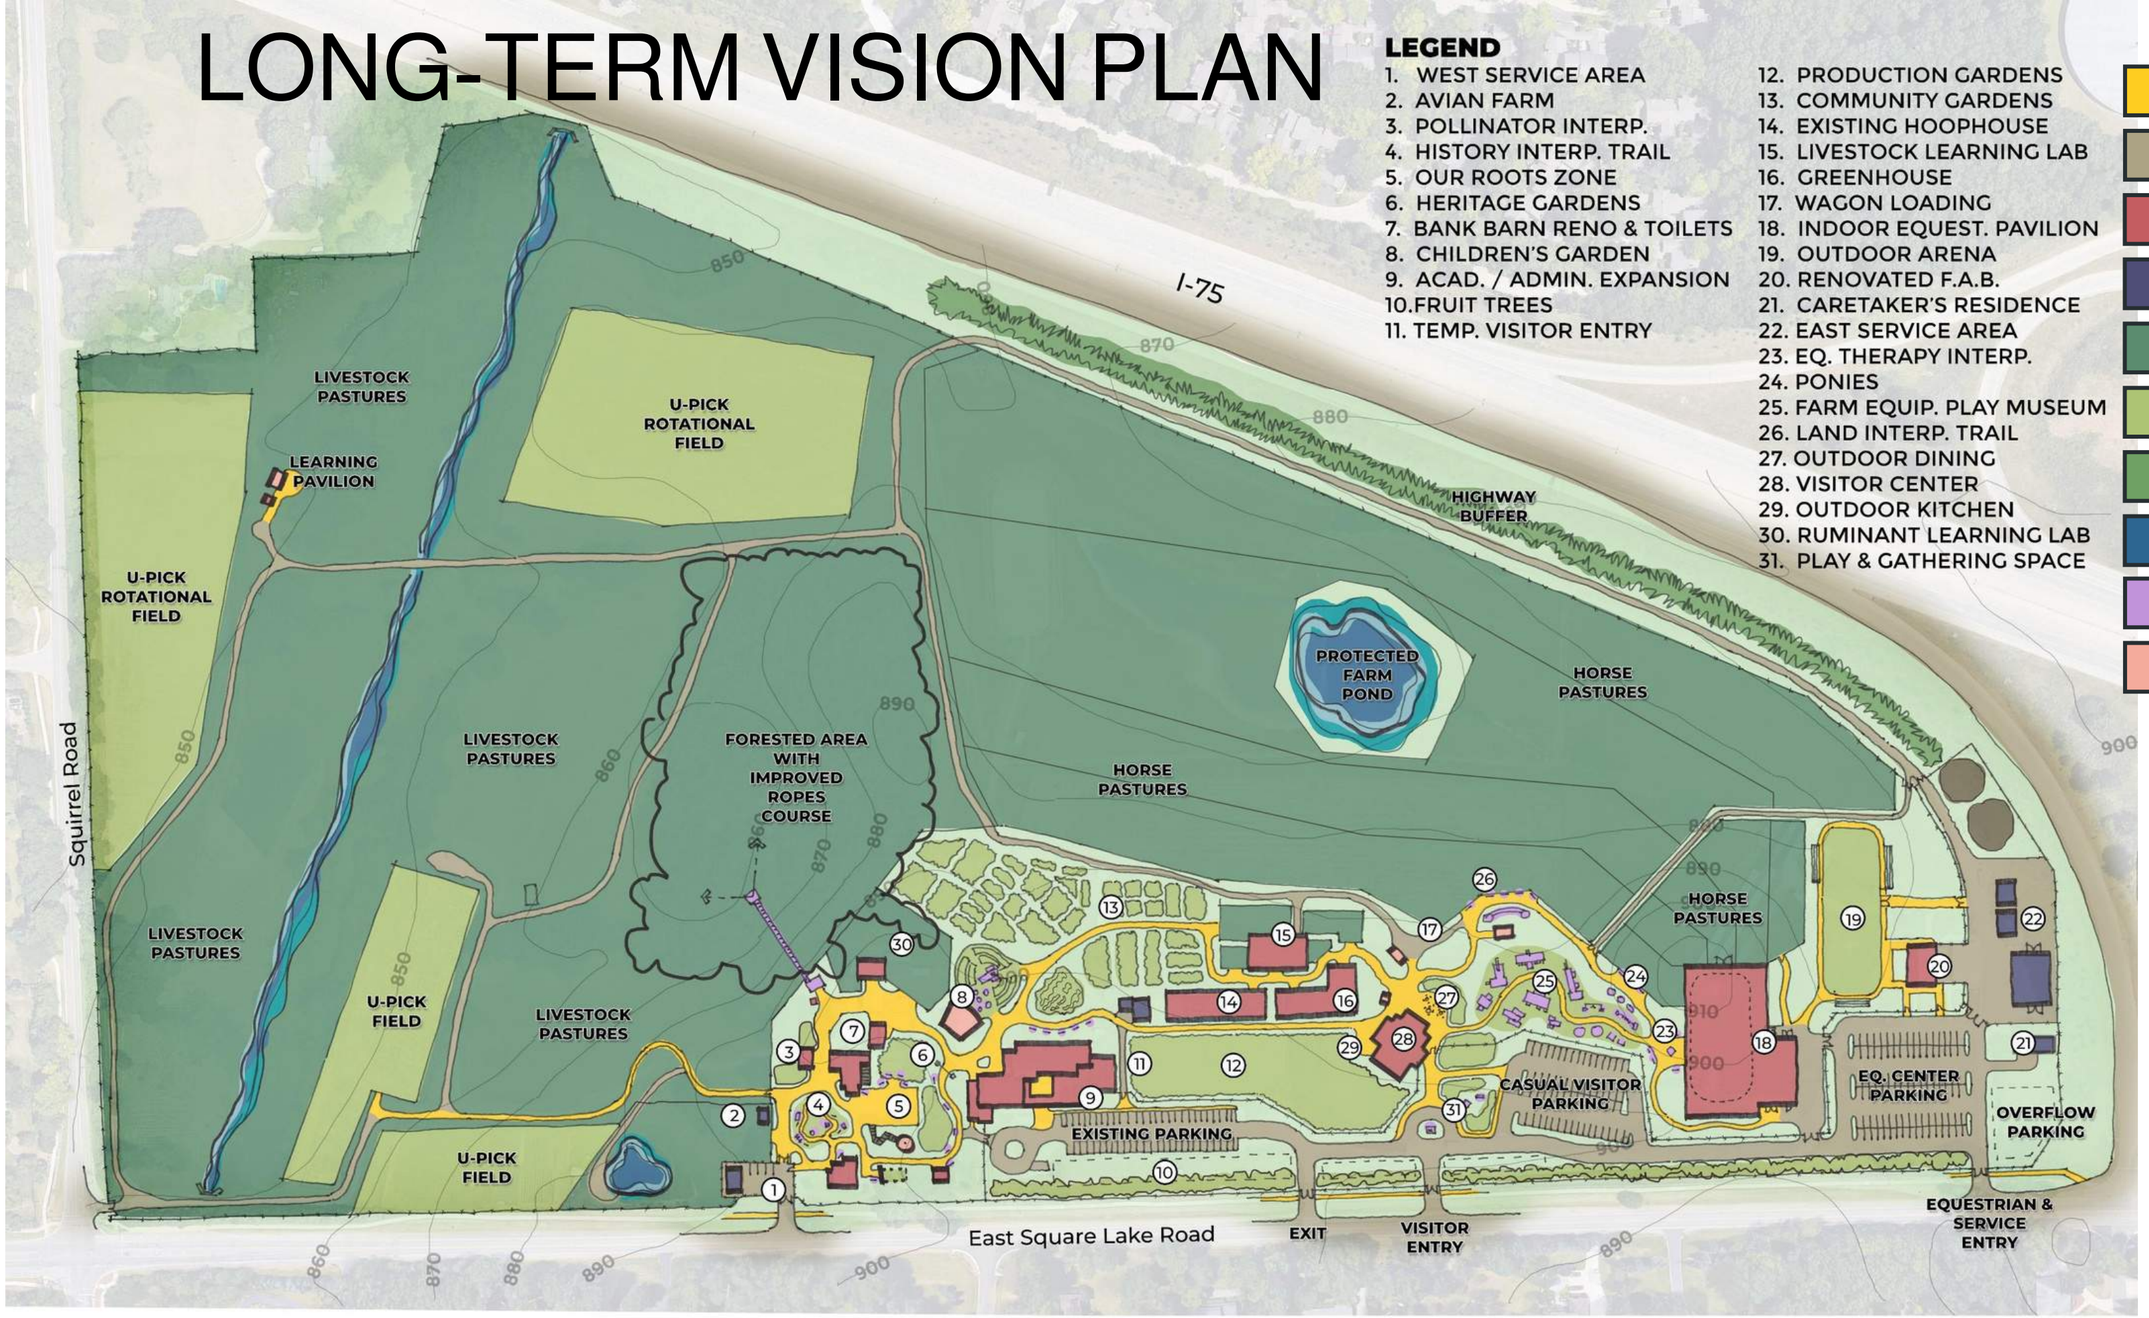
Existing Site Plan

~93 total acres

- GUEST PATH
- ROADS & PARKING
- GUEST ACCESS BUILDINGS
- BACK OF HOUSE BUILDINGS
- ANIMAL HABITATS
- POINTS OF INTEREST
- TREES & VEGETATION
- ANIMAL SHELTER
- WATER



FACILITY EVALUATION

	Ave / Priority	Age / Cond.	/ Efficienc	Guest Exp.	Known Improvements Needed
Hoop House / New Field Wash Pack	0.0	N/A	N/A	N/A	Needs to be created.
Academy Café	1.0	1	1	1	Café used as social work office space now; Carpeted floor; Storage for food; Too many uses and too small.
Root Cellar	1.0	1	1	1	Leaks. Needs a full space review - needs to be rodent proof. Historic structure.
Horse & Goat Barn	1.0	1	1	1	It's time to replace. Not ideal for any animal. We have made many modifications to work current needs.
Bowers Cottage	1.0	1	1	1	It is a space that has potential. Needs total overhaul.
Toilet Building	1.0	1	1	1	Needs to be replaced.
Laundry Room	1.3	2	1	1	Beat up, older stuff. Not enough lockers or space. Office supplies in there. Need additional washer and dryer for kitchen vs animal stuff. Need biosecure entry for all from Farm.
Toilets Entry / Academy	1.3	2	1	1	All people use the same toilet...need additional and separate areas. Bad toilet, gaps in doors, etc.
Produce Display (in store)	1.3	2	1	1	Since we are growing produce, we need to be able to get it to the customer. Closed coolers, not have to move it back and forth.
Store	1.3	2	1	1	Not intended for retail. Was originally a lunchroom. No secure inventory storage. Lack of power. No wall for display. No water line for ice cream. Sound issues.
Ticketing	1.3	1	1	2	
Livestock Pastures	1.3	1	1	2	Poor ground, poor drainage, and lack of guest experience access.
Event Storage Barn: FAB Garage	1.3	2	1	1	Needs to be organized.
Outdoor Flex Space "parking lot area"	1.3	1	1	2	Use for show ring - use for teaching space - not a parking lot. Used for events - more entertainment vs parking lot. Needs better water management.
Hillside Pasture	1.3	1	1	2	Poor soil. Lack of water access. Fences are patched together. Guests love to say hello. Concern of biosecurity with animals nose to nose with dogs on walks. Too far from core of animal care.
Residence	1.3	1	1	2	Needs major improvements (roof, soffits)
Production Gardens	1.3	1	2	1	Needs new shed roof, ok for growing - hard to get to, lack of consistent management for optimal weed and pest management. Back part is on a big hill - erosion issues. No electricity. Far from everything - especially the store and the cooler. Will benefit with full site deer fencing. Groundhog issues. NO equipment storage.
Wash Pack (area where produce is prepped)	1.3	2	1	1	Currently a car port - no electricity. No rodent proof storage space. One season use. Drainage issues.
I-75 Pond	1.3	1	1	2	When there is water, it is pretty. Water is mostly all run off. Not ideal for animals. Very shallow - attracts unwanted water birds. Not ideal for pasture animals.
Ropes Course	1.3	1	2	1	Was built in 1991 - 4 out of 6 elements will have to be retired by spring and needs a complete rework. Accessibility is a challenge. No site maps. No signage. No electricity. Lots of room for improvements and opportunities.
Staff Break Room (Hall)	1.5	2	1	N/A	Not really a room, old equipment.
Admin 1st Floor Offices	1.5	2	1	N/A	Lacking HVAC, too small.
Loft Offices	1.5	2	1	N/A	HVAC...intended to be guest experience space but is used as offices; No storage; No storage for personal items; Break out space in the open space; Copy and office supplies located here.
Gazebo	1.7	1	2	2	Starting to show age. Needs power. ADA concerns. Slippery when wet.

FACILITY EVALUATION (cont.)

	Ave / Priority	Age / Cond.	Function/ Efficiency	Guest Exp.	Known Improvements Needed
Academy Staff Office	1.7	3	1	1	Student workspace and staff workspace, storage and copy all together--too small. Storage and copy pulled out as separate.
Academy Common Space (Hall)	1.7	3	1	1	Too many things happening here--lunchroom, storage, office, kitchen, hallway, ticket window.
Academy Library	1.7	3	1	1	Needs to be much bigger--holds 2 kids right now; would like seating, study space, more book storage; 25 kids max.
Academy Science Classroom	1.7	3	1	1	Not designed for science lab (needs plumbing for sinks; overhead electric; lab tables). Furniture change. Needs more storage. Need chemical storage. Eye wash station. Need Exterior access.
Greenhouse	1.7	2	1	2	Mechanics for the temperature controls are unreliable. Too hot in the summer. Control of systems needs a reboot. Too small for current needs.
Kitchen	1.7	3	1	1	Too small right now for teaching... equipment is wrong for use for teaching or for bulk production; Like concession and pizza oven. Storage lacking.
Chicken Mobile Coop	1.7	2	1	2	Needs to be reworked in areas. Water and feed challenges. Inside parts have started to come apart. Animal husbandry? Would like to look at an improved space for care.
Bank Barn	1.7	1	2	2	Needs historical correct repairs. Wood rot. Water drain issues. electrical issues - not enough power. Hard to clean. Functionality is not designed for current methods of use.
Outside Lower Barn (bank barn)	1.7	2	2	1	Could be improved by leveling the concrete and finding a way for a skid steer to enter for cleaning. LOVE the outside animal space.
Community Gardens	1.7	1	2	2	Will benefit with full site deer fencing. Concern of hydrant reliability. Some areas are too wet and should not be used for growing. Needs a dedicated, enclosed compost area.
Chicken / Bee Classrooms	2.0	2	2	2	
Riding Arena	2.0	2	2	2	Does the job - needs shade shelter - look at shade. All cattle shades not adjacent to a horse barn.
Academy Classroom 1	2.3	3	2	2	Too many functions...needs exterior door. Needs storage. Add spaces for gym and office.
Academy Classroom 2	2.3	3	2	2	Connected to #1
Hoop House	2.3	3	2	2	Excited to use this! Still under construction. Need interior tables for production support. Being used as a supplemental space to the existing greenhouse -> this is not ideal but working with what we have.
Farm Activities Building	2.3	3	2	2	Deck needs to be covered to increase space to accommodate a group of 100. Tent is not a permanent solution.
Barton Farmhouse	2.3	2	2	3	Wonderful old home. Needs a care plan for continuing to maintain not owned by BHS.
Horticulture "Master" Gardens	2.3	2	2	3	Beautiful and great community connection with the Master Gardeners.
Pumpkin Patch	2.3	2	2	3	Working on plans for improvement. need a deer perimeter fence around full property. Fun destination for guests. Great for field trips. Use of a porta potty helps each season. Site wide crop rotation plan. Weed issues are great. Groundhog damage.
Tubing / Winter Park Facilities	2.3	2	2	3	People love it - drain on staff. Need to increase capacity, change operational model to reduce staff inputs. Auto snow maker and snow carpet would help.
Cooler (not the freezer)	2.5	3	2	N/A	At times it is not large enough for kitchen and garden use.
Craig Log Cabin	2.7	2	3	3	Love it! Aware of ADA accessibility. What is the plan for long term maintenance not owned by BHS?
Academy Admin Office	3.0	3	3	3	

LONG-TERM VISION PLAN

LEGEND

1. WEST SERVICE AREA
2. AVIAN FARM
3. POLLINATOR INTERP.

25 October 2023 jfm

CONCRETE VAULT (or CISTERN)

Unearthed while excavating for New Entrance Road to Bowers SCHOOL FARM - 11 AUGUST 2009

Top was broken down, then filled with aggregate and left in place under the east edge of new Entrance Road.

NOTE: This SE corner of Vault is Located ~ 58' from S.W. Corner of Farmhouse - on Line parallel to Square Lake Road. R.O.W.

LICENSEE'S STATEMENT:

This Document has been prepared under the supervision of the Architect, Stephen E. Smith, AIA, as the person in Responsible Charge with the firm of TMP ARCHITECTURE, INC. An original embossed or rubber stamp seal and original signature of the Architect is required and shall be affixed to any copy of this Document submitted to a governmental agency for approval or record. This is in conformance with the State of Michigan's PA 299, Article 20 and the General Rules of the Board of Architects.

The Architect's seal provided hereon does not take responsibility for certain portions of the Documentation or project requiring the services of a licensed Professional Engineer or other design professional. An original embossed or rubber stamp seal and original signature of the Professional Engineer is required and shall be affixed to any copy of this or other Document submitted to a governmental agency for approval or record. The engineering firms associated with this document are listed above as Consultants.

BENCHMARK DESCRIPTIONS

MASTER BM INVERT FOR A 10" PIPE IN A SANITARY MANHOLE LOCATED ±111 SOUTH OF THE SQUARE LAKE RD. CENTERLINE AND IN THE MIDDLE OF KENTMOOR RD.
ELEV.=894.66

SOURCE: SANITARY SEWER PLANS BY HRC JOB #20010782 DATED AUGUST 19, 2002
DATUM: NGVD 1929

SITE BM#1 ARROW ON HYDRANT LOCATED ON THE SOUTH SIDE OF SQUARE LAKE RD. ±250' EAST OF THE CENTERLINE OF KENTMOOR RD.
ELEV.=908.65

SITE BM#2 SET CHISELED "x" IN THE NORTH RIM OF SEPTIC MANHOLE LOCATED ±30' NORTHEAST OF THE SOUTHEAST CORNER OF THE ALUMINUM BARN.
ELEV.=910.84

NOTE: DUE TO THE TIME ELAPSED BETWEEN THE COMPLETION OF THE TOPOGRAPHIC SURVEY AND THE APPROVAL OF FINAL CONSTRUCTION PLANS, IT IS THE CONTRACTORS RESPONSIBILITY TO VERIFY THAT THE SITE BENCHMARKS, RIMS, INVERTS AND FINISH FLOOR ELEVATIONS ARE IN AGREEMENT WITH THE CONSTRUCTION PLANS. THIS CHECKING NEEDS TO BE COMPLETED PRIOR TO ANY NEW CONSTRUCTION TAKING PLACE. IF DISCREPANCIES ARISE, NOTIFY SDA IMMEDIATELY.

UTILITY NOTES

1. STORM SEWER 12" AND LARGER SHALL BE C76 CL IV (PREM.JT.) UNLESS OTHERWISE NOTED ON THE PLAN.
2. STORM SEWER 8" AND SMALLER SHALL BE PVC SDR 23.5. STORM SEWER GREATER THAN 6" THROUGH 10" SHALL BE PVC SDR 26.
3. WATER MAIN SHALL BE CLASS 54 DUCTILE IRON. WATER MAINS SHALL BE LEAKAGE AND PRESSURE TESTED IN ACCORDANCE WITH AWWA STANDARD C600. WATER MAINS SHALL BE DISINFECTED IN ACCORDANCE WITH AWWA STANDARD C651 PRIOR TO BEING PUT INTO SERVICE.
4. SANITARY SEWER SHALL BE PVC TRUSS PIPE. LEADS SHALL BE SOLID WALL, PVC, SDR 23.5.
5. ALL UTILITY TRENCHES THAT FALL WITHIN A 1-ON-1 INFLUENCE OF PAVEMENT AREAS SHALL BE BACKFILLED WITH CLASS 2 SAND AND COMPACTED TO 95% OF MAXIMUM DENSITY.
6. ALL WATER MAIN SHALL BE BURIED WITH 5' OF COVER FROM PROPOSED GRADES. USE 22.5° BENDS TO LOWER WATER MAIN WHERE NOTED AT UTILITY CROSSING.
7. WHERE HYDRANTS ARE INDICATED ON THE PLAN, COMPLETE HYDRANT ASSEMBLIES ARE REQUIRED, INCLUDING SHUT-OFF VALVE AND BOX (REFER TO THE STANDARD DETAIL SHEET FOR DETAILED REQUIREMENTS) THE ELEVATION OF THE VALVE BOX SHALL BE EQUAL TO THE FINISH GRADE (FG) ELEVATION OF THE HYDRANT UNLESS OTHERWISE NOTED.
8. ALL UTILITIES SHALL BE INSTALLED IN ACCORDANCE WITH THE STANDARDS AND SPECIFICATIONS OF THE TOWNSHIP OF BLOOMFIELD.
9. ALL UTILITIES SHALL BE INSTALLED ON CLASS "B" BEDDING OR BETTER.
10. ALL HYDRANTS MUST BE AT LEAST 5' FROM THE BACK OF CURB OR EDGE OF PAVEMENT.
11. ALL UTILITIES SHALL BE PLACED AT LEAST 10' FROM OTHER UTILITIES, SIGNIFICANT TREES, AND FIXED STRUCTURES.
12. UNLESS OTHERWISE NOTED, ALL STORM SEWER STRUCTURES SHALL BE 4' DIAMETER (INLETS SHALL BE 3' DIAMETER). UNLESS OTHERWISE INDICATED ON THE STANDARD DETAIL SHEETS CASTINGS SHALL BE:
   PIMT. CATCH BASINS - EJIW 5105 - "M1" (FRAMES WITH CURB BOXES WILL NOT BE ALLOWED)
   YARD CATCH BASINS - EJIW 1040 - "S"
   MANHOLES - EJIW 1040 - "A"
13. PLACEMENT OF EDGE DRAINS AND FINGER DRAINS AT ALL CATCH BASINS IS REQUIRED. SEE DETAIL THIS SHEET.
14. FOR CURB CATCH BASINS, SEE BASIN LOCATION DETAIL FOR BASIN STAKING RELATIVE TO THE CURB.

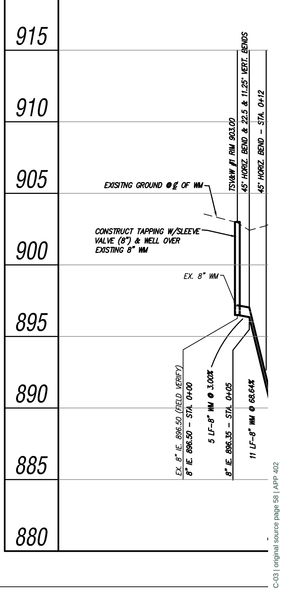
SUNOCO PIPELINE NOTES:



1. ALL UNDERGROUND FACILITIES CROSSING THE RIGHT-OF-WAY SHALL MAINTAIN A ONE FOOT MINIMUM VERTICAL CLEARANCE BETWEEN THE OUTER DIAMETER OF THE PIPELINE AND THE PROPOSED UTILITY.
2. A SUNOCO L.P. INSPECTOR MUST BE PRESENT AT THE TIME THAT ANY WORK IS DONE WITHIN SUNOCO PIPELINE L.P.'S RIGHT OF WAY. CALL (313) 292-8850 TO ARRANGE FOR INSPECTOR.
3. CONTACT MICHIGAN MISS DIG SYSTEM AT (800)482-7171 SEVENTY TWO HOURS PRIOR TO CONSTRUCTION ACTIVITY NEAR THE PIPELINE.
4. PROPOSED CROSSINGS BY UTILITIES OR UNDERGROUND STRUCTURES SHALL BE DESIGNED TO PASS UNDER THE PIPELINE AND AS PERPENDICULAR TO THE PIPELINE AS POSSIBLE.
5. SUNOCO'S ONECALL REFERENCE NUMBER IS 20100193.

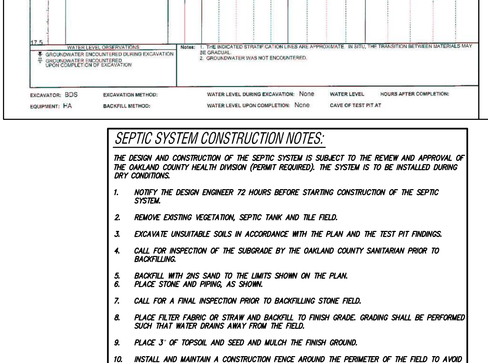
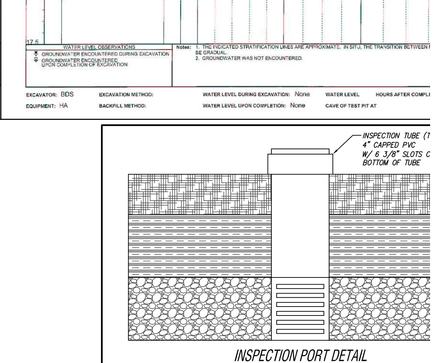
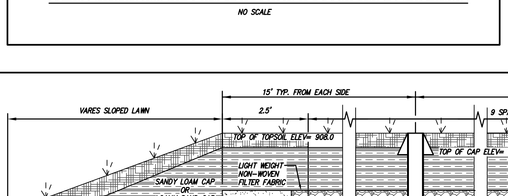
NOTES:



1. FLOATS TO BE MERCURY TYPE – FLOAT SWITCH DIFFERENTIAL "A" = 9"
2. ALL PVC PIPE AND FITTINGS IN PUMP CHAMBER TO BE 2" PVC SCH. 40
3. EXCAVATOR MUST BACK FILL AROUND TANKS & RISERS W/SAND AND COMPACT.
4. THE SEPTIC AND PUMP TANKS MAY NOT BE INSTALLED BELOW 24" FROM THE TOP OF THE TANKS TO FINISH GRADE.
5. MUST ANCHOR PVC PIPING ON BOTH SIDES OF THE SEAL OFF FITTINGS, USING GALV. STRAP AND S/S SCREWS
6. EXCAVATOR MUST DIG IN TRENCH FOR ELECTRICAL CONDUIT, FROM PUMP CHAMBER RISER TO LOCATION FOR CONTROL PANEL ON SIDE OF HOME. TRENCH MUST BE AT LEAST 24" DEEP.
7. THE CONTROL PANEL LOCATION MUST BE IN SIGHT OF PUMP CHAMBER/RISER AND MAY BE MOUNTED TO THE SIDE OF THE BUILDING IN LOCATION SHOWN ON PLANS.



CHECK LIST:



- ☐ – SET PUMP & SEPTIC TANKS, BACK FILLED W/SAND.
- ☐ – CONNECT TO PROVIDED LEAD, CONFIRM USE OF BRASS CORP STOP AND METAL ACCESS BOX (CONFIRM CORP STOP IS OPEN).
- ☐ – SET PUMP SYSTEM AND CONTROL PANEL.
- ☐ – CONNECT ELECTRICAL CIRCUIT TO CONTROL PANEL.
- ☐ – AFTER PUMPS ARE INSTALLED FILL TANKS WITH WATER.
- ☐ – EXCAVATOR MUST HAVE TANKS INSPECTED BY THE "COUNTY HEATH DEPT.".
- ☐ – THE TOWNSHIP ELECTRICAL INSPECTOR MUST INSPECT & APPROVE (GREEN STICKER).

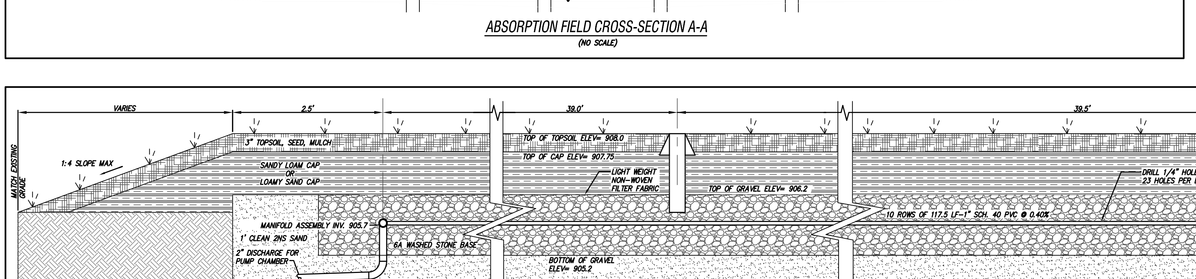
SEPTIC SYSTEM CONSTRUCTION NOTES:

THE DESIGN AND CONSTRUCTION OF THE SEPTIC SYSTEM IS SUBJECT TO THE REVIEW AND APPROVAL OF THE OAKLAND COUNTY HEALTH DIVISION (PERMIT REQUIRED). THE SYSTEM IS TO BE INSTALLED DURING DRY CONDITIONS.

1. NOTIFY THE DESIGN ENGINEER 72 HOURS BEFORE STARTING CONSTRUCTION OF THE SEPTIC SYSTEM.
2. REMOVE EXISTING VEGETATION, SEPTIC TANK AND TILE FIELD.
3. EXCAVATE UNSUITABLE SOILS IN ACCORDANCE WITH THE PLAN AND THE TEST PIT FINDINGS.
4. CALL FOR INSPECTION OF THE SUBGRADE BY THE OAKLAND COUNTY SANITARIAN PRIOR TO BACKFILLING.
5. BACKFILL WITH 2NS SAND TO THE LIMITS SHOWN ON THE PLAN.
6. PLACE STONE AND PIPING, AS SHOWN.
7. CALL FOR A FINAL INSPECTION PRIOR TO BACKFILLING STONE FIELD.
8. PLACE FILTER FABRIC OR STRAW AND BACKFILL TO FINISH GRADE. GRADING SHALL BE PERFORMED SUCH THAT WATER DRAINS AWAY FROM THE FIELD.
9. PLACE 3" OF TOPSOIL AND SEED AND MULCH THE FINISH GROUND.
10. INSTALL AND MAINTAIN A CONSTRUCTION FENCE AROUND THE PERIMETER OF THE FIELD TO AVOID DAMAGE DURING CONSTRUCTION ON OTHER AREAS OF THE SITE.



BASIS OF DESIGN:

DESIGN FLOW: 200 STUDENTS X 15 GAL/STUDENT/DAY = 3000 GPD

Stealth™ Control Panels
Duplex
Wall Mount Series

BARNES PRESSURE SYSTEMS

STEALTH
CONTROL PANELS

Specifications:

R & O Series

Listed by Underwriters Laboratories, duplex pump control panels provide reliable grinder pump station operation and potential malfunction warning.

STANDARD FEATURES:

- UL 508 Listed
- NEMA 4X Fiberglass Enclosure
- Padlockable Latch
- Pump/Panel Circuit Breaker
- IEC Rated Motor Contactor
- Ambient Compensated Current Overload (R Panels Only, except for SGVF2022L, and SGVH2022L. Overload for SGPC, OGVF2022, OGVH2022, SGVF2022L and SGVH2022L. Pumps located internally in the pump)
- Pump Start Pushbuton
- Individually Fused Circuits for Alarm and Control Components
- 25 Watt High Water Alarm Light with NEMA 4X Lens
- Pre-Installed Capacitor Kit (R Panels Only, Capacitor for OGVF, OGVH & SGPC Pumps located Internally in the pump)
- Terminal Strip and Ground Lug for Incoming Connections
- Pump Alternator (200 Series Duplex Panels Only)
- Separate Alarm Circuit Breaker

OPTIONAL FEATURES:

- 90 db alarm horn with NEMA 4X silence pushbuton.
- 7 Digit Elapsed Time Meter with meter running indicator.
- Transfer Switch with easy access reverse pin portable generator receptacle and weatherproof cover.
- Seal Leak Indication with 120 volt indicator lamp and terminals for 2 leak probe wires. (R Series only)

Series: **Wall Mount**

OPTIONAL - Temperature sensor cord for 3 phase models is 14/3 SOW, 0.530 (13.5mm) O.D.
OPTIONAL - Moisture sensor cord is 18/5 SOW, 0.470 (11.9mm) O.D.
OPTIONAL - Moisture & temperature sensor cord for 3 phase models is 18/5 SOW, 0.473 (11.9mm) O.D.

IMPORTANT !
1) PUMP MAY BE OPERATED BY THE FOLLOWING METHODS ONLY. ANY OTHER METHOD MAY CAUSE DAMAGE TO THE PUMP AND VOID THE WARRANTY:
a) CONTINUOUSLY SUBMERGED.
b) CONTROLLED BY A CRANE BARNES SYSTEMS PANEL WITH A MINIMUM RUN TIME OF 1 MINUTE.
c) MANUALLY FOR SHORT PERIODS OF TIME FOR MAINTENANCE PURPOSES.
2) THIS PUMP IS APPROPRIATE FOR THOSE APPLICATIONS SPECIFIED AS CLASS I, DIVISION 1 HAZARDOUS LOCATIONS.
3) THIS PUMP IS NOT APPROPRIATE FOR THOSE APPLICATIONS SPECIFIED AS CLASS I, DIVISION 1 HAZARDOUS LOCATIONS.
4) INSTALLATIONS SUCH AS TEMPORARY OR PORTABLE FIXTURES PROVIDED FOR VISUAL EQUIPMENT MUST BE INSTALLED IN ACCORDANCE WITH THE NATIONAL ELECTRIC CODE AS AMENDED, AND/OR THE AUTHORITY HAVING JURISDICTION. THIS PUMP IS NOT INTENDED FOR USE IN SWIMMING POOLS, RECREATIONAL WATER PARKS, OR INSTALLATIONS IN WHICH HUMAN CONTACT WITH PUMPED MEDIA IS A COMMON OCCURRENCE.

3150 Gallon Interceptor - 12' x 6' x 7'
Advance Concrete Products Company
(800) 824-8351 (248) 887-4173 Fax: (248) 887-2755

All Concrete Shall Have A 28 Day Compressive Strength Of 4500 PSI.

Reinforcing Steel Shall Comply With ASTM A615 Grade 60 Heber. Bar Bending And Placement Shall Comply With The Latest ACI Standards.

Standard Structural Design Based On AASHTO HS-20 Wheel Loading.

1" O Butyl Rubber Rope Mastic Is Provided For Placement Between Top And Bottom Sections Of Vault.

If Function Of Interceptor Is Oil, Gas, or Water Separation, Fuel Resistant Rope Mastic Is Recommended & Can Be Provided.

Available Options -
Grade Adjustment Rings
Cast Iron Frames & Covers
Custom Opening Locations
Watertight Boots in Variety of Sizes
Double, Triple or Quadruple Compartments

Approximate Weight Total: ± 31,600 Lbs.
Bottom Section: ± 14,250 Lbs. Top Section: ± 14,250 Lbs.
Divider Wall: ± 3,100

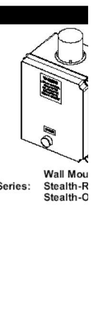
Stealth™ Control Panels
Duplex
Wall Mount Series

BARNES PRESSURE

STEALTH
CONTROL PANELS



Specifications:

R & O Series

Listed by Underwriters Laboratories, duplex pump control panels provide reliable grinder pump station operation and potential malfunction warning.

STANDARD FEATURES:
- UL 508 Listed
- NEMA 4X Fiberglass Enclosure
- Padlockable Latch
- Pump/Panel Circuit Breaker
- IEC Rated Motor Contactor
- Ambient Compensated Current Overload (R Panels Only, except for SGVF 2022L and SGVH2022L, Overload for SGPC, OGVF2022, OGVH2022, SGVF2022L and SGVH5022L, Pumps located internally in the pump.)
- Pump Start Pushbutton
- Individually Fused Circuits for Alarm and Control Components
- 25 Watt High Water Alarm Light with NEMA 4X Lens
- Pre-Installed Capacitor Kit (R Panels Only, Capacitor for OGVF, OGVH & SGPC Pumps located internally in the pump)
- Terminal Strip and Ground Lug for Incoming Connections
- Pump Alternator (200 Series Duplex Panels Only)
- Separate Alarm Circuit Breaker

OPTIONAL FEATURES:
- 90 db alarm horn with NEMA-4X silence pushbutton.
- 7 Digit Elapsed Time Meter with meter running indicator.
- Transfer Switch with easy access reverse pin portable generator receptacle and weatherproof cover.
- Seal Leak Indication with 120 volt indicator lamp and terminals for 2 leak probe wires. (R Series only)

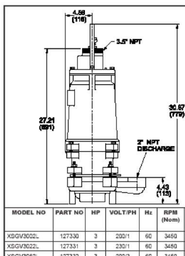
Sample Specifications: Section 3 Page 14.

DESCRIPTION:

THE GRINDER PUMP IS FOR USE IN HAZARDOUS LOCATIONS AND IS DESIGNED TO REDUCE DOMESTIC, COMERCIAL, INSTITUTIONAL AND LIGHT INDUSTRIAL SEWAGE TO A FINELY GROUND SLURRY.



Specifications:

DISCHARGE ..... 2" NPT, Vertical
LIQUID TEMPERATURE ..... 104°F (40°C) Continuous
VOLUTE ..... Cast Iron ASTM A-48, Class 30.
MOTOR HOUSING ..... Cast Iron ASTM A-48, Class 30.
SEAL PLATE ..... Cast Iron ASTM A-48, Class 30.
IMPELLER: *Design* ..... 12 Vane, Vortex, With Pump Out Vanes On Back Side. Dynamically Balanced.
ISO 06.3: *Material* ..... 85-5-5-5 Bronze
SHREDDING RING ..... Hardened 440C Stainless Steel
CUTTER ..... Rockwell® C-55, Hardened 440C Stainless Steel, Rockwell® C-55,
SHAFT ..... 416 Stainless Steel
SQUARE RINGS ..... Buna-N
HARDWARE ..... 300 Series Stainless Steel
PAINT ..... Air Dry Enamel.
SEAL: *Design* ..... Tandem Mechanical, Oil Filled Reservoir.
Material ..... Rotating Faces - Carbon
Stationary Faces - Ceramic
Elastomer - Buna-N
Hardware -300 Series Stainless
CORD ENTRY ..... 30 ft. (9.1 m) Std. Cord, Epoxy Sealed Housing with Secondary Pressure Grommet for Sealing and Strain Relief.
UPPER BEARING: *Design* ..... Single Row, Ball, Oil Lubricated
Load ..... Radial
LOWER BEARING: *Design* ..... Single Row, Ball, Oil Lubrication
Load ..... Radial & Thrust
MOTOR: *Design* ..... NEMA L-Single Phase, NEMA B-Three Phase Torque Curve, Oil-Filled, Squirrel Cage Induction.
Insulation ..... Class F
SINGLE PHASE: Capacitor Start/Capacitor Run. Requires Overload Protection to be included in control panel. Requires Barnes® Starter or Control Panel which includes Capacitors, or Capacitor pack.
THREE PHASE: Dual Voltage 230/460. Requires Overload Protection to be included in control panel.
MOISTURE SENSORS ..... Normally Open (N/O), Requires relay in control panel
TEMPERATURE SENSORS ..... Normally Closed (N/C), Requires relay in control panel
OPTIONAL EQUIPMENT ..... Seal Material, Impeller Trims, Cord Length

Moisture and Temperature sensor cord for all models is 18/5 SOW, 0.476 (12mm) O.D.

IMPORTANT !
1) MOISTURE AND TEMPERATURE SENSORS MUST BE CONNECTED TO VALIDATE THE UL LISTING.
2) A NON-SPARKING BREAK AWAY FITTING MUST BE USED TO VALIDATE THE UL LISTING.
3) CONTACT BARNES PUMPS FOR INFORMATION CONCERNING MOISTURE SENSING RELAYS FOR CUSTOM PANELS.
4) THESE PUMPS ARE UL LISTED FOR PUMPING WATER AND WASTEWATER. DO NOT USE TO PUMP FLAMMABLE LIQUIDS.
5) INSTALLATIONS SUCH AS DECORATIVE FOUNTAINS OR WATER FEATURES PROVIDED FOR VISUAL ENJOYMENT SHALL COMPLY WITH THE NATIONAL ELECTRIC CODE AND SHALL TO AND/OR THE AUTHORITY HAVING JURISDICTION. THESE INSTALLATIONS SHALL BE CONSIDERED SWIMMING POOLS, RECREATIONAL WATER PARKS, OR INSTALLATIONS IN WHICH HUMAN CONTACT IS ANTICIPATED.

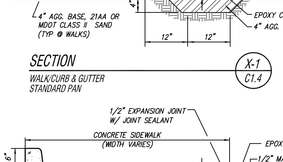
ROAD COMMISSION FOR OAKLAND COUNTY NOTES:



1. BORING OF UTILITIES IN THE RIGHT-OF-WAY SHALL BE A MINIMUM OF 4 FEET BELOW THE CENTER ROAD GRADE. GROUT ENDS OF CASING TO PREVENT THE INFILTRATION. BORING PITS SHALL BE AT LEAST 10 FEET FROM THE EDGE OF THE ROADWAY.
2. PROPER SIGNING IS REQUIRED BEFORE ANY WORK IN R.O.W. IS STARTED.
3. MAINTAIN TWO-WAY TRAFFIC AT ALL TIMES.
4. CLASS II GRANULAR SAND BACKFILL IS REQUIRED IN ALL EXCAVATIONS WITHIN THE ZONE OF INFLUENCE OF THE ROADWAY AND SIDEWALK. THE BACKFILL SHALL BE MECHANICALLY COMPACTED TO 95% DENSITY. NATIVE BACKFILL IS NOT AUTHORIZED.
5. CALL INSPECTOR OR PERMIT SUPERVISOR 48 HOURS BEFORE BEGINNING ANY WORK IN R.O.W. (248) 858-4835

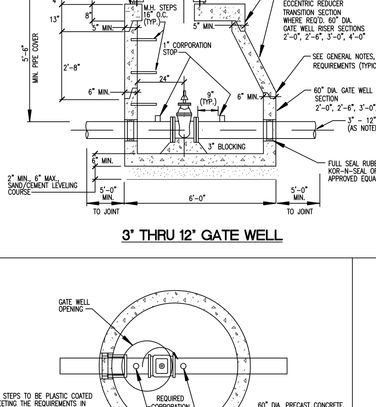
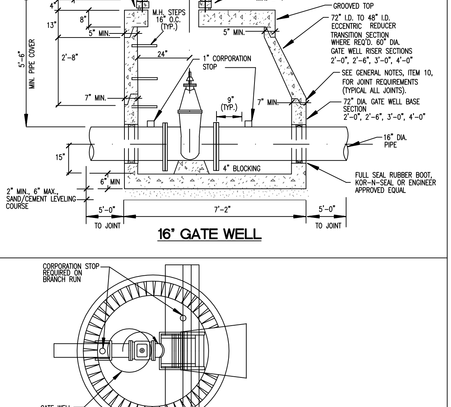
Catch-All - is a manufactured inlet filtration device designed to significantly reduce the ingress of pollutants into stormwater systems, and therefore, improve water quality. Designs are available for a custom fit in virtually any drainage structure casting.



Catch-All HR is available to provide the added benefit of hydrocarbon removal.

Design Benefits
1. Pollution Prevention
   - Sediment Control
2. Pollution Removal
   - Hydrocarbons (Catch-All HR)
   - Total Suspended Sediment
   - Phosphorus*
   - Nitrogen*
   - Heavy Metals*
   - *By virtue of sediment control



Applications
1. Site Development & Highway Construction
   - Inlet Protection / Sediment Control
2. Permanent BMP
   - Maintenance Yards
   - Wash Bays
   - Parking Lots & Garages
   - Airports – Tarmac, Catch Lime Stands, Rental Returns
   - Bank/Fast Food Drive-Ups
   - Reduce Maintenance of Underground Detention Systems
   - Reduce Maintenance of Underground Oil/Water Separators

Annual Attendance:	44,660	FY 2022 (programs & gate)
Ave Peak Day:	512	Average of top 10 days
Maximum Day:	2068	Fall Fest day 2021: 2580 total
Design Day:	350	Average Friday in May
Design Day, Peak in Park:	140	
Length of Stay:	N/A	

Although these busy days are limited to the month of May, due to the morning influx of Pre-K and field trips alongside Academy students, the highest peak in park for the Farm is experienced on these days. These peaks mostly inform the parking lot, traffic flow, and entry design as most of these visitors are participating in specific formal programs.

A secondary PIP occurs when Open Barn opens in the afternoon.

AILY ATTENDANCE PATTERNS

Annual Attendance:	**44,660**	FY 2022 (programs & gate)
Ave Peak Day:	**459**	Average of top 10 days
Maximum Day:	**2068**	Fall Fest day 2021: 2580 total
Ave Day:	**336**	2022 Average Friday in June / July
Design Day, Peak in Park:	**141**	
Length of Stay:	**N/A**	

Peak Arrival is at 3-4pm when peak Open Barn meets Camp pick-up. Peak Departure and Peak in Park aligns with this rush.

Sanitary Sewer

There are two existing lift stations that collect and pump wastewater from the site to the public infrastructure in Square Lake Road.

- Lift Station 1 (LS#1) is located outside of the Bowers Academy, near the sidewalk adjacent to the circular drop off loop.
- Lift Station 2 (LS#2) is located near the northwest corner of the FAB. There are also undocumented onsite wastewater disposal systems on the property.

The Toilet Building, located between the Horse Barn and the Cottages is served by a drain field believed to be located north and west of the Academy.

The Caretakers Residence is also assumed to be served by a private on-site wastewater disposal system.

Refer to *Appendix B6* for documentation related to the existing lift station and sanitary sewer service from the building.

Sanitary Sewerage Analysis:

Original Design Intent:

In reviewing Lift Station #1 within the 2010 Bowers Farms School House contract documents, it appears that:

- The design was to support an estimated daily user population of 335 people.
- The average daily design flow was estimated to be 5,000 gallons per day (335 people * 15 gallons per day per person).
- The pump selection (60 gallons per minute) was sized to address peak flow conditions (more than 4 times greater than average flows).
- Intrinsic to situations that are experienced (low design flows with relatively higher head conditions within a smaller force main), one can anticipate higher operating and maintenance concerns.

A couple items to further review within this lift station design are:

- Did the assumption that the average daily flow was spread out over a 24-hour period meet the actual conditions of the facility (being a smaller facility that primarily operated for a small portion of the day).
- Did the design assumptions for the force main match the conditions of the final design.

Both concerns could be contributors to increased pump maintenance and/or failures.

Current Operations:

In reviewing the current Attendance Trends, it appears that the estimated daily user population has significantly increased.

Appendix B7 provides historical attendance and projected use of the site.

Using the data provided, it can be estimated that the current maximum daily user population breaks down as follows:

Annual Attendance (est. based on "Attendance Trends" PDF)	
Year	**Annual**
2018	20,000
2019	18,000
2020	15,000
2021	19,000
2022	45,000

Monthly Attendance	
January	9,500
February	9,500
March	1,500
April	2,500
May	3,500
June	3,500
July	2,000
August	2,500
September	2,800
October	4,000
November	2,000
December	1,500
Total	**44,800**

Attendance Distribution Curve		
Day	**Value**	**%**
Monday	1	2.0%
Tuesday	2	3.9%
Wednesday	1	2.0%
Thursday	6	11.8%
Friday	18	35.3%
Saturday	22	**Max. @ 43.1%**
Sunday	1	2.0%
Total	**51**	**100.0%**

Estimated Max. Daily	
Weeks / Month	**Saturday Peak (@ 50%)**
5	950
4	**1,188**
4	188
5	250
4	438
4	438
5	200
4	313
4	350
5	400
4	250
4	**188**
Minimum	**188**
Maximum	**1,188**

What does the Lift Station Currently Experience?			
Daily Attendance:	Minimum	Maximum	
	200	**1,200**	visitors / day
Est. Design Flow:		**15**	gallons / day / visitor
	3,000	18,000	GPD
Daily Attendance Pattern:		**10:00 AM - 4:00 PM**	
Peak Hours		**6**	hours
Equivalent Design Flow:	**12,000**	**72,000**	GPD
	8.3	**50.0**	gpm
Peak Factor:		**4**	
Peak Flow:	**33.3**	**200.0**	**gpm**

With these projected current user assumptions, it could be reasoned that Lift Station #1 is beyond its capacity.

Furthermore, the Daily Attendance Patterns table shows that the Maximum Day users was 2,068. This would further strain the station's ability to maintain service.

Future State / Operations:

With continued growth anticipated and expansion at Bowers Farm, it should be anticipated that the conditions at Lift Station #1 continue to degrade.

Alternatives Analysis:

A. Status quo:
   - Add Equalization Tank and / or Port-a-Potties for "Peak Days" (pump & haul).
   - Master Plan for proposed grinder pumps / tanks for all future improvement projects.

B. Validate & improve existing Lift Station #1
   - Validate capacity in existing 10-inch municipal gravity sewer

- Evaluate new / reconfigured pumps (this will potentially include a larger and/or deeper structure).

C. Build new Lift Station (located further west along E Square Lake Road) & Campus Gravity Sewer
   - Master Plan for new lift station that serves western / central portions of the campus
   - Master Plan for new gravity sanitary sewer that services western / central portions of campus

D. Connect to existing municipal system
   - Evaluate the potential to replace the existing 2-inch force main with gravity sewer service (connecting to 10-inch municipal sewer in Kentmoor Road.
     - Explore realignment of a portion of the 24-inch watermain in E Square Lake Road.

Recommendations:

While further study & costing is required to complete our analysis, we recommend the Owner explores:

- Potential to upgrade the pumps within the current lift station (Option B above).
- Master Plan for a "campus-wide" lift station and gravity sewer system that will support your growth projections and future projects (Option C above).

Scheduling & Permitting:

Depending on which option is selected, the next phase would be to develop the engineered design, approach the Utility Authority, and secure the appropriate permits.

Permits may be required from:

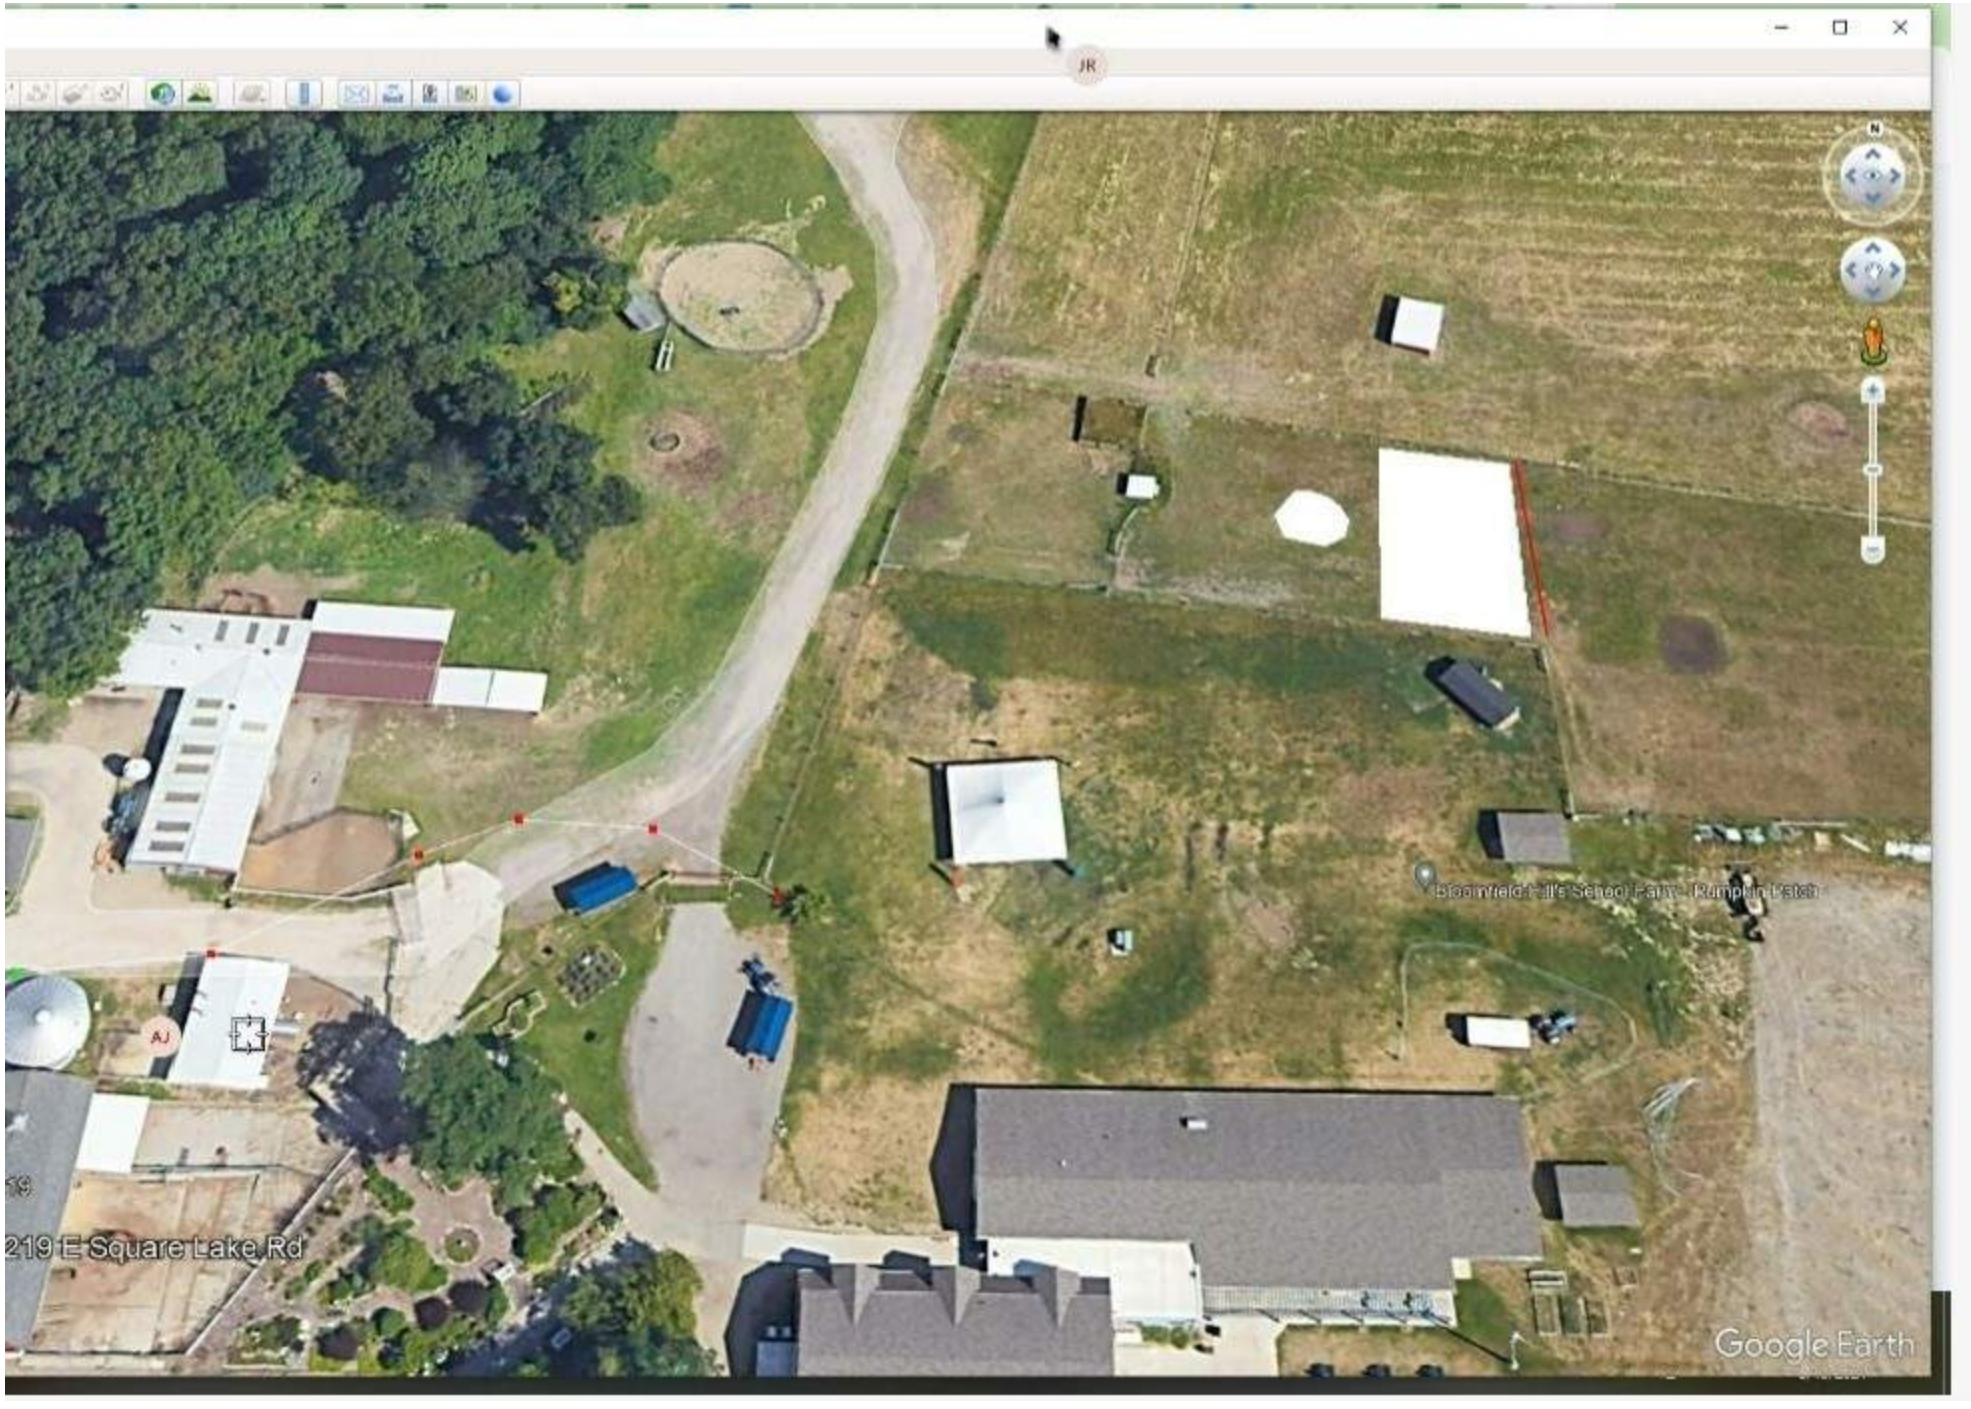
- Bloomfield Township (Zoning, Engineering, Sewer & Water, Soil Erosion, Environmental, Storm)
- Road Commission of Oakland County (RCOC) (Right of Way, Grading Easements, Road Crossing)
- Oakland County Water Resources Commission (Stormwater, Soil Erosion)
- EGLE (Utility Construction permits)

As with all permit submittals, ultimate approvals and authorization are dependent on reviewing agencies.

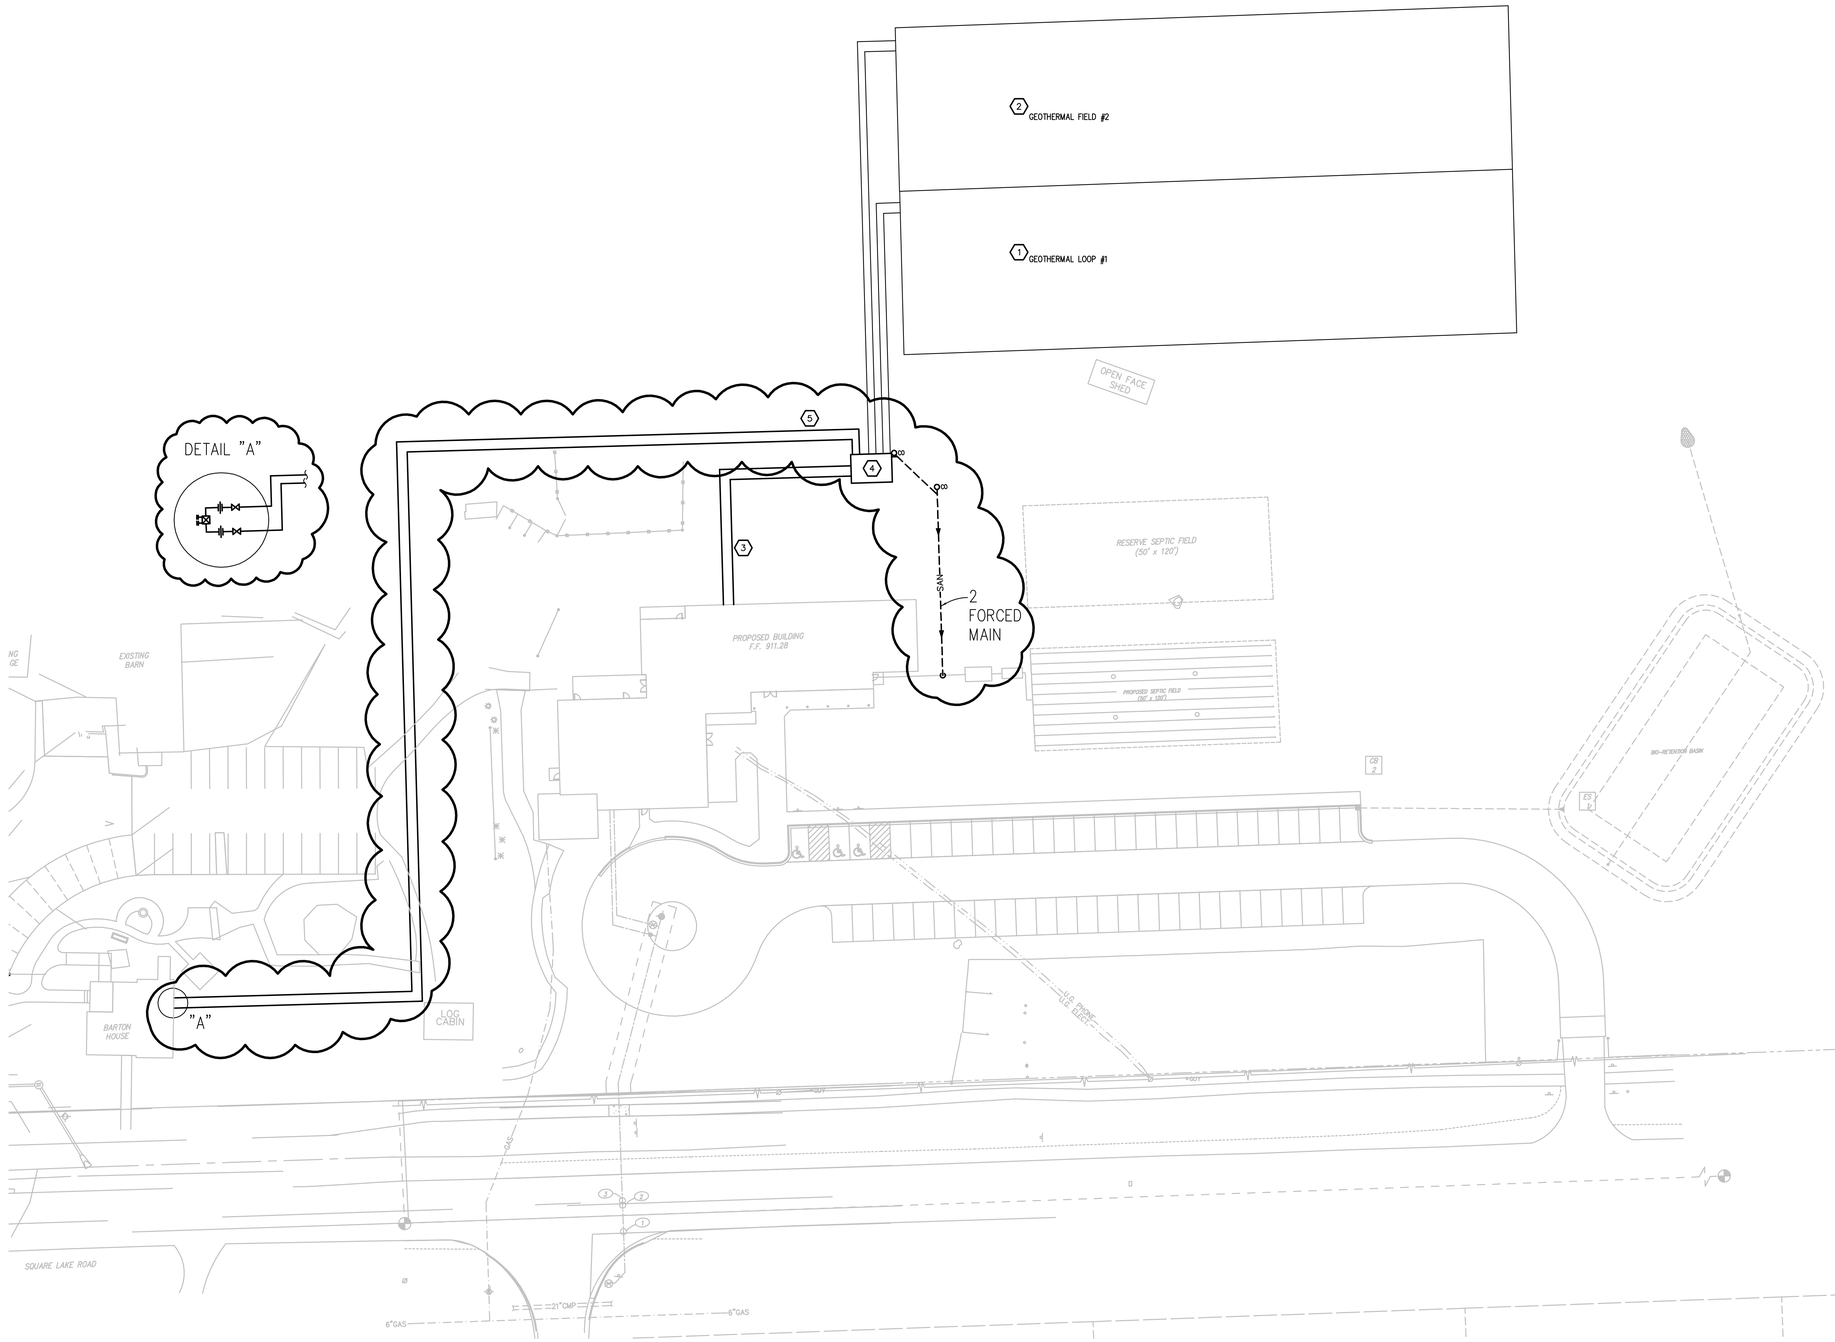
<u>Option B:</u>

This option should be a little more streamlined for the owner.

Schedule should include:



- Confirmation of intended design parameters.
- Development of engineered plans.
- Engagement with Township & Utility Authority.
- Acquisition of necessary permits.
- Bidding, Construction & Commissioning.



<u>Option C:</u>

This option will provide greater flexibility for Bowers Farm long-term but will also require a more intentional design process.

Anticipated schedule should include:

- Development of Master Plan
- Coordination with Township (partially concurrent with MP development)
- Development of engineered plans.
- Engagement & Approvals from Township & Utility Authority.
- Acquisition of necessary permits.
- Bidding, Construction & Commissioning.

Google Earth

SITE PLAN GENERAL NOTES:

1. THESE DRAWINGS ARE DIAGRAMMATIC & INDICATE THE GENERAL EXTENT OF THE WORK. PROVIDE SYSTEMS COMPLETE AND PER APPLICABLE CODES INCLUDING REQUIRED COMPONENTS, OFFSETS REQUIRED TO AVOID STRUCTURES AND OTHER UTILITIES, ETC.
2. BUILDING CONTRACTOR SHALL BE RESPONSIBLE FOR PIPING SYSTEM TO THE PUMP HOUSE AND IN THE PUMP HOUSE. GEOTHERMAL CONTRACTOR SHALL BE RESPONSIBLE FOR GEOTHERMAL FIELD PIPING SYSTEM FROM THE PUMP HOUSE.
3. CONTRACTORS SHALL COORDINATE THE INSTALLATION OF SYSTEMS WITH THE WORK OF ALL OTHER TRADES.
4. ALL GEOTHERMAL FIELD PIPE SHALL BE A MINIMUM OF 4 FEET TO THE TOP OF PIPE. CONTRACTOR SHALL INSTALL PIPING DEEPER AT LOCATIONS TO AVOID INTERFERENCE FROM FOUNDATIONS, UTILITIES, ETC. AS NECESSARY.
5. GEOTHERMAL PIPING FIELD BASED ON 340 MBH HEATING, 380 MBH COOLING, 90 °F SUMMER EWT, 34 °F WINTER EWT AND 30% PROPYLENE GLYCOL SOLUTION.

MECHANICAL SITE PLAN

SCALE: 1" = 30'

0 10 20 30

SITE PLAN CONSTRUCTION NOTES:

1. GEOTHERMAL PIPING FIELD #1 – 300'x80' LOOP FIELD WITH 5'x80' HEADER AREA. (FOR REFERENCE ONLY)
2. GEOTHERMAL PIPING FIELD #2 – 300'x80' LOOP FIELD WITH 5'x80' HEADER AREA. (FOR REFERENCE ONLY)
3. 4" HEAT PUMP LOOP SUPPLY AND 4" HEAT PUMP LOOP RETURN FROM BUILDING TO THE PUMP HOUSE BY MECHANICAL CONTRACTOR.
4. PUMP HOUSE BUILDING. PIPING MANIFOLD TO BE PROVIDED AND INSTALLED BY MECHANICAL CONTRACTOR.
5. ALTERNATE NO. 8: 1 1/2" HEAT PUMP LOOP SUPPLY AND 1 1/2" HEAT PUMP LOOP RETURN FROM THE PUMP HOUSE TO BARTON HOUSE BY MECHANICAL CONTRACTOR. PIPING WILL TERMINATE IN THE BASEMENT OF THE HOUSE WITH UNIONS, A SET OF ISOLATION VALVES AND A BALANCING VALVE SET TO 12 GPM FOR FUTURE CONNECTION TO THE GEOTHERMAL SYSTEM.

Site Changes to Support Further Development of the Strategic Plan
Bowers School Farm & Johnson Nature Center

October, 2019 (updated March 2020)

Items listed in no particular order

Bowers School Farm

1219 E. Square Lake Road
Bloomfield Twp., MI 48304

1. **Accessibility throughout Farm public spaces**
   Purpose: All learners and all guests should be able to access the buildings and demonstrations throughout the farm.
   a. Including the barns, Barton Farm House, Craig Log Cabin, lower area, Children's Discovery Garden, pavilion, veterinary science building, livestock learning lab, etc.
2. **Event Barn**
   Purpose: Support large events such as weddings, parties, and community events. This also gives a large flexible space to host early childhood programs, educational activities, and high school courses.
   a. Move hay storage to a central location that can house round-bales, square bales, and straw
      i. Construct a clear-span hay storage building that can serve a place to keep hay and area to preserve straw for fall activities (straw fun zone)
   b. Move the storage room A, B, and C from the barn area and relocate.
      i. Storeroom A which houses educational supplies and materials can be consolidated and moved to the back end of the Farm Activity Building loft which is climate controlled.
      ii. Storeroom B has farm supplies such as shovels, rakes, etc. Temporarily, these items will need to find a place, though long-term this can be stored in the future animal barn.
      iii. Storeroom C houses electrical cords, irrigation supplies, and farm supplies.
   c. Add restrooms and concession food area to host catering service

3. **Renovate Lower Barn area**
   Purpose: Provide additional space for activities, historical display and interpretation, and an updated milking area.
   a. **High Priority:** Remove animals from feedlot to provide a higher level of animal care while solving drainage challenges from stormwater runoff.
      i. Investigate drainage system for storm water and waste water from the milk room
      ii. Remove lower barn pens "jugs" and feedlot pens to be repurposed in the new barn area
      iii. Construct a new facility for horses

4. **Livestock Learning Lab, housing small ruminants and hogs**
   Purpose: Moving the livestock from the historic bank barn built for production to an updated facility allows us to demonstrate 21st century principles of sustainable agriculture and use the
   a. Renovate current horse barn into learning lab
   b. Make the paths accessible and large enough to accomodate large groups

5. **Construct an indoor equestrian pavilion**
   Purpose: Expand equestrian offerings year-round with a covered arena and horse stalls to support

equestrian activities such as the community horse program, hippo therapy, high school equestrian team, lesson program, and summer camp.

a. Construct a structure for indoor riding and connect a 30’ 60’ pole structure for a viewing area, tack storage, and horse stalls.
b. Add an outdoor riding area that accommodates guests with physical limitations
c. Connect a pole structure to store equipment, supplies, etc.

6. **Design and create a natural Children’s Discovery Garden**

Purpose: fulfill a need in our community for a safe and inclusive outdoor place for youth and families to explore and grow together. Explore agriculture and horticulture casually in a safe and exploratory environment. Staff at the farm will be able to enrich and expand educational offerings, such as to better include and engage youth with special needs. Casual visitors can use the garden as a place to experience the joys and wonder of the natural world without a pre scheduled appointment

a. Construct an area 80’ X 80’ behind the learning center that will grow in phases with the support of the community
b. Additionally, a pavilion approx. 60’ X 40’ will be constructed where the current wagon circle is located
c. The wagon circle is moved between the cottage and farm residence. This provides greater accessibility for farm programs. The earth will need to be shaped to provide a natural slope

7. **Create a new entry way and single point of entrance for the farm and academy and replace the aging fence infrastructure on the property**

Purpose: As part of the necessary safety and security upgrades

a. Improve the driveway, creating a central entrance wide enough for two-way car and bus traffic, with addition of turn-around area for bus traffic
b. Increase parking for guests and students. Asphalt existing lot
c. Add a simple main entrance sign (digital to match the BHHS installation) with a secondary wayfinding sign to signify the location of Bowers Academy, Barton Farmhouse, Craig Log cabin, and Farm Activity Building
d. Replace the deteriorating Square Lake Road chain link fence with an updated white vinyl 5-post fence (mirroring the W. Square Lake Road fence from Woodward to Telegraph)
e. Update and replace interior fence line that currently poses a safety hazard for animals and future guests

8. **Design and build a living roof pavilion**

Purpose: A living roof pavilion becomes a place to demonstrate principles of sustainable design and becomes a gathering space for students, groups, and community members to casually enjoy the farm or as part of an offered community/special event

a. Focus on best practice applications
b. Connect with local stakeholders such as Universities and businesses, allowing current students a “design/built” experience with experts in the field
c. Sited near to the Children's Discovery Garden for maximum casual use on weekends and during evenings

9. **Additions to the Visitor Center and Bowers Academy Space**
   Purpose: The current shared building structure is approx. 11,000 sq. feet and lacks the necessary features to be a comprehensive outdoor teaching and learning facility
   a. Create a large flexible space behind the visitor center, to be used as a lunch area, meeting room, or teaching space
   b. Additional academic & meeting space for Bowers Academy, etc.
   c. Expansion and future addition of Farm Store and Visitor Center with farm-fresh foods and products
   d. Flexible space for casual visitation
   e. Teaching kitchen for student interaction, afterschool, and adult enrichment

10. **Walking Paths for Weekend Use**
   Purpose: Promoting health and wellness, includes eating local fruits and vegetables, physical fitness, and social/emotional wellbeing. A holistic approach to community outreach requires pathways for visitors to use casually.
   a. Reorganize pathway entrances and exits, connecting to existing sidewalks
   b. Restructure interior fence lines to differentiate between animal and people spaces
   c. Additional stairway leading to ropes course area for safety

11. **Re-organize Barn Parking Lot to Green "Park" Space**
   Purpose: Create an area where people can come enjoy the beautifully maintained Master Gardener Horticultural Demonstration Gardens with seating areas and accessible walking paths.
   a. Additional signage to highlight themes of horticultural gardens
   b. Brick paver pathway with sponsored (named) bricks for legacy donors
   c. Connection to the historic structures maintained by Preservation Bloomfield
   d. Preserve large green space for community and private events

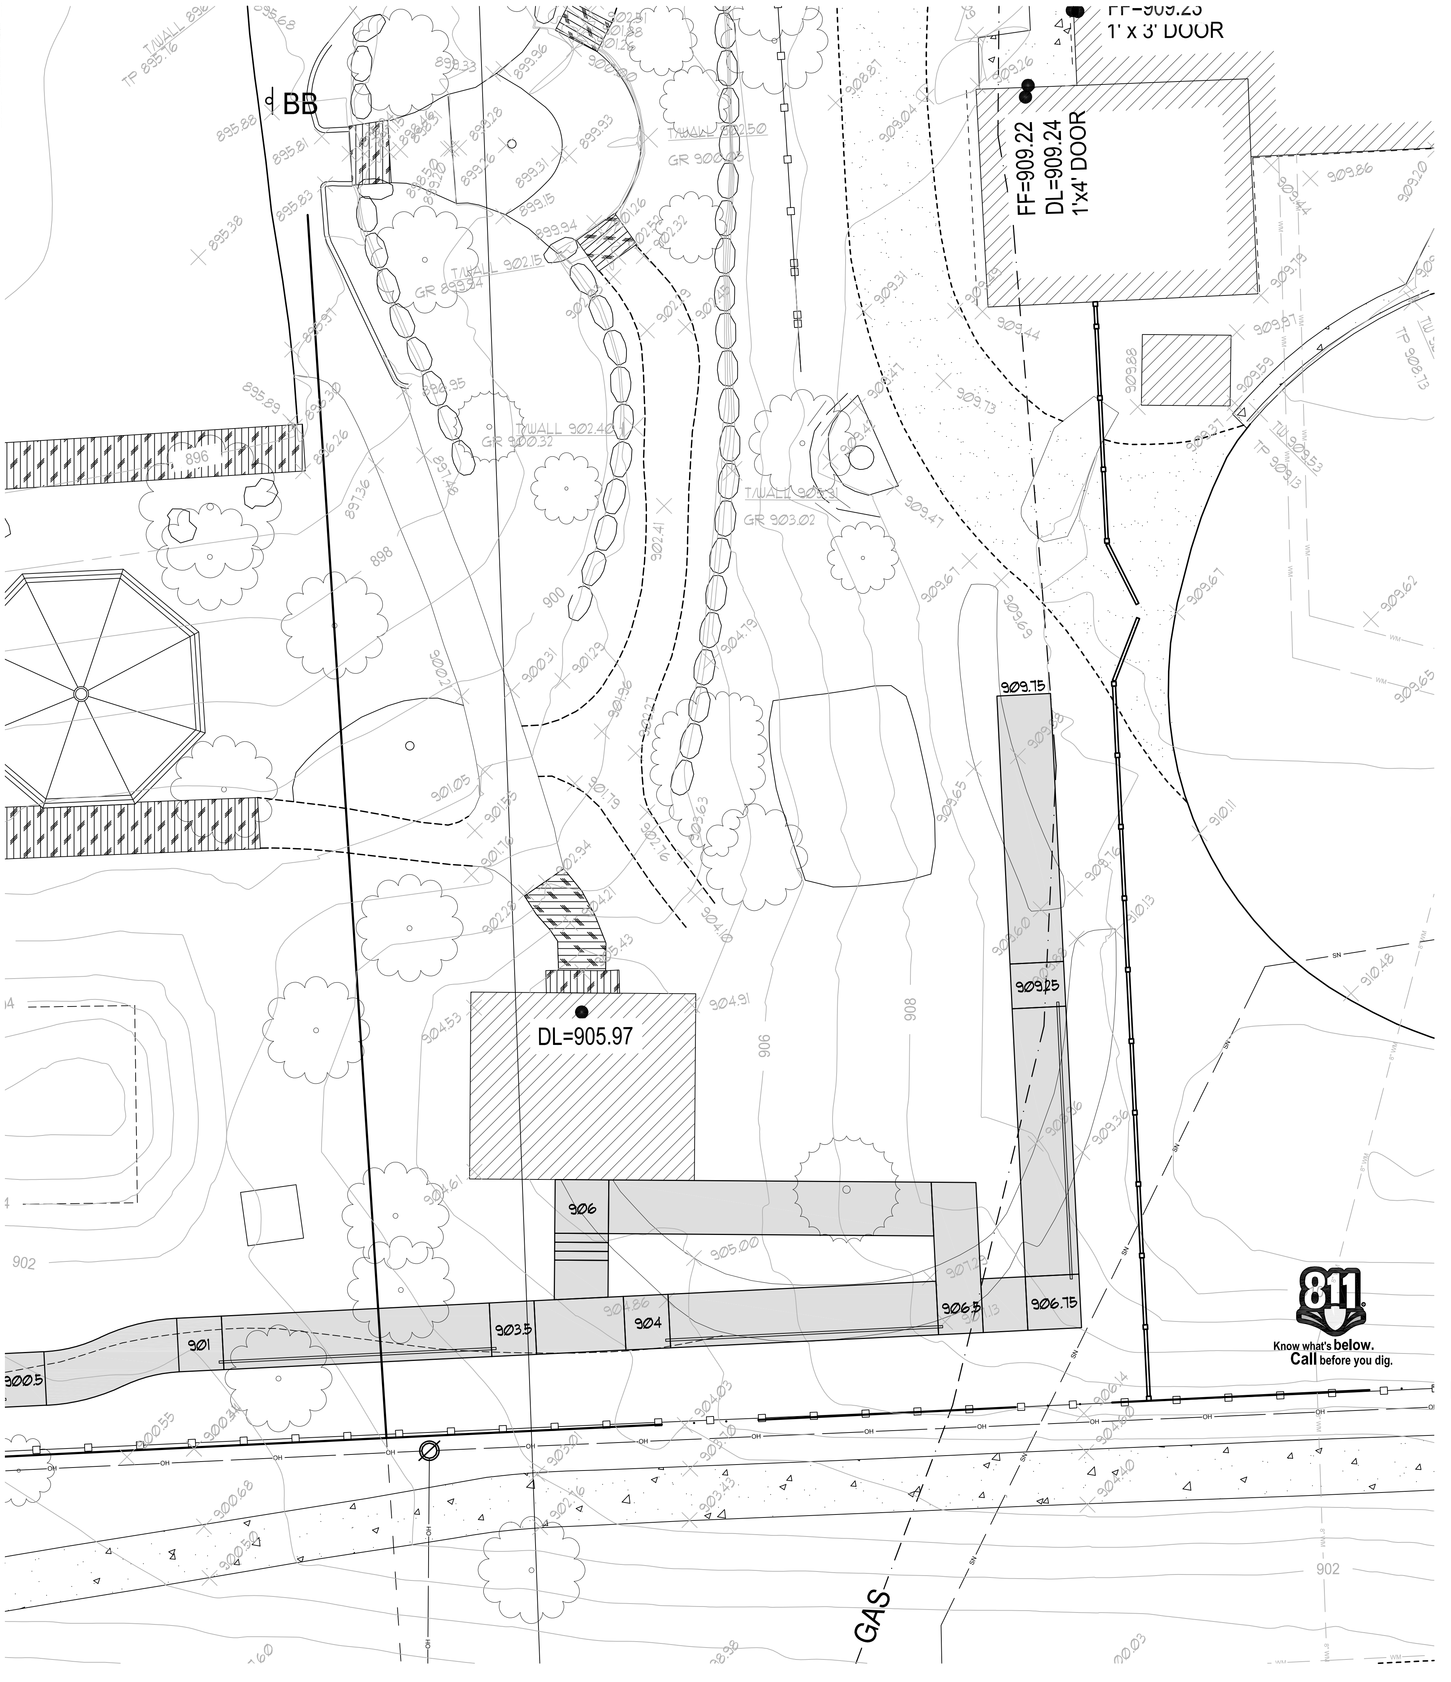
12. **Update Technology Infrastructure**
   Purpose: Increase footprint of wifi to support measures to connect the contextual environment to the classroom
   a. Use "beacons" technology that gives visitors a self-guided tour using a smartphone or other portable device, replacing the antiquated interpretive static signage
   b. Connect the Barton house historical building with wi-fi to bring history to life
   c. Use the ipads to collect data and make pre-experience/post-experience follow-up visits virtually
   d. Increase the number of security cameras to protect the assets

Johnson Nature Center

3325 Franklin Road
Bloomfield Hills, MI 48302

1. **Accessibility throughout Nature Center public spaces**
   Purpose: All learners and all guests should be able to access the buildings and demonstrations throughout the site.
   a. Including the Log Cabin, Visitor Center, Sugar Shack, Pond Boardwalk, animal demonstrations, etc.
   b. Create a sensory demonstration area
   c. Create wheelchair accessible trail to key features of nature center property

2. **Update Technology Infrastructure**
   Purpose: Increase footprint of wifi to support measures to connect the contextual environment to the classroom
   a. Use “beacons” technology that gives visitors a self-guided tour using a smartphone or other portable device, replacing the antiquated interpretive static signage
   b. Connect the Barton house historical building with wi-fi to bring history to life
   c. Use the ipads to collect data and make pre-experience/post-experience follow-up visits virtually
   d. Increase the number of security cameras to protect the assets



3. **Increase size of deck connected to visitor center**
   Purpose: In order to hold larger community and special events, a larger outdoor flexible use deck would accommodate more guests
   a. Cover the deck with an overhang, either from the roof line or awning
   b. Use the area below the deck as a pavilion covered structure
   c. Connect to the walking trails below and to the adjacent bathroom above

4. **Expand Walking Paths for Weekend Use**
   Purpose: Promoting health and wellness, includes eating local fruits and vegetables, physical fitness, and social/emotional wellbeing. A holistic approach to community outreach requires pathways for visitors to use casually.
   a. Reorganize pathway entrances and exits, connecting to existing sidewalks
   b. Theme current trails and expand entry points, where possible
   c. Design sensory pathways to meet the needs of all learners

5. **Explore Nature Based Early Childhood Program**
   Purpose: To provide a rich early learning experience that meets children’s developmental needs while fostering meaningful relationships with the outdoor world and community.
   a. Fence in area outside visitor center for natural play area
   b. Renovate space to bring the site up to regulatory code for early learners
   c. Add signage and space encouragement guidelines to give permission for learning and exploration

6. **Update current captive wildlife habitat**
   Purpose: To assure proper welfare standards based on best practices for the injured and orphaned animals

7. **Expand Visitor Center exhibits with interactive elements**
   Purpose: Community engagement through inquiry requires access to exhibits that come to life rather than static displays

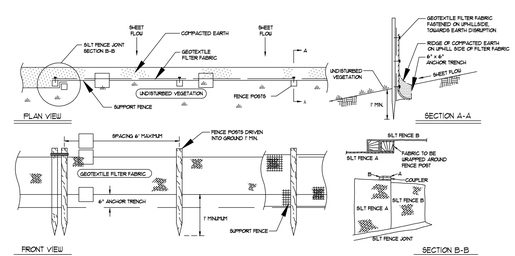
GENERAL NOTES

GENERAL CONDITIONS:
1.) CONTRACTOR SHALL VERIFY ALL EXISTING CONDITIONS AND REPORT ANY DISCREPANCIES TO THE LANDSCAPE ARCHITECT PRIOR TO SUBMITTING BID PROPOSAL OR BEGINNING ANY WORK.
2.) EXCEPT AS OTHERWISE SHOWN OR STIPULATED, THIS CONTRACT SHALL INCLUDE THE DEMOLITION OF EVERY DESCRIPTION NECESSARY TO SUCCESSFULLY COMPLETE THE WORK UNDER THIS CONTRACT TO THE LINES AND GRADES SHOWN ON THESE PLANS WITHIN THE LIMIT OF WORK.
3.) THE CONTRACTOR SHALL LEGALLY DISPOSE OF ALL ITEMS TO BE REMOVED THAT ARE NOT TURNED OVER TO THE OWNER OR STOCKPILED FOR REUSE.
4.) THE CONTRACTOR IS RESPONSIBLE FOR ANY DAMAGE INSIDE AND OUTSIDE LIMIT OF WORK DUE TO CONTRACT OPERATIONS.
5.) DO NOT DISTURB EXISTING UTILITIES THAT SERVE AREAS SURROUNDING LIMIT OF WORK. IF SUCH UTILITIES ARE ENCOUNTERED NOTIFY PROPER UTILITY COMPANY BEFORE PROCEEDING.
6.) THE CONTRACTOR SHALL CONTACT THE PROPER LOCAL AUTHORITIES TO CONFIRM THE LOCATION OF EXISTING UTILITIES BEFORE COMMENCING WORK. ANY DAMAGE DUE TO FAILURE TO CONTACT THE PROPER AUTHORITIES SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR.
7.) THE CONTRACTOR SHALL THOROUGHLY REVIEW ALL THE DRAWINGS AND SPECIFICATIONS FOR SPECIFIC COORDINATION REQUIREMENTS PRIOR TO COMMENCING CONSTRUCTION.
8.) CONTRACTOR SHALL PROVIDE UNIT PRICING FOR ALL AREAS OF WORK.
9.) CONTRACTOR SHALL PROTECT EXISTING BUILDING FACADE, DOORS, WINDOWS, AND ALL EXISTING SITE AMENITIES & PLANT MATERIALS SCHEDULED TO BE RETAINED.

DEMOLITION SCHEDULE



SYMBOL	QTY.	ITEM/DESCRIPTION
DEMOLITION NOTES:		ALL REMOVED MATERIAL MUST BE DISPOSED OF LEGALLY OFF-SITE.
A	680 L.F.	SUPPLY AND INSTALL 24" SILT FENCE PER OCDC SPECIFICATION. REMOVE AT COMPLETION OF PROJECT.
B	640 S.F.	SAWCUT FULL DEPTH, REMOVE AND DISPOSE (OFF SITE) EXISTING CONCRETE FLATWORK.
C	705 S.F.	SAWCUT FULL DEPTH, REMOVE AND DISPOSE (OFF SITE) EXISTING ASPHALT WALKWAY.
D	6,800 S.F.	REMOVE AND STORE (ON SITE) EXISTING GRAVEL ROADWAY MATERIAL AND SUBGRADE (FULL DEPTH), MIN. 12" BELOW FINISH GRADE.
E	210 L.F.	REMOVE AND STORE (ON SITE) EXISTING CATTLE FENCING, INCLUDE WOODEN POSTS, FOOTINGS, WIRE MESH AND (16'-WIDE) METAL GATE PANEL.
F	1 L.S.	REMOVE AND STORE (ON SITE) EXISTING METAL CATTLE GRATE STRUCTURE, 5' WIDE X 20' LONG X FULL DEPTH. LOCATION ON-SITE TO BE DETERMINED BY OWNER.
G	1 L.S.	REMOVE AND DISPOSE (OFF SITE) EXISTING CONCRETE UNIT BLOCK RAISED PLANTER BOX STRUCTURE, 40 L.F. X 24" HIGH.
H	1 L.S.	STRIP, REMOVE AND DISPOSE (ON SITE) EXISTING LAWN (27,590 S.F.). LOCATION ON-SITE TO BE DETERMINED BY OWNER.
I	1 L.S.	ROUGH GRADE SITE PER DRAWINGS WITHIN 0.10' OF PROPOSED ELEVATIONS, INCLUDE REQUIRED EXCAVATION, REMOVAL AND DISPOSAL (OFF SITE) OF THE ESTIMATED 1,750-2,000 C.Y. OF EARTH CUT (WHICH INCLUDES 30% FLUFF FACTOR).
J	2 E.A.	TRANSPLANT EXISTING 2" & 4" MAPLE TREES. LOCATION ON-SITE TO BE DETERMINED BY OWNER.

SESC-SEQUENCE OF OPERATIONS

COMMENCING SUMMER 2024
COMPLETION BY FALL 2024
1.) INSTALL SILT FENCE AND CONSTRUCTION FENCE.
2.) SAVE EXISTING CONCRETE SIDEWALK OUTSIDE OF WORK AREA THROUGHOUT DURATION OF CONSTRUCTION.
3.) PERFORM DEMOLITION AND SITE PREPARATION OPERATIONS TO ESTABLISH ROUGH GRADE.
4.) PERFORM AND INSTALL HARDSCAPE CONSTRUCTION OPERATIONS.
5.) PERFORM AND INSTALL LANDSCAPE CONSTRUCTION OPERATIONS
6.) CLEAN PAVEMENT AND STORM SEWERS. REMOVE SILT FENCE AND INLET FILTERS ONCE VEGETATION HAS BEEN ESTABLISHED.
7.) ALL DIRT AND MUD TRACKED ONTO PUBLIC AND PRIVATE ROADS SHALL BE REMOVED DAILY & PROMPTLY.

SESC MAINTENANCE SCHEDULE/NOTES

1.) THE CONTRACTOR SHALL INSPECT THE SOIL EROSION/ SEDIMENTATION DEVICES EACH DAYAND/ OR WITHIN 24 HOURS OF A RAINFALL EVENT WHICH RESULTS IN A STORM WATER DISCHARGE FROM THE SITE. ALL TEMPORARRY SESC MEASURES MUST REMAIN IN PLACE UNTIL PERMENENT SOIL EROSION MEASURES ARE INSTALLED. THE FOLLOWING STEPS SHALL BE IMPLEMENTED IF ANY DAMAGE HAS OCCURRED:
A.) ANY DEBRIS OR DIRT ON ANY ROADWAY RESULTING FROM CONSTRUCTION TRAFFIC SHALL BE CLEANED IN A PROMPT MANNER BY THE CONTRACTOR. THE CONSTRUCTION DRIVE SHALL BE CLEANED AT THE END OF EACH DAY.
B.) SILT FENCE MAINTENANCE SHALL INCLUDE THE REMOVAL OF ANY BUILT-UP SEDIMENT WHEN THE SEDIMENT HEIGHT ACCUMULATES TO 1/3 TO 1/2 OF THE HEIGHT OF THE FENCE. THE CONTRACTOR IS RESPONSIBLE TO REMOVE, REPLACE, RE-TRENCH, OR RE-BACKFILL THE SILT FENCE SHOULD IT FALL OR BE DAMAGED DURING CONSTRUCTION.
C.) INLET FILTERS MAINTENANCE SHALL INCLUDE THE REMOVAL OF ANY ACCUMULATED SILT OR OTHER DEBRIS. THE REMOVAL OF SILT SHOULD BE WITH THE USE OF A STIFF BRISTLE BROOM OR SQUARE POINT SHOVEL. IF INLET FILTERS CANNOT BE CLEANED, OR ARE DAMAGED, THEN THE FABRIC MUST BE REPLACED.
D.) A WATER TRUCK SHALL BE AVAILABLE TO WATER DOWN THE SITE ON A DAILY BASIS AS REQUIRED TO MAINTAIN DUST CONTROL.

INCLUDE MIN. 42" DEEP REIN. CONCRETE FOOTING WITH CONT. NO. 4 HOR. REBAR & NO. 4 VERT. REBAR (12" O.C.) SEE DETAIL.		
(D)	72 L.F.	½" WIDE PRE-MOLDED EXPANSION JOINT COMPLETE WITH SNAP CAP AND DOW CORNING 790 CAULK.		GRAY
(S)	80 L.F.	4" SCH. 40 P.V.C. SLEEVES-BURY MIN. 12", EXTEND A MIN. 12" BEYOND PAVING EDGES, CAP ENDS, STAKE LOCATIONS.		
		DRYLAID CONCRETE UNIT PAVERS: ALL CONCRETE UNIT PAVERS SHALL BE INSTALLED ON MIN. 6" DEEP COMPACTED 21AA LIMESTONE AGGREGATE, 1" COMPACTED 2NS SAND SETTING BED, POLYMERIC (GREY) SAND JOINTS.		
(E)	150 SF.	CONCRETE UNIT 'DONOR' PAVERS (PER OWNER SPECIFICATIONS) ON A MIN. 6" COMPACTED 21AA LIMESTONE AGGREGATE & 1" COMPACTED 2NS SAND SETTING BED, POLYMERIC JOINT SAND.	PER OWNER	PER OWNER SPEC'S
		BOULDER RETAINING WALL: BOULDERS SHALL BE INSTALLED ON A MIN. 6" COMPACTED 21AA, EMBED BASE COURSE A MIN. ⅓ DEPTH INTO GRADE. STACK AND BATTER ROCK TO FORM WALL. BOULDER RETAINING WALL SHALL BE SET WITH LANDSCAPE ARCHITECT ON-SITE APPROVING FINAL GRADES AND LOCATIONS.		
(F)	900 FF. 360 L.F.	NATIVE MICHIGAN FIELDSTONE BOULDERS (24-48" DIA)-COMPLETE WITH MIN. 6" COMPACTED 21AA LIMESTONE BASE, 18" WIDE X FULL WALL HEIGHT (AVG. 30") 6A LIMESTONE BACKFILL WRAPPED IN 8 OZ. NON-WOVEN FILTER FABRIC.		
(S)	50 L.F.	4" SCH. 40 PVC SLEEVES, EXTEND TO TOP OF WALL, CAP ENDS, STAKE LOCATIONS.		
		GRAVEL ROADWAY: CONTRACTOR SHALL REUSE EXISTING STOCKPILED GRAVEL AGGREGATE AND SUPPLEMENT WITH IMPORTED MATERIAL AS NECCESSARY.		
(G)	4,940 SF.	MIN. 4" THICK COMPACTED CRUSHED ASPHALT AGGREGATE ROADWAY. MATCH AND BLEND WITH EXISTING ROADWAY AT CONNECTION POINTS.		
(S)	60 L.F.	4" SCH. 40 P.V.C. SLEEVES-BURY MIN. 12", EXTEND A MIN. 12" BEYOND PAVING EDGES, CAP ENDS, STAKE LOCATIONS.		
		FENCING: CONTRACTOR SHALL REUSE EXISTING STOCKPILED CATTLE FENCING, INCLUDING WOOD POSTS AND WIRE MESH. SUPPLEMENT WITH NEW MATERIAL AS NECCESSARY.		
(H)	210 L.F.	CATTLE FENCING W/ WOOD POSTS & WIRE MESH.		

CONCRETE CONSTRUCTION:

1.) THE CONTRACTOR SHALL LAY OUT PROPOSED EXPANSION FOR THE LANDSCAPE ARCHITECT'S APPROVAL PRIOR TO INSTALLATION.
2.) THE LANDSCAPE ARCHITECT SHALL APPROVE FINAL CONTRACTOR FORM WORK IN THE FIELD PRIOR TO POURING CONCRETE.
3.) ALL EXPANSION JOINTS SHALL BE PRE-MOULDED ½" WIDE AND INCLUDE EXPANSION JOINT MATERIAL. INCLUDE PREFABRICATED SNAP CAP. PROVIDE EXPANSION JOINTS EVERY 400 S.F. MAX., SEE DRAWINGS FOR LAYOUT.
4.) EXPANSION JOINT MATERIAL: RESILIENT, NON-EXTRUDING TYPE PREMOLDED BITUMINOUS IMPREGNATED FIBERBOARD.
5.) ALL EXPANSION JOINTS SHALL BE CAULKED WITH DOW CORNING 790 SILICONE SEALANT (COLOR: LIGHT GRAY). CONTRACTOR SHALL REMOVE AND DISPOSE SNAP CAP PRIOR TO CAULKING AND PROTECT/BARRACADE ALL CAULK JOINTS FROM TRAFFIC DURING CURING TIME.
6.) ALL CONTROL JOINTS SHALL BE MACHINE V-GROOVE SAWCUT MIN. 1" DEEP, 2" DEEP EVERY 100 S.F. (NO HAND SAW PERMITTED). CONTROL JOINT LAYOUT SHALL BE EQUAL FLAGS, DIVIDE LENGTH EQUALLY BETWEEN EXPANSION JOINTS-SEE DRAWINGS FOR LAYOUT.
7.) CONCRETE STRENGTH FOR ALL PROPOSED CONCRETE FLATWORK SHALL BE MIN. 4,000 P.S.I. CONCRETE FOR ALL CONCRETE AT 28 DAYS, WITH A +/-6% AIR ENTRAINMENT MIX DESIGN SHALL NOT HAVE LESS THAN 6.25 SACKS OF CEMENT PER CUBIC YARD.
8.) ALL PROPOSED SLEEVES SHALL BE SCHEDULE 40 PVC, EXTEND A MIN. 12" BEYOND PROPOSED PAVING EDGES, BURY A MIN. 12" BELOW PROPOSED FINISH GRADE, CAP ENDS, AND STAKE LOCATIONS (BOTH ENDS). CONTRACTOR SHALL SUPPLY LANDSCAPE ARCHITECT WITH AN AS-BUILT DRAWING ILLUSTRATING LOCATION OF ALL SLEEVES.
9.) ALL CONCRETE FLATWORK SHALL BE REINFORCED AS SPECIFIED, MIN. 2" EMBEDMENT.
10.) THE CONTRACTOR IS RESPONSIBLE FOR ALL REQUIRED EARTHWORK AND EXCAVATIONS TO PERFORM SCHEDULED WORK. ALL EXCAVATED MATERIALS SHALL BE GRADED IN PLACE (ON-SITE) IN PARK AS DIRECTED BY LANDSCAPE ARCHITECT, INCLUDED IN THE SUBMITTED BID PROPOSAL.
11.) THE CONTRACTOR SHALL INSTALL ALL PROPOSED WORK ON COMPACTED OR UNDISTURBED SUBGRADE.
12.) THE CONTRACTOR SHALL FORM ALL PROPOSED CONCRETE BASE WORK TO MINIMIZE OVERPOURS. ALL FORMS SHALL BE REMOVED AND LEGALLY DISPOSED OFF-SITE.

CONCRETE UNIT PAVERS:

1.) THE CONTRACTOR SHALL LAYOUT PROPOSED PAVER WALK FOR THE LANDSCAPE ARCHITECT'S APPROVAL PRIOR TO INSTALLATION.
2.) ALL PROPOSED SLEEVES SHALL BE SCHEDULE 40 PVC, EXTEND A MIN. 12" BEYOND PROPOSED PAVING EDGES, BURY A MIN. 12" BELOW PROPOSED FINISH GRADE, CAP ENDS, AND STAKE LOCATIONS (BOTH ENDS). CONTRACTOR SHALL SUPPLY LANDSCAPE ARCHITECT WITH AN AS-BUILT DRAWING ILLUSTRATING LOCATION OF ALL SLEEVES.
3.) THE CONTRACTOR IS RESPONSIBLE FOR ALL REQUIRED EARTHWORK AND EXCAVATIONS TO PERFORM SCHEDULED WORK. ALL EXCAVATED MATERIALS SHALL BE LEGALLY DISPOSED (OFF-SITE), INCLUDED IN THE SUBMITTED BID PROPOSAL.
4.) THE CONTRACTOR SHALL INSTALL ALL PROPOSED WORK ON COMPACTED OR UNDISTURBED SUBGRADE.
5.) THE CONTRACTOR SHALL INSTALL COMPACTED 21AA LIMESTONE AGGREGATE AND 2NS SAND SETTING BEDS TO SPECIFIED DEPTHS.
6.) THE CONTRACTOR SHALL INCLUDE A MIN. 6" WIDE OVERDIG AND INSTALL MIN. 6" COMPACTED 21AA LIMESTONE AGGREGATE AND CONTINUOUS CONCRETE RETAINING EDGE.
7.) ALL JOINTS SHALL BE SWEPT WITH GREY POLYMERIC SAND PER MANUFACTURER'S SPECIFICATIONS UPON COMPLETION OF PROJECT.

ENGINEERING & ENVIRONMENTAL SERVICES DEPARTMENT

Application for Engineering Plan Review

1. Project Name: _____

   Project Address: _____ Section: _____

2. Owner's Name: _____

   Company: _____

   Address: _____

   Phone: _____ E-Mail: _____

3. Plans Prepared By: ☐ Engineer ☐ Architect ☐ Surveyor

   Name: _____

   Company: _____

   Address: _____

   Phone: _____ E-Mail: _____

4. Project Status: (check one that applies)

   Planning Commission Approved: ☐ Y ☐ N ☐ NA

   Design Board Approved: ☐ Y ☐ N ☐ NA

   Township Board Approved: ☐ Y ☐ N ☐ NA

   Application for Building Permit: ☐ Y ☐ N ☐ NA

5. Type of Site Improvement: (check all that apply)

   ☐ **Sanitary Sewer:** ☐ Public ☐ Private Sewer Lead

   ☐ **Water Main:** ☐ Public ☐ Fire Protection Line

   ☐ **Storm Drainage:** ☐ Storm sewer ☐ Detention / Retention Storage

   ☐ **Site Grading:** ☐ Parking lot ☐ Retaining Walls

   ☐ **Other:** _____

6. Identify off-site outlet(s) for project storm drainage (by name if possible):

☐ Lake _____ ☐ Wetlands _____

☐ Stream _____ ☐ Open ditch _____

☐ Pond _____ ☐ Storm Sewer _____

☐ Other: _____

7. Will the project include any work or disruption within a floodplain?

☐ No

☐ Yes, ☐ Fill ☐ Structure ☐ Road

8. Will the project include any work within the cross-section of a lake, stream, or wetland?

☐ No

☐ Yes, ☐ Dredging ☐ Stream Relocation

☐ Filling ☐ Stream Crossing

9. Engineering plans have been/ or will be submitted to the following agencies for approval:

☐ RCOC / MDOT for Right-of-Way Work

☐ OCWRC / County Drain Connection or Crossing

☐ OCWRC / Soil Erosion Permit

☐ MDEQ ☐ Wetland ☐ Flood Plain ☐ Water Main ☐ Sanitary Sewer

☐ Other: _____

10. <u>Application Attachments</u>:

The applicant shall submit the following with the completed application:

☐ Four (4) sets of engineering plans

☐ Engineer's cost estimate for site improvements: sanitary sewer, water mains, storm sewers, and grading

11. Plan Review Fees:

After review of the application the Township will request from the applicant the plan review fee based upon 2.50% of the engineer's estimate, or $1,500, whichever amount is greater, plus an administration fee as determined by the most current EESD Fee Schedule.

The plan review includes the initial review and one revised plan review resulting from the engineer's comments. Additional engineering review fees will be required for substantial changes to the project or special consultation is necessary.

Identify the person that will be responsible for paying all review fees associated with this project, if other than the applicant:

Name: _____

Company: _____

Address: _____

Phone: _____

E-Mail: _____

I hereby certify that the proposed work is authorized by the owner of the property and that I have been authorized by the owner to make this application as their authorized agent and we agree to all applicable laws and ordinances of the Township.

Applicant Signature: _____ Date: _____

Applicant Name: _____

Company: _____

Address: _____

Submit completed application and plans to:

Permit E No.	
Date of Issuance	

APPLICANT: _____ hereby makes **APPLICATION for a permit to CONSTRUCT, OPERATE, USE and/or MAINTAIN or to TEMPORARILY CLOSE A COUNTY ROAD** within the part of the right-of-way of road(s) _____ under the jurisdiction of the Board: **a detailed description of the desired facility and/or activity is required in the space provided below:** (include size, length, type of facility; - if underground, indicate depth below surface; if parallel to road, indicate distance from inside edge of facility to edge of pavement, if crossing under roadbed, describe method). **THE FOLLOWING MUST BE ATTACHED TO THE APPLICATION WHEN APPLICABLE**: 1. Plans, specifications and location of facility. 2. Traffic plan and detour route in cases of street closures.

PLEASE CHECK THE APPROPRIATE BOX(ES) THAT APPLY TO THE TYPE OF WORK YOU WISH TO OBTAIN A PERMIT FOR:

☐ Annual	☐ Community Event	☐ Public Utility (i.e. electric, gas, telephone)	☐ Soil Boring/Monitoring Well
☐ Approach/Private Road Access	☐ Landscaping/Grading	☐ Sanitary/Storm Sewer	☐ Watermain
☐ Cable TV	☐ Pathway/Sidewalk	☐ Sign/Subdivision Entrance Marker	☐ Other _____

City or Township _____ Section No. _____

The above activities will be carried out in accordance with plans, specifications, maps and statements filed with the R.C.O.C. as part of this application, and if said application is approved, the above named applicant agrees to abide by the **CONDITIONS** contained on the reverse side. Since a permit will have to be secured from the Board prior to the start of any construction or maintenance operations proposed by this application, it is intended that the **SUPPLEMENTAL SPECIFICATIONS**, on the reverse side, are to be incorporated as part of the plans or specifications required for this proposed work.

Form 64A (12/08)

AS A CONDITION OF THE APPROVAL OF THIS APPLICATION, THE APPLICANT AGREES TO THE FOLLOWING CONDITIONS:

1. The application agrees to secure, or cause to be secured, a permit from the Board prior to the commencement of construction or maintenance operations. If a contractor is to perform the construction or maintenance entailed in this application, the contractor shall secure the permit from the Board prior to the commencement of construction or maintenance operations and thereby assumes responsibility, along with the applicant, for any provisions of this application which apply to them.
2. Any and all construction proposed under this application will meet all requirements of the Board, together with the Supplemental Specifications as set forth below.
3. The applicant agrees to save harmless, indemnify, defend, and represent the Board and its employees against any and all claims for bodily injury or property damage, or any other claim arising out of or related to the creation, operation, use, or continuing existence of the structure or facility covered by the permit or for any other work done within county road right-of-way whether or not specifically authorized or in conformance with the description of activities for which the permit was issued . Applicant agrees and understands that the obligations set forth herein are binding upon their successors, transferors, assigns, sureties, and guarantors. The Applicant shall maintain insurance of a type and in an amount in conformance with the Board's established requirements and provide certificates of insurance in a type and amount which shall assure conformance with the Board's established requirements is currently in force for any and all facilities installed in the Board's right of way.
4. The applicant agrees to surrender the permit herein applied for; surrender all rights hereunder; cease operations; and remove, alter, relocate at applicant's own expense, the facilities for which this permit is granted whenever ordered to do so by the Board because of the need for the area covered by this permit for public uses or because of a default in the conditions of the permit. Upon failure to remove, alter, relocate or surrender the facilities pursuant to the order of the Board, the applicant agrees to reimburse the Board for its cost in doing same.
5. Nothing in this application shall be construed to grant any rights whatsoever to any public utilities whatsoever except as to the consent herein specifically given, nor to otherwise impair any existing rights granted in accordance with the constitution or laws of this State.
6. The obligation to construct, operate, use and/or maintain the facility to the satisfaction of the Board remains in force as long as the facility exists and is within the right-of-way under the jurisdiction of the Board. The applicant is obliged to repair any damage to the road and right of way which is a result of the facility and which occurs or appears after the permit licensee is released.
7. The necessary construction zone signing for the protection of traffic shall be in accordance with the most current edition of the Michigan Manual of Uniform Traffic Control Devices, Part 6. All such devices shall be furnished, installed and maintained by the Permit Holder. All construction signage shall have black lettering on a reflective florescent orange background, unless otherwise specified. The Permit Holder shall provide any additional signs, barricades and/or lights, at the Permit Holder's expense, required to protect the general motoring public and the work zone when requested by the Road Commission.
8. **ADDITIONAL CONDITIONS**: As will be identified in approved permit description.

SUPPLEMENTAL SPECIFICATIONS

1. **EXCAVATION AND DISPOSAL OF EXCAVATED MATERIAL:** The contractor and/or the utility company shall provide and place the necessary sheeting, shoring and bracing required to prevent caving, loss or settlement of foundation material supporting the pavement, or any other highway installation such as sewers, culverts, etc. The contractor and/or utility company shall assume the full responsibility for this protection. Excavated material shall be stocked in such locations that it does not obstruct vision on the traveled portion of the highway and in such a manner that it will not interfere with the flow of traffic. Sod and topsoil shall be stocked separately from other excavated material. The applicant shall dispose of all surplus and unsuitable material outside of the limits of the right-of-way unless the permit provides for, and with approval of abutting property owners, disposal at approved locations with the right-of-way. In the latter case, the material shall be leveled and trimmed in a manner approved by the Road Commission for Oakland County.
2. **BACKFILLING AND COMPACTING BACKFILL:** All trenches, holes, pits, and other excavations shall be filled with approved excavated earth or with MDOT Class II granular material if so provided, placed in successive layers not more than 9 inches in depth, loose measure, and each layer shall be thoroughly compacted by tamping and all backfill compaction will be subject to check by the Controlled Density Method (minimum 95%). Restoration shall be such that it will provide a condition equal to or better than the original condition and in accordance with current Road Commission for Oakland County standards. Any excavation within the right of way outside traveled portion of road must be maintained until all settlement has occurred and must be restored and seeded or sodded as directed. The permit will not be released until the Road Commission is satisfied that no further settlement will occur.
3. **CROSSING ROADBED BY TUNNELING, DIRECTIONAL BORE, JACK CASING AND BORE:** When the pipe is installed by tunneling without cutting the existing pavement, the tunnel shall be adequately sheeted or shored to prevent the sides and top from collapsing or the pavement from settling or cracking. Directional bore shall be at least 4 diameters under the pavement or 48 inches, whichever is greater. When the pipe is installed by boring and jacking, the leading edge of the pipe must always precede the auger. The tunnel backfill shall be made by tamping a dry mix of lean concrete into place so as to completely fill any voids remaining around the installation. The concrete shall be composed of one part of Portland cement and 10 parts of sand-gravel by volume. Tunnel and boring pits shall be at least 10 feet from the edge of the pavement unless otherwise approved.
4. **CROSSING BY CUTTING GRAVEL ROADS:** All trenches are to be backfilled with approved material to within 12 inches of surface within the limits of the roadbed. Backfill methods will be as described in paragraph 2 above. All surplus excavated material will be disposed of as described in paragraph 1. The top 12 inches within the roadbed will be backfilled with processed road gravel (MDOT 22A or 23A). Trenches outside of the roadbed will be backfilled in accordance with paragraph 2 above.
5. **CROSSING BY CUTTING PAVEMENT AND TRENCHING:** When this method is approved by the Road Commission, the pavement shall be cut so that the opening is a minimum of 5 feet wide and at least 1 foot wider on each side than the trench. In no case shall an open cut result in a remaining slab width of less than 5 feet from patch to an existing joint. The cut shall be made by sawing to a full pavement depth. Cuts in concrete residential and commercial drives shall be as above except that the patch width shall be a minimum of 3 feet and the remaining slab from patch to existing joint a minimum of 3 feet. Backfill shall be made with MDOT Class II granular material. After the backfill has been placed by control density method and thoroughly compacted, the pavement shall be replaced with a temporary surface of approved hot-mixed bituminous material and later replaced with new pavement of the original type and quality by the Permit Licensee unless other provisions are included in the permit.
6. **DEPTH OF COVER MATERIAL:** Pipes shall be placed to a depth that will provide not less than 4 feet of cover between the top of roadway surface and top of the pipe.
7. **TREE TRIMMING OR REMOVAL:** All trees that may be affected by the proposed construction shall be shown on the plans. The plan must clearly indicate which trees are proposed to be removed, trimmed and/or tunneled. This work, if approved, must be done in accordance with current Board standards, including advance notification of abutting property owners. Wood Disposal License Agreement(s) will be required for any tree work
8. **DISPOSAL OF GROUND WATER:** Roadside drainage systems – open ditches, storm sewers, etc. – shall not be used for the disposal of water pumped from below the surface of the ground unless specifically allowed by the Road Commission. Details such as volume and frequency of discharge, erosion control, duration of use, NPDES permit and other pertinent information as may be required must be submitted with the application for such permission.
9. Any proposed operation in the right of way not covered by the above specifications, submitted with this application, shall be done in accordance with any additional specifications deemed necessary by the Board or as outlined in the Permit Rules, Specifications and Guidelines.

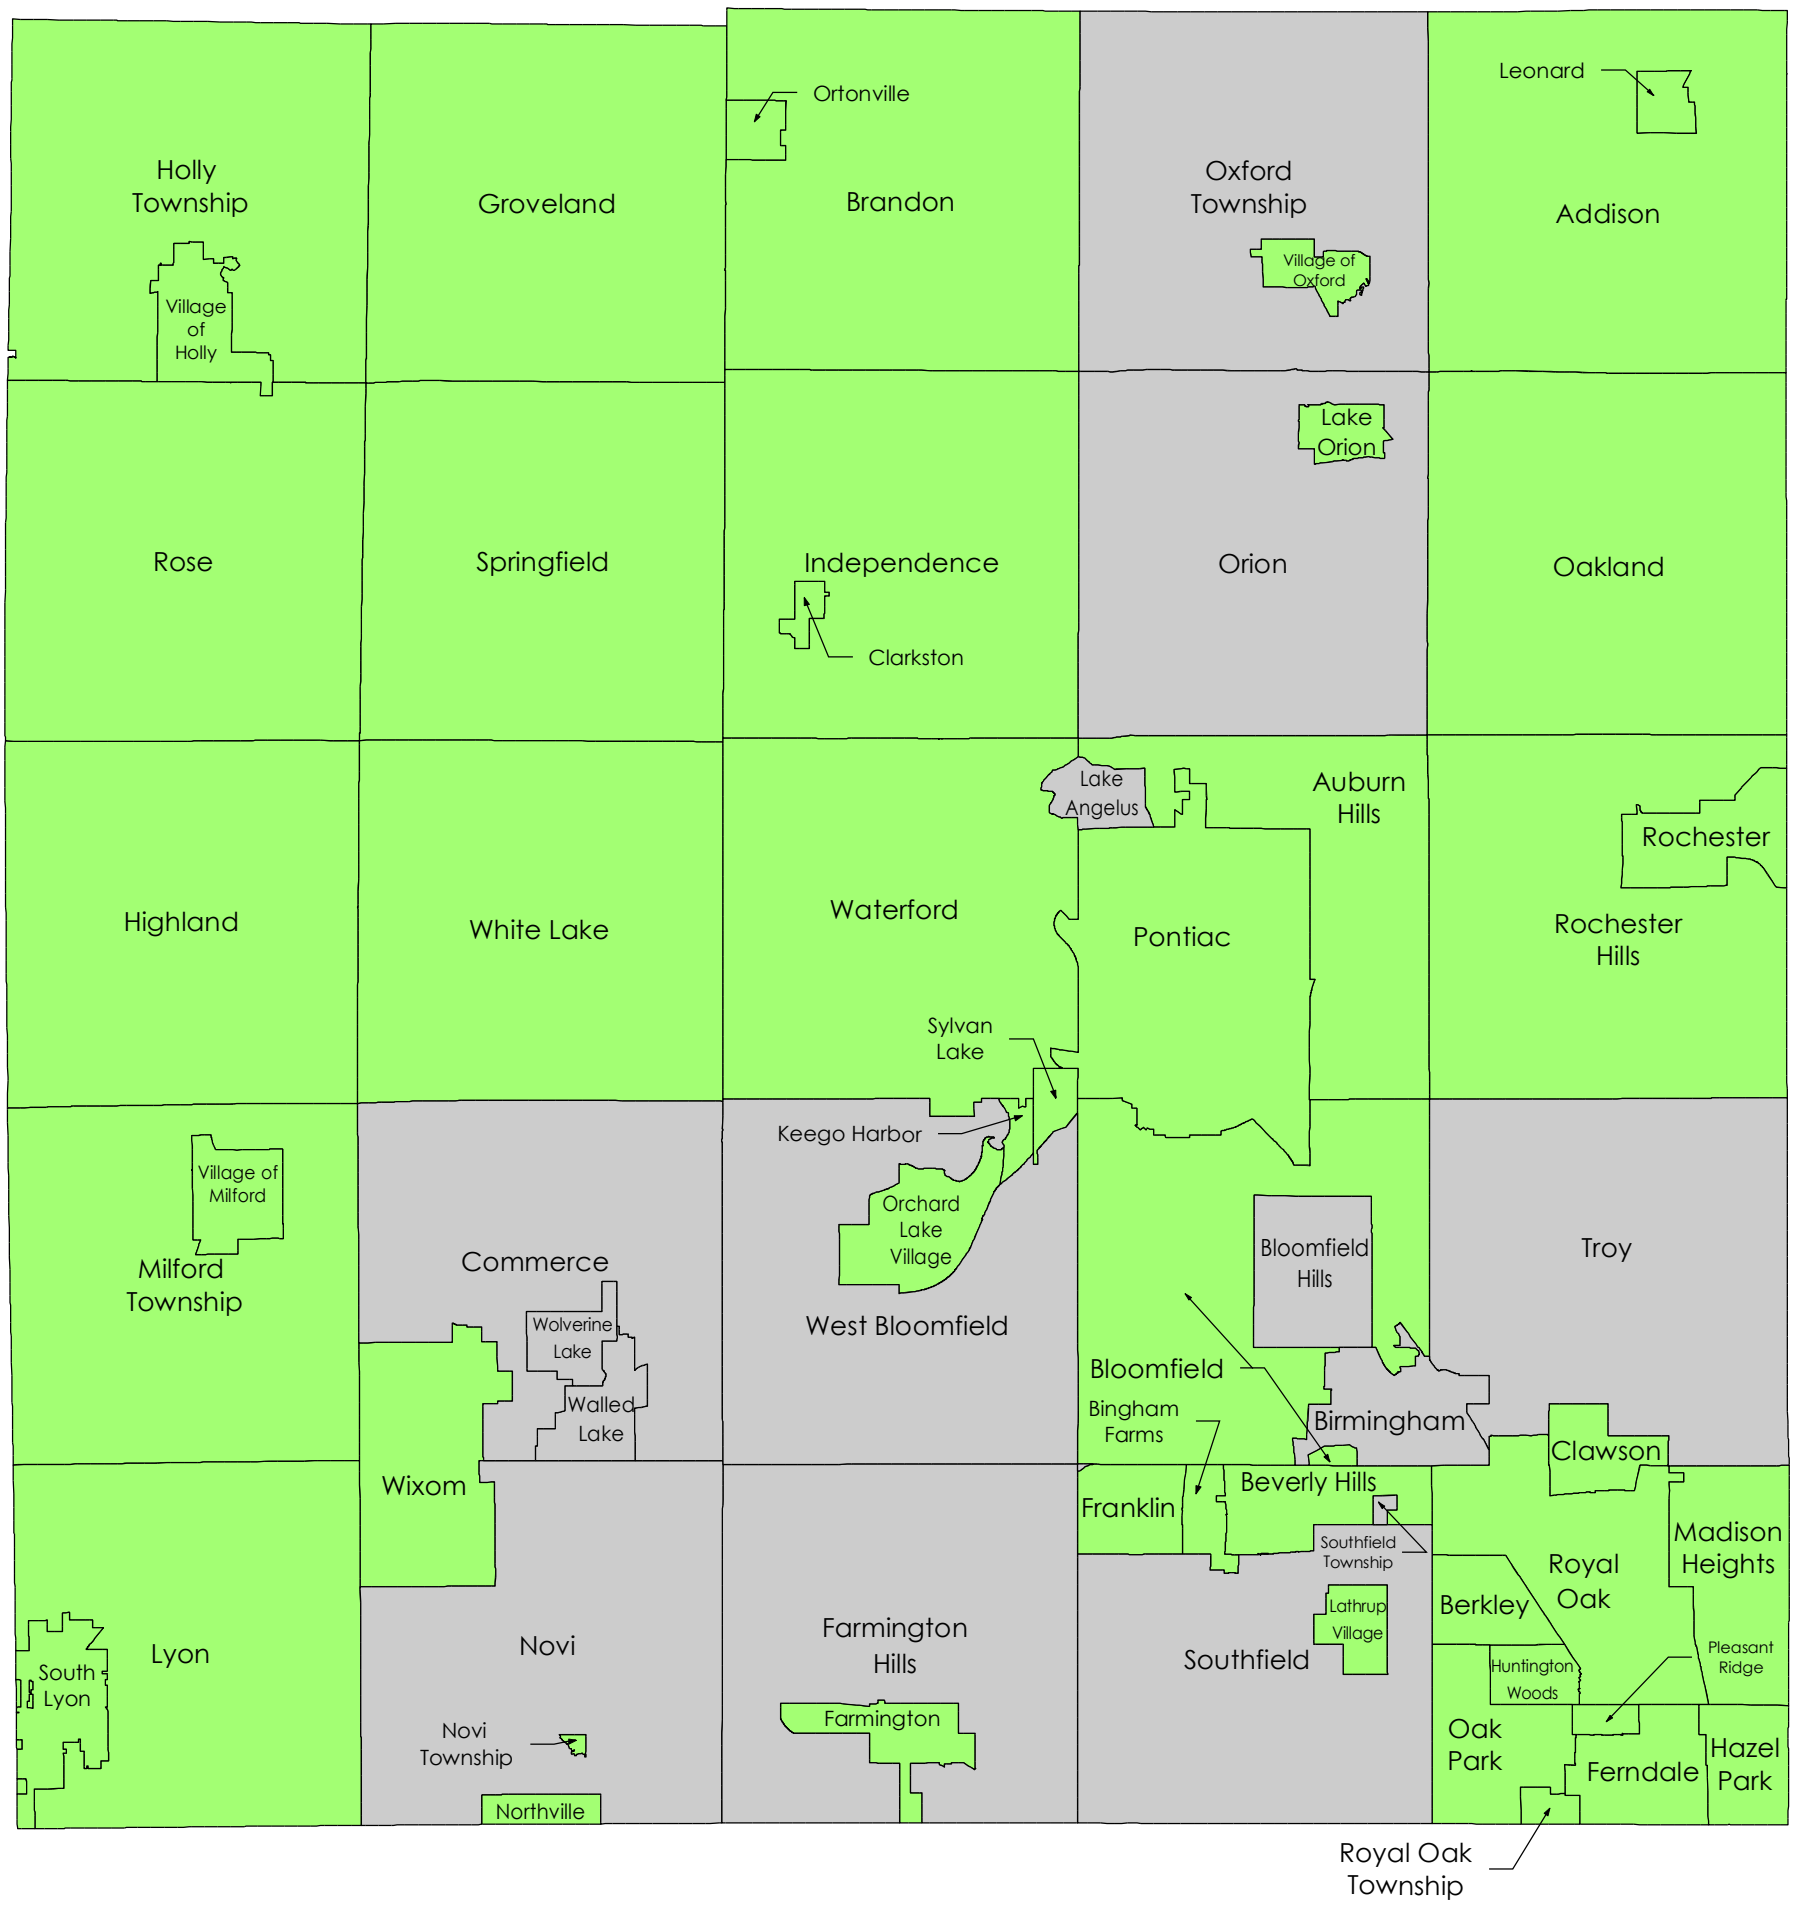
APPLICATION AND PERMIT FEES AS OF OCTOBER 1, 2021

Each item listed below should be a separate application. Many projects will have more than one permit required – one for approach and related work and another for underground utility connections. Please direct any questions to (248) 858-4835 or permits@rcoc.org. Please make checks payable to the Road Commission for Oakland County. Applications fees are not required for governmental organizations (Municipalities, Public School Districts, Public Libraries, etc.)

RCOC is now accepting digital applications and plan submittals at permits@rcoc.org. Payment can be made by electronic check or credit card (in person or over the phone).

TYPE OF WORK	APPLICATION FEE	PERMIT FEE
COMMERCIAL DRIVE/PRIVATE ROAD		
Single driveway without passing or turning lanes	$ 400.00	$ 500.00
Single driveway with passing lane or turning lanes	$ 500.00	$ 500.00
Multiple driveways	$ 500.00	$ 1,000.00
Reconstruct or pave existing	$ 300.00	$ 100.00
Utility Drive – Rule 6.6	$ 150.00	$ 50.00
IMPROVING UNCERTIFIED		
Residential Street	$ 450.00	$ 1,000.00
ROAD AND STREET APPROACHES		
New public connection *(Inspection fee may be collected as part of plat inspection administered by SID)*	$ 300.00	$ 200.00
PAVING OF EXISTING PUBLIC ROAD		
Applicant to provide for testing, inspection by Registered Engineer, etc.	$ 1,200.00	$ 100.00
Paving less than 500 feet	$ 500.00	$ 100.00
RCOC to provide testing, engineering inspection, etc. by way of agreement with applicant	$ 1,200.00	8% of Contract
NON-MOTORIZED PATHS		
Less than 300 feet in length	$ 150.00	$ 150.00
Greater than 300 feet in length	$ 200.00	$ 500.00
LANDSCAPING		
Plantings, berms, grading surfaces, drainage work. ditch enclosure, entrance markers, signs	$ 200.00	$ 100.00
SPECIAL CATEGORIES, SIGNAL FEES		
Groundwater wells, soil borings	$ 200.00	$ 200.00
Monitoring wells	$ 200.00	$ 200.00
Seismic testing, geo probe, other	$ 200.00	$ 100.00
Intersection traffic signal	$ 700.00	$ 50.00
Pedestrian Signals	$ 300.00	$ 100.00

TYPE OF WORK	APPLICATION FEE	PERMIT FEE
UNDERGROUND UTILITY, SANITARY, WATERMAIN		
By directional bore or plowing	$ 100.00	$ 100.00
(*200 lineal feet or less, .35 per foot in excess of 200 feet with maximum of $250.00, these amounts will be determined by RCOC.)*		
By trenching without pavement removal	$ 100.00	$ 100.00
By trenching with pavement removal	$ 200.00	$ 200.00
(*200 lineal feet or less, .65 per foot in excess of 200 feet with maximum of $1,000.00, these amounts will be determined by RCOC.)* (*REGARDLESS OF LENGTH/METHOD*)		
UNDERGROUND INSTALLATION		
Impacting RCOC facilities bond for installations on our poles	$ 500.00	$ 1,000.00
MAJOR UNDERGROUND UTILITY PROJECT		
Greater than 2.0 miles in length (**> 1 MILE, OR 2+ PRIMARY ROAD CROSSINGS**)	$ 200.00	$ 1,000.00
Removal and restoration of .5 or more miles of roadway	$ 200.00	$ 1,000.00
Numerous road crossings and/or open-cut of roads	$ 200.00	$ 1,000.00
UTILITY OVERHEAD (JOINT APPLICATION AND PERMIT FEE)		
Less than 1,500 feet in length and on one road	$ 200.00	$ 200.00
Greater than 1,500 feet in length or multiple road	$ 200.00	$ 300.00
STORM WATER CONNECTION TO AN EXISTING SYSTEM	$ 200.00	$ 200.00
SUMP PUMP CONNECTION TO AN ENCLOSED SEWER SYSTEM	$ 200.00	$ 100.00
ANNUAL DUST CONTROL PERMIT		
Joint application and permit fee	$ N/A	$ 100.00
SURVEYING IN COUNTY ROAD RIGHT-OF-WAY		
(Joint application and permit fee)	$ N/A	$ 150.00
FORESTRY (JOINT APPLICATION AND PERMIT FEE)		
Tree removal or planting by property owner on their property	$ N/A	$ N/A
Tree removal or planting as part of work with separate permit	$ N/A	$ N/A
Tree removal or planting	$ 100.00	$ 200.00
(Fee waived if applicant is abutting homeowner, or if part of separate application.)		



TYPE OF WORK	APPLICATION FEE	PERMIT FEE
MUNICIPALITY OR PUBLIC UTILITY, PARADES AND BANNERS ANNUAL PERMITS (Joint application and permit fee)		
Maintenance and/or repairs of utilities in the right-of-way overhead or underground	$ N/A	$ 550.00
Installation of new facilities on regular or recurring basis	$ N/A	$ 550.00
Maintenance and/or repair issued to governmental agencies	$ N/A	$ N/A
RESIDENTIAL DRIVEWAYS		
Pave Existing (remove/replace or repair)		$ 100.00
New Driveway		$ 150.00
SPECIAL CATEGORIES (NEW)		
Unauthorized work performed. prior to issuance of permit	Application and Permit Fee x 2	
No Show w/Inspection Scheduled	One (1) hour of inspection time	
Road Closure	Application fee, plus $500.00	

ROAD COMMISSION FOR OAKLAND COUNTY
TRANSPORTATION

TYPE OF WORK	PERMIT FEE
SINGLE MOVE EXCEEDING CAB CARD LIMITS	$ 50.00
SINGLE MOVE MOBILE HOME/OFFICES UP TO 16'	$ 50.00
ANNUAL CAB CARD Per Licensed Vehicle	$ 65.00
ANNUAL CAB CAR FOR UP TO 16' MOBILE HOME/OFFICE	$ 200.00
BUILDING MOVE/SUPER MOVE (*Permit includes two hours of Weighmaster escort. Additional charges for overtime or beyond two hours*)	$ 350.00

		APPLICATION FEE	PERMIT FEE
1.	**SPECIAL HAUL ROUTES**	$ 150.00	$ 350.00

(*Permit fee includes periodic inspection by a Weighmaster*)

Accessibility Evaluation and Barrier Removal Recommendations

The identification of accessibility barriers is the key to developing strategies to remove barriers to enhance accessibility for all people of all abilities utilizing this environment. This accessibility evaluation was conducted on site September 26-28, 2022. The following report identifies accessibility barriers observed, the Americans with Disability Act Accessibility Guideline citation relevant to the identified barrier, and barrier removal recommendations for each identified barrier. The intent of the report is to assist the farm staff in making thoughtful informed decisions to remove accessibility barriers and improve inclusive universally accessible experiences for everyone together. The following general observations and environmental, programmatic, and operational barrier removal strategies are intended to give overarching guidance that can affect specific accessibility decisions for the environment as well as programs and services.

Environmental, Programmatic and Operational Accessibility Barriers	**Accessibility Enhancement Recommendations**
No connected accessible routes to outdoor classrooms or interpretive experiences such as the historic cabin, garden walks, barns, animal enclosures, production garden, community gardens, challenge courses, pumpkin patch, chicken coop, etc.	It is imperative that accessible connecting routes be developed to the outdoor classrooms and interpretive experiences. All students and guests should be able to, at a minimum, visit and experience these amenities. There is plenty land space to create these accessible routes with thoughtful planning and professional design, so routes don't go straight up and down steep slopes. Engaging trail design professionals to develop accessible reroutes to these main amenities will result in greater accessibility as well as environmental protection of the farm property. Additionally, the purchase of at least two accessible hiking wheelchairs such as the Action Track Chair, Terrain Hopper, or GRIT wheelchair will greatly enhance access. These hiking assistive devices should be available for free use for all programs and on all days/times the farm is open. They should be advertised on the website and set out for use whenever staff is on site and the center is open.

Extreme slopes on many routes render them technically inaccessible to guests with mobility related disabilities who use personal mobility devices.	The layout of current routes have not been designed to reduce running slopes. It is imperative to give guests steep slope information so they can decide if they have the ability and adaptive equipment to safely navigate each route. This information should be given at each route intersection and can be incorporated into the site map. In order to give accurate slope information a professional mapping of the entire site should be conducted. In particular, the route from the rear of the visitor center down to the event space at the bottom of the extremely steep hill should be closed off immediately to prevent further injury accidents!
Many of the route surfaces around the main structures on the farm are in disrepair such as cracking/heaving/sinking asphalt and boardwalks. There are also many routes to outer experiences that are unimproved, mowed grass.	The existing route surfaces that have accessibility barriers should be, at the very least repaired, and should be considered for replacement soon. These surface barriers are not only an access barrier for people with disabilities, but a safety concern for trip and fall of little ones as well. To create greater access to experiences such as the chicken coop that are transient and relocated, temporary route surface such as Mobi-mat can used to "direct human behavior" on to the accessible route to the experience.
No directional or interpretive signs provide information in any alternative accessible formats	Providing information in alternative formats can greatly enhance access for people with vision impairments and non-readers alike. Automated systems exist that connect to cell phones that "ping" when someone approaches an interpretive information sign or trail intersection.
Some of the accessibility barriers are due not from design but ongoing maintenance of constructed features such as boardwalks and bridges.	Developing a robust maintenance program to maintain the accessible features of the site can greatly enhance accessibility for everyone. This requires time and expertise to identify areas in need of maintenance and to preform the upkeep. Some simple things like keeping encroaching vegetation cut back from the sides and overhead could be done by volunteers.
The website has no accessibility information regarding programs or the facility	As a school district program, you have an obligation to provide accessibility accommodations for all your programs and this should be articulated on your website. Developing informative accessibility information on the website will help visitors to plan their visits as well.

Photo	Barrier Description	ADAAG	Barrier Removal Recommendations
 	Visitor Center parking lot 52 spaces 1 van accessible space appropriately signed and striped 1 car accessible space appropriately signed and striped 1 car space signed with a portable sign & not striped, does not count as accessible space in required count	208.2 502	3 accessible permanent spaces required At least one van accessible space required Add one additional permanent parking space with appropriate markings and signage

Photo	Barrier Description	ADAAG	Barrier Removal Recommendations
 	Visitor Center parking lot Portable benches located on the sidewalk reducing the clear width to less than the required 5’	402 403	Move portable benches off sidewalk or remove Create accessible bench spaces surrounded by accessible surface with accessible clear space on at least one end and anchor so they don’t migrate back on to the sidewalk

Photo	Barrier Description	ADAAG	Barrier Removal Recommendations
	Route to Gazebo from historic home side No visual step edge protection indicating change of level	504 402 403 302	Consider reconstructing stairs to meet accessible design requirements including adding handrails To enhance accessibility, at the very least, add accessible handrails to both sides of the stairs To enhance accessibility and safety add high contrasting stair edge color to indicate a step edge Add information at stairs directing people to the accessible route on the other side of the gazebo to the ramp up from the front cabin route Another consideration is to remove the lower two steps and regrade to create an accessible route to the lower deck in front of the gazebo that takes users to the ramp at the other end of the gazebo, also have to add accessible route end to connect with the route to the cabin Best option is to remove current wood stairs and ramps, regrade and create accessible route to gazebo from both sides 
	No handrails		
	Running slope of ramp to gazebo is too steep at +13% Ramp has no accessible design handrails		
	Ramp has an end platform with a running slope of 7% and no level landing and ends with a step down to a platform creating a dangerous roll off/ tip off end		

Photo	Barrier Description	ADAAG	Barrier Removal Recommendations
	Route to gazebo from the historic cabin side Route to gazebo from the cabin side is too steep with a running slope of +10.5% and no accessible handrails	402 403	Reduce ramp running slope to less than 5% (1'/20') Best option is to remove current wood ramp, regrade and create accessible route to gazebo from both sides

Photo	Barrier Description	ADAAG	Barrier Removal Recommendations
 	Route to firepit gathering space from gazebo Good wide path, relatively level, but the gravel surface is large +1" chunk which greater than ¼" accessible size surface	402 403 302 305	Top dress and maintain accessible ¼" crushed aggregate surfacing When setting up temporary event spaces and amenities make sure they are on accessible surface, connected to an accessible route, and provide accessible side-by-side sitting space between seating

Photo	Barrier Description	ADAAG	Barrier Removal Recommendations
	Route to historic house Good route design, but once again the route has large +1” chunk gravel surface, which greater than ¼” accessible size surface	402 403 302	Top dress and maintain accessible ¼” crushed aggregate surfacing
	Step up onto porch is too high at 1½” change of level, which is greater than ¼” accessible change of level allowed	303	Add transition plate on porch down to accessible ¼” crushed aggregate surface and remove rug

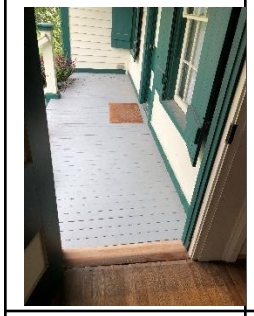

Photo	Barrier Description	ADAAG	Barrier Removal Recommendations
	Historic home interior Interior door too narrow	404	If the home is deemed a historical structure no accessibility changes to the structure may be required, but…providing accessible interpretive information of the areas of the home that are not made accessible should be a priority and can be provided through on-site photos and/or video (captioned/audio described) tours of the inaccessible spaces
	Toilet is accessible height, but sink is not accessible design and there is not accessible clear space in the toilet room		Interior door may be able to be made accessible by removing the door and door jams to create a 32” opening
	Two doors out to back porch with steps down to the ground, neither is accessible width and door thresholds have change of level greater than ¼”		If an accessible route along the roadside fence line is created a ramped route onto the back house porch could be created to create an accessible route into the home from the rear porch. This would also require door threshold adjustments to eliminate the changes of level greater than ¼”

Photo	Barrier Description	ADAAG	Barrier Removal Recommendations
	Water hand pump Surrounding windmill structure creates a barrier on the accessible route, pounds of force is greater than 5# to operate pump and clear space in front of spigot is blocked by concrete pad, topped with metal drain grids, topped by wood slabs under bucket	402 403 302	If use of the water pump is restricted to staff only, accessible changes only need to be made to accommodate a staff person with a disability whose duties include access to and use of the water pump, but…if guests or volunteers have access to use the pump then accessibility changes are required Create accessible route to pump, reduce the pounds of force to operate pump, remove barriers in front of spigot

Myron Gwinner	
Major Modifications Since last Inspection	No

Disclaimer

Experiential Systems, Inc. (ESI) believes the information contained within this inspection report to be correct at the time of completion. The report is based on a limited visual inspection of the challenge course structures, systems and components. The inspection was performed in accordance with relevant industry standards and practices for challenge course inspections unless otherwise listed within the scope of the contract for services.

INSPECTION SCOPE:
The scope of the inspection is limited to the items listed within this report, and as seen and evaluated on the date(s) of the inspection. The inspection and the provided report are but a snapshot of the course structures, components and installation areas as they were seen during a specific moment in time, and it is beyond the scope of this inspection or the associated report to attest to any future usability or condition of a course, system or component that may be subject to environmental damage, normal wear and tear, abnormal or unauthorized use, or intentional or accidental modification by others.

The inspector is a challenge course generalist and is not acting as a licensed engineer or expert in any other specific craft or trade. If the inspector recommends that the Client consult with specialized experts, the Client must do so at the Clients expense (ex. arborist, engineer, etc.).

NOT INCLUDED IN THE SCOPE OF INSPECTION:
Any area which is not exposed to view, is concealed, or was inaccessible because of soil, walls, fixed or immovable barriers, or any other activity, system or component installed on your property that is not included within the inspection report. The inspection does not include any destructive testing or dismantling of components or systems. Client agrees to assume all risks for any and all conditions which are concealed from view at the time of the inspection. The inspection is not a challenge course warranty, guarantee, or insurance policy. Some specific items not included in the scope of this inspection include, but are not limited to: soil or geological inspection; arboricultural inspection; building code or zoning ordinance violations; engineering analysis or calculations of any system; efficiency analysis of any installed components or systems; or complete identification of mold, fungi, pests, termites, or other wood destroying organisms.

CLIENTS RESPONSIBILITIES:
It is the Client’s responsibility to understand and adhere to all requirements and regulations set forth by any Authority Having Jurisdiction (AHJ) applicable to their site(s) and organization including but not limited to Federal OSHA codes, and state regulations regarding challenge courses and related structures. This includes but is not limited to AHJ requirements related to insurance, work safety, and industry specific standards such as those produced by ASTM International, the Association for Challenge Course Technology (ACCT), The Professional Ropes Course Association (PRCA), The Climbing Wall Association (CWA), or the International Standards Organization (ISO).

It is the Client’s responsibility to retain at all times a designated Qualified Course Manager who shall be charged with the responsibility to oversee operations for all elements, structures, and programs in accordance with the ANSI/ACCT 03-2019 Challenge Course and Canopy/Zip Line Tour Standard and the ACCT Qualified Challenge Course Professional (QCCP) Guidelines, and ensure that staff training and skills verification are completed annually to the same standards.

Copies of the most recent industry standards can be procured from the standard setting bodies directly. Experiential Systems recommends membership with at least one relevant standard setting body, and participation in ongoing relevant professional development.
Information on the latest workers compensation and OHS / WHS laws can be found at the relevant State WorkCover / WorkSafe Authority.
Information on the latest workers compensation and OHS / WHS laws can be found at the relevant State WorkCover / WorkSafe Authority.

Course and Operation Documentation / Policy and Procedures

Annual Arborist Report on File

Non-Compliant - Organization does not have the required annual arboricultural inspection documentation (D.2.3. Inspection and Evaluation: A tree inspection and evaluation shall be conducted by a qualified person.)

ESI recommends that all trees used in high challenge course activities be inspected annually by a certified arborist to ensure the health and vitality of the tree. Building in trees takes extra maintenance.

Low Ropes Course / Low Ropes Course / Low Ropes Course 1 / Fixed Low Element / Fixed Low Element 3

Element Condition

Non-Compliant

This element has been heavily affected by tree growth and is not safe to use. Significant repairs will be necessary.

Low Ropes Course / Low Ropes Course / Low Ropes Course 1 / Fixed Low Element / Fixed Low Element 7

Element Condition

Non-Compliant

The beam was broken by a tree several years ago. This should be removed to prevent injuries due to misuse.

Climbing Structures: Tower - Stand-Alone - Wall / Climbing Structures: Stand-Alone / Climbing Structures: Stand-Alone 1

Life Support System Condition

Non-Compliant

The Tree that is shared by the Giants Ladder shows signs of significant decay. An arborist inspection will be needed to determine the health of the tree.
The backup Loop cable is beginning to be affected by tree growth. This will need to be replaced soon.

Photo 20

Climbing Structures: Tower - Stand-Alone - Wall / Climbing Structures: Stand-Alone / Climbing Structures: Stand-Alone 1

Element Condition

Non-Compliant

The tree shows signs of significant decay.

Climbing Structures: Tower - Stand-Alone - Wall / Climbing Structures: Stand-Alone / Climbing Structures: Stand-Alone 1

Overall Structure Condition

Non-Compliant

Tree growth issues and arborist report

Climbing Structures: Tower - Stand-Alone - Wall / Climbing Structures: Stand-Alone / Climbing Structures: Stand-Alone 2

Life Support System Condition

Non-Compliant

The Tree that is shared by the Beam Crossing shows signs of significant decay. An arborist inspection will be needed to determine the health of the tree.
The backup Loop cable is beginning to be affected by tree growth. This will need to be replaced soon.

Photo 24

Climbing Structures: Tower - Stand-Alone - Wall / Climbing Structures: Stand-Alone / Climbing Structures: Stand-Alone 2

Element Condition

Non-Compliant

The eye bolt suspending the element is pulling through the tree. This is an indication of weakness in the tree itself.

Photo 25

Climbing Structures: Tower - Stand-Alone - Wall / Climbing Structures: Stand-Alone / Climbing Structures: Stand-Alone 2

Overall Structure Condition

Non-Compliant

There are indications of weakness in the trees leading to movement of the bolts

Course and Operation Documentation	1 flagged
Operational Review	
Has a documented operational review, or equivalent, been completed within the last 5 years?	Compliant - Organization has had an Operational Review or equivalent within the last 5 years or this structure was built within the last 5 years
Name of Reviewing Organization	
Peer Review with Upland Hills School	
Date of last operational review (if applicable)	05/20/2022
Policy and Procedures	1 flagged
Participant Health Screenings/Forms	Compliant - Health screenings and/or forms are used with participants
Liability Releases and/or Waivers	Compliant - Liability releases and/or waivers are used with participant
Equipment Inspection and Use Log	Compliant - Equipment inspection and use logs are present and up to date
Course Pre-use Logs	Compliant - Organization has a up-to-date course pre-use inspection log
Maintenance Logs	Compliant - Organization has up-to-date maintenance logs
Course Periodic Inspection Logs	Compliant - Organization has a up-to-date course periodic inspection log
Documented Risk Management Plan	Compliant - Organization has a documented risk management plan
Emergency Management Plan	Compliant - Organization has a documented emergency management plan
Near Miss Report Forms	Compliant - Organization documents near misses in a consistent manner
Incident Report Forms	Compliant - Organization documents incidents in a consistent manner
Accident Report Forms	Compliant - Organization documents accidents in a consistent manner
	Compliant - Organization

Annual Incident Analysis	documents an annual analysis of all incident documentation including remedial measures or changes implemented
Operations Manual w/Standard Operating Procedures (SOPs)	Compliant - Organization has operations manuals or SOP's for all inspected activities
Employee Policy Manual	Compliant - Organization has employee manual
Work at Height Plan	Compliant - Organization has a documented work at height plan
Employee Training and/or Skills Verification	Compliant - Organization has up to date records of all staff training
Training Organization	In-House

Level II Facilitator

Engineering, Design, Building Plans or As-Built Drawings	Compliant - No plans or engineering documentation for course structures are available - While best practice, the course was designed and installed prior to requirements for such by industry standards and/or regulations.
Course Acceptance Inspection Documents	Compliant - Organization Has No Acceptance Inspection Documents for Any Activities - While best practice, the course was designed and installed prior to November 2012, when this standard was added. All Major modifications after November 2012 would require Commissioning Documents (none have occurred)
Annual Arborist Report on File	Non-Compliant - Organization does not have the required annual arboricultural inspection documentation (D.2.3. Inspection and Evaluation: A tree inspection and evaluation shall be conducted by a qualified person.)

ESI recommends that all trees used in high challenge course activities be inspected annually by a certified arborist to ensure the health and vitality of the tree. Building in trees takes extra maintenance.

Comments and Considerations

Course and Equipment - Things to Consider

Petzl harnesses and helmets have a max life of 10 years. Any failure to pass pre-use inspection requires immediate removal from service.

Headwall harnesses have a max life of 10 years. Any failure to pass pre-use inspection requires immediate removal from service.

Singing Rock harnesses have a max in-service life of 10 years with a max shelf life of 12 years. Any failure to pass pre-use inspection requires immediate removal from service.

Most metal carabiners have a max in service life only based on condition. Any failure to pass pre-use inspection requires immediate removal from service.

Course and Equipment - General Comments

The Elements that are built in Trees are continuing to be heavily affected by tree growth. They have been repaired several times and will continue to need extensive maintenance to keep operational. These are very near to the end of their useful life. Plans need to be made to replace these elements.

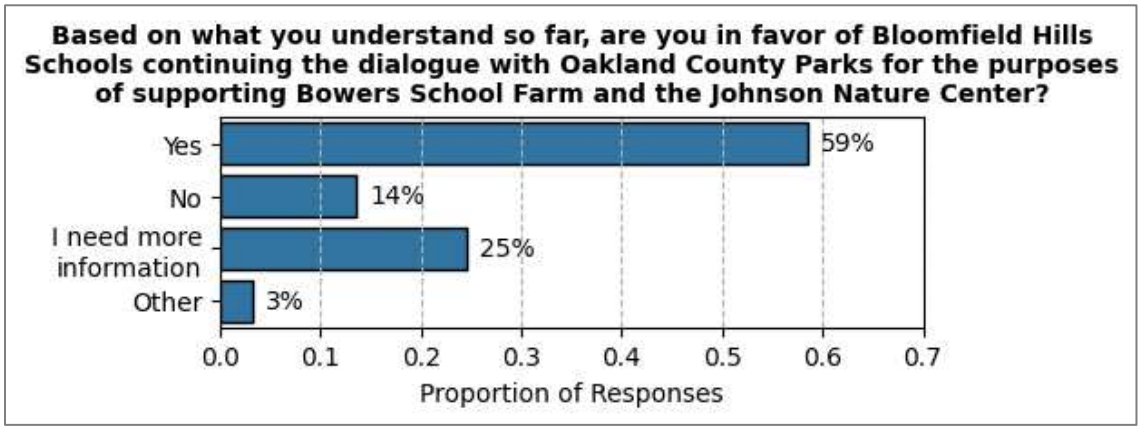
Background

Oakland County Parks (OCP) and Bloomfield Hills Schools (BHS) are exploring a potential intergovernmental partnership to support and strengthen Bowers School Farm (BSF) and the Johnson Nature Center (JNC). While no agreements have been made, early discussions suggest a model where Bloomfield Hills Schools would continue to have priority access for educational programming, while Oakland County Parks would oversee operations and management with a focus on bolstering recreation activities.

In-person community engagement opportunities were held at both Bowers School Farm and the Johnson Nature Center, and an online survey was also available to provide feedback on this potential partnership. The purpose of the online survey was three-fold:

1. To measure the amount of public support for Bloomfield Hills Schools to continue dialogue with Oakland County parks about this potential partnership.
2. To determine community priorities related to offerings, features, and activities related to Bowers School Farm and the Johnson Nature Center
3. To analyze how often these facilities are visited and the different ways visitors use them.

Around 80 people engaged with the materials present at the in-person events and 646 individuals sent in complete responses to the online survey, for a total of 727 participants.



Community Feedback Summary

Support for the Potential Partnership

59% of respondents answered "Yes" to a question about whether they support the dialogue that may lead to a partnership. An additional 1.5% answered "Yes, with conditions" and an additional 0.5% are "leaning yes", for a total of **61% in support**. 25% need more information and **14% are not in support** (*Figure 1*).

The more often a respondent visits either Bowers School Farm or the Johnson Nature Center, the more strongly they feel about the facility and its ownership. However, this does not mean loyal supporters are opposed to the idea of the partnership, as 47% of respondents who visit the Johnson Nature Center more than once a month say they need more information on the subject to decide (*Figure 46*). The percentage of respondents who explicitly do not support the partnership is roughly the same (14%) regardless of how often they visit the facilities (*Figure 45*).

Figure 1. Percent of respondents in support of partnership dialogue

Community Priorities

Visitors to Bowers School Farm who took this survey highly value agriculture education, weekend events, and natural areas (*Figure 21*). Popular features and activities at the Farm include farm store and kitchen (56%), Fall Festival (53% attended), Winter Park (46%), and grade K-5 field trips (42%) (*Figure 19*). Visitors to the Johnson nature Center who took this survey highly value natural areas/trails and youth education opportunities (*Figure 32*). Popular features and activities at the Nature Center include trails and hiking (59%), youth education (46%), visiting rescue animals (45%), and maple sugaring (33% attended) (*Figure 30*).

1. In-Person Events

Two in-person engagement opportunities were held:

- Saturday, October 18th, 2025 @ Bowers School Farm's Fall Festival event from 10AM-12PM (paid admission)
- Monday, October 20th, 2025 @ Johnson Nature Center from 4-6PM

Representatives from both Bloomfield Hills Schools and Oakland County Parks were present at both events and available to answer questions from visitors. Each person engaged at an in-person pop-up event (80 total) was given four stickers to "vote" for their priorities (*Figure 2*).

In-Person Feedback

Figure 2. In-Person priority boards with stickers

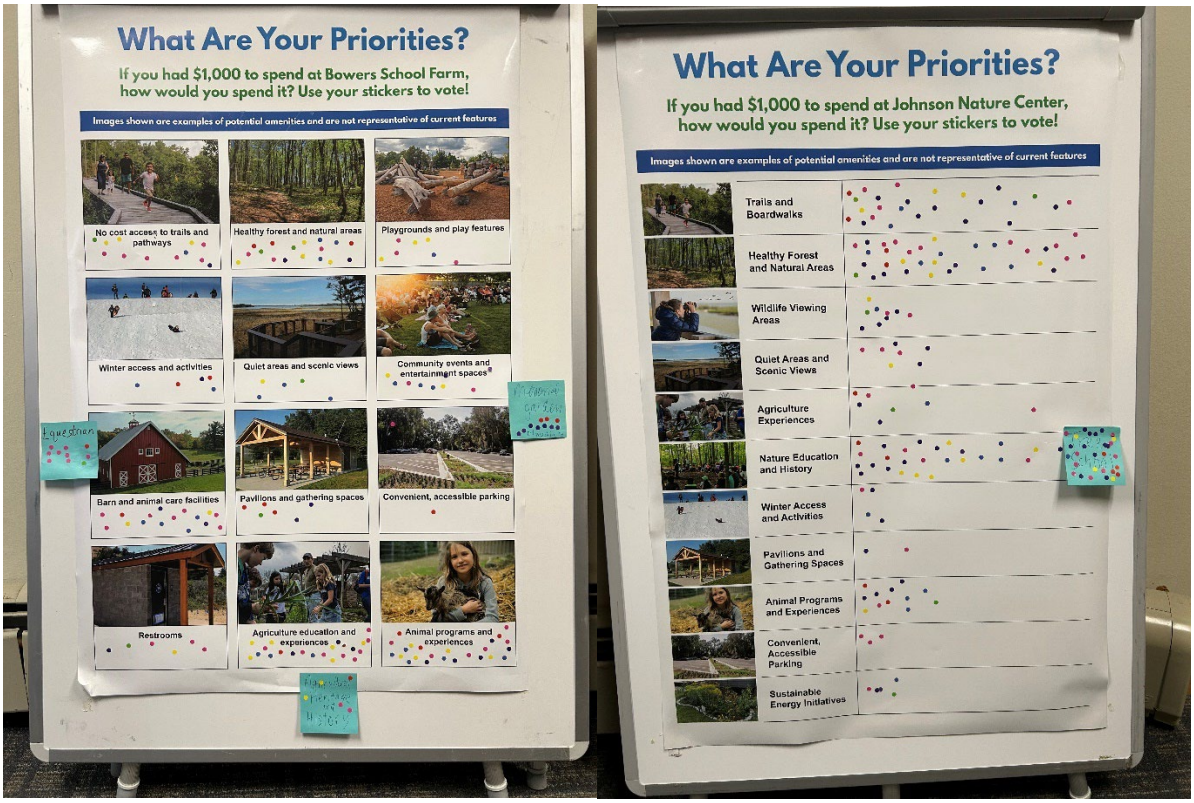


Figure 3. Priorities in financial expenditure at BSF with added assets highlighted

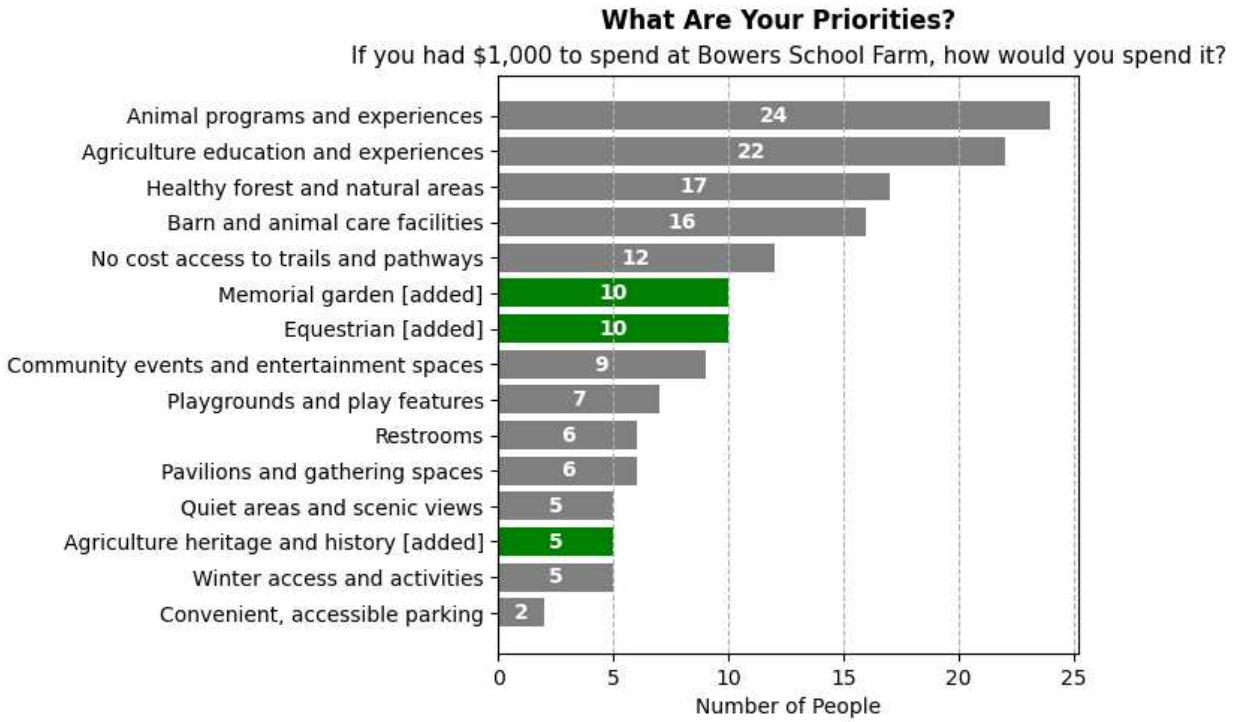

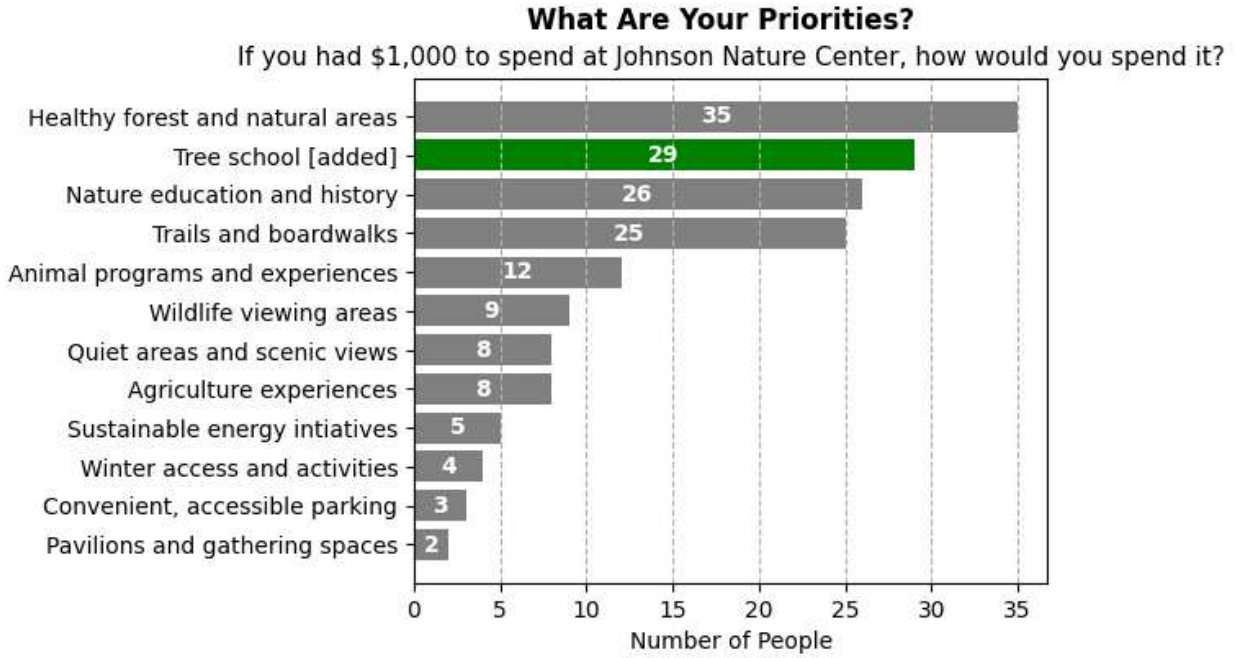

Figure 4.Priorities in financial expenditure at JNC with added assets highlighted

In-Person Priorities vs Online Priorities

The priorities expressed by participants at the in-person events and the priorities expressed by individuals taking the online survey are very similar. At Bowers School Farm in-person participants rated animal experiences and agriculture education more highly important than the online participants, who valued natural areas above education (*Figure 3*). At Johnson Nature Center, both in-person and online participants rated healthy forest and natural areas as the top priority. In-person participants were also very enthusiastic about Tree School specifically, adding that voting option to the board and gathering 29 votes (*Figure 4*).

2. Online Survey

Survey Methods

A total of 646 complete responses were collected between October 7th and October 31st, 2025. The survey was shared via social media and email newsletters and via postcards with a QR code link to residents in the Bloomfield Hills school district boundaries.

The full survey text is included in the appendix (*Full Survey Text*) and consists of 28 questions. Five of those questions were open-ended. Four of those questions were rating different features out a preset scale. Eight of those questions were related to demographics. The remaining questions were related to visitor experiences and participation at Bowers School Farm and the Johnson Nature Center.

Typical Demographics

97% of respondents live in Oakland County (*Figure 9*), with 32% living in Bloomfield Township followed by 27% in Bloomfield Hills (*Figure 10*). 68% of survey respondents live within BHS district boundaries (*Figure 5*), and 41% of them are a parent or guardian or a child currently enrolled in a BHS school (*Figure 6*). 56% of respondents have children under 19 years old in their household (*Figure 8*), and of those, the most common age range is 6-11 years (*Figure 7*).

The area within a 10-minute drive of either Bowers School Farm or the Johnson Nature Center contains 70,910 households (population of 173,233) and contains the entirety of the Bloomfield Hills Schools district boundaries. Where relevant, the charts below will indicate the demographics of that service area compared to the demographics of respondents. Additional horizontal or vertical lines on the chart represent the value of that demographic within the service area. The color of the line will indicate whether the survey under-represents (red), accurately represents (blue), or over-represents (green) that demographic.

The most common age range of respondents is 35-54 years old, which is greatly over-represented compared to BSF and JNC's 10-minute drive service areas (*Figure 12*). 69% of respondents identify as female (*Figure 13*), and 84% are White (*Figure 14*). Both the female gender and the White race are also greatly over-represented compared to the target service area. 93% speak English at home (*Figure 15*).

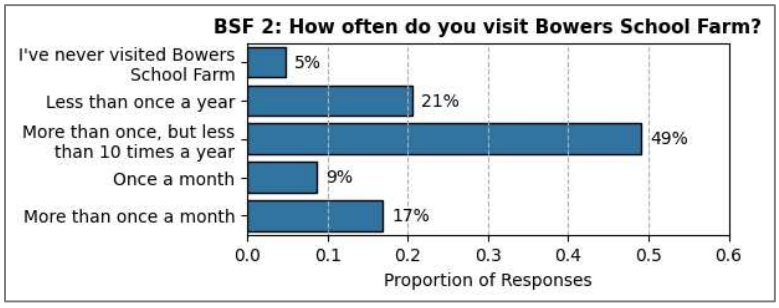
Survey Results

Bowers School Farm Questions



13% of respondents guessed correctly that Bowers School Farm sees 40,000 visitors annually.

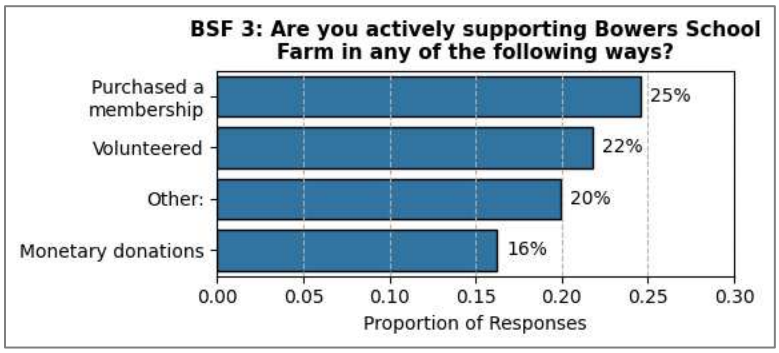
Figure 14. Respondent guess on BSF visitation with correct highlighted

49% of respondents visit Bowers School Farm more than once, but less than 10 times per year. 17% visit more than once per month, and 5% have never visited.

Figure 15. Respondent BSF visitation frequency

83% of respondents say they actively support Bowers School Farm in some way. 25% have purchased a membership, 22% have volunteered, 16% have made monetary donations, and 20% contribute in some other way, including purchasing items from the farm, attending school or camp, or participating in other ways.

Figure 16. Respondent BSF support style



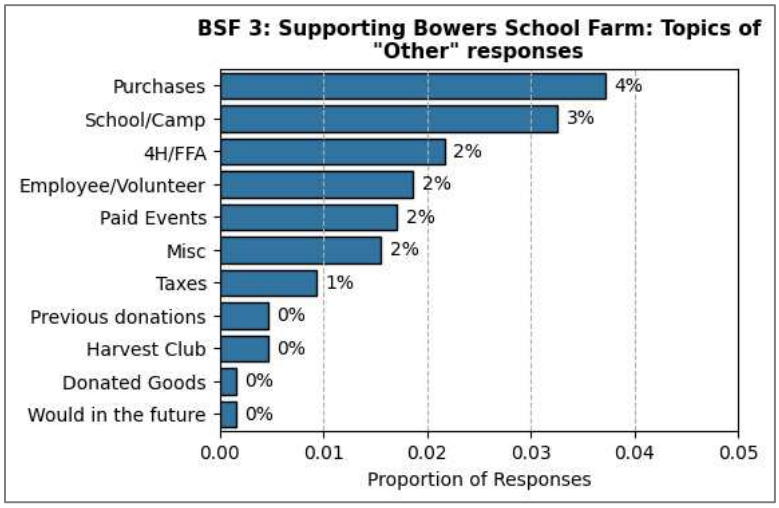


Figure 17. Respondent BSF support style "other" elaborated

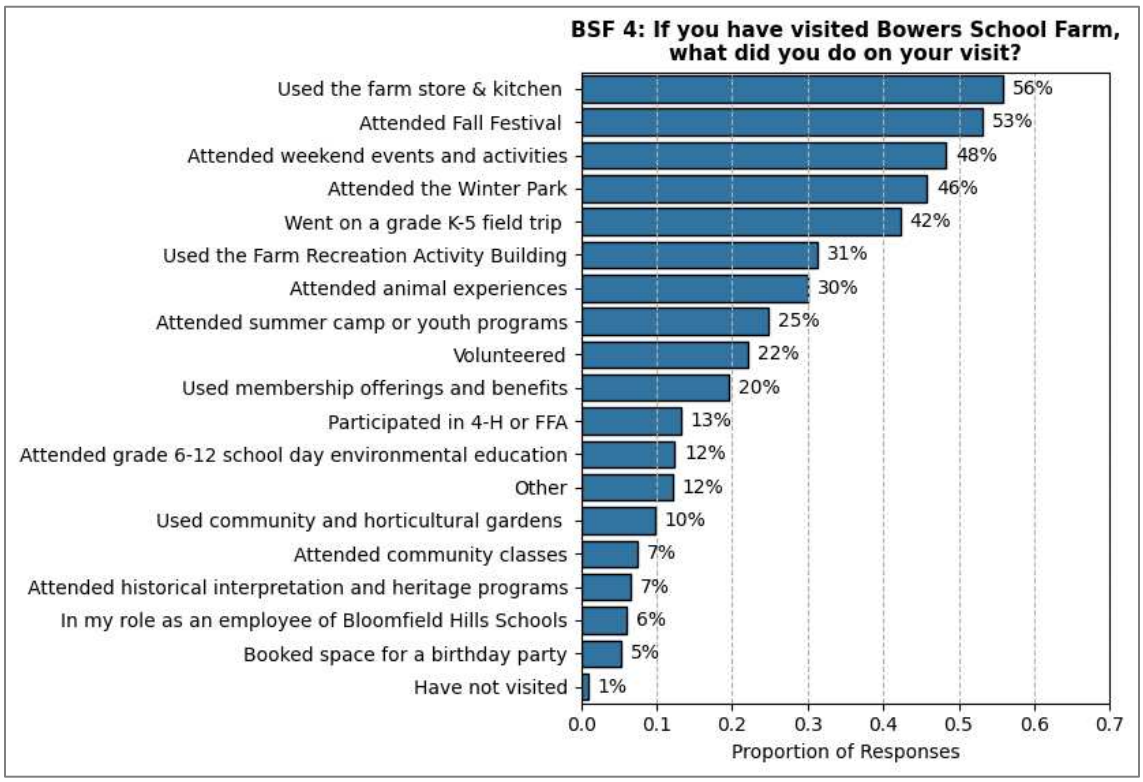
56% of respondents have used the farm store and kitchen when visiting Bowers School Farm. 53% have attended the Fall Festival and 46% have attended the Winter Park event. There are many other popular activities listed in the two figures below.

Figure 18. Respondent activity upon visitation



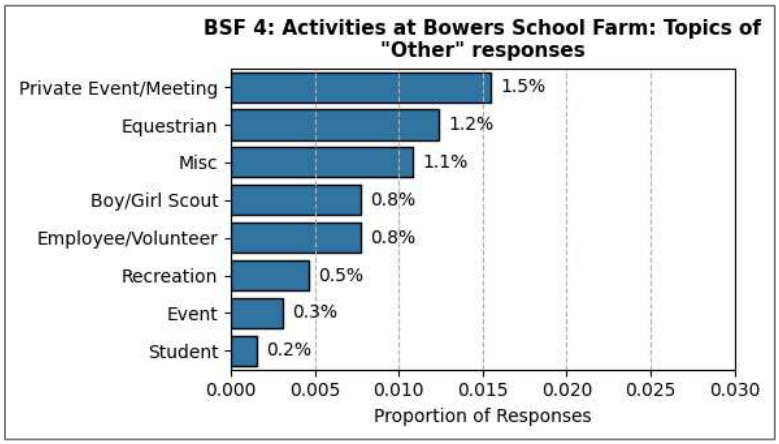


Figure 19. Respondent activity upon visitation "other" elaborated

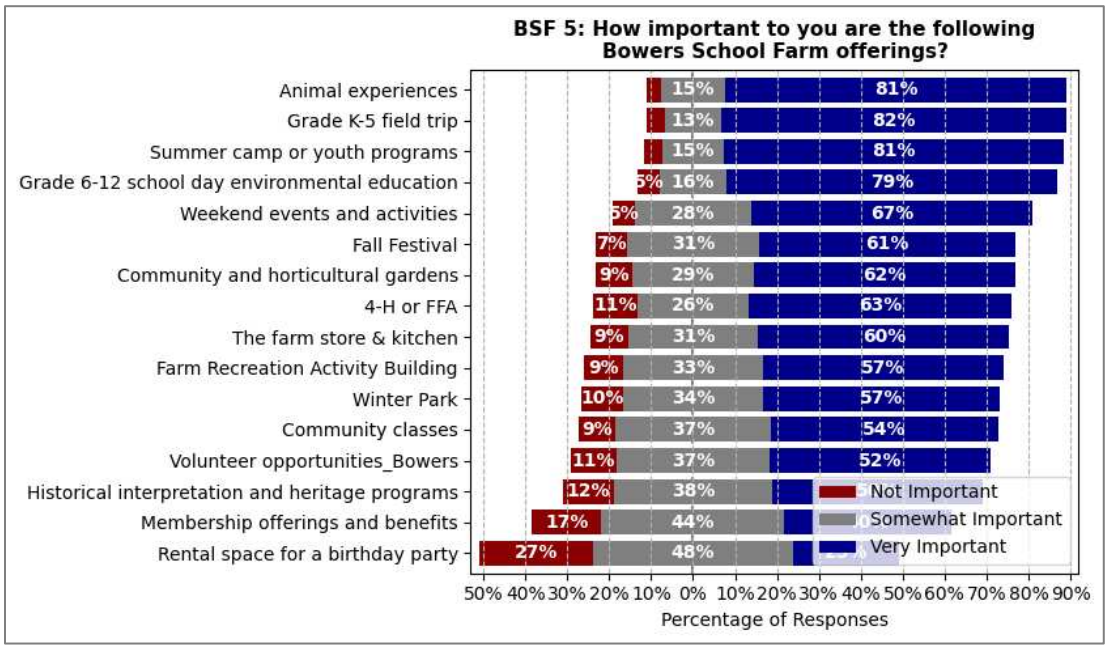
When asked about the importance of various offerings at Bowers School Farm, at least 50% of respondents answered that every item was “Very Important”, except for the items “Membership offerings and benefits” and “Rental space for a birthday party”. The most important offerings by rating are “Animal experiences”, “Grade K-5 field trip”, and “Summer camp or youth programs”.

Figure 20. BSF offerings in order of importance – percentage split



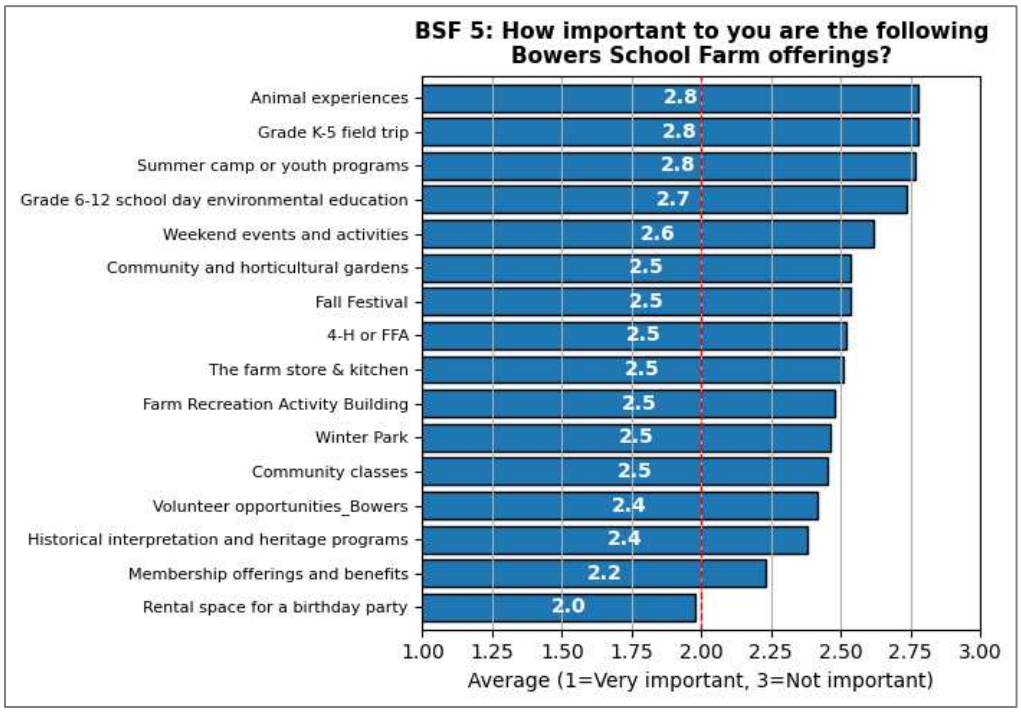


Figure 21. BSF offerings in order of importance – average score

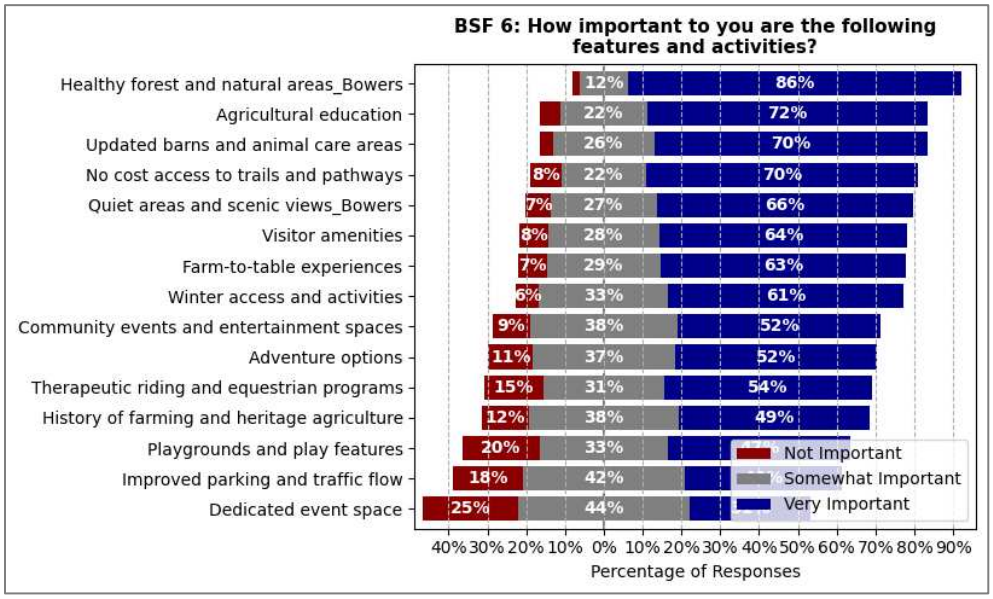
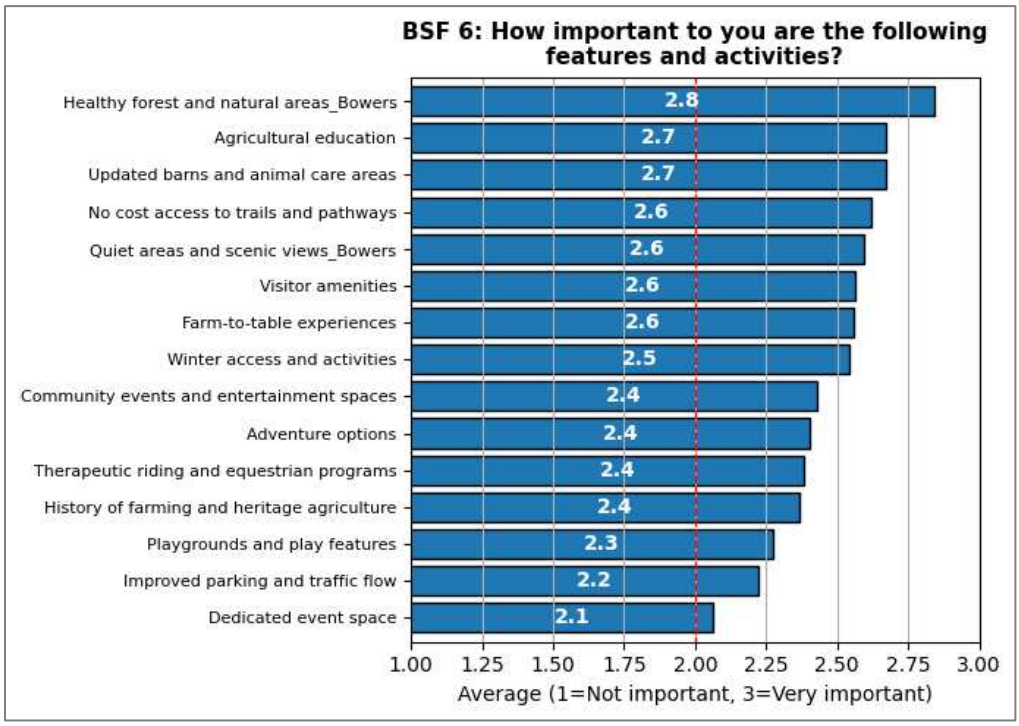
When asked about the importance of various features and activities at Bowers School Farm, there starts to appear some variation in importance, although at least half of the items still have greater than 50% of respondents rated as “Very Important”. The most important features and activities by rating are “Healthy forest and natural areas”, “Agricultural education”, and “Updated barns and animal care areas”. Least important are “Improved parking and traffic flow” and “Dedicated event space”

Figure 22. BSF features/activities in order of importance – percentage split





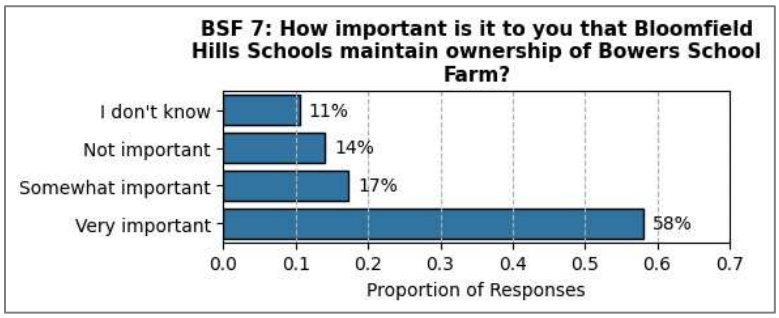


Figure 23. BSF features/activities in order of importance – average score

58% of respondents say that Bloomfield Hills Schools maintaining ownership of Bowers School Farm is Very Important.

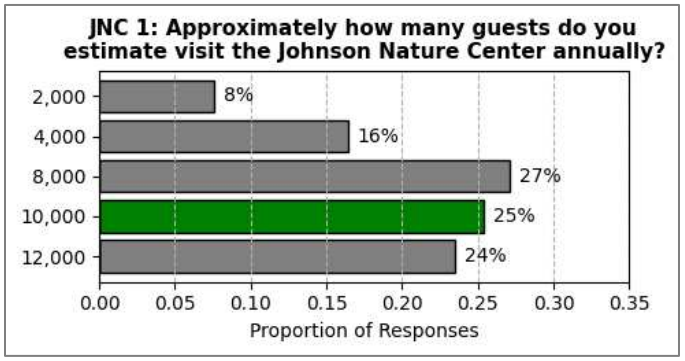

Figure 24. Importance of BHS ownership of BSF to respondents

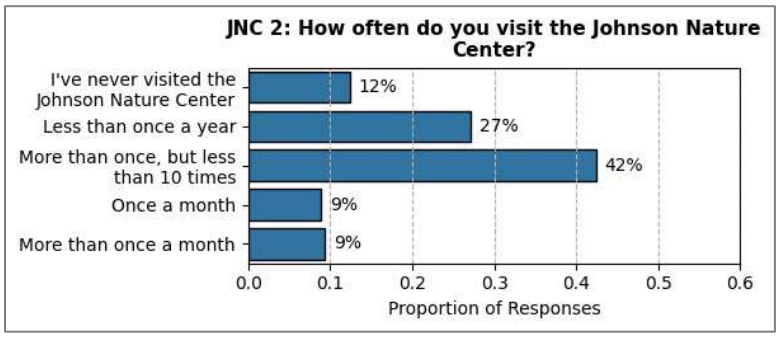
Johnson Nature Center Questions



25% of respondents guessed correctly that the Johnson Nature Center sees 10,000 visitors annually.

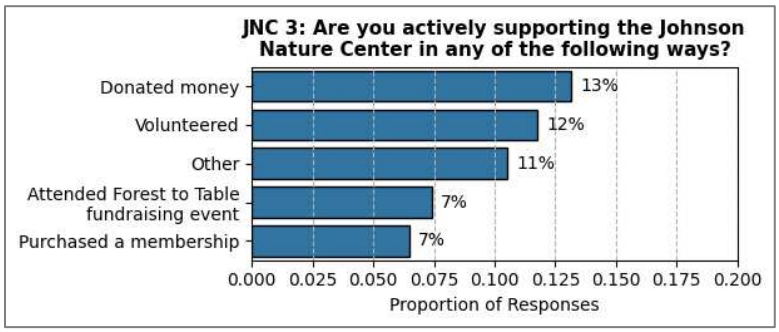
Figure 25. Respondent guess on BSF visitation with correct highlighted

42% of respondents visit the Johnson Nature Center more than once, but less than 10 times per year. 9% visit more than once per month, and 12% have never visited.

Figure 26. Respondent JNC visitation frequency

50% of respondents say they actively support the Johnson Nature Center in some way. 13% have donated money, 12% have volunteered, 7% have attended a Forest to Table fundraising event, and 7% have purchased a membership. 11% support in other ways, including attending school/classes and events.

Figure 27. Respondent JNC support style



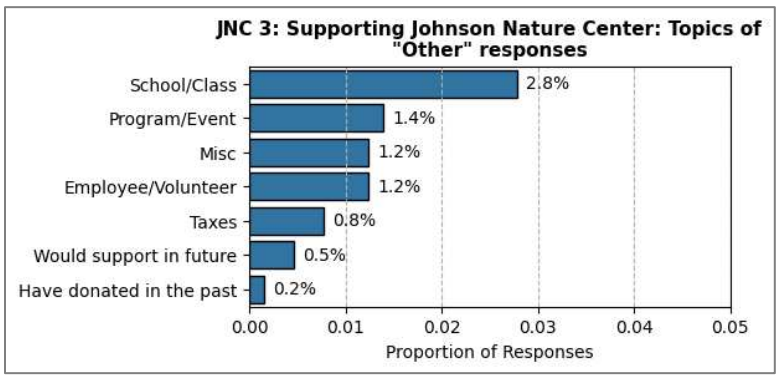


Figure 28. Respondent JNC support style "other" elaborated

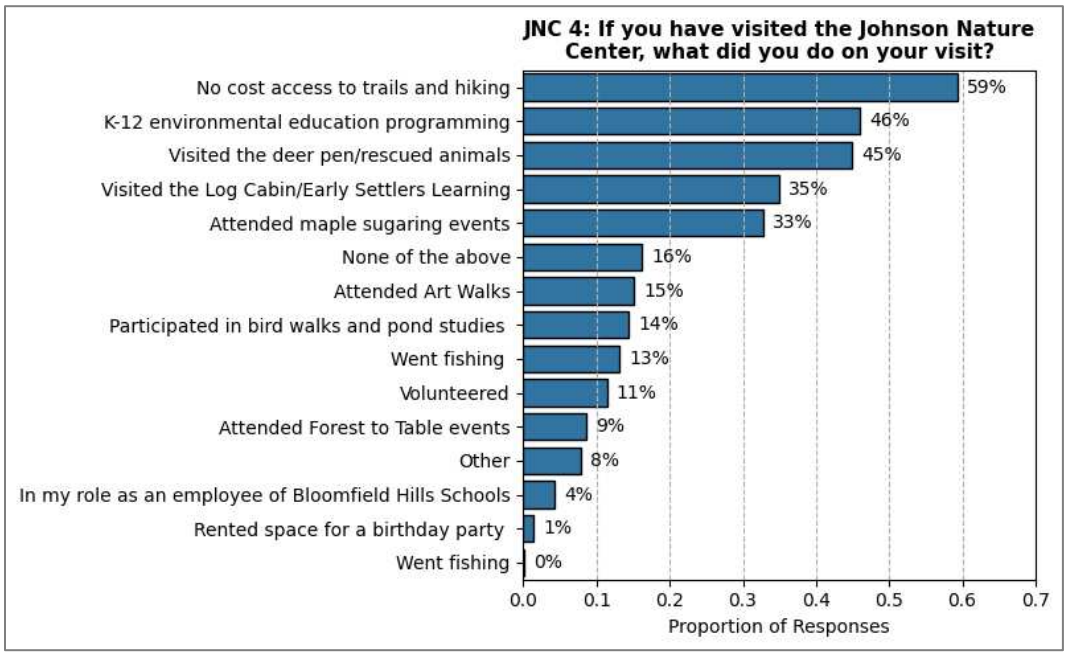
59% of respondents have used the trails and hiking opportunities when visiting the Johnson nature Center. 46% have taken part in K-12 environmental education programming, and 45% have visited the deer pen/rescued animals. There are many other popular activities listed in the two figures below.

Figure 29. Respondent activity upon visitation



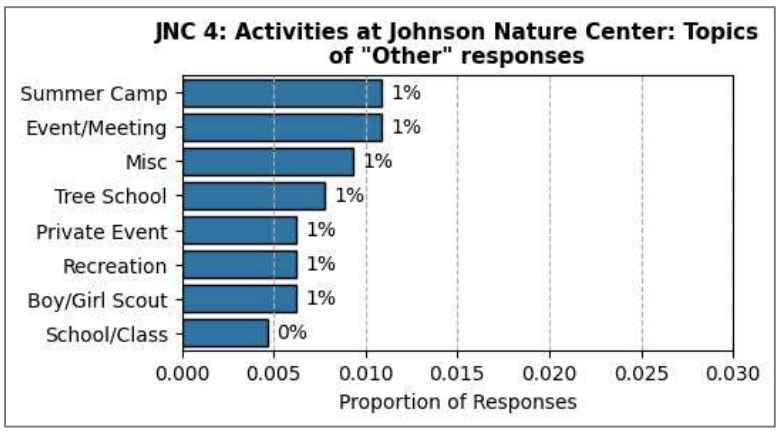


Figure 30. Respondent activity upon visitation "other" elaborated

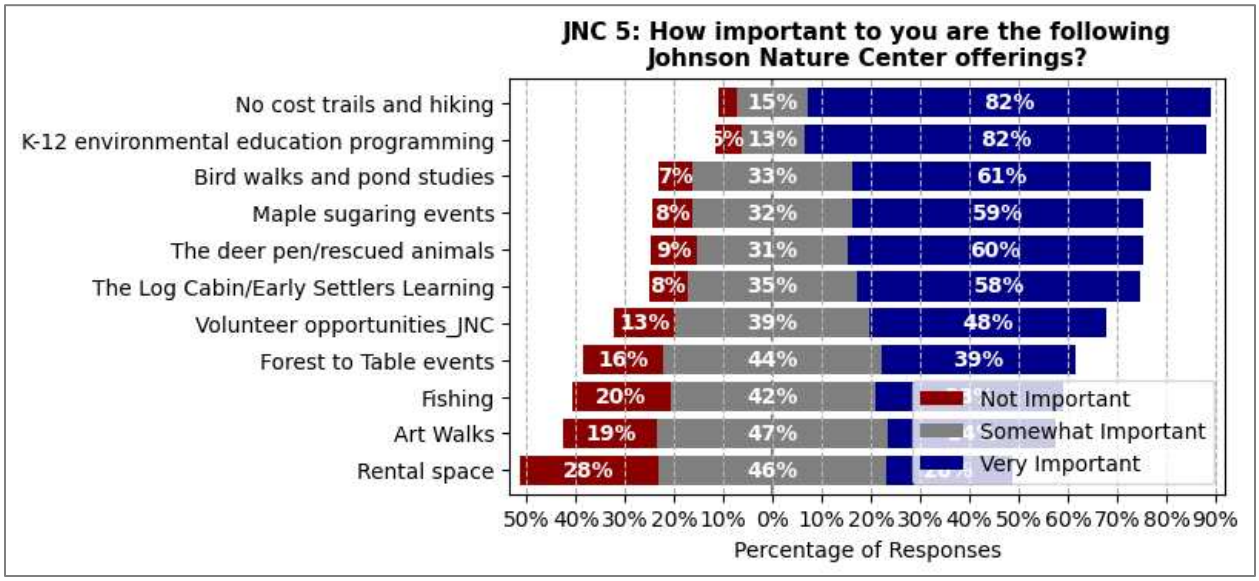
When asked about the importance of various offerings at the Johnson Nature Center, “No cost trails and hiking” (82% say Very Important) and “K-12 environmental education programming” (82% say Very Important) are the most important to respondents, followed by offerings such as “Bird walks and pond studies” and “Maple sugaring events”. Rental space and art walks are the least important.

Figure 31. JNC offerings in order of importance – percentage split



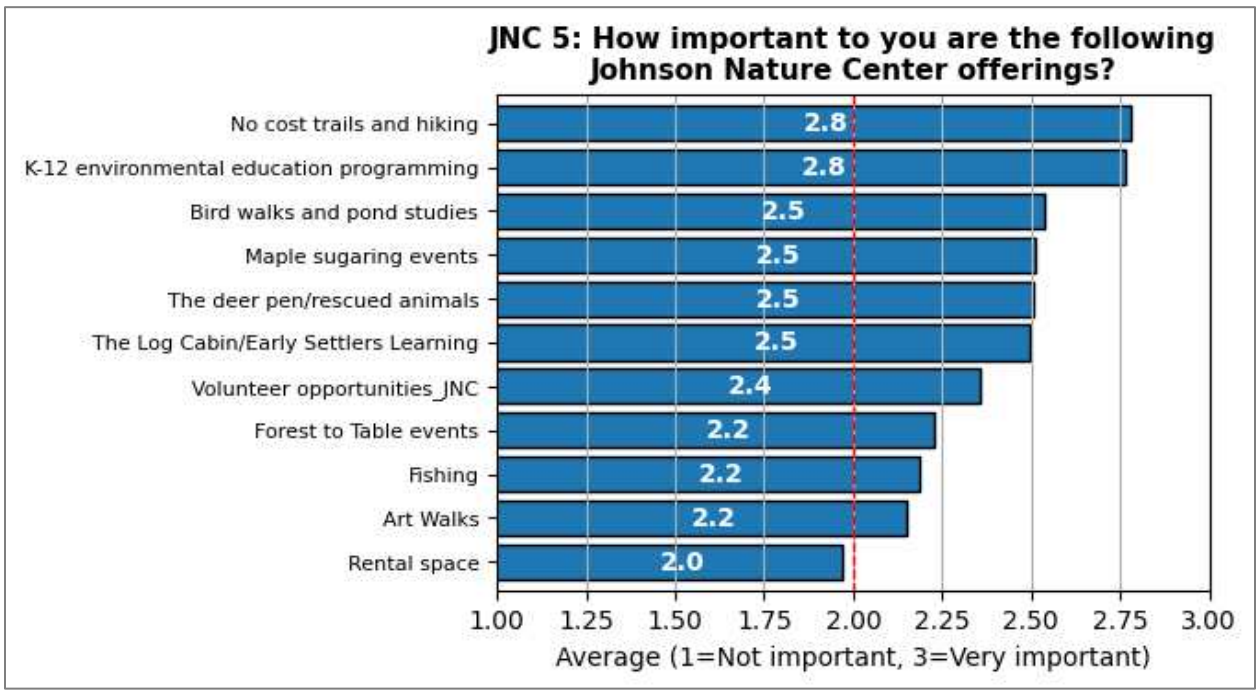


Figure 32. JNC offerings in order of importance – average score

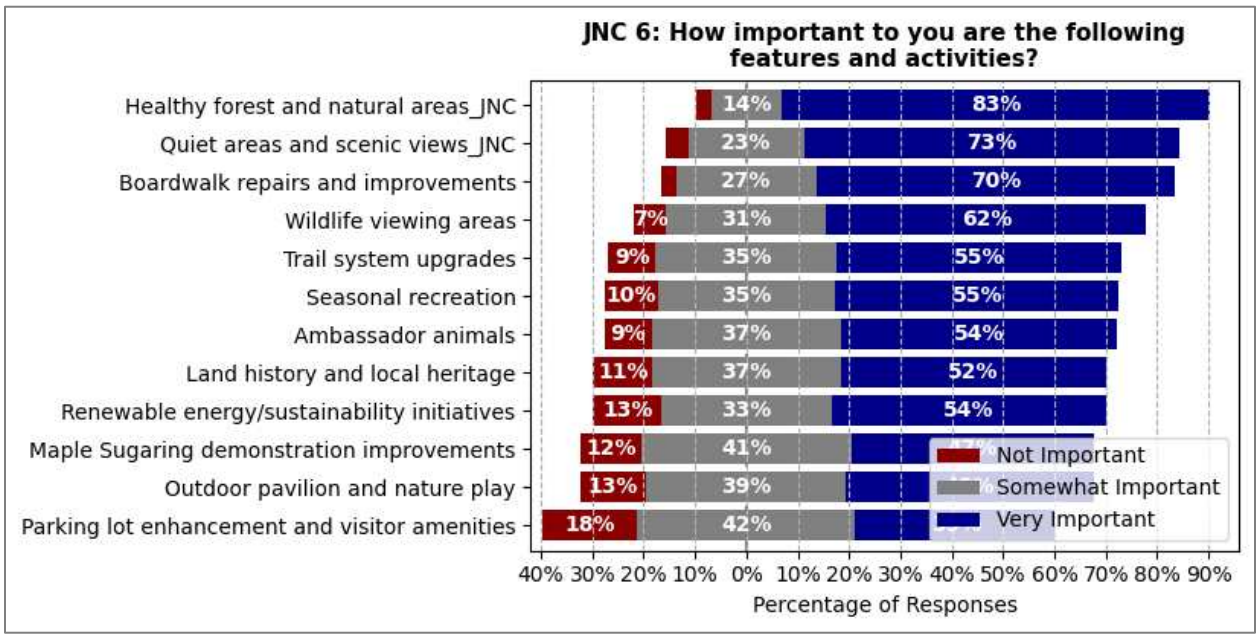
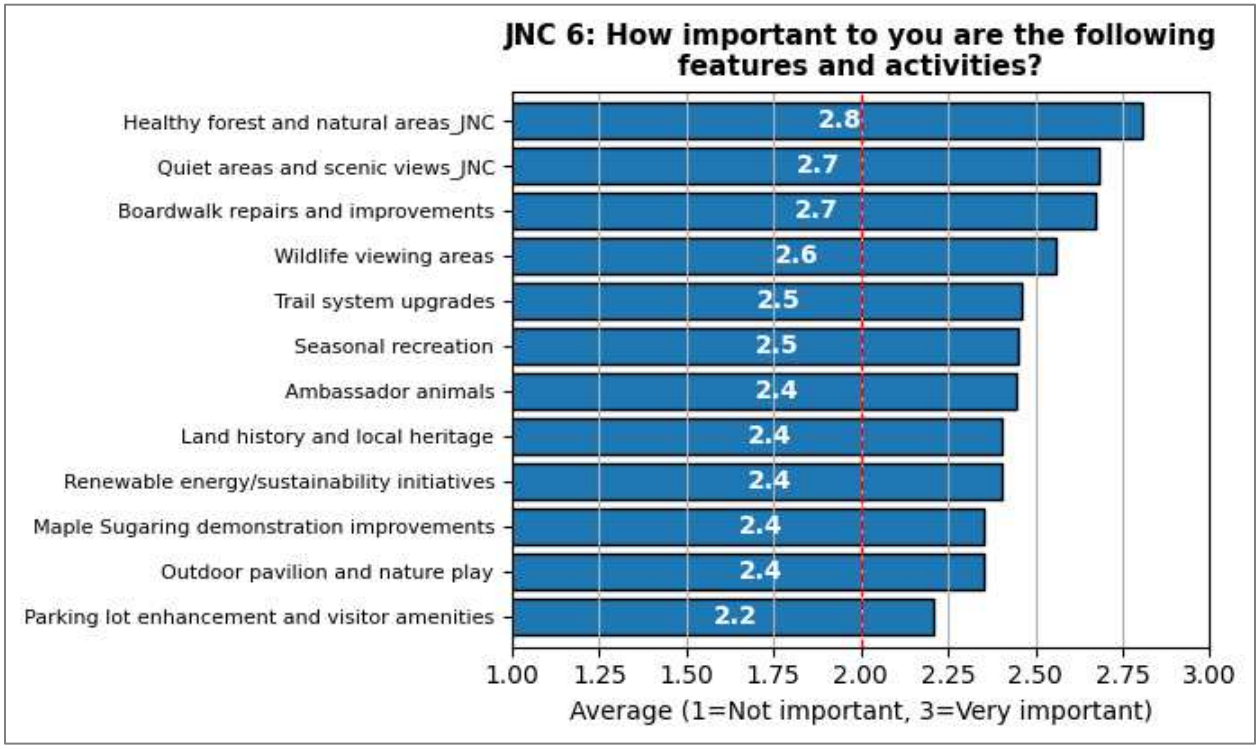
When asked about the importance of various features and activities at the Johnson Nature Center, natural areas and trails are the most important. Enhancements to visitor amenities like parking lots are the least important (30% Very Important).

Figure 33. JNC features/activities in order of importance – percentage split





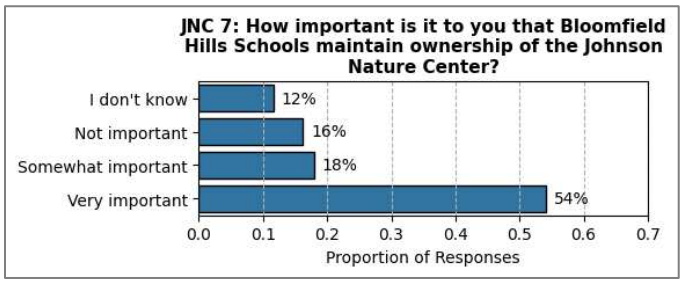


Figure 34. JNC features/activities in order of importance – average score

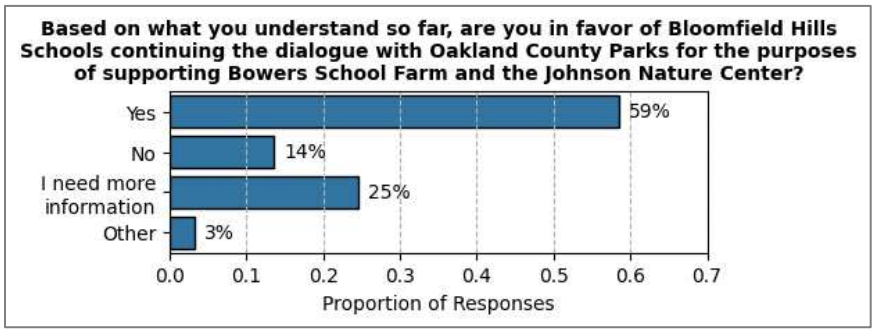
54% of respondents say that Bloomfield Hills Schools maintaining ownership of the Johnson Nature Center is Very Important.

Figure 35. Importance of BHS ownership of JNC to respondents

Other Questions

59% of respondents answered “Yes” to a question about whether they support the dialogue that may lead to a partnership. An additional 1.5% answered “Yes, with conditions” and an additional 0.5% are “leaning yes”, for a total of 61% in support. 25% need more information and 14% are not in support.

Figure 36. Proportion of respondents in favor of BHS partnering with OCP



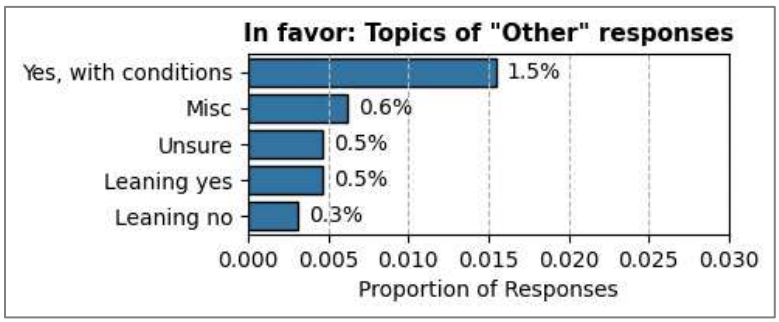


Figure 37. Proportion of respondents in favor of BHS partnering with OCP - "other" elaborated

Crosstab Survey Results

Responses to any of the above survey questions can be further broken down and separated by different demographic variables such as age or whether they have young children, or even their answers to a different question, such as whether they are in favor of the partnership or how often they visit the location in question. All the possible combinations of results are available in this interactive dashboard, but a subset will be presented here, along with any notable results from charts not included.

Factors Influencing Importance of Offerings, Features, and Activities

See *Figure 39*, *Figure 40*, *Figure 41*, and *Figure 42* for charts.

Effect of Age

- Respondents under age 35 generally think all offerings, features, and activities are more important than respondents over age 35.
    - In particular, younger respondents think volunteer opportunities are more important (true at Johnson Nature Center, more true at Bowers School Farm).

Effect of Having Young Children in the Household

- Respondents without children under 19 years old generally think all offerings, features, and activities are more important than respondents with young children.
    - In particular, respondents without young children think "History of farming and heritage agriculture" are more important at Bowers School Farm.

Effect of Visit Frequency

- Respondents who visit Bowers School Farm more often generally think all offerings, features, and activities are more important.
    - For an infrequent visitor (less than once per year), the most important features at Bowers School Farm are "Healthy forest and natural areas" and "No cost access to trails and pathways".

Effect of Partnership Opinion

- Respondents who answered "Yes" to the question "…are you in favor of BHS continuing the dialogue with OCP…" generally think all offerings, features, and activities are slightly more important than respondents who answered "No".
- Respondents who answered "No" still think natural areas are important at the Johnson Nature Center

Factors Influencing Answers to Other Questions

Effect of Partnership Opinion on Responses

- 54% of BHS residents support the partnership, while 68% of non-BHS residents support the partnership. (*Figure 40*)
- 48% of BHS parent/guardians support the partnership, while 65% of respondents who are not BHS parent/guardians support the partnership. (*Figure 41*)
- The percentage of respondents who do not support the partnership is roughly equal across Johnson Nature Center visit frequency (roughly 14%). The percentage of respondents who explicitly support the partnership is much lower for respondents who visit more than once a month (35% vs 62% for other frequencies). The most common answer for respondents who visit more than once a month is "I need more information", at 47%. (*Figure 43*)
    - Visit frequency does not have a notable effect on answers to the Bowers School Farm visit frequency question. (*Figure 42*)

Effect of BHS Ownership Importance on Responses

- As respondents' visit frequency to both Bowers School Farm and the Johnson Nature Center increases, so does respondents' level of importance placed on BHS ownership of those facilities. 68% of respondents who visit Bowers School Farm more than once a month think BHS ownership of the facility is "very important". (*Figure 44*) That number is 65% at the Johnson Nature Center. (*Figure 45*)

Effect of Support (Monetary or Otherwise) on Responses

- Respondents who have supported either Bowers School Farm or the Johnson Nature Center in some way (either through donations, volunteering, or other means) are much more likely to visit those locations more frequently.
    - 96% of respondents who visit Bowers School Farm once a month or more have supported the facility in the past. (*Figure 46*)
    - 70% of respondents who visit the Johnson Nature Center once a month or more have supported the facility in the past. (*Figure 47*)

Effect of Age on Responses

- At Bowers School Farm, visit frequency decreases as age increases. 58% of respondents who visit more than once per month are under the age of 35. (*Figure 48*)
    - Age does not have as much correlation with visit frequency at the Johnson Nature Center. (*Figure 49*)

Numeric Crosstabs – Heatmaps

How to read a heatmap

The following four pages are heatmaps breaking the Importance questions down by additional variables. The numbers on the heatmaps are the same calculation shown earlier in the report (average rating), but grouped and averaged by different factors, such as age or gender. The color of each cell in the heatmap also corresponds to the average rating and provides a visual indicator of differences. Generally, you will be looking for especially light or dark areas that stand out ("hot spots").

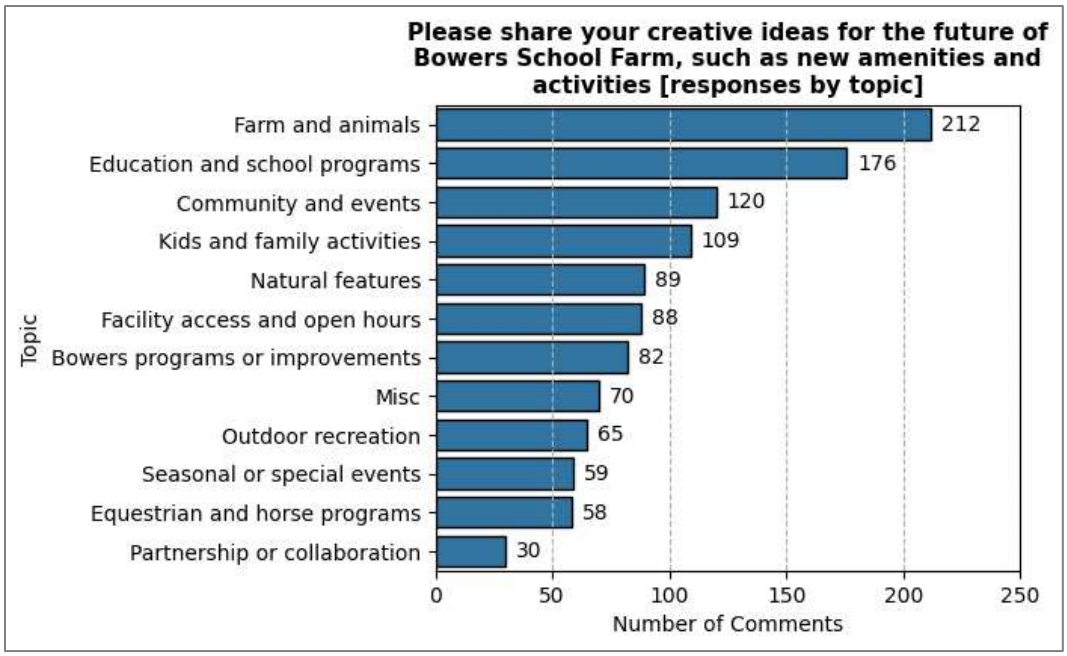
Comment Analysis

Almost 1,800 total comments were received between the four open-ended questions:



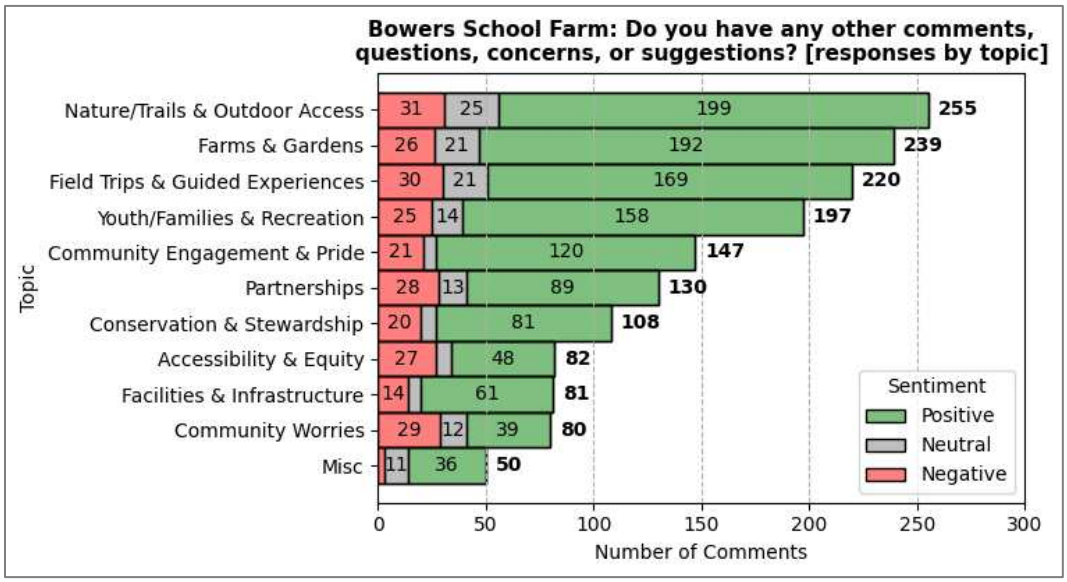
1. Please share your creative ideas for the future of Bowers School Farm, such as new amenities and activities.
2. Do you have any other comments, questions, concerns, or suggestions? (regarding Bowers School Farm)
3. Please share your creative ideas for the future of the Johnson Nature Center, such as new amenities and activities.
4. Do you have any other comments, questions, concerns, or suggestions? (regarding Johnson Nature Center)

All comments are available for viewing in this interactive dashboard.

Creative Ideas for Bowers School Farm

Most comments center on farm experiences, community events, and educational programs for students and families. Many recommend adding workshops, art activities, outdoor recreation, and equestrian opportunities. Several emphasize better access, extended hours, and revitalized Bowers-specific events and partnerships.

Figure 52. Ideas for BSF categorized by topic



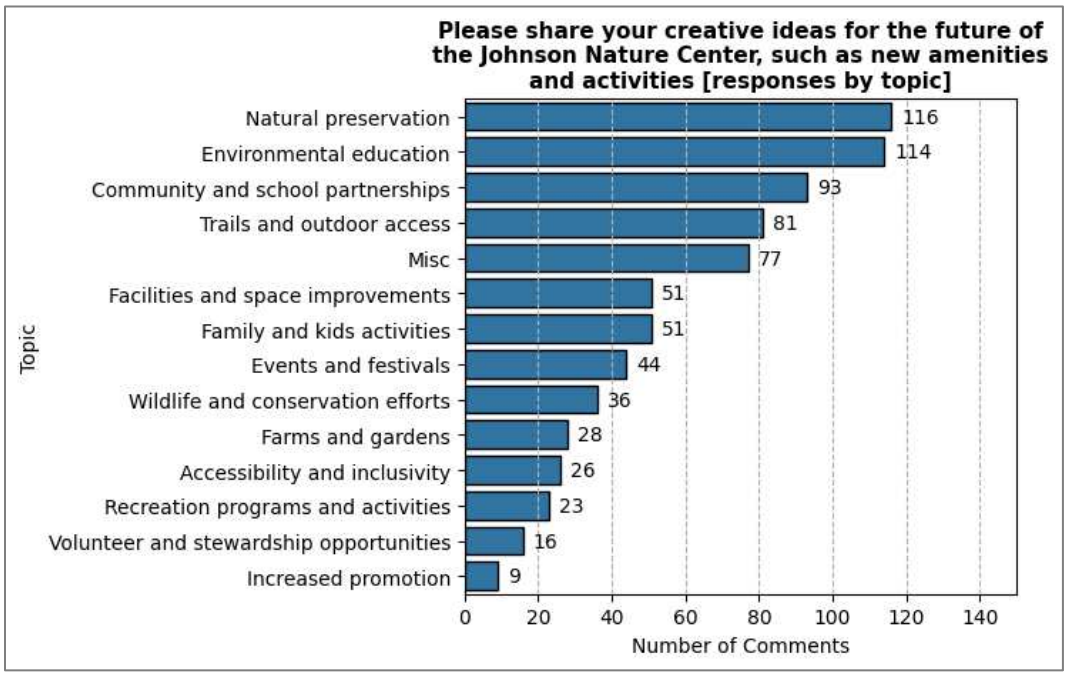
Comment Samples:

- “Partner with plain air painting groups and bring artists to the farm”
- “Expanded STEM programs and integration of student research”
- “Offer community garden plots with oversight on gardening”
- “Play structures and playground for children”
- “It would be great to have accessible trails for quiet walks”
- “Open the ropes course for public use”
- “More equestrian programs”

Comments on Bowers School Farm

The most common theme in responses to this question is strong community and educational value, with most commenters emphasizing Bowers School Farm's importance as an educational resource for students and a meaningful part of the Bloomfield Hills Schools experience. Also common are comments are diversity of experiences and programs, with many mentioning specific activities such as field trips, camps, animal care, agricultural learning, seasonal festival, and the tubing hill. Comments were also received regarding the respondents' desires for preservation and continued support of the facility. A significant portion express opposition to closure or redevelopment, urging continued funding, upkeep, and access for families and schools.

Figure 53. Additional comments about Bowers School Farm, categorized by topic and sentiment



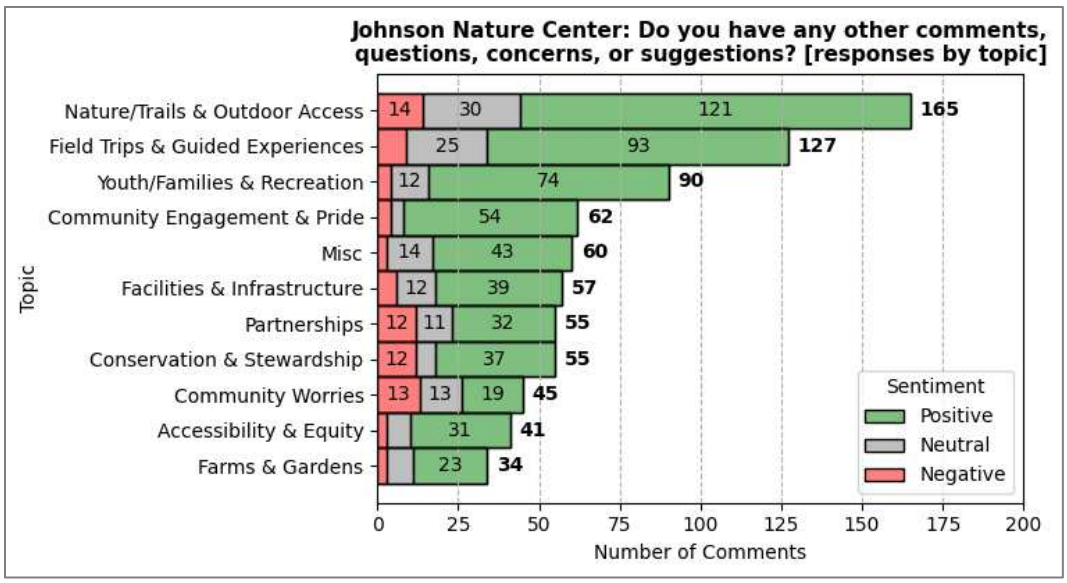
Comment Samples:

- "Bowers Farm is an important part of the Bloomfield Schools community and it's important to keep the relationship there for our children"
- "We love Bowers. Please do not move forward with this plan. Work with the community, the Bloomfield Foundation, grants, etc. to help with costs. Charge more for out of district field trips, perhaps?"
- "Expand curricular programs to grades 6-12. The programs seem mostly limited to grade schoolers."
- "Camps are amazing but so difficult to get into. Perhaps a lottery selection would be better"
- "Outdoor (green) spaces are more important than ever. We need to keep and maintain them for public use."

Creative Ideas for the Johnson Nature Center

Comments include strong interest in expanding outdoor and nature experiences, including more trails, hiking paths, and access to open spaces. There are frequent requests for education and community programs, particularly partnerships with schools, youth activities, and environmental learning. Also present are suggestions for facility improvements and inclusive events, such as better infrastructure, more family-friendly features, and accessible programming for all visitors.

Figure 54. Ideas for Johnson Nature Center, categorized into topics



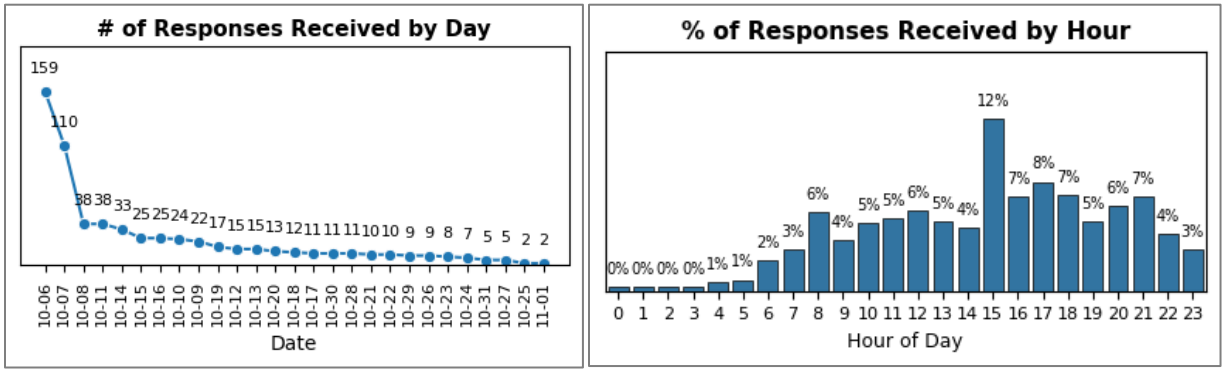
Comment Samples:

- “Wildlife signage related to potential species we might spot at the nature center”
- “Cross overs with university programs, enhancing environment concerns with like minded companies”
- “Open hours extended”
- “Guided hikes with naturalist…. Snow shoe and smores, qr code interactive displays, stargazing activity, arts and crafts”
- “We LOVED the fairy gardens last year: both on the nature trail and the homes from the middle school. Such a fun art installation.”

Comments on the Johnson Nature Center

The most common theme in responses to this question is education and learning, with a strong focus on student experiences, school district involvement, and learning opportunities through programs at the nature center. There is frequent praise for the nature center and trails as valuable community spaces that connect people to the environment. There are also repeated expressions of love, pride, and appreciation for the partnership between schools and the nature center as a community asset.

Figure 55. Additional Johnson Nature Center comments, categorized by topic and sentiment



Comment Samples:

- “We enjoy the trails to get some peace and quiet without having to travel farm from home!”
- “Bring program costs down”
- “This is such an important asset to protect. It is already well visited, so bringing in more visitors might make things worse for everyone”
- “I feel like the community is not aware enough about the nature center. I think that if people knew about it more, it would be used way more.”
- “Sounds like you want to pave it over for yoga studios, corporate party rental pavilions, and cross country skiing – this was supposed to be a natural area, not a playground.”

Appendix A. Further Analysis

Survey Days and Times

Figure 56. Day and time that respondents completed the survey

Response Correlation

See this interactive dashboard for correlation between answers to each question.

Data Cleaning Notes

- Answers to open-ended questions that just said “no”, “N/A”, or similar were removed
- Comments were anonymized, then AI was used to find a list of common topics expressed in the responses to a single question
    - A list of keywords associated with each topic was generated manually, then each comment was tagged with the topics it contained
- Responses to the BSF open comment question and JNC open comment question were assigned a topic and a sentiment (positive/neutral/negative)
    - Two different sentiment models were used:
        - VADER (Valence Aware Dictionary and sEntiment Reasoner) – a lexicon and rule-based sentiment analysis tool developed by MIT specifically attuned to sentiments expressed in social media
        - roBERTa (robustly optimized BERT approach) – a transformer-based model developed by Facebook AI designed to improve on the BERT (Bidirectional Encoder Representations from Transformers) model, trained on a larger corpus with more data
    - If both models presented the same result then the sentiment was assigned. For comments where the models disagreed, a manual review was conducted and sentiment was assigned by the analyst.
- Answers to the “Likert” questions were duplicated and then coded as numbers:
    - 1=Not Important, 2=Somewhat Important, 3=Very Important

- This allowed these questions to be analyzed in aggregate and represented as averages to better summarize responses.

Appendix B. Online Marketing Activity

Bitly Link Tracking

A shortened Bitly link was created to use when promoting the survey online, with an accompanying QR code for physical promotion. The Bitly link gathered 807 clicks and the QR code gathered 12 scans. 69% of this engagement came from the Facebook mobile app, 21% came from "direct" sources, 7% came from Facebook desktop, and the remaining 3% from other sources.

Oakland County Parks Facebook and Instagram

The Oakland County Parks Facebook page published a paid ad to share the survey, with the following results:

- Active: 10/7/2025 to 11/1/2025
- Views: 27,663
- Reach: 11,666
- Link Clicks: 580
- Click-through Ratio: 2.1%
- Engagement: 667 total

The Oakland County Parks Facebook page also shared post #6 from Friends of Bowers Farm on 10/23 (1,186 views, 702 reach, 10 interactions, 6 link clicks) and posted natively on 10/30 (1,980 views, 1,220 reach, interactions, 13 link clicks)

Figure 60. Johnson Nature Center Project Overview Document

Figure 61. Johnson Nature Center Partnership Vision Document

OCP Partnership FAQ Document

What am I hearing about a possible partnership?

Oakland County Parks and Bloomfield Hills Schools are exploring a potential intergovernmental partnership to support and strengthen Bowers School Farm and the Johnson Nature Center. While no agreements have been made, early discussions suggest a model where Bloomfield Hills Schools would continue to have priority access for educational programming, while Oakland County Parks would oversee operations and management with a focus on bolstering recreation activities.

What is the status of the conversation?

This is still in the exploratory phase. No formal proposal or agreement has been drafted or reviewed.

What are the potential benefits of a partnership?

A partnership could:

Ensure long-term sustainability and environmental stewardship of both properties

Bring in new facility and infrastructure investments and improvements

Offer more programs and activities for families

Preserve first-in-line access for BHS students

Combine Oakland County Park's recreation expertise with BHS's commitment to education and community

Help win state and federal grants that require joint ownership

Will this increase my taxes?

No. This would not raise taxes.

How long would the partnership last?

The exact length has not yet been determined. In similar agreements, partnerships run 20–30 years. A long-term agreement would allow OCP and BHS to jointly apply for state and federal grants, bringing additional resources to enhance and sustain the Farm and Nature Center.

Why does this make sense for Oakland County Parks?

Oakland County Parks is committed to delivering increased value to residents by expanding access to recreation, education, and nature. Partnering with BHS on Bowers Farm and Johnson Nature Center would:

Strengthen OCP's mission to connect people with outdoor learning and recreation

Extend services into an area of the county that currently has limited OCP presence

Leverage county resources to invest in and sustain two well-loved community destinations

Ensure that more families and students benefit from high-quality programs and facilities

Why does this make sense for BHS?

This partnership could bring important resources to preserve and enhance these treasured spaces, while expanding recreational opportunities and addressing long-term facility needs.

Who would decide? Any agreement would need approval from:

The Bloomfield Hills Schools Board of Education

The Oakland County Parks Commission

The Oakland County Board of Commissioners

Will current programs change?

An intergovernmental partnership could strengthen long-term sustainability and expand offerings. It could help fund new programming, provide essential operational investments and maintenance, and improve accessibility.

Would the Farm and Nature Center be shared more widely with the public?

These spaces already serve the broader community through school field trips, camps, and public events. A partnership could maintain or expand these already established experiences.

Where do things stand now?

These are early talks only. No agreement has been written. Both Oakland County Parks and Bloomfield Hills Schools agree that nothing will move forward unless the community is on board.

What role do Friends of Bowers Farm and Friends of Johnson Nature Center play?

Both are independent 501(c)(3) nonprofit organizations that exist to advance the mission and reach of their respective sites through fundraising, volunteer efforts, and community events. Both organizations support any and all investments that strengthen and expand these facilities, including a partnership with Oakland County Parks.

When will a decision be made?

October will be dedicated to gathering community feedback, followed by a thorough analysis of the results in November. A summary of the feedback will be shared with both the Bloomfield Hills School Board of Education and the Oakland County Parks Commission at their November meetings. This website will continue to be updated as the timeline evolves.

How can I share my opinion?

Community input is essential in shaping how these treasured spaces can best serve students, staff, and residents in a sustainable, fiscally responsible, and operationally efficient way for

years to come. To gather feedback, Bloomfield Hills Schools is working with Oakland County Parks to offer public forums and a community survey.

Public Forums: Two sessions will be held for residents to learn more and share their views:

Saturday, October 18, 2025, at Bowers School Farm during the Fall Festival event from 10 a.m.–12 p.m.

Monday, October 20, 2025, at Johnson Nature Center from 4 p.m.–6 p.m.

Complete the short survey.

Full Survey Text

Bloomfield Hills Schools and Oakland County Parks Survey

An Intergovernmental Partnership to Support Bowers School Farm and Johnson Nature Center

Oakland County Parks and Bloomfield Hills Schools are exploring a potential intergovernmental partnership to support and strengthen Bowers School Farm and the Johnson Nature Center. While no agreements have been made, early discussions suggest a model where Bloomfield Hills Schools would continue to have priority access for educational programming, while Oakland County Parks

would oversee recreation-related operations. This partnership could bring important resources to preserve and enhance these treasured spaces, while expanding recreational opportunities and addressing long-term facility needs. Here is a proposal that shares more details about a possible intergovernmental partnership.

Community input is essential in shaping how these treasured spaces can best serve students, staff, and residents in a sustainable, fiscally responsible, and operationally efficient way for years to come. To gather feedback, Bloomfield Hills Schools is working with Oakland County Parks to offer public forums and a community survey.

Public Forums: Two sessions will be held for residents to learn more and share their views:

- Saturday, October 18, 2025, at Bowers School Farm from 10 a.m.–12 p.m.
- Monday, October 20, 2025, at Johnson Nature Center from 4 p.m.–6 p.m.

Thank you for taking the time to complete the below survey. This survey should take you approximately ten minutes to complete.

Questions Specific to Bowers School Farm

1. Approximately how many guests do you estimate visit Bowers School Farm annually?
   - 10,000
   - 20,000
   - 30,000
   - 40,000
   - 50,000

Then branching/confirming the correct answer (Bowers School Farm has more than 40,000 annual visitors.)

2. How often do you visit Bowers School Farm?
   - I've never visited Bowers School Farm
   - Less than once a year
   - More than once, but less than 10 times a year
   - Once a month
   - More than once a month
3. Are you actively supporting Bowers School Farm in any of the following ways?
   - Monetary donations
   - Volunteered
   - Purchased a membership
   - None of the above
   - Other: (Open Ended)

4. If you have visited Bowers School Farm, what did you do on your visit? Please select all that apply.
    - Went on a grade K-5 field trip
    - Attended grade 6-12 school day environmental education
    - Used the Farm Recreation Activity Building (Barn used for Winter Park, rentals, etc.)
    - Attended Fall Festival
    - Attended the Winter Park (tubing hill)
    - Used the farm store & kitchen
    - Attended summer camp or youth programs
    - Attended weekend events and activities
    - Used membership offerings and benefits
    - Booked space for a birthday party
    - Attended community classes
    - Participated in 4-H or FFA
    - Volunteered
    - Used community and horticultural gardens
    - Attended historical interpretation and heritage programs
    - Attended animal experiences
5. How important to you are the following Bowers School Farm offerings? [not important, somewhat important, very important]
    - Grade K-5 field trip
    - Grade 6-12 school day environmental education
    - Farm Recreation Activity Building (Barn used for Winter Park, rentals, etc.)
    - Fall Festival
    - Winter Park (tubing hill)
    - The farm store & kitchen
    - Summer camp or youth programs
    - Weekend events and activities
    - Membership offerings and benefits
    - Rental space for a birthday party
    - Community classes
    - 4-H or FFA
    - Volunteer opportunities
    - Community and horticultural gardens
    - Historical interpretation and heritage programs
    - Animal experiences
6. How important to you are the following features and activities? [not important, somewhat important, very important]
    - No cost access to trails and pathways
    - Healthy forest and natural areas

- Winter access and activities
- Playgrounds and play features
- Quiet areas and scenic views
- Community events and entertainment spaces
- Updated barns and animal care areas
- Visitor amenities (accessible restrooms, food/beverage, picnic shelters)
- Improved parking and traffic flow
- Dedicated event space (barn rentals, pavilion, amphitheater)
- Agricultural education (livestock, crops, equestrian)
- Farm-to-table experiences (gardening, cooking, maple sugaring)
- History of farming and heritage agriculture
- Therapeutic riding and equestrian programs
- Adventure options (farm mazes, ropes course, winter tubing)

7. How important is it to you that Bloomfield Hills Schools maintain ownership of Bowers School Farm?
   - Very important
   - Somewhat important
   - Not important
   - I don't know
8. Please share your creative ideas for the future of Bowers School Farm, such as new amenities and activities. [open-ended]
9. Is there anything else you'd like to share about Bowers School Farm? [open-ended]

Questions Specific to the Johnson Nature Center

1. Approximately how many guests do you estimate visit the Johnson Nature Center annually?
   - 2,000
   - 4,000
   - 8,000
   - 10,000
   - 12,000

Then branching/confirming the correct answer (The Johnson Nature Center has approximately 10,000 annual visitors.)

2. How often do you visit the Johnson Nature Center?
   - I've never visited the Johnson Nature Center
   - Less than once a year
   - More than once, but less than 10 times
   - Once a month
   - More than once a month
3. Are you actively supporting the Johnson Nature Center in any of the following ways?
   - Donated money

- Volunteered
- Purchased a membership
- Attended Forest to Table fundraising event
- None of the above
- Other (open ended)

4. If you visited JNC, what did you do on your visit? Please select all that apply.
   - K-12 environmental education programming
   - No cost access to trails and hiking
   - Visited the Log Cabin/Early Settlers Learning
   - Visited the deer pen/rescued animals
   - Attended Art Walks (when visiting exhibits are on site)
   - Attended maple sugaring events
   - Participated in bird walks and pond studies
   - Attended Forest to Table events
   - Volunteered
   - Went fishing
   - Rented space for a birthday party
   - None of the above
   - Other (open-ended)
5. How important to you are the following Johnson Nature Center offerings? (all should be: not important, somewhat important, very important)
   - K-12 environmental education programming
   - No cost trails and hiking
   - The Log Cabin/Early Settlers Learning
   - The deer pen/rescued animals
   - Art Walks (when visiting exhibits are on site)
   - Maple sugaring events
   - Bird walks and pond studies
   - Forest to Table events
   - Volunteer opportunities
   - Fishing
   - Rental space
6. How important to you are the following features and activities? (all should be: not important, somewhat important, very important)
   - Trail system upgrades (ADA-accessible, wayfinding)
   - Healthy forest and natural areas
   - Boardwalk repairs and improvements
   - Wildlife viewing areas (bird blinds, observation decks)
   - Quiet areas and scenic views
   - Maple Sugaring demonstration improvements

- Land history and local heritage
- Seasonal recreation (snowshoeing, cross-country skiing, fishing)
- Outdoor pavilion and nature play
- Parking lot enhancement and visitor amenities (restrooms, water stations)
- Ambassador animals (rehabilitated, non-releasable)
- Renewable energy / sustainability initiatives (solar, rain gardens)

7. How important is it to you that Bloomfield Hills Schools maintain ownership of the Johnson Nature Center?
   - Very important
   - Somewhat important
   - Not important
   - I don't know
8. Please share your creative ideas for the future of the Johnson Nature Center, such as new amenities and activities. [open-ended]
9. Is there anything else you'd like to share about Johnson Nature Center? [open-ended]

Final Thoughts:

1. Based on what you understand so far, are you in favor of Bloomfield Hills Schools continuing the dialogue with Oakland County Parks for the purposes of supporting Bowers School Farm and the Johnson Nature Center?
   - Yes
   - No
   - I need more information
   - Other (open ended)
2. Do you have any other comments, questions, concerns, or suggestions? [open-ended]

About You

1. Do you live within the Bloomfield Hills Schools boundaries?
   - Yes
   - No
   - Unsure
2. Are you a parent or caretaker of a child currently enrolled in Bloomfield Hills Schools?
   - Yes
   - No
3. How old are your children? Please select all that apply for multiple children.
   - 0-5
   - 6-11
   - 12-14
   - 15-18
   - 18+
   - No children

4. What is your home zip code?
5. What is your age?
    - 18-24
    - 25-34
    - 35-44
    - 45-54
    - 55-65
    - 65 or older
6. What is your gender?
    - Female
    - Male
    - Prefer not to answer
7. Which of the following best describes your race/ethnicity?
    - Asian or Asian Indian
    - Black or African American
    - Native American or Alaska Native
    - White
    - Native Hawaiian or other Pacific Islander
    - Hispanic or Latino/a
    - Middle Eastern or North African
    - Other ____
8. Languages spoken in your home:
    - English
    - Spanish
    - Arabic
    - Mandarin or Cantonese
    - Hindi
    - Other_____

After survey is completed:

Thank you for taking the time to complete the survey, your feedback is important to us.

This survey was created in partnership with the Friends of Bowers Farm, the Friends of the Johnson Nature Center, and Oakland County Parks.

1.0 EXECUTIVE SUMMARY

ASTI Environmental (ASTI) was retained by Oakland County Parks and Recreation to conduct a Phase I Environmental Site Assessment (ESA) of the site at 1219 E. Square Lake Road, Bloomfield Hills, Oakland County, Michigan 48034 (Subject Property). The Phase I ESA was conducted in accordance with United States Environmental Protection Agency (US EPA) Standards and Practices for All Appropriate Inquiries (AAI, 40 CFR Part 312) and the American Society for Testing and Materials (ASTM) Practice E1527-21. The information and opinions presented in this report are intended solely for the reliance of Oakland County Parks and Recreation.

Subject Property Overview		
Address/Location	1219 E. Square Lake Road, Bloomfield Hills, Oakland County, Michigan 48034	
Parcel Information	Street Address	Parcel Number
	1219 E. Square Lake	C -19-01-376-006
	E. Square Lake	C -19-01-451-002
	1219 E. Square Lake	C -19-01-451-003
Acreage	± 85.54	
Current Use	Rural land with a farm school, park, and event venue	

The Phase I ESA included (1) a site inspection on May 1, 2026, (2) interviews with knowledgeable site contacts, (3) review of pertinent Michigan Department of Environment, Great Lakes, and Energy (EGLE), Department of Licensing and Regulatory Affairs (LARA), Bloomfield Hills, and Wayne County records, (4) acquisition and review of a federal and state database search, and (5) review of historical aerial photographs, topographic maps, and city directories.

Below is a summary of our opinion, which represents the findings of this Phase I ESA. Affirmative answers are discussed following the summary table.

Condition as defined in ASTM E1527 and/or AAI	Identified through a search of ***Reasonably Ascertainable*** records
Significant Data Gap	No
De Minimis Condition	No
Historically Recognized Environmental Condition (HREC)	No
Controlled Recognized Environmental Condition (CREC)	No
Recognized Environmental Condition (REC)	Yes

Refer to Section 10.0 for a more detailed summary of the findings.

Recognized Environmental Conditions

We have performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527-21 for the Subject Property. Any exceptions to, or deletions from, this practice are described in Section 2.4 of this report. This assessment has identified the following RECs, CRECs, and/or significant data gaps in connection with the Subject Property.

- REC: It was reported that a diesel oil underground storage tank (UST) was recently discovered underneath the northern portion of a cottage at the Subject Property. The tank was located on the hill-facing façade behind a concrete retaining wall. A section of the retaining wall was removed to allow for tank removal. During site reconnaissance, ASTI observed posted signs prohibiting use of the cottage. A pungent oily odor was noted during inspection of the cottage. All that remains of the tank removal activity is a 55-gallon metal drum with impacted soil that was excavated after the discovery. No other information was given, but the former tank appears to have been an orphaned fuel oil tank. There is evidence of a release, which is a REC.

2.0 INTRODUCTION

ASTI was retained by Oakland County Parks and Recreation to conduct a Phase I ESA of the Subject Property. The Phase I ESA was conducted in accordance with the U.S. EPA Standards and Practices for AAI and the ASTM Practice E1527-21.

2.1 Purpose

The assessment was conducted to identify *recognized environmental conditions* (RECs), *historically recognized environmental conditions* (HRECs), and *controlled recognized environmental condition*s (CRECs) associated with the historical uses of the Subject Property, current site operations, and the condition of surrounding properties. This Phase I ESA can be used by Oakland County Parks and Recreation to qualify for one of three landowner liability protections (contiguous property owner, innocent landowner, or bona fide prospective purchaser) available under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) of 1980, as amended. This Phase I ESA may also be used to qualify for State of Michigan liability defenses and exemptions that may be available under Part 201 of the Natural Resources and Environmental Protection Act.

2.2 Detailed Scope of Services

Information required to complete the Phase I ESA was obtained from personal interviews and a review of *practically reviewable* and *reasonably ascertainable* records. Informational sources include the following:

Section	Item	Adequate	Inadequate/ Data Gap	Source
7.0	Interviews	x		Ken Wallace, Site Coordinator
4.0	User-Provided Information		x	Questionnaire
4.1/4.2	AUL/Liens Search		x	User
5.2.3	Assessing Documents	x		Bloomfield Hills
5.2.4	Building Permits	x		Bloomfield Hills
5.2.5	Zoning Documents	x		Bloomfield Hills
5.2.2	Fire Department Records	x		Bloomfield Hills
5.2.1	Health Department Records	x		Oakland County
5.3.1	Aerial Photographs	x		EDR
5.3.2	Sanborn Map Search	x		EDR
5.3.3	City Directories	x		EDR
5.3.4	Topographic Maps	x		EDR
5.1	Regulatory Database Review	x		EDR

2.3 Significant Assumptions

Information obtained during this assessment, to the extent it was relied on to form our opinion, was assumed to be complete and accurate. ASTI cannot be held responsible for the quality or content of information obtained from interviews and standard sources. Since ASTI cannot warrant or guarantee that the information provided by interviews and standard sources is accurate or complete, the intention of this Phase I ESA is to reduce, but not eliminate, uncertainty for the potential for RECs, HRECs, and CRECs on the Subject Property.

2.4 Deviations, Exceptions, and Limitations

The information and opinions included in this report were provided in response to a limited scope of work, specifically a Phase I ESA as per ASTM Practice E1527-21 and AAI. They should be considered and implemented only in light of that particular scope of work. The services provided

by ASTI in completing this assessment have been provided in a manner consistent with the expected standards of the profession. No other warranties, expressed or implied, are made.

Non-scope issues are considered by ASTM Practice E1527-21 to be beyond the scope of a Phase I ESA. These issues may affect *business environmental risk* at the Subject Property. These non-scope issues may warrant assessment based on the type of Subject Property transaction. Non-scope issues such as those described in ASTM Practice E1527-21 Appendix X6 were not investigated.

No deviations to ASTM Practice E1527-21 or AAI have occurred during this assessment.

No testing or sampling of materials (i.e., soil, water, and air) was conducted as part of this assessment. No limiting conditions were identified during the site reconnaissance, except for those described in Section 6.1.

ASTM Practice E1527-21 does not require a review of standard historical sources at intervals of less than approximately five years. Past uses of the Subject Property at intervals of less than approximately five years may not have been uncovered.

Responses received from regulatory agencies or other secondary sources of information after the issuance of this report may alter the facts, findings, conclusions, or recommendations in this Phase I ESA.

2.5 Special Terms and Conditions

The Phase I ESA was performed in conformance with the scope and limitations of ASTM Practice E1527-21 and AAI. No special terms and conditions outside ASTM Practice E1527-21 and AAI have been addressed. Under the AAI Rule and ASTM Practice E1527-21, AAI must be conducted within one year prior to the date of the transaction of the Subject Property. However, according to Section 4.6 of ASTM Practice E1527-21, "Certain Components" of the AAI must be conducted or updated within 180 days prior to the date of the Subject Property transaction. These "Certain Components" and the corresponding dates they were conducted are provided below:

- Interviews with owners, operators, and occupants (conducted May 1, 2026)
- Governmental records review (conducted April 7, 2026)
- Site reconnaissance (conducted May 1, 2026)

- Searches for records of environmental cleanup liens (a User responsibility, ASTI conducted a review of liens perfected by the EGLE Remediation and Redevelopment Division on April 8, 2026)
- Declaration by the Environmental Professional responsible for the assessment (signed May 22, 2026)

2.6 User Reliance

The Phase I ESA was performed for the benefit of Oakland County Parks and Recreation. ASTI acknowledges that this party may rely on the contents and conclusions presented in this report. This effort was performed per the authorization of Oakland County Parks and Recreation on April 3, 2026. The information and opinions presented in this report are intended exclusively for the use of Oakland County Parks and Recreation. ASTI will not distribute or publish this report without the prior consent of Oakland County Parks and Recreation, except as required by law or court order.

Any use a third party makes of this report, any reliance upon it, or any decision based on it is the sole responsibility of the third party. A third party is not afforded the status of a third-party beneficiary unless ASTI expressly agrees to such status in writing. ASTI has no liability for any damages that may be incurred by a third party as a result of any decision made or action taken by that party based on this report.

3.0 SITE DESCRIPTION

3.1 Location, Legal Description, Vicinity Characteristics

General Location	A Site Location Map is provided in Appendix A.	
Legal Description	A copy of the assessment record, including the legal description, is included in Appendix D.	
Section & Township and Range	SE¼ of Section 01, Township 2 North, Range 10 East	
City/Township, County, State, Zip Code	Bloomfield Hills, Oakland County, Michigan 48034	
Parcel Information	Street Address 1219 E. Square Lake E. Square Lake 1219 E. Square Lake	Parcel Number C -19-01-376-006 C -19-01-451-002 C -19-01-451-003
Acreage	± 85.54	

Subject Property Zoning	R-2: One Family Residential District
Local Development Utilization	Rural land with a farm school, park, event venue, offices, residential

A Site Features Map is included in Appendix A. Photographs of the Subject Property and adjoining properties were taken during the site inspection and are provided in Appendix B.

3.2 Current Use of the Subject Property

The Subject Property is used for agricultural, educational, and recreational purposes.

3.3 Descriptions of Structures, Roads, Other Improvements on the Site

Building Descriptions					
I.D.	Building Type	Primary Use	Functional Spaces	Built Date	Stories
1	Commercial	Visitor Center	Retail, classrooms, kitchen, office, restroom, janitorial, electrical	1990s, 2012	1
2	Commercial	Farm Activities Building	Classrooms, office, restroom, janitorial, electrical	1990s	2
3	Farmhouse*	Barton Farmhouse	Bedroom/office, bathroom, stairs, living room, kitchen	Early 1900s	2
4	Barn	Livestock Barn	Storage, pens	Early 1900s	2
5	Barn	Bird Barn	Storage	1980s	1-2
6	Barn	Horse & Maintenance Barn	Storage, pens	1980s	2
7	Cottage	Storage	Bedroom/office, bathroom, stairs, living room, kitchen	Early 1900s	1
8	Farmhouse	Storage	Bedroom/office, bathroom, stairs, living room, kitchen	1970s	1

*Relocated onto the Subject Property in the 2000s

Building Construction			
I.D.	Square Footage*	Primary Construction	Interior Finishes
1, 2	6,500-11,000	Concrete slab foundation, wood framing, gable roof	Epoxy, drywall, ceiling tile, paint, wallpaper, ceramic, vinyl, carpet, composite flooring, base cove
3, 7, 8	1,200-2,500	Concrete slab foundation, basement, wood framing, gable roof	Plaster/dry wall, paint, wood, ceramic

Building Construction			
I.D.	Square Footage*	Primary Construction	Interior Finishes
4, 5, 6	1,000-3,800	Concrete slab foundation, earthen floor, wood framing, gable roof	Paint

*All square footage is estimated

Roads and Other Improvements	
Access	Via nearby roadways
Paved Areas	Limited areas around buildings
Maintained Lawn	
Landscaped Areas	Limited areas around dwellings
Surface Water	Tributary of Lake Charnwood
Additional Improvements	Fencing, farmland, and trails

Municipal Services and Utilities			
Service or Utility	Present	Provider	Comments
Potable Water Source	Yes	City of Bloomfield	
Irrigation Well	Yes		Installed in 2013 and 2021 (3 total)
Sewage	Yes		Private septic systems installed in 1993 and 2010 (2 total)
Storm Sewer	No		
Electrical	Yes	DTE Energy	
Natural Gas	Yes	DTE Energy	
Solid Waste Disposal	Yes	Green For Life	
Heating & Cooling	Yes		Geothermal pumps, natural gas, and electric

3.4 Current Uses of Adjoining Properties

ASTI observed adjoining properties during the site inspection to evaluate the potential risk these properties may pose to the Subject Property. Observations were made from the Subject Property and public access areas, as appropriate. Each is described as follows:

Adjoining Property Use			
Direction	Description	Use	Potential Concerns Observed During Site Reconnaissance
North	Private Residences	Residential	None
	Tuskegee Airmen Memorial Highway	Transit	None
East	Tuskegee Airmen Memorial Highway	Ramp	None

Adjoining Property Use			
Direction	Description	Use	Potential Concerns Observed During Site Reconnaissance
East	Offices, 6001 N. Adams	Commercial	None
South	Private Residences	Residential	None
West	Private Residences	Residential	None

No stained areas, stressed vegetation, or signs of material spillage were observed along the shared property lines with the Subject Property. No pits, waste lagoons, above-ground storage tanks (ASTs), physical evidence of underground storage tanks (USTs), or other forms of chemical storage were observed on the adjoining properties.

3.5 Physical Setting Sources

The EDR report in Appendix D provides a Physical Setting Sources Map, which includes an overlay of the United States Geological Survey (USGS) topographic map (7.5-minute series) for the Birmingham, Michigan quadrangle, which includes the Subject Property. The USGS map is also the basis of the Site Location Map in Appendix A.

Average Elevation (feet above mean sea level)	902 feet
Local Gradient	Declines to the west-northwest
Regional Gradient	Declines to the southeast
Nearest Surface Water Body	Tributary of Lake Charmwood exists onsite (drains to the Rouge River to the southeast
Groundwater Depth (feet below ground)	Between 30 – 65 feet according to onsite well records
Groundwater Flow Direction	Inferred to flow northwest based on gradient and surface water flow

According to onsite well/septic records, the lithology of the Subject Property consists silt and gravel to 18 feet bgs, clay and gravel to 31 feet bgs, sand to 45 feet bgs, sand and gravel to 75 feet bgs, clay and gravel to 162 feet bgs, gravel and clay to 170 feet bgs, sand to 182 feet bgs, sand with clay to 185 feet bgs, and sand and gravel to 210 feet bgs.

E-01 | original source page 12 | APP 658

4.0 USER-PROVIDED INFORMATION

To qualify for one of the landowner liability protections offered by the Small Business Liability Relief and Brownfield's Revitalization Act of 2002, the User, defined by ASTM as *the party seeking to use Practice E1527 to complete an environmental site assessment of the property*, has specific obligations for completing a successful application of this practice as outlined in Section 6 of ASTM Practice E1527-21. Failure to provide information regarding the obligations outlined to the Environmental Professional may result in a determination that AAI is not complete.

ASTI requested the completion of a User Questionnaire; however, no response was received during the completion of this Phase I ESA. A blank copy of the questionnaire is included in Appendix C.

Question		Response
1	Did a search of recorded land title records identify any environmental liens filed or recorded against the Subject Property under federal, tribal, state, or local law?	No response
2	Did a search of recorded land title records identify any Activity Use Limitations, such as engineering controls, land use restrictions, or institutional controls that are in place at the Subject Property and/or have been filed or recorded against the Subject Property under federal, tribal, state, or local law?	No response
3	Do you have any specialized knowledge or experience related to the Subject Property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the Subject Property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?	No response
4	Is the purchase price significantly lower than the fair market value? If you conclude there is a difference, have you considered whether a lower price is due to contamination known or believed to be present at the Subject Property?	No response

E-01 | original source page 13 | APP 659

Question		Response
5	Are you aware of commonly known or reasonably ascertainable information about the Subject Property that would help the environmental professional to identify conditions indicative of releases or threatened releases?	No response
5a	Do you know past uses of the Subject Property?	No response
5b	Do you know of specific chemicals that are present or once were present at the Subject Property?	No response
5c	Do you know of spills or other chemical releases that have taken place at the Subject Property?	No response
5d	Do you know of any environmental cleanups that have taken place at the Subject Property?	No response
5e	Based on your knowledge and experience related to the Subject Property, are there any obvious indicators that point to the presence or likely presence of releases at the Subject Property?	No response
6	Are you aware of any prior environmental investigations that may be available for review?	No response

4.1 Environmental Liens and Activity Use Limitations (AULs)

The User did not report AULs or liens related to environmental matters.

4.2 Search of Recorded Land Title Records

The User did not provide recorded land title records for the Subject Property.

4.3 Additional Records Provided by the User

The User did not provide any additional records.

5.0 RECORDS REVIEW

5.1 Standard Environmental Record Sources

ASTI ordered a government records search for the Subject Property from Environmental Data Resources, Inc. (EDR) in Shelton, Connecticut. A copy of the EDR Radius Map Report with GeoCheck®, dated April 7, 2026, is included in Appendix D. The EDR report presents a description of the databases, search distances, and results.

5.1.1 Discussion of Subject Property Listings

There are no Subject Property Listings.

The EGLE Remediation and Redevelopment Division (RRD) maintains a list of environmental liens that EGLE RRD has placed on properties in the state to recover costs associated with state-led response activities. No EGLE RRD environmental liens were listed for the Subject Property in the online database as of August 7, 2026 (Appendix D).

According to the EDR report, the Subject Property was not listed in the search of institutional control and engineering control registries.

5.1.2 Discussion of Sites of Potential Environmental Concern

There are no listings for adjoining sites.

For the remaining listings, ASTI considers select criteria to determine which listings represent an environmental concern to the Subject Property. The criteria include but are not limited to the following:

- Database type
- Topography relative to the Subject Property
- Direction and distance
- Soil profile identified in available sources
- Known or inferred groundwater depth and flow direction
- Status of applicable investigation
- Surface and subsurface conditions including but not limited to buildings, pavement, utility corridors, and surface water features
- Potable water source (well or municipal)

An evaluation of these criteria is completed to determine the level of risk associated with each

listing. Listings with likely releases that are found to have the potential to represent an elevated or high risk are requested through the Freedom of Information Act (FOIA) from applicable agencies.

Using the referenced criteria and based on the information in the EDR report, ASTI did not identify identified additional listings beyond adjoining properties that were considered to represent a potential elevated or high risk to the Subject Property.

5.1.3 Discussion of Orphan Sites

No orphan sites were listed in the EDR Radius Map Report.

5.2 Additional Agency/Regulatory Sources

5.2.1 Local Health Department

ASTI requested information about the Subject Property from the Oakland County Health Department. Available records were provided on April 14, 2026, and copies are included Appendix D. Records regarded irrigation wells and septic systems.

5.2.2 Local Fire Department

ASTI requested information about the Subject Property from the Bloomfield Township Fire Department. In a response dated April 15, 2026, the township clerk indicated that there were no records. A copy of the response is included in Appendix D.

5.2.3 Subject Property Assessor/Tax Files

ASTI requested information about the Subject Property from the Bloomfield Township Assessing Department. Current assessment records are provided in Appendix D. No RECs were identified.

5.2.4 Building Permit/Inspections

ASTI requested information about the Subject Property from the Bloomfield Township Building Department. Reviewed records include electrical, mechanical, building, plumbing and water service permits. Reviewed records are provided in Appendix D.

5.2.5 Zoning/Land Use Records

ASTI reviewed information about the Subject Property from the Bloomfield Township Zoning Department. The Subject Property is zoned R-2 (One Family Residential District). A copy of the zoning map is provided in Appendix D.

5.2.6 Oil and Gas Wells

Based on a review of the EGLE GeoWebFace search system and the EDR report, no oil or gas wells were identified on or adjacent to the Subject Property.

5.3 Historical Use Information

Reasonably ascertainable historical sources, as outlined in Section 8.3.4 of ASTM Practice E1527-21, were utilized to determine the previous use of the Subject Property and its surrounding area. A chronological summary of the sources used may include, but is not limited to, aerial photographs, Sanborn maps, city directories, agency records, and prior environmental assessments. ASTI made a *good faith* effort to identify the obvious uses of the Subject Property from the present back to the Subject Property's first developed use, or back to 1940, whichever is earlier. *Data Failures* were encountered as part of this assessment and are discussed as data gaps in Section 9.0.

5.3.1 Aerial Photographs

ASTI reviewed aerial photographs provided by EDR. Observations about the Subject Property and adjoining sites are summarized in the table below. Copies of the obtained information are provided in Appendix E.

Year	Observations
1937	Subject Property: Two farmsteads, farmland and woodland are evident.
	Adjoining: Rural land is evident. The area is dominated by farmland. A farmstead and an orchard are evident to the south.
1940	No significant change is identified.
1949	
1952	Subject Property: The eastern farmstead appears deteriorated and demolished.
	North Adjoining: The current residences are evident.
1956	South Adjoining: Increased residential use is evident.
1967	Subject Property: A disturbance is evident in the eastern portion, and it appears to be surface mining.
	North Adjoining: The current highway is evident.
	West Adjoining: Pre-development grading is evident.
1976	Subject Property: Additional buildings are evident.
	West Adjoining: The current residences are evident.
1983	Subject Property: Additional buildings are evident.
1987	East Adjoining: The current office building is evident.
1997	Subject Property: Additional buildings are evident in the eastern portion. A track is evident.
1999	No significant changes are evident.
2006	
2009	
2012	Subject Property: The current school complex is evident.

Year	Observations
2016	No significant changes are evident.
2020	
2024	

5.3.2 Sanborn Maps

There are no Sanborn maps for the area. A Certified Sanborn Map Report, which identifies the search results as unmapped, is included in Appendix D.

5.3.3 City Directories

City directory research was conducted by EDR (Appendix E). The non-residential occupant information was considered as part of the summaries provided in Sections 5.3.6 and 5.3.7.

5.3.4 Topographic Maps

ASTI reviewed the United States Geological Survey (USGS) topographic maps provided by EDR. Observations about the Subject Property and adjoining sites are summarized in the table below. Copies of the obtained information are provided in Appendix E.

Year	Observations
1908	Subject Property: Three buildings are evident.
	Adjoining: Buildings are evident to the south.
1936	Subject Property: Two buildings are evident.
	Adjoining: Linton School is evident to the south.
1945	Subject Property: One building is evident.
1952	Subject Property: An additional building is evident.
	Adjoining: An orchard is evident to the south. Residences are evident to the north.
1968	Subject Property: Buildings are no longer evident. The topography on the eastern portion has changed and is about 40 to 60 feet lower than before.
	Adjoining: Residences are evident to the south and west. The highway is evident to the north.
1972	Subject Property: Two outbuildings are evident.
1981	Subject Property: Three outbuildings are evident.
2014	Buildings are no longer included in map images.
2017	No significant change is identified.
2019	
2023	

5.3.5 Previous Environmental Reports

ASTI was not provided with any environmental reports.

5.3.6 Historical Use Summary of the Subject Property

Based on a review of the historical sources obtained, the former uses of the Subject Property are

summarized as follows.

The Subject Property was used for agricultural and residential purposes from at least 1937 until the mid-1970s when it was repurposed as the current farm school. The farm school has continued to be developed into the 2010s. The eastern portion appears to have been used as a surface mine in the 1960s, which is around the time the adjoining highway was constructed.

5.3.7 Historical Use Summary of the Adjoining Properties

Based on a review of the obtained historical sources, the former uses of adjoining properties are summarized as follows:

The area was dominated by rural land from at least 1937 until the mid-1950s when residential uses increased. The highway to the north was constructed in the 1960s, followed by the office building to the west in the late 1980s. Several residences have been used for home-based businesses, including metal architecture, inspector, and a limo service.

6.0 SITE RECONNAISSANCE

6.1 Methodology and Limiting Conditions

Assessor Name and Title	Brady Metzger, Environmental Technician
Date of Inspection	May 1, 2026
Weather Conditions	44 º F and cloudy
Methodology	ASTI inspected the Subject Property in a meander and search pattern, including all property boundaries, adjoining properties from the Subject Property, and public access areas.
Access Limitations	Untrimmed vegetation, storage, park cars, secured building
Adverse Subject Property Conditions	None

6.2 Exterior Observations

The following table summarizes the site's exterior observations. Observed items are further discussed below.

Category	Item	Item Observed
Above Ground Hazardous Substance/Petroleum Product Storage	Drums, barrels, or containers ≥5 gallons in connection with identified uses	Yes
	Drums, barrels, or containers ≥5 gallons not in connection with identified uses	No
	Unidentified Substance Containers	No
	ASTs	No
Underground Hazardous Substance/Petroleum Product Storage	USTs (fill ports and/or vent pipes)	Reported
	Fuel dispensers	No
	Natural gas or petroleum pipelines/wells	No
Basic & Specialized Systems	Pole-mounted or pad-mounted transformers	Yes
	Hydraulic equipment	No
Indications of Releases or Potential Releases	Stained soil or pavement	No
	Stressed vegetation	No
	Pools of liquid	No
	Strong or pungent odors	Yes
	Filled Land/Soil Piles/Mounding	Yes
	Unregulated/Unauthorized Waste Disposal	No
	Dumpsters with Staining	No
	Monitor wells	No
Drainage & Waste Collection Systems	Pits	No
	Ponds	Yes
	Lagoons	No
	Sumps/Oil-Water Separators	No
	Stormwater collection basins	No
	Dry wells/crocks/cisterns	No
Other Notable Items	None observed	N/A

Items noted as unobserved do not fully warrant that these items are not present on the Subject Property, as some items may not have been readily observable.

ASTI observed a 55-gallon metal drum that was labeled hazmat. The drum was located north of the farm activity building. It contained impacted soil that was excavated from around the recently discovered buried diesel/oil tank underneath the cottage.

ASTI observed posted signs prohibiting use of the cottage. A pungent oily odor was noted during inspection of the cottage.

ASTI observed debris pile comprised of milled asphalt, brick, cobble, and concrete.

ASTI observed pole- and pad-mounted transformers. They were in fair condition. It's assumed that the transformers are owned by the local utility provider.

ASTI observed two ponds. They don't appear to be associated with any drainage or waste collection systems.

6.3 Interior Observations

The following table summarizes the site's interior observations. Observed items are further discussed below.

Category	Item	Item Observed
Above Ground Hazardous Substance/Petroleum Product Storage	Drums, barrels, or containers ≥5 gallons in connection with identified uses	Yes
	Drums, barrels, or containers ≥5 gallons not in connection with identified uses	No
	Unidentified Substance Containers	No
	ASTs	No
Underground Hazardous Substance/Petroleum Product Storage	USTs (fill ports and/or vent pipes)	No
	Dispensing Systems	No
Basic & Specialized Systems	Transformers	No
	Elevators	No
	Compressors	No
	Compactors	No
	Hydraulic Hoists/Lifts	No
	Hydraulic Equipment other than those above	No
	Emergency generators	No
Indications of Releases or Potential Releases	Staining	No
	Pools of liquid	No
	Strong or pungent odors	No
	Monitor wells	No
Drainage & Waste Collection Systems	Pits	No
	Standard floor drains	Yes
	Sumps/manhole covers/oil-water separators	Yes
	Trench drains	Yes
	Dry wells/crocks	No
Other Notable Items	Grease Trap	Yes

ASTI observed small containers of cleaning supplies, salt, and oil. These materials were stored on concrete, shelves, and a flammable materials cabinet. Generally, the storage areas were neat and orderly.

ASTI observed standard floor drains and one french drain. The plumbing for each building was not verified, but its assumed plumbing connects into septic systems or municipal services. No mismanagement or suspect operations were observed.

A standard basement sump was observed in a dwelling.

ASTI observed a kitchen grease trap. The trap intercepts kitchen greases before being discharged into the septic system or municipal sewer service.

7.0 INTERVIEWS

7.1 Interview with Owner

ASTI requested the completion of an Owner Questionnaire; however, no response was received during the completion of this Phase I ESA.

7.2 Interview with Site Manager

ASTI interviewed Ken Wallace, Site Coordinator with Bower's School Farm/Bloomfield Hills Schools, during site reconnaissance on May 1, 2026. It was reported that a diesel oil underground storage tank was recently discovered underneath the northern portion of cottage at the Subject Property. The tank was located on the hill-facing façade behind a concrete retaining wall. A section of the retaining wall was removed to allow for tank removal. About 32 gallons of product were pumped and removed during tank closure.

7.3 Interview with Occupants

Refer to Section 7.2.

7.4 Interviews with Local Government Officials

Conversations with local government officials were limited to requesting department records.

7.5 Interviews with Others

No others were interviewed as part of this assessment.

8.0 DISCUSSION REGARDING POTENTIAL VAPOR MIGRATION/ENCROACHMENT

Tier 1 Non-Invasive screening aims to conduct an initial screen to determine whether a vapor migration/encroachment condition (VEC) exists, is likely to exist, cannot be ruled out, or can be ruled out at the Subject Property.

The REC discussed in Section 11.0 is a potential VEC.

The screening process concludes that a VEC cannot be ruled out.

9.0 DATA FAILURE AND DATA GAPS

Data gaps occur when the EP is unable to obtain the required information despite making a *good-faith* effort.

Data failure is one type of data gap. According to ASTM Practice E1527-21, data failure occurs when all the standard historical sources that are *reasonably ascertainable* and likely to be useful have been reviewed, and yet the objectives have not been met. Historical sources are required to document the property's use back to the Subject Property's first developed use or to 1940, whichever is earlier. A data failure is considered to have occurred and is described below.

Data Gap	The Subject Property was developed prior to the earliest reasonably ascertainable standard historical source.
Is this a significant data gap?	No
Rationale	The earliest identified uses were residential and agricultural.

No additional data gaps were identified during this investigation, except for those listed below.

Data Gap	ASTI was unable to interview the Owner despite a request to do so. ASTI requested the completion of an Owner Questionnaire as an interview tool, but no response was received during the completion of this Phase I ESA.
Is this a significant data gap?	No
Rationale	Given the history of the site as a residence, farm, and farm school, the reviewed information is sufficient to determine risk. If the Owner is available in the future, they should be interviewed.

Data Gap	The User has not met their obligations, which are defined in Section 6 of ASTM Practice E1527-21. ASTI requested the completion of a User Questionnaire to cover the obligations, but no response was received during the completion of this Phase I ESA.
Is this a significant data gap?	No
Rationale	Given the history of the site as a residence, farm, and farm school, the reviewed information is sufficient to determine risk. If the Owner is available in the future, they should be interviewed.

Data Gap	ASTI was unable to determine past heating fuel sources for the Subject Property. The fuel sources may have included electric, wood, coal, propane, or fuel oil.
Is this a significant data gap?	No
Rationale	Although no evidence (i.e., fill ports, vent pipes, or pressure gauges, etc.) or information regarding the use of heating fuel was found during the assessment, based on the age of the former residences/buildings (built in the early 1900s), there is a potential that heating oil was used as a fuel source prior to natural gas. If a buried heating oil fuel tank is found during any redevelopment activities, the tank should be properly decommissioned with verification sampling conducted.

Data Gap	The foundation type of the former dwelling is unknown. Dwellings can be built with the following foundations: concrete slab, crawl space, partial basement, and full basement.
Is this a significant data gap?	No
Rationale	The foundation type is unknown and there is no indication or evidence to suggest a specific foundation type based on interviews or reviewed municipal records and historical records. Outbuildings typically have concrete floors, wood floors, or earthen floors. Therefore, the risk of fill material is minimal. If it is found that the former building contained a basement and fill material is encountered in the future, an assessment of fill material can be performed to further reduce environmental risk.

10.0 FINDINGS AND OPINION

FINDINGS

Below is a summary of the findings of this Phase I ESA.

The Subject Property was used for agricultural and residential purposes from at least 1937 until the mid-1970s when it was repurposed as the current farm school. The farm school has continued to be developed into the 2010s. The eastern portion appears to have been used as a surface mine in the 1960s, which is around the time the adjoining highway was constructed.

E-01 | original source page 24 | APP 670

ASTI interviewed Ken Wallace, Site Coordinator with Bower's School Farm/Bloomfield Hills Schools, during site reconnaissance on May 1, 2026. It was reported that a diesel oil underground storage tank was recently discovered underneath the northern portion of cottage at the Subject Property. The tank was located on the hill-facing façade behind a concrete retaining wall. A section of the retaining wall was removed to allow for tank removal. About 32 gallons of product were pumped and removed during tank closure. No other information was given.

ASTI observed posted signs prohibiting use of the cottage. A pungent oily odor was noted during inspection of the cottage.

ASTI observed a 55-gallon metal drum that was labeled hazmat. The drum was located north of farm activity building. It contained impacted soil that was excavated from around the recently discovered buried diesel/oil tank.

OPINION

Based on the site inspection, interviews, review of regulatory and municipal records, and examination of historical documentation, the following is opined by the EP.

De Minimis Conditions

The EP did not identify any de minimis conditions associated with the Subject Property.

Significant Data Gaps

The EP did not identify any significant data gaps associated with the Subject Property.

Historical Recognized Environmental Conditions

The EP did not identify any HRECs associated with the Subject Property.

Controlled Recognized Environmental Conditions

The EP did not identify any CRECs associated with the Subject Property.

Recognized Environmental Conditions

The EP identified the following REC associated with the Subject Property.

- REC: ASTI interviewed Ken Wallace, Site Coordinator with Bower's School Farm/Bloomfield Hills Schools, during site reconnaissance on May 1, 2026. It was

reported that a diesel oil underground storage tank was recently discovered underneath the northern portion of a cottage at the Subject Property. The tank was located on the hill-facing façade behind a concrete retaining wall. A section of the retaining wall was removed to allow for tank removal. During site reconnaissance, ASTI observed posted signs prohibiting use of the cottage. A pungent oily odor was noted during inspection of the cottage. All that remains of the tank removal activity is a 55-gallon metal drum with impacted soil that was excavated after the discovery. No other information was given, but the former tank appears to have been an orphaned fuel oil tank.

11.0 CONCLUSIONS

We have performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527-21 for the Subject Property. Any exceptions to, or deletions from, this practice are described in Section 2.4 of this report. This assessment has identified the following RECs, CRECs, and/or significant data gaps in connection with the Subject Property:

- REC: It was reported that a diesel oil underground storage tank (UST) was recently discovered underneath the northern portion of a cottage at the Subject Property. The tank was located on the hill-facing façade behind a concrete retaining wall. A section of the retaining wall was removed to allow for tank removal. During site reconnaissance, ASTI observed posted signs prohibiting use of the cottage. A pungent oily odor was noted during inspection of the cottage. All that remains of the tank removal activity is a 55-gallon metal drum with impacted soil that was excavated after the discovery. No other information was given, but the former tank appears to have been an orphaned fuel oil tank. There is evidence of a release, which is a REC.

12.0 ADDITIONAL SERVICES

Non-Scope Considerations under Appendix X6 of ASTM Practice E1527-21 were not addressed in this investigation.

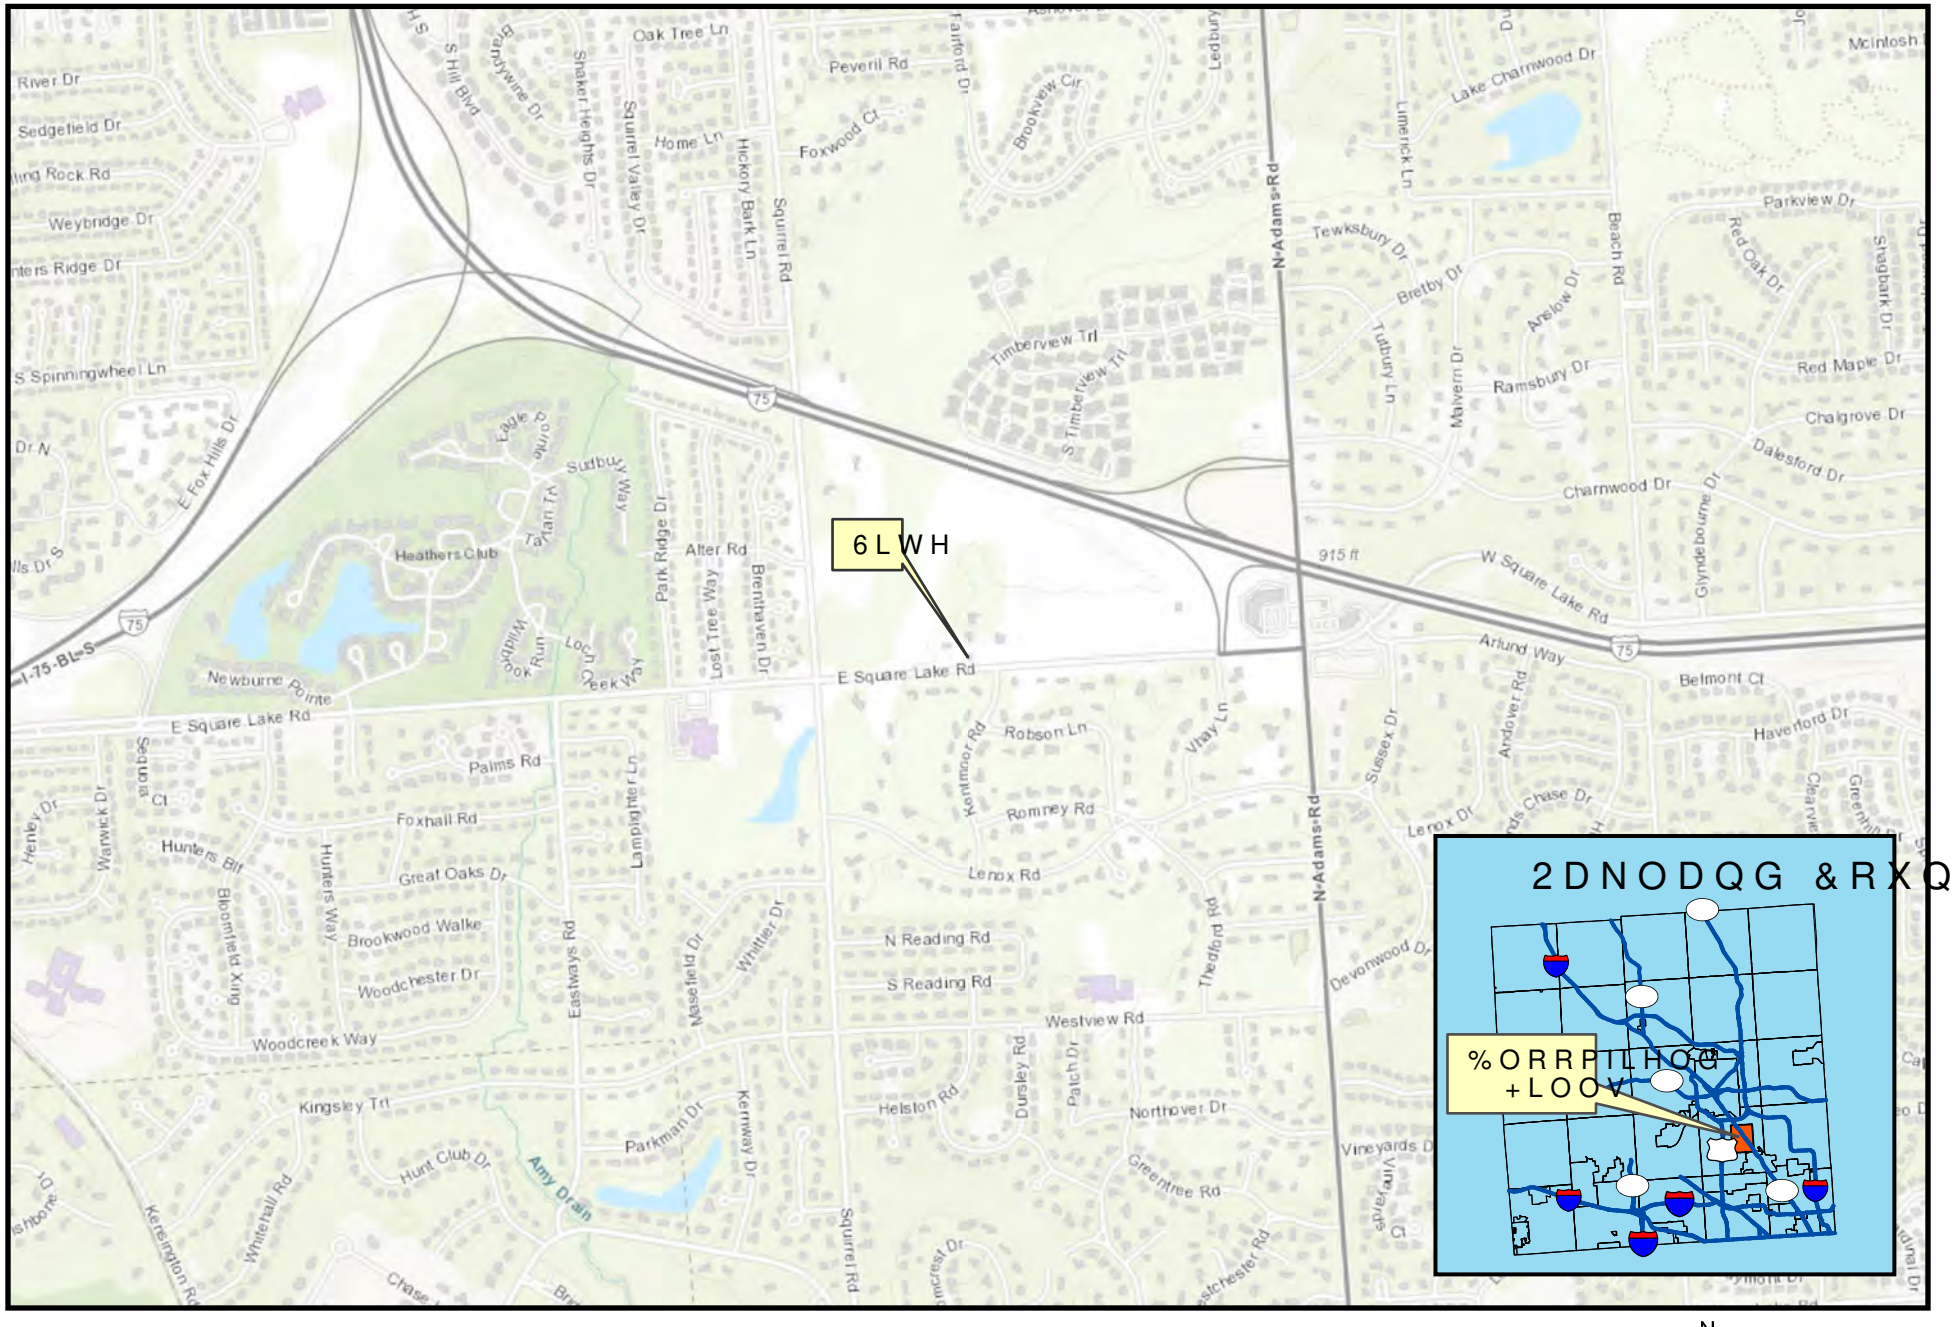
14.0 SIGNATURE(S) OF ENVIRONMENTAL PROFESSIONAL(S)

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in 312.10 of 40 CFR 312.

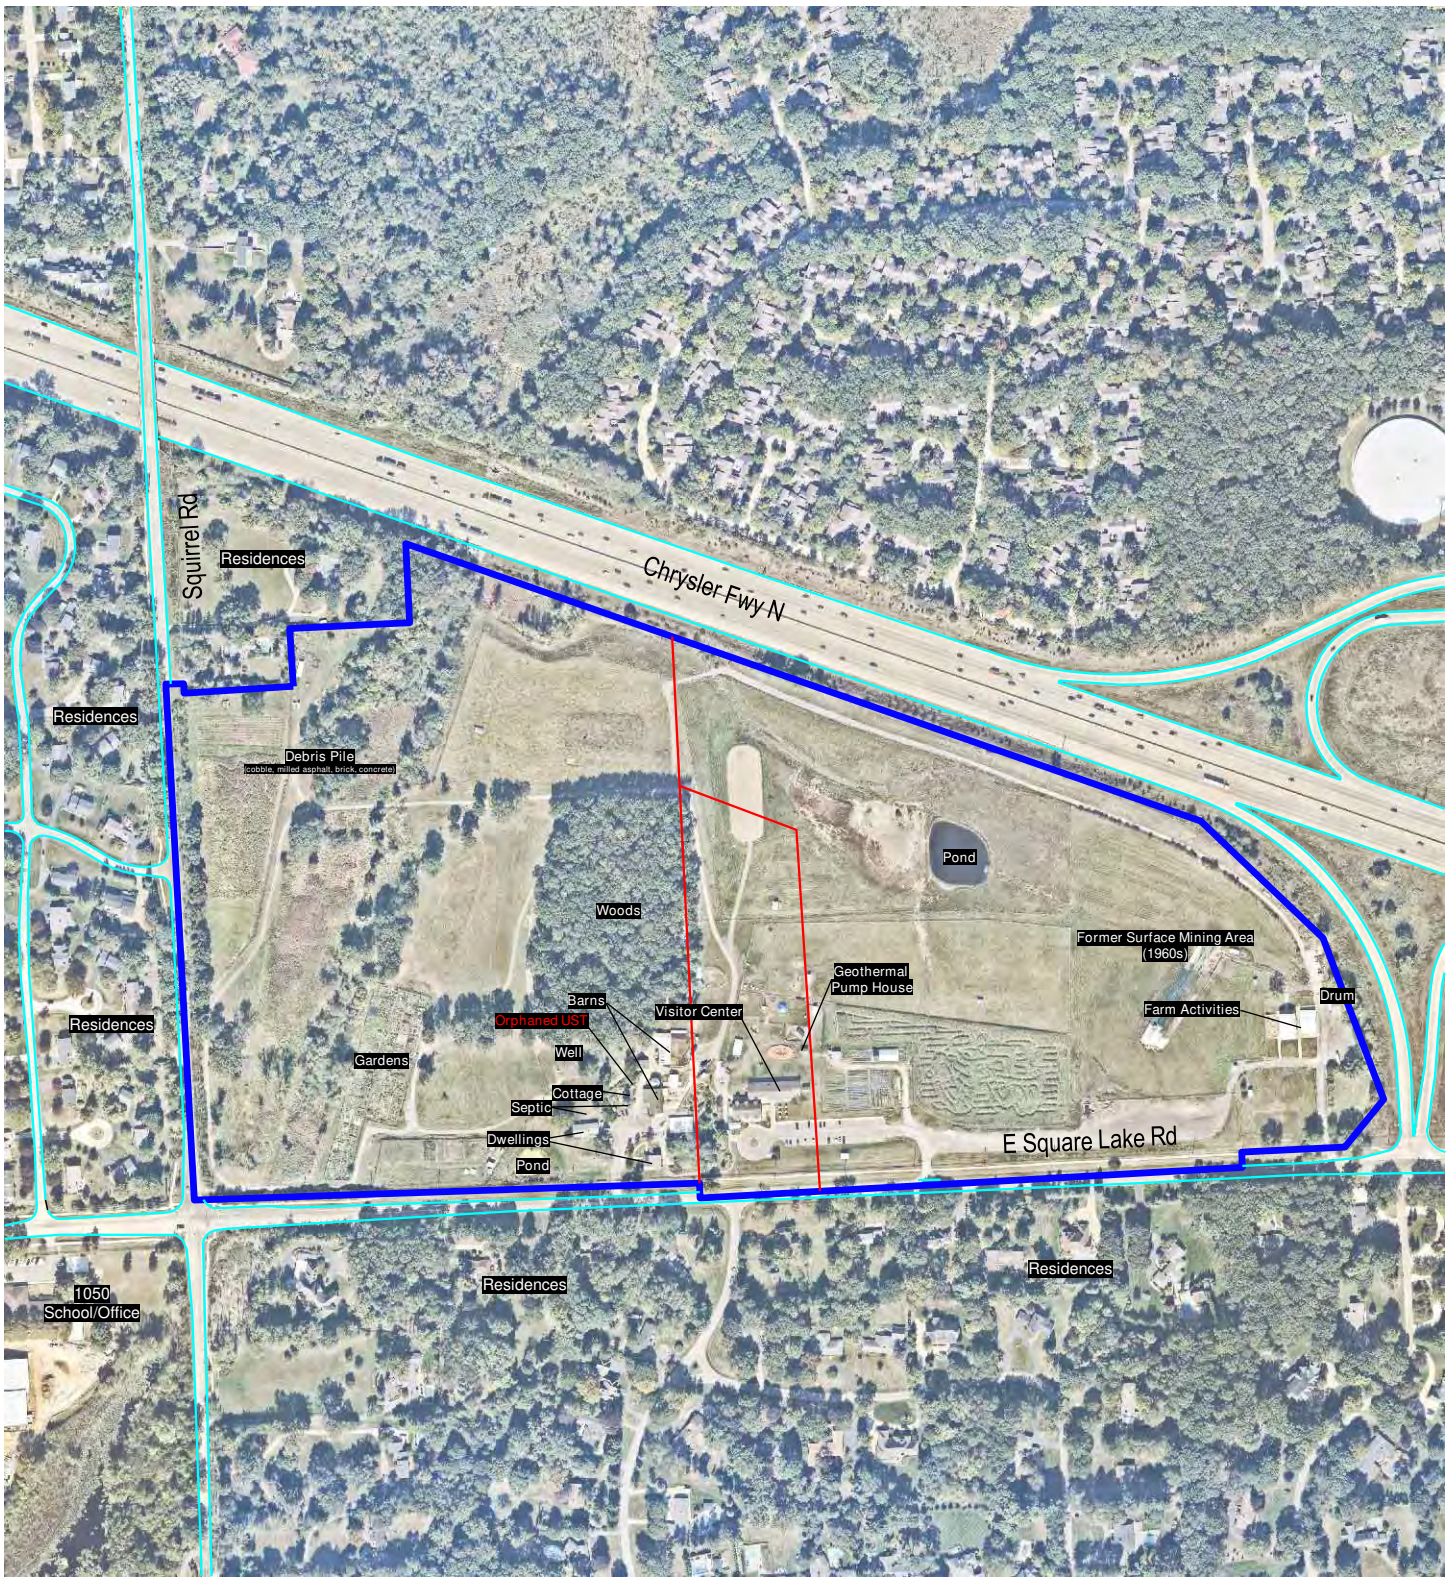
I possess the specific qualifications, based on education, training, and experience, to assess the property in terms of its nature, history, and setting, specifically the Subject Property. I have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Anthony Spencer, EP
Environmental Project Manager
Date: June 4, 2026

Glossary



- *Business Environmental Risk:* A risk that can have a material environmental or environmentally driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in ASTM Practice E1527.
- *Controlled REC*: A recognized environmental condition affecting the Subject Property that has been addressed to the satisfaction of the applicable regulatory authority or authorities, with hazardous substances or petroleum products allowed to remain in place, subject to the implementation of required controls (for example, activity and use limitations or other property use limitations).
- *Data Gap: A lack of or inability to obtain information required by this practice, despite the EP's good faith efforts* to gather such information.
- *De Minimis Condition:* De minimis conditions refer to releases that generally do not pose a threat to human health or the environment and would not typically be the subject of an enforcement action if brought to the attention of relevant governmental agencies. Conditions deemed de minimis are neither RECs nor CRECs.
- *Environmental Condition:* ASTI defines an Environmental Condition as the presence or likely presence, currently or in the past, of a hazardous substance or petroleum product in, on, or at the Subject Property of which the Environmental Professional requires an opinion regarding the likelihood of a release to the environment to determine if a REC is present.
- *Good Faith:* The absence of any intention to see an unfair advantage or to defraud another party; an honest and sincere intention to fulfill one's obligations in the conduct or transaction concerned.
- *Hazardous Substance:* A substance defined as A) any substance designated pursuant to section 1321(b)(2)(A) of Title 33, B) any element, compound, mixture, solution, or substance designated to section 9602 of this title, C) any hazardous waste having the characteristics identified under or listed pursuant to section 3001 of the RCRA Act of 1976, as amended, D) any toxic pollutant listed under section 1317(a) to Title 33, E) any hazardous air pollutant listed under section 112 of the Clean Air Act, and F) any imminently hazardous chemical substance or mixture with respect to which the Administrator of the EPA has taken action pursuant to section 2606 of Title 15.
- *Historical REC*: A previous release of hazardous substances or petroleum products affecting the Subject Property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the Subject Property to any controls (for example, activity and use limitations or other property use limitations). HRECs are not considered to be RECs.
- *Material Threat: An obvious threat that is likely to lead to a release and that, in the opinion of the EP, would likely result in an adverse impact on* public health or the environment.
- *Migration*: The movement of hazardous substances or petroleum products in any form, including solids, liquids, and vapors at the surface or subsurface.
- *Petroleum Product:* Petroleum, including crude oil or any fraction thereof which is not otherwise specifically listed or designated as a hazardous substance under Subparagraphs (A) through (F) of 42 U.S.C. 9601 (14), natural gas liquids, liquefied natural gas, and synthetic gas usable for fuel (or mixtures of natural gas and such synthetic gas).
- *Practically Reviewable: The information is provided by the source in a manner and form that, upon examination, yields relevant information about the Subject Property without requiring* extraordinary analysis of irrelevant data.
- *Subject Property:* The real property that is the subject of the environmental assessment described in ASTM Practice E1527. The User defines the real property boundaries, and these boundaries may not be consistent with the boundaries of a legal parcel.
- *Reasonably Ascertainable:* Information that is (1) publicly available, (2) obtainable from its source within reasonable time and cost constraints, and (3) practically reviewable.
- *Recognized Environmental Condition*: (1) the presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release or likely release to the environment; or (3) the presence of hazardous substances or



petroleum products in, on, or at the Subject Property under conditions that pose a material threat of a future release to the environment. For this definition, “likely” refers to that which is neither certain nor proven but can be expected or believed by a reasonable observer based on the logic and/or experience of the EP and/or available evidence, as stated in this report to support the opinions given herein. The term REC is not intended to include de minimis conditions.

- *Release*: Spilling, leaking, pumping, pouring, emitting, discharging, injecting, escaping, leaching, dumping, or disposing into the environment.
- *Significant Data Gap: A data gap that affects the environmental professional's ability* to identify a recognized environmental condition.

User-Provided Information and Interview Documentation
User Questionnaire (blank)

E1527 USER QUESTIONNAIRE

In order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfield's Revitalization Act of 2001 (the "Brownfields Amendments"), the User must conduct the following inquiries required by 40 CRF 312.25, 312.28, 312.29, 312.30, and 312.31. Failure to provide knowledge pertaining to this information could result in a determination that "all appropriate inquiry" is not completed. Please complete this questionnaire and return via email or fax to 810-225-3800. Details regarding "yes" responses should be provided with a brief explanation in the comment section.

Respondent Name:_____ **Signature:**_____

Date:_____

Subject Property Address: _____

ASTI Project #_____

Please answer all questions to the best of your knowledge and in good faith. Please provide details on comments to "yes" responses.

	Question	Response		Comments
		Yes	No	
1	Did a search of recorded land title records identify any environmental liens filed or recorded against the property under federal, tribe, state, or local law?			
2	Did a search of recorded land title records identify any Activity and Land Use Limitations such as engineering controls, land use restrictions, or institutional controls that are in place and/or have been filed in a recorded registry under federal, tribe, state, or local law?			
3	Do you have specialized knowledge or experiences related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and process used by this type of business?			
4	Is the purchase price significantly lower than the fair market value of the property? If you conclude there is a difference, have you considered whether a lower price is due to contamination known or believed to be present?			

Question			Response		Comments
			Yes	No	
5	Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of a release or threatened release?				
	5a	Do you know past uses of the property?			
	5b	Do you know specific chemicals that are present or once were present at the property?			
	5c	Do you know of spills or chemical releases that have occurred at the property?			
	5d	Do you know of any environmental cleanups that have taken place at the Property?			
	5e	Are there any obvious indicators that point to the presence or likely presence of contamination at the property?			
6	Are you aware of any prior environmental investigation reports that may be available for review?

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 23), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 11/30/2025 has revealed that there is 1 RCRA-VSQG site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
BLOOMFIELD HILLS SCH EPA ID:: MIK602191666	***1020 E SQ LAKE RD***	***WSW 1/8 - 1/4 (0.191 mi.)***	***1***	***8***

Lists of state and tribal registered storage tanks

AST: The Aboveground Storage Tank database contains registered ASTs. The data come from the Department of Natural Resources' Michigan AST database.

A review of the AST list, as provided by EDR, and dated 10/29/2025 has revealed that there is 1 AST site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
ADAMS ROAD PUMP STAT Facility Id: 91084227 Tank Status: Currently In Use	6201 N ADAMS RD	NE 1/8 - 1/4 (0.198 mi.)	A3	14

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Hazardous waste / Contaminated Sites

PART 201: A Part 201 Listed site is a location that has been evaluated and scored by the DEQ using

the Part 201 scoring model. The location is or includes a "facility" as defined by Part 201, where there has been a release of a hazardous substance(s) in excess of the Part 201 residential criteria, and/or where corrective actions have not been completed under Part 201 to meet the applicable cleanup criteria for unrestricted residential use. The Part 201 List does not include all of the sites of contamination that are subject to regulation under Part 201 because owners are not required to inform the DEQ about the sites and can pursue cleanup independently. Sites of environmental contamination that are not known to DEQ are not on the list, nor are sites with releases that resulted in low environmental impact.

A review of the PART 201 list, as provided by EDR, and dated 01/12/2026 has revealed that there are 2 PART 201 sites within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
3200 SOUTH BOULEVARD	***3200 SOUTH BOULEVARD***	***NNW 1/2 - 1 (0.756 mi.)***	***5***	***17***

Facility Status: Interim Response in progress				
Facility ID: '63000874'				

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 11/30/2025 has revealed that there is 1 RCRA NonGen / NLR site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
HAVERHILL OFFICE CEN	2950 W SQUARE LAKE R	E 1/8 - 1/4 (0.206 mi.)	4	15
EPA ID:: MIK767415581				

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 12/17/2025 has revealed that there is 1 PFAS ECHO site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
DETROIT WATER & SEWE	***6201 ADAMS ROAD***	***NE 1/8 - 1/4 (0.198 mi.)***	***A2***	***12***

EXECUTIVE SUMMARY

E MANIFEST: EPA established a national system for tracking hazardous waste shipments electronically. This system, known as ?e-Manifest,? will modernize the nation?s cradle-to-grave hazardous waste tracking process while saving valuable time, resources, and dollars for industry and states.

A review of the E MANIFEST list, as provided by EDR, and dated 11/30/2025 has revealed that there is 1 E MANIFEST site within approximately 0.25 miles of the target property.

Environmental Interest/Information System:
THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES

NO SITES FOUND

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 12/26/2025
Date Data Arrived at EDR: 01/05/2026
Date Made Active in Reports: 01/22/2026
Number of Days to Update: 17

Source: EPA
Telephone: N/A
Last EDR Contact: 04/01/2026
Next Scheduled EDR Contact: 07/06/2026
Data Release Frequency: Quarterly

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/26/2025
Date Data Arrived at EDR: 01/05/2026
Date Made Active in Reports: 01/22/2026

Next Scheduled EDR Contact: 07/06/2026
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994
Date Made Active in Reports: 03/30/1994

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/26/2025

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Data Release Frequency: No Update Planned

PART 201: Part 201 Site List

A Part 201 Listed site is a location that has been evaluated and scored by the DEQ using the Part 201 scoring model. The location is or includes a "facility" as defined by Part 201, where there has been a release of a hazardous substance(s) in excess of the Part 201 residential criteria, and/or where corrective actions have not been completed under Part 201 to meet the applicable cleanup criteria for unrestricted residential use. The Part 201 List does not include all of the sites of contamination that are subject to regulation under Part 201 because owners are not required to inform the DEQ about the sites and can pursue cleanup independently. Sites of environmental contamination that are not known to DEQ are not on the list, nor are sites with releases that resulted in low environmental impact.

Date of Government Version: 01/12/2026
Date Data Arrived at EDR: 01/13/2026
Date Made Active in Reports: 03/25/2026

Next Scheduled EDR Contact: 04/27/2026
Data Release Frequency: No Update Planned

INVENTORY: Inventory of Facilities

The Inventory of Facilities has three data sources: Facilities under Part 201, Environmental Remediation, of the Natural Resources and Environmental Protection Act, 1994 PA 451, as amended (NREPA) identified through state funded or private party response activities (Projects); Facilities under Part 213, Leaking Underground Storage Tanks of the NREPA; and Facilities identified through submittals of Baseline Environmental Assessments (BEA) submitted pursuant to Part 201 or Part 213 of the NREPA. The Part 201 Projects Inventory does not include all of the facilities that are subject to regulation under Part 201 because owners are not required to inform the Department of Environmental Quality (DEQ) about the facilities and can pursue cleanup independently. Facilities that are not known to DEQ are not on the Inventory, nor are locations with releases that resulted in low environmental impact. Part 213 facilities listed here may have more than one release; a list of releases for which corrective actions have been completed and list of releases for which corrective action has not been completed is located on the Leaking Underground Storage Tanks Site Search webpage. The DEQ may or may not have reviewed and concurred with the conclusion that the corrective actions described in a closure report meets criteria. A BEA is a document that new or prospective property owners/operations disclose to the DEQ identifying the property as a facility pursuant to Part 201 and Part 213. The Inventory of BEA Facilities overlaps in part with the Part 201 Projects facilities and Part 213 facilities. There may be more than one BEA for each facility.

DEL PART 201: Delisted List of Contaminated Sites

A deleted site has been removed from the Part 201 List because information known to the DEQ at the time of the evaluation does not support inclusion on the Part 201 List. This designation is often applied to sites where changes in cleanup criteria resulted in a determination that the site no longer exceeds any applicable cleanup criterion.
A delisted site has been removed from the Part 201 List because response actions have reduced the levels of contaminants to concentrations which meet or are below the criteria for unrestricted residential use.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

UST FINDER RELEASE: UST Finder Releases Database

US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

Data Release Frequency: Semi-Annually

UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

PFAS: PFAS Contaminated Sites Listing

PFAS have been widely used in numerous industrial and residential applications since the 1950a??s. Their stability and unique chemical properties produce waterproof, stain resistant, and nonstick qualities in products. They are found in some firefighting foams and a wide range of consumer products such as carpet treatments, non-stick cookware, water-resistant fabrics, food packaging materials, and personal care products.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

1219 E SQUARE LAKE ROAD
1219 E SQUARE LAKE ROAD
BLOOMFIELD HILLS, MI 48304

TARGET PROPERTY COORDINATES

Latitude (North):	42.60609 - 42° 36' 21.92''
Longitude (West):	83.217303 - 83° 13' 2.29''
Universal Tranverse Mercator:	Zone 17
UTM X (Meters):	318112.1
UTM Y (Meters):	4719242.0
Elevation:	902 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	50029850 BIRMINGHAM, MI
Version Date:	2023
North Map:	50029951 ROCHESTER, MI
Version Date:	2023

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

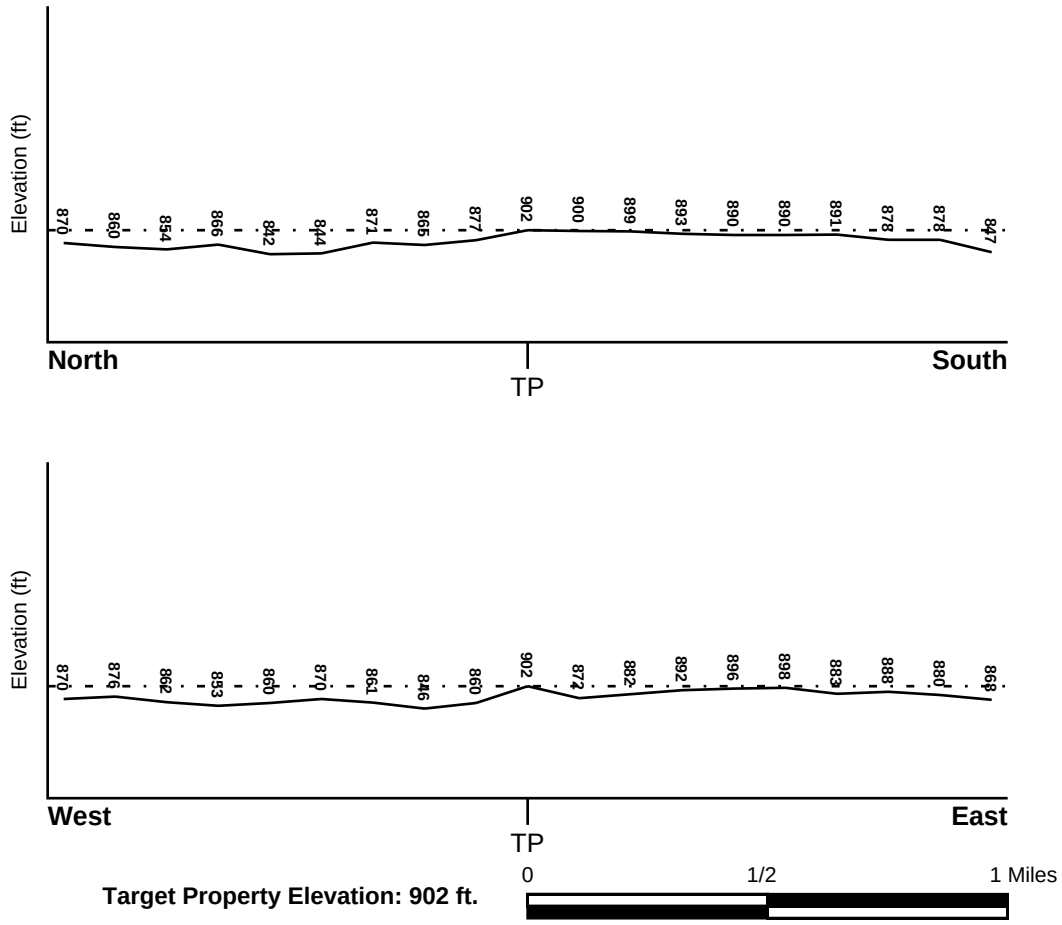
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WNW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
26125C0527F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
26125C0526F	FEMA FIRM Flood data
26125C0528F	FEMA FIRM Flood data
26125C0529F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
BIRMINGHAM	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

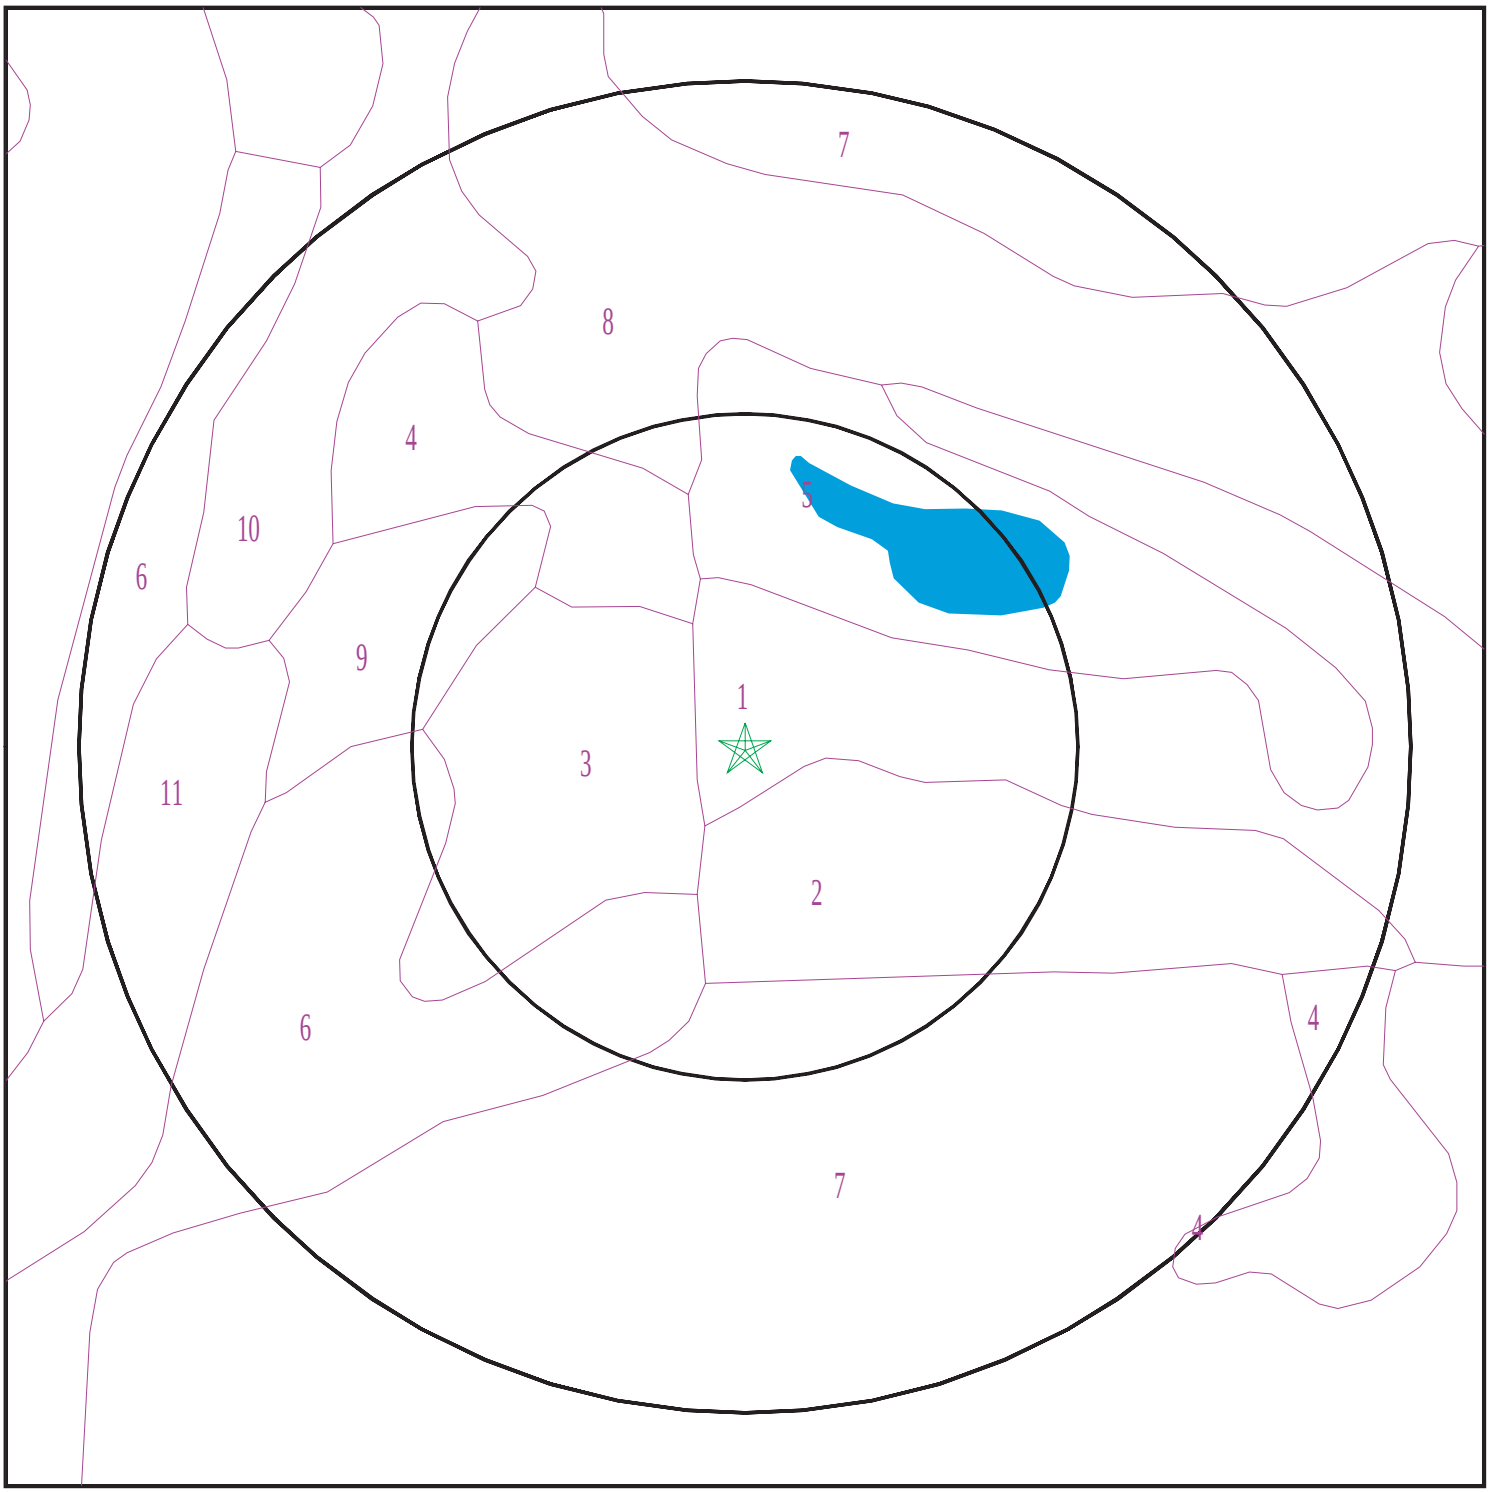
GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT



Era:	Paleozoic
System:	Mississippian
Series:	Osagean and Kinderhookian Series

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Udipsamments

Soil Surface Texture: sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	59 inches	sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand.	Max: 141 Min: 42	Max: 6.5 Min: 5.1

Soil Map ID: 2

Soil Component Name: Udipsamments

Soil Surface Texture: sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	59 inches	sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand.	Max: 141 Min: 42	Max: 6.5 Min: 5.1

Soil Map ID: 3

Soil Component Name: Marlette

Soil Surface Texture: loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	7 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 8.4 Min: 6.6

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
2	7 inches	22 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 8.4 Min: 6.6
3	22 inches	31 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 8.4 Min: 6.6
4	31 inches	59 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 8.4 Min: 6.6

Soil Map ID: 4

Soil Component Name: Fox

Soil Surface Texture: sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	16 inches	sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand.	Max: 141 Min: 42	Max: 8.4 Min: 7.4
2	16 inches	29 inches	gravelly sandy clay loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand.	Max: 141 Min: 42	Max: 8.4 Min: 7.4
3	29 inches	59 inches	gravelly sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand.	Max: 141 Min: 42	Max: 8.4 Min: 7.4

Soil Map ID: 5

Soil Component Name: Aquents

Soil Surface Texture: variable

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Very poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetlands Inventory
Source: Department of Natural Resources
Telephone: 517-241-2254

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Data
Source: Department of Environmental Quality
Telephone: 517-335-9218
The data in this file was obtained from Wellogic, the Michigan Department of Environmental Quality Statewide Groundwater Database (SGWD). Wellogic contains approximately 425,000 water well records found within the State of Michigan, and although it represents the best available data, it cannot be considered a complete database of all the wells or well records in existence. Locations of verified municipal and private water well sites compiled from Michigan Department of Public Health, Water Well and Pump Records. Available in the following MI counties: Calhoun, Eaton, Genesee, Ingham, Jackson, Kalamazoo, Kent, Midland, Muskegon, Oakland, Ottawaw, Saginaw, St. Clair, Washtenaw.

OTHER STATE DATABASE INFORMATION

Michigan Oil and Gas Wells
Source: Department of Environmental Quality
Telephone: 517-241-1528
Locations of oil and gas wells are compiled from permit records on file at the Geological Survey Division (GSD), Michigan Department of Natural Resources.

RADON

State Database: MI Radon
Source: Department of Environmental Quality
Telephone: 517-335-9551
Radon Test Results

Michigan Radon Test Results
Source: Department of Environmental Quality
Telephone: 517-335-8037
These results are from test kits distributed by the local health departments and used by Michigan residents. There is no way of knowing whether the devices were used properly, whether there are duplicates (or repeat verification) test (i.e., more than one sample per home), etc.

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey

Enforcement Actions - Perfected Lien List

Contact

Katelyn Wysocki
Wysockik@Michigan.gov
517-614-2058

The Michigan Department of Environment, Great Lakes, and Energy (EGLE), Remediation and Redevelopment Division (RRD) has perfected liens on property pursuant to Section 20138 of Part 201, Environmental Remediation, of the Natural Resources and Environmental Protection Act, 1994 PA 451, as amended (NREPA), MCL 324.20101 et seq. The following is a current listing of liens perfected by the RRD on property as of the date that appears on this list. The list will be updated only when the RRD has perfected a new lien on a property or has released a lien from a property. The information provided herein cannot be construed or interpreted as legal verification that a perfected lien does not exist on a particular property, or that a lien is the only perfected lien on a property. To obtain legal verification, you must access official records from the appropriate County Register of Deeds and/or the Michigan Secretary of State when applicable.

RE: FOIA REQUEST of April 08, 2026, Reference # F002401-040826

Your request is granted in part. You may log in to the Oakland County Records Center to view the responsive records able to be r
1901376006 and vacant 1383 E Square Lk Rd/Parcel ID 1901451004, which include the following:

For 1219 E Square Lk Rd:
- Septic Permit 21729 (issued in 1993) & its file
- Irrigation Well Permit 108-13-000038 (issued in 2013) & its file
- Well Abandonment Permit 108-13-000039 (issued in 2013) & its file
- Expired Well Application ATN 63330332 (submitted in 2021) and its file
- Irrigation Well Permit 108-21-000023 (issued in 2021) and its file

For 1383 E Square Lk Rd:
- Expired Septic Application ATN 63194806 (submitted in 2010 under its "parent" parcel ID 1901451003) and its file

No well records were found for 1383 E Square Lk Rd and no records were found for vacant parcel ID 19-01-451-002.

The property build year for 1219 E Square Lk Rd was 1938.

Please note: the final well sketches for the two irrigation well permits and one well abandonment permit for 1219 E Square Lk Rd are no longe
Health Division processed well permits through. Therefore, I have put in a request for the Public Health Sanitarian for Bloomfield Twp to recrea
completed and the recreated final sketches are attached to the Records Center for this FOIA record request, I will be in touch via email to let you

YOUR FURTHER LEGAL RIGHTS

To the extent that this response, in your opinion, constitutes a denial of your Freedom of Information Act (FOIA) rights, your statu

For FOIA denials, you may submit to the head of the public body a written appeal that specifically states the word "appeal" and id
denial. Within 10 business days after the head of the public body receives a written appeal he or she will do one of the following:

1. Reverse the denial.
2. Issue a written notice to you upholding the denial.
3. Reverse the denial in part and issue a written notice to you upholding the denial in part.
4. Under unusual circumstances, issue a notice extending for not more than 10 business days the time to respond.

You may begin a civil action in circuit court to compel the public body's disclosure of the public records within 180 days after a pu
request.

You have the right to receive attorneys' fees and damages as provided in MCL 15.240 if, after judicial review, the court determine
MCL 15.235 and orders disclosure of all or a portion of a public record.

For fee appeals, if the public body requires a fee that, in your opinion, exceeds the amount permitted under its procedures and g
head of the public body a written fee appeal for a fee reduction that specifically states the word "appeal" and identifies how the r
Within 10 business days after the head of the public body receives a written fee appeal, he or she will do one of the following:

1. Waive the fee.
2. Reduce the fee and issue a written determination to the requesting person indicating the basis for the remaining fee.
3. Uphold the fee and issue a written determination to the requesting person indicating the basis for upholding the fee.
4. If necessary, issue a notice extending for not more than 10 business days the time to respond.

Within 45 days after the head of the public body issues a written determination on the fee appeal or if the head of the public bod
begin a civil action in circuit court.

Oakland County's FOIA Procedures and Guidelines, and its Public Summary, can be found at https://www.oakgov.com/governme

RE: NEW AT 1383 E SQUARE LAKE RD, BLOOMFIELD HILLS, OAKLAND COUNTY, MI.

Dear Bloomfield Hills School District:

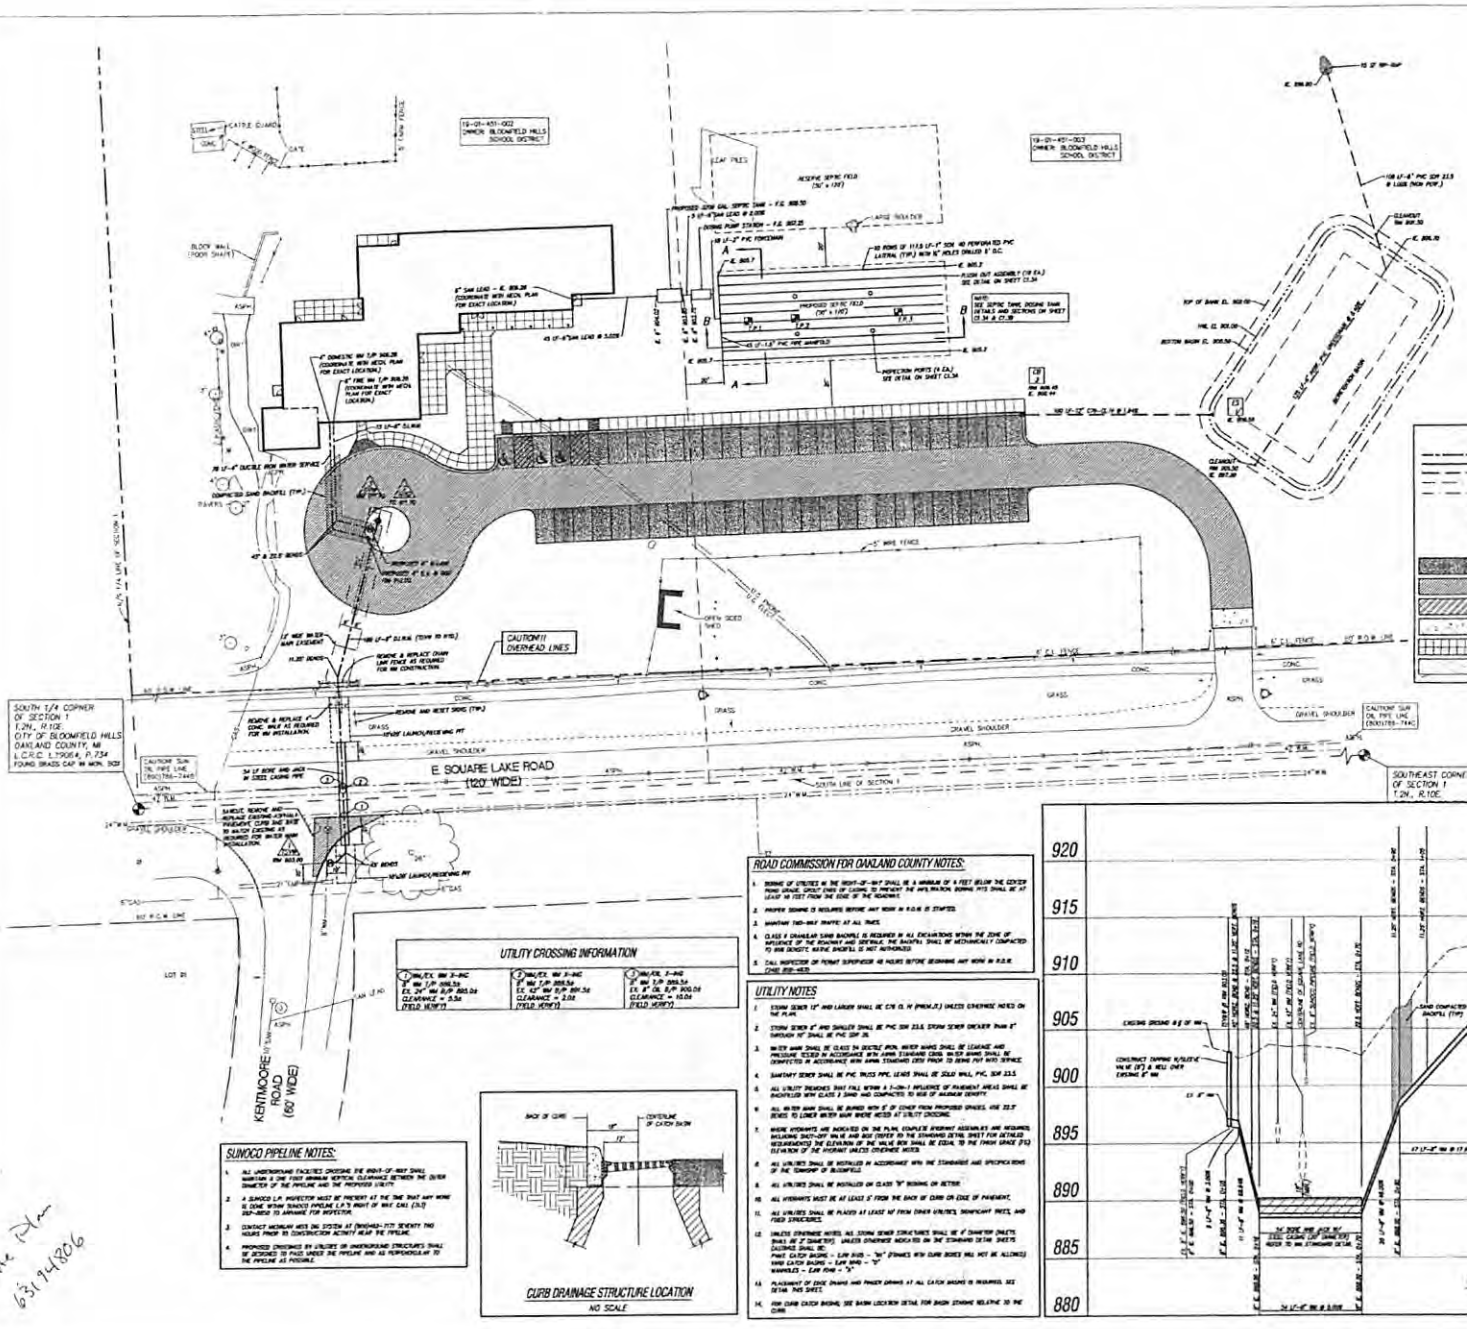
Your application for an on-site sewage permit is being held for additional information which will be needed before any further action can be taken by this Division. Please refer to the item(s) checked below:

_X_ Architectual plans showing classrooms and buildings locations, drawn to scale.

Please correct and resubmit to the appropriate office at your earliest convenience.

If you have any questions, please contact the Oakland County Health Division, Environmental Health Services, at the respective office listed below. Our office hours are 8:00 a.m. to 5:00 p.m., Monday through Friday. However, the field sanitarians are generally in the office between the hours of 8:30 a.m. to 10:00 a.m.

IF NO FURTHER ACTION IS TAKEN BY YOU, THE APPLICATION WILL BECOME NULL AND VOID ONE YEAR FOR THE DATE OF RECEIPT.



Sincerely,

OAKLAND COUNTY HEALTH DIVISION
Department of Health and Human Services

RE: PROPOSED NEW SEPTIC SYSTEM INSTALLATION AT 1383 E SQUARE LAKE ROAD, BLOOMFIELD HILLS. (BOWERS FARM SCHOOL HOUSE).

Dear Mr. Mayotte:

Oakland County Health Division (OCHD) recently met with you and Mr. Barber (TMP Associates, Inc.). At this meeting the following items were discussed with regard to the proposed project.

The building will facilitate the Bloomfield Hills Alternative High School with a maximum capacity of 50 students, without a cafeteria, gym or showers.

Additional Programs at the facility will include the Bloomfield Hills Bowers Farm Program that will offer educational programs to visiting District students.

At this time the project remains on **hold** pending the following actions:

- Require clarification on the scope of the food processing aspect of the working farm, specifically dairy and baked goods. Recommend that the Project Manager contact Susan Trombley at Michigan Department of Agriculture (1-800-292-3939) for plan review and licensing information.
- Confirm if the facility will be providing services during the Summer Semester to serve the community or the school district (camps or evening activities).
- Additional soil borings are required in the location of the proposed disposal system.
- Provide comparable flow data to calculate flow quantities for the proposed Farm Program. The data provided must contain actual flow data from 3 similar type and size facilities for a minimum of 12 month period.

Please contact this Division at (248) 858-1312 if you have any additional questions.

Sincerely,

OAKLAND COUNTY HEALTH DIVISION
Department of Health and Human Services

Your application for a permit to install an on-site sewerage system is denied. Denial is based upon a field inspection of the property which included an evaluation of the subsurface soils as well as water table elevations. The factors considered adverse for such a system are checked below to help you understand the reasons for denial.

- ✓ Dense clay subsoils exist to 6 feet with a saturated condition observed.
- ____ Dense clay subsoils exist to at least ____ feet below grade.
- ✓ Unsuitable soils consisting of peat, muck and/or marl were observed.
- ✓ Ground water table is too high, being 33" - 4 feet below grade.
- ____ The lot size or shape is such that adequate separation of water well and sewerage systems cannot be provided.
- ____ The area is subject to flooding or ponding of surface water.
- ____ Onsite soils cannot fully protect the source of well water. (No Aquaclude demonstrated.)
- ____ Other: ____

Should you wish to pursue this matter further, proceed with the directions following the indicated section below:

✓ Section A - It is suggested that you contract with a professional engineer to evaluate your property and determine whether a sewerage system could be designed and installed which would function properly under the adverse conditions that exist on your property. Plans should then be submitted to this division for review. If the engineer's proposed system is acceptable, your application for a permit will be approved. The system would then have to be constructed exactly as shown on the engineered drawings. After installation, the engineer would be required to submit a letter to us verifying the installation was according to his plans.

If the engineer's plan does not satisfactorily answer the reasons for denial, you have the right to appeal to the Sanitary Code Appeal Board. This appeal must be requested by you in writing, accompanied by a fee of $50.00, within 30 days from the date of this letter. Unless this process is initiated within 30 days, your application will expire and you will receive a $10.00 refund.

____ Section B - You may appeal this denial to the Water Resources Commission (WRC). To initiate action, you must file an application for a state discharge permit with the WRC. You may request the application by writing to the Michigan Department of Natural Resources, Waste Management Division, P.O. Box 30028, Lansing, Michigan, 48909 (Phone: (517) 373-8147). The application must be accompanied by an explanation of your reasons for appeal, the details of your proposal and the statement of the relief requested. The provisions of Act 245 and rules promulgated thereunder, regarding processing of discharge permits, shall apply.

Please contact this division if you need further assistance or have additional questions.

Yours truly,

0002178

Attention: Mr. Dave Mickola

RE: Learning & Activities Facility
At Bloomfield Hills Schools Farm
Bloomfield Hills Schools
1219 E. Square Lake Road

Plan Review??

Dear Sir:

Enclosed please find our check for $80 to cover the fee for the required Perk Test for the proposed Learning & Activities Facility at Bloomfield Hills Schools Farm.

We talked to Dave Norkis and he suggested we also submit the following information to you:

1. The building will be used as a part-time classroom and community activities building. - Exercise classes - ?? nature of comm. activities
2. The building will be used as a classroom two hours per day, five days a week. The classroom size will be approximately twenty students. 20 students/day - specify
3. The laboratory sinks shown on the Floor Plan will be used for various student experiments. The only toxic materials to be disposed down the sinks would be a small amount of acid. specify
4. The shower shown on the Plans would be used for possible students accidents, such as a student falling into a pile of animal waste. The residential washer and dryer which are shown would also be used in such an event.
5. The kitchen sink shown on the Drawings would be used for coffee making and cup washing. The sink also shows a proposed garbage disposal. If this presents a problem, the garbage disposal can be removed from the project. food preparation
6. The building will have three water closets; one urinal; and two lavatories.

00052729

7. The activities program for the building usage is unclear at this time. It is difficult to give a population count for the building; however, it is safe to say the building will be used by approximately 20 to 25 people a day for 5 hours, 5 days a week, 9 months a year.

If you would like further information, please let us know.

RE: Learning & Activities Facility
at Bloomfield Hills Schools Farm
Bloomfield Hills Schools
1219 E. Square Lake Road

Dear Sir:

We are writing this letter to answer your questions pertaining to our letter to you dated March 31, 1993.

The Classroom size for the proposed building will be twenty students per day for two hours duration, for five days a week.

The lab sink will be used for the following:

1. Biological dissections
2. Water quality tests

No acids will be used in the Classrooms. The only substances that will be used in experiments are a few drops of Phenol Red and Menthol Blue. Because of this, the neutralizing sump will be deleted from our project.

There will be no food preparation at the building. The garbage disposer will be used solely for the elimination of possible food scraps from a teacher's lunch. The room where the disposer is located is actually a Teacher's Lounge.

As we discussed, the building population should be approximately 20 to 25 people, 5 hours a day, 5 days a week, 12 months a year.

We hope this answers your questions. If we can be of further help, please contact us.

Sincerely,

O.E.M. ASSOCIATES, INC.

Learning and Activities Building Septic System
Charles Bower Farm Site
Bloomfield Hills Schools
O.C.H.D. Permit No. 21729

Gentlemen:

On behalf of the Bloomfield Hills Schools and their General Contractor on the subject project, P.R.S. Contracting, Inc., we submit this letter of final inspection for the building septic system.

Our office has made site visits during construction of the septic system, and authorizes that said improvements were completed in accordance with the approved plans issued by our office, and the conditions contained within the Oakland County Health Division Permit No. 21729.

Please contact our office, should you have any questions regarding this matter.

Very truly yours,

HUBBELL, ROTH & CLARK, INC.

RE: NEW DRINKING WATER WELL AT 1219 E SQUARE LAKE RD, BLOOMFIELD HILLS, OAKLAND COUNTY, MI.

Dear Bloomfield Hills School Dist:

Application for an on-site drinking water well permit is being held for additional information which will be needed before any further action can be taken by this Division.

The well is intended to be used as an irrigation well. Resubmit an application for an irrigation well.

Please correct and resubmit to the appropriate office at your earliest convenience.

Please contact the Oakland County Health Division with any questions at 248 858-1312. Our office hours are 8:00 a.m. to 5:00 p.m., Monday through Friday. However, the field sanitarians are generally in the office between the hours of 8:30 a.m. to 10:00 a.m.

IF NO FURTHER ACTION IS TAKEN BY YOU, THE APPLICATION WILL BECOME NULL AND VOID ONE YEAR FROM THE DATE OF RECEIPT.

Sincerely,

OAKLAND COUNTY HEALTH DIVISION

PERMIT APPROVED SUBJECT TO THE FOLLOWING CONDITIONS:

Minimum Isolation Distances to be Maintained:

Keep well at least 50 feet from any animal or poultry yard.

Special Conditions:

A water supply system shall be operated and maintained in a manner to prevent cross-connections and contamination of the water supply.

Keep well at least 150 feet from all chemical storage.

An irrigation well shall not be used to augment any bodies of water.

Any augmenting discharge of groundwater to a regulated lake or stream is required to obtain DEQ Part 301, Inland Lakes & Streams and Part 303, Wetlands Protection permits.

Owner may be required to comply with other applicable laws, regulations, ordinances, and codes related to the water supply at this location

Special Sampling: **Frequency:**

Comments:

OTHER PERMIT CONDITIONS:

- Required isolation distances must be met.
- Call for grout inspection when work begins.
- Call for water sample collection and final inspection upon completion of the well. Satisfactory bacteriological and nitrate samples results are mandatory.
- Well log and/or abandonment records must be submitted within 60 days of well completion and/or plugging activity.
- Installation must comply with Michigan Water Well Construction and Pump Installation Code, Part 127, Act 368 of the Public Acts of 1978 as amended, and rules, and Act 399 of 1976 as amended and administrative rules.
- ACT 53 - P.A. 1974 requires the applicant to notify the public utilities prior to excavation. In addition you must call 1-800-MISS DIG to locate public underground utilities.

THIS PERMIT IS VOID AFTER TWO (2) YEARS FROM DATE OF ISSUE

LOT ____ SUBDIVISION ____
ACREAGE-SIDWELL 19-01-376-006
STREET 1219 E. Square Lake Rd. C.V.T. 108

Your application for a permit to install an on-site sewerage system is denied. Denial is based upon a field inspection of the property which included an evaluation of the subsurface soils as well as water table elevations. The factors considered adverse for such a system are checked below to help you understand the reasons for denial.

- ✓ Dense clay subsoils exist to 6 feet with a saturated condition observed.
- ____ Dense clay subsoils exist to at least ____ feet below grade.
- ✓ Unsuitable soils consisting of peat, muck and/or marl were observed.
- ✓ Ground water table is too high, being 33" - 4 feet below grade.
- ____ The lot size or shape is such that adequate separation of water well and sewerage systems cannot be provided.
- ____ The area is subject to flooding or ponding of surface water.
- ____ Onsite soils cannot fully protect the source of well water. (No Aquaclude demonstrated.)
- ____ Other: ____

Should you wish to pursue this matter further, proceed with the directions following the indicated section below:

✓ Section A – It is suggested that you contract with a professional engineer to evaluate your property and determine whether a sewerage system could be designed and installed which would function properly under the adverse conditions that exist on your property. Plans should then be submitted to this division for review. If the engineer's proposed system is acceptable, your application for a permit will be approved. The system would then have to be constructed exactly as shown on the engineered drawings. After installation, the engineer would be required to submit a letter to us verifying the installation was according to his plans.

If the engineer's plan does not satisfactorily answer the reasons for denial, you have the right to appeal to the Sanitary Code Appeal Board. This appeal must be requested by you in writing, accompanied by a fee of $50.00, within 30 days from the date of this letter. Unless this process is initiated within 30 days, your application will expire and you will receive a $10.00 refund.

____ Section B – You may appeal this denial to the Water Resources Commission (WRC). To initiate action, you must file an application for a state discharge permit with the WRC. You may request the application by writing to the Michigan Department of Natural Resources, Waste Management Division, P.O. Box 30028, Lansing, Michigan, 48909 (Phone: (517) 373-8147). The application must be accompanied by an explanation of your reasons for appeal, the details of your proposal and the statement of the relief requested. The provisions of Act 245 and rules promulgated thereunder, regarding processing of discharge permits, shall apply.

Please contact this division if you need further assistance or have additional questions.

Yours truly,

00021729

Attention: Mr. Dave Mickola

RE: Learning & Activities Facility
At Bloomfield Hills Schools Farm
Bloomfield Hills Schools
1219 E. Square Lake Road

Plan Review??

Dear Sir:

Enclosed please find our check for $80 to cover the fee for the required Perk Test for the proposed Learning & Activities Facility at Bloomfield Hills Schools Farm.

We talked to Dave Norkis and he suggested we also submit the following information to you:

1. The building will be used as a part-time classroom and community activities building. - exercise classes - ?? nature of comm. activities

2. The building will be used as a classroom two hours per day, five days a week. The classroom size will be approximately twenty students. 20 students/day - specify

3. The laboratory sinks shown on the Floor Plan will be used for various student experiments. The only toxic materials to be disposed down the sinks would be a small amount of acid. specify

4. The shower shown on the Plans would be used for possible students accidents, such as a student falling into a pile of animal waste. The residential washer and dryer which are shown would also be used in such an event.

5. The kitchen sink shown on the Drawings would be used for coffee making and cup washing. The sink also shows a proposed garbage disposal. If this presents a problem, the garbage disposal can be removed from the project. food preparation

6. The building will have three water closets; one urinal; and two lavatories.

00024729

7. The activities program for the building usage is unclear at this time. It is difficult to give a population count for the building; however, it is safe to say the building will be used by approximately 20 to 25 people a day for 5 hours, 5 days a week, 9 months a year.

If you would like further information, please let us know.

Yours truly,

RE: Learning & Activities Facility
at Bloomfield Hills Schools Farm
Bloomfield Hills Schools
1219 E. Square Lake Road

Dear Sir:

We are writing this letter to answer your questions pertaining to our letter to you dated March 31, 1993.

The Classroom size for the proposed building will be twenty students per day for two hours duration, for five days a week.

The lab sink will be used for the following:

1. Biological dissections
2. Water quality tests

No acids will be used in the Classrooms. The only substances that will be used in experiments are a few drops of Phenol Red and Menthol Blue. Because of this, the neutralizing sump will be deleted from our project.

There will be no food preparation at the building. The garbage disposer will be used solely for the elimination of possible food scraps from a teacher's lunch. The room where the disposer is located is actually a Teacher's Lounge.

As we discussed, the building population should be approximately 20 to 25 people, 5 hours a day, 5 days a week, 12 months a year.

We hope this answers your questions. If we can be of further help, please contact us.

Sincerely,

O.E.M. ASSOCIATES, INC.

Learning and Activities Building Septic System
Charles Bower Farm Site
Bloomfield Hills Schools
O.C.H.D. Permit No. 21729

Gentlemen:

On behalf of the Bloomfield Hills Schools and their General Contractor on the subject project, P.R.S. Contracting, Inc., we submit this letter of final inspection for the building septic system.

Our office has made site visits during construction of the septic system, and authorizes that said improvements were completed in accordance with the approved plans issued by our office, and the conditions contained within the Oakland County Health Division Permit No. 21729.

Please contact our office, should you have any questions regarding this matter.

Very truly yours,

HUBBELL, ROTH & CLARK, INC.

NOTES:

1. THE SEPTIC TANK SHALL BE A TWO COMPARTMENT PRECAST REINFORCED CONCRETE SEPTIC TANK WITH A CAPACITY OF NOT LESS THAN 2000 GALLONS, CONSTRUCTED AND INSTALLED IN ACCORDANCE WITH OAKLAND COUNTY HEALTH DEPARTMENT STANDARDS. THE TANK WALLS AND ROOF SHALL BE DESIGNED TO SUPPORT THE DEAD LOADS AS INDICATED ON THE DRAWINGS PLUS A SUPERIMPOSED H-20 TRUCK LOAD.
2. THE TILE FIELD AREA SHALL BE SCARIFIED TO A DEPTH OF 12 INCHES BELOW EXISTING GRADE. CARE SHALL BE TAKEN DURING THIS PROCESS TO AVOID COMPACTING ANY ADJACENT AREAS.
3. A UNIFORM LAYER OF MDOT 2NS GRANULAR MATERIAL SHALL BE INSTALLED AS SHOWN.
4. A UNIFORM LAYER OF MDOT 6A AGGREGATE SHALL BE INSTALLED WITH THE 4 INCH TILE LOCATED AS SHOWN.
5. PRIOR TO BACKFILLING OVER THE 6A AGGREGATE A LAYER OF STRAW OR OTHER SUITABLE POROUS MATERIAL SHALL BE PLACED OVER THE STONE.
6. THE EXCAVATION SHALL BE BACKFILLED TO GRADES, DIMENSIONS, AND SLOPES SHOWN WITH SANDY LOAM MATERIAL APPROVED BY THE ENGINEER. TOPSOIL SHALL BE SPREAD UNIFORMLY OVER THE AREA AND THE AREA SHALL BE SEEDED PER SPECIFICATIONS.
7. CONSTRUCTION OF THE PROPOSED SEPTIC FIELD WILL NOT BE PERMITTED DURING PERIODS OF WET WEATHER.
8. THE PROPOSED SEPTIC FIELD AREA SHALL BE FENCED OFF AT ALL TIMES DURING CONSTRUCTION.
9. THE OWNER'S ENGINEER SHALL INSPECT AND APPROVE ALL PHASES OF CONSTRUCTION OF THE PROPOSED SEPTIC SYSTEM.
10. COMMUNITY USE OF THE PROPOSED LEARNING AND ACTIVITIES BUILDING SHALL NOT BE PERMITTED.
11. PLANNED USE OF THE FACILITY SHALL BE FOR CONDUCTING REGULAR CLASS SESSIONS, CONSISTING OF APPROXIMATELY 25 STUDENTS AND INSTRUCTORS, 8 HOURS PER DAY, 5 DAYS PER WEEK DURING SCHOOL YEAR.
12. LABORATORY USE AT THE FACILITY SHALL BE LIMITED TO SIMPLE WATER ANALYSIS (pH TESTING, BACTERIAL COUNTS, ETC.).

RE: IRRIGATION WELL AT 1219 E SQUARE LAKE RD, BLOOMFIELD HILLS, OAKLAND COUNTY, MI.

Dear Brian M Keller:

The Oakland County Health Division has reasonable grounds to believe there has been a violation of Part 127, Act 368, P.A. of 1978, or the rules, regulations, or construction code adopted under the act, and/or Article X of the Oakland County Sanitary Code at the above listed property. Pursuant to Section 12714 of Part 127, Act 368, P.A. of 1978 and Article X, a review of our files and field activities disclosed the following deficiencies:

(X) (R 325.1657): The well does not have a downward turned screened vent.
(X) (R 325.1656): The pressure/storage tank is in an unapproved location.
(X)(R325.1674a): The ASSE 1015 double check valve backflow device installed is not the proper backflow for this application.

Pursuant to Section 12709 of Part 127, Act 368, P.A. of 1978 and/or Article X, you are hereby ordered to within 30 days of this letter:

1) Provide a 3/4 inch vent that is screened, pointed downward and terminates not less than 12 inches above the ground surface.
2) The pressure tank shall be installed in an approved pump room or well house.
3) Provide a pressure vacuum breaker or RPZ backflow assembly.

You are further advised that pursuant to Section 12715 of Part 127, Act 368, P.A. of 1978, and/or Section 5, Article I of the Oakland County Sanitary Code, any person who is convicted of the violation of any provision of the Act or any rule, regulation, or

construction code adopted under the Act, or any order of the director of the health department, is guilty of a misdemeanor.

Please contact the appropriate Health Division office with any questions. Office hours are 8:00 a.m. to 5:00 p.m., Monday through Friday. However, the field sanitarians are generally in the office between the hours of 8:00 a.m. to 10:00 a.m.

Sincerely,

Well Caps

The following well caps/seals meet the requirements set forth in R325.1657A of Part 127, Act 368 PA 1978 Administrative Rules. Caps and venting requirements became effective May 1, 1985. Vents must be installed on all wells except those having deep well, single pipe, packer jet installations or on flowing wells.

[2]These companies are now called MAASS Midwest

Hand Pumps

The hand pumps listed below meet the requirements of Rule 153 of Part 127, Act 368 PA of 1978 and may be used on public or private water supplies. These hand pumps have a closed spout, directed downward, and a pump rod that operates through a stuffing box and packing nut.

DEEP WELL HAND PUMPS (LIFT CYLINDER REQUIRED)
COLUMBIANA FIGURE 80[3], SINGLE ACTING FORCE PUMP
DEMPSTER MODEL 210F AND 226F FORCE PUMP; MODEL 23F AND MODEL 40F

COLUMBIANA FIGURE 55-3 HOUSE FORCE PUMP
HELLER-ALLER (SEE HITZER INC)
HITZER INC FIGURE PHB HOUSE FORCE PUMP (FORMERLY "HELLER-ALLER")

[3]These hand pumps use the drop pipe into the well as the pump base or may be threaded onto a 2" well casing by using a 2" x 1.25" reducer. If the drop pipe is used as a pump base, the opening between the drop pipe and well casing must be sealed using a well cap base and sanitary well seal.
[4]These hand pumps include a shroud which provides additional sanitary protection by enclosing the pump rod and packing nut.
[5]This pump operates with a rotating pump rod and has a hand operated gear box rather than a lever fulcrum type handle operating type handle operating a reciprocating pump rod through a packing nut.

Yard Hydrants

The following frost-proof yard hydrants do not use a stop-and-waste valve and are approved for installation on any water supply. Yard hydrants with buried stop-and-waste valve are prohibited on all types of water supplies, under Section P1501.1.1 of Article 15 of the Michigan Plumbing code, R325.1674A of Part 127, Act 368 PA 1978 Administrative Rules, and Rule 1108(3) of Act 399, PA 1976.

INNOVATION ISN'T JUST WRAPPING FIBERGLASS AROUND OLD WELL TANK TECHNOLOGY.

[INTRODUCING THE NEW FLEX-LITE WITH CAD-2]

Precision injection molded domes for uniform wall thickness and consistent engineered dome profiles.

Reinforced with durable, continuous strand fiberglass and sealed from the environment with weather resistant epoxy resin. Suitable for underground installation.

High tech spin welding process permanently fuses precision injection molded domes to the extruded cylinder.

SUPER SIZED

Our larger tank sizes offer greater drawdown capacity.

Flexcon's patented CAD-2 controlled action diaphragm design enables the tank's water chamber to be sized for the optimum drawdown capacity of each tank.

CAD-2

New CAD-2 diaphragm technology: strong 100% butyl diaphragm and copolymer polypropylene lower water chamber for maximum water and air separation.

Rugged base engineered to withstand maximum loads and extreme environmental conditions.

Tough, injection molded, rigid PVC connection for easy installation and lifetime performance.

Unlike other composite tanks that hide tired old bag technology in a plastic shell, the Flex-Lite FL composite tank uses the latest evolution of the field proven controlled action diaphragm design that Flexcon introduced in Well-Rite steel tanks in 1988.

The Flex-Lite FL series' improved CAD-2 diaphragm design is stronger and won't crease and wear out like bag designs. It features a chlorine resistant 100% butyl diaphragm with a precision molded copolymer polypropylene lower water chamber for superior air and water separation.

This patented design allows each size tank to have a properly sized water chamber, matched to the drawdown performance of that tank. When it comes to performance and durability, the CAD-2 system cannot be beat.

So if you are looking for the proven performance of a Flexcon steel tank in a lightweight composite design, Flex-Lite FL is the answer.

MATERIALS OF CONSTRUCTION

- *Top and bottom domes:* Injection molded copolymer polypropylene
- *Shell:* Extruded copolymer polypropylene
- *Outer shell:* Fiberglass-wound, coated with epoxy resin
- *Water chambers:* Top diaphragm is 100% butyl rubber, lower water chamber is copolymer polypropylene
- *Base:* Copolymer polypropylene
- *Connection:* Rigid Schedule 80 PVC
- *Air valve:* Brass valve with o-ring seal
- *Warranty:* 5 year limited

PERMIT APPROVED SUBJECT TO THE FOLLOWING CONDITIONS:

Minimum Isolation Distances to be Maintained:

Greater than 50 feet from storm drains.
Keep well at least 50 feet from any sewage pump chamber, grease trap or sump pit receiving laundry waste.
Keep well at least 10 feet from any surface water (lake, stream, pond, ditch, etc.
Keep well at least 10 feet from any buried gravity sewer with approved watertight joints (Sch 40 PVC, cast iron or ductile iron).
Keep well at least 50 feet from any buried pressure sewer or gravity sewer of unknown construction.
Keep well at least 50 feet from any animal or poultry yard.
Keep well at least 150 feet from any agricultural chemical/fertilizer storage or prep area.

Special Conditions:

R 325.1656 A pressure tank shall be installed in an approved pump room, well house, crawl space, basement offset or basement.
This permit is for direct connection to an irrigation system. Augmentation of a body of water has additional requirements that would need to be met before final approval.

OTHER PERMIT CONDITIONS:

- Required isolation distances must be met.
- Call for grout inspection when work begins.
- Call for water sample collection and final inspection upon completion of the well. Satisfactory bacteriological and nitrate samples results are mandatory.
- Well log and/or abandonment records must be submitted within 60 days of well completion and/or plugging activity.
- Installation must comply with Michigan Water Well Construction and Pump Installation Code, Part 127, Act 368 of the Public Acts of 1978 as amended, and rules, and Act 399 of 1976 as amended and administrative rules.
- ACT 53 - P.A. 1974 requires the applicant to notify the public utilities prior to excavation. In addition you must call 1-800-MISS DIG to locate public underground utilities.

THIS PERMIT IS VOID AFTER TWO (2) YEARS FROM DATE OF ISSUE

Sanitarian: Teresa Brooks **Supervisor:** Christy Fedototszkin

Existing Well Information	From Application	Yes	No
* Existing well on site?	Unknown	◉	○
* Was the well properly abandoned?		○	◉
* Have you received the Verification of Serviceable Use?		○	◉

* Comments:
another irrigation well on other side of property

*Well Log Received ? Yes Date 09/23/2021
Well Log Decision: Well Log not recieved Date:

Well Isolation Parameters

Isolation	Approved? Yes	No	Dist.in Ft./Comments
* Water Well Location	◉	○	
* Same Location as approved on Permit	◉	○	
* Accessible for maintenance/ Repair	◉	○	

Isolation Distance From Permit	Approved? Yes	No	Dist.in Ft./Comments
*Greater than 50 feet from storm drains.	◉	○	
*Keep well at least 50 feet from any sewage pump chamber, grease trap or sump pit receiving laundry waste.	◉	○	
*Keep well at least 10 feet from any surface water [lake, stream, pond, ditch, etc.	◉	○	
*Keep well at least 10 feet from any buried gravity sewer with approved	◉	○	

watertight joints [Sch 40 PVC, cast iron or ductile iron].			
*Keep well at least 50 feet from any buried pressure sewer or gravity sewer of unknown construction.	◉	○	
*Keep well at least 50 feet from any animal or poultry yard.	◉	○	pasture moved
*Keep well at least 150 feet from any agricultural chemical/fertilizer storage or prep area.	◉	○	no chm for treatment or within 150ft

Isolation Distance: Septic Add

Isolation	Approved? Yes	No	Dist.in Ft./Comments

Well Construction Parameters

Parameter	Approved? Yes	No	Measurement/Comments
* Casing Terminates: Above grade	◉	○	Ht. above grade 12.00 in
* Well Casing Material: Plastic	◉	○	Casing Size 5.00 in.
* Minimum Well Depth met	◉	○	Well Depth 210.00 ft.
* Well Cap	◉	○	
* Annular space or caving absent around casing	◉	○	
* Screened Vent	◉	○	○ NA
Flowing Well properly constructed	○	○	◉ NA

Special Construction Parameters From Permit	Approved? Yes	No	Measurement/Comments
*R 325.1656 A pressure tank shall be installed in an approved pump room, well house, crawl space, basement offset or basement.	◉	○	in shed
*This permit is for direct connection to an irrigation system. Augmentation of a body of water has additional requirements that would need to be met before final approval.	◉	○	irrigation only
*Keep well at least 150 feet from all chemical storage. This includes chemicals used to treat the irrigation well water.	◉	○	no chm for treatment or within 150ft
*A water supply system shall be operated and maintained in a manner to prevent cross-connections and contamination of the water supply. An adequate backflow device is required when a well is connected to an irrigation system. An RPZ may be needed.	◉	○	RPZ
*Owner may be required to comply with other applicable laws, regulations, ordinances, and codes related to the water supply at this location.	◉	○	
*The pumping capacity shall not exceed 70 GPM without a passing registration in the DEQ Large Quantity Withdrawal Tool.	◉	○	per log 25gpm

Subdivision Restrictions From Permit	Approved? Yes	No	Measurement/Comments
NONE			

Well Inside

Well Inside Parameter	Approved? Yes	No	Comments
Electrical Conduit	◉	○	
Sample Tap	◉	○	
Min 160psi pressure rating	◉	○	
Type of Pump: Submersible	◉	○	
Storage Tank type: Captive Air	◉	○	Location: Well House
Water Piping matl.: Plastic:PE	◉	○	○ Unknown
Protected Suction Line	○	○	◉ NA
Is Pressure relief valve required?	◉	○	○ NA
Is Pressure relief valve provided?	◉	○	
Is Pressure relief valve approved?	◉	○

LOT ____ SUBDIVISION ____
ACREAGE-SIDWELL 19-01-376-006
STREET 1219 E. Square Lake Rd C.V.T. 108

Your application for a permit to install an on-site sewerage system is denied. Denial is based upon a field inspection of the property which included an evaluation of the subsurface soils as well as water table elevations. The factors considered adverse for such a system are checked below to help you understand the reasons for denial.

- ✓ Dense clay subsoils exist to 6 feet with a saturated condition observed.
- ____ Dense clay subsoils exist to at least ____ feet below grade.
- ✓ Unsuitable soils consisting of peat, muck and/or marl were observed.
- ✓ Ground water table is too high, being 33" - 4 feet below grade.
- ____ The lot size or shape is such that adequate separation of water well and sewerage systems cannot be provided.
- ____ The area is subject to flooding or ponding of surface water.
- ____ Onsite soils cannot fully protect the source of well water. (No Aquaclude demonstrated.)
- ____ Other: ____

Should you wish to pursue this matter further, proceed with the directions following the indicated section below:

✓ Section A - It is suggested that you contract with a professional engineer to evaluate your property and determine whether a sewerage system could be designed and installed which would function properly under the adverse conditions that exist on your property. Plans should then be submitted to this division for review. If the engineer's proposed system is acceptable, your application for a permit will be approved. The system would then have to be constructed exactly as shown on the engineered drawings. After installation, the engineer would be required to submit a letter to us verifying the installation was according to his plans.

If the engineer's plan does not satisfactorily answer the reasons for denial, you have the right to appeal to the Sanitary Code Appeal Board. This appeal must be requested by you in writing, accompanied by a fee of $50.00, within 30 days from the date of this letter. Unless this process is initiated within 30 days, your application will expire and you will receive a $10.00 refund.

____ Section B - You may appeal this denial to the Water Resources Commission (WRC). To initiate action, you must file an application for a state discharge permit with the WRC. You may request the application by writing to the Michigan Department of Natural Resources, Waste Management Division, P.O. Box 30028, Lansing, Michigan, 48909 (Phone: (517) 373-8147). The application must be accompanied by an explanation of your reasons for appeal, the details of your proposal and the statement of the relief requested. The provisions of Act 245 and rules promulgated thereunder, regarding processing of discharge permits, shall apply.

Please contact this division if you need further assistance or have additional questions.

Yours truly,

00021789

Plan Review??

Dear Sir:

Enclosed please find our check for $80 to cover the fee for the required Perk Test for the proposed Learning & Activities Facility at Bloomfield Hills Schools Farm.

We talked to Dave Norkis and he suggested we also submit the following information to you:

1. The building will be used as a part-time classroom and community activities building. - exercise classes. → ?? nature of comm. activities

2. The building will be used as a classroom two hours per day, five days a week. The classroom size will be approximately twenty students. 20 students/day - specify

3. The laboratory sinks shown on the Floor Plan will be used for various student experiments. The only toxic materials to be disposed down the sinks would be a small amount of acid. specify

4. The shower shown on the Plans would be used for possible students accidents, such as a student falling into a pile of animal waste. The residential washer and dryer which are shown would also be used in such an event.

5. The kitchen sink shown on the Drawings would be used for coffee making and cup washing. The sink also shows a proposed garbage disposal. If this presents a problem, the garbage disposal can be removed from the project. food preparation?

6. The building will have three water closets; one urinal; and two lavatories.

7. The activities program for the building usage is unclear at this time. It is difficult to give a population count for the building; however, it is safe to say the building will be used by approximately 20 to 25 people a day for 5 hours, 5 days a week, 9 months a year.

If you would like further information, please let us know.

Attention: Mr. Dave Mikkola

RE: Learning & Activities Facility
at Bloomfield Hills Schools Farm
Bloomfield Hills Schools
1219 E. Square Lake Road

Dear Sir:

We are writing this letter to answer your questions pertaining to our letter to you dated March 31, 1993.

The Classroom size for the proposed building will be twenty students per day for two hours duration, for five days a week.

The lab sink will be used for the following:

1. Biological dissections
2. Water quality tests

No acids will be used in the Classrooms. The only substances that will be used in experiments are a few drops of Phenol Red and Menthol Blue. Because of this, the neutralizing sump will be deleted from our project.

There will be no food preparation at the building. The garbage disposer will be used solely for the elimination of possible food scraps from a teacher's lunch. The room where the disposer is located is actually a Teacher's Lounge.

As we discussed, the building population should be approximately 20 to 25 people, 5 hours a day, 5 days a week, 12 months a year.

We hope this answers your questions. If we can be of further help, please contact us.

Sincerely,

O.E.M. ASSOCIATES, INC.

O.C.H.D. Permit No. 21729

Gentlemen:

On behalf of the Bloomfield Hills Schools and their General Contractor on the subject project, P.R.S. Contracting, Inc., we submit this letter of final inspection for the building septic system.

Our office has made site visits during construction of the septic system, and authorizes that said improvements were completed in accordance with the approved plans issued by our office, and the conditions contained within the Oakland County Health Division Permit No. 21729.

Please contact our office, should you have any questions regarding this matter.

Very truly yours,

PERMIT APPROVED SUBJECT TO THE FOLLOWING CONDITIONS:

Special Conditions:

If applicable, proper abandonment of a flowing well shall stop flow by plugging the well with neat cement or concrete grout.

Comments:

OTHER PERMIT CONDITIONS:

- Well log and/or abandonment records must be submitted within 60 days of well completion and/or plugging activity.
- Installation must comply with Michigan Water Well Construction and Pump Installation Code, Part 127, Act 368 of the Public Acts of 1978 as amended, and rules, and Act 399 of 1976 as amended and administrative rules.
- ACT 53 - P.A. 1974 requires the applicant to notify the public utilities prior to excavation. In addition you must call 1-800-MISS DIG to locate public underground utilities.

Abandonment process needs to be performed by a licensed well driller

THIS PERMIT IS VOID AFTER TWO (2) YEARS FROM DATE OF ISSUE

Sanitarian: Teresa Brooks **Supervisor:** Laura Riddell

ACREAGE-SIDWELL 19-01-376-006
STREET 1219 E. Square Lake C.V.T. 108

Your application for a permit to install an on-site sewerage system is denied. Denial is based upon a field inspection of the property which included an evaluation of the subsurface soils as well as water table elevations. The factors considered adverse for such a system are checked below to help you understand the reasons for denial.

- ✓ Dense clay subsoils exist to 6 feet with a saturated condition observed.
- ____ Dense clay subsoils exist to at least ____ feet below grade.
- ✓ Unsuitable soils consisting of peat, muck and/or marl were observed.
- ✓ Ground water table is too high, being 33" - 4 feet below grade.
- ____ The lot size or shape is such that adequate separation of water well and sewerage systems cannot be provided.
- ____ The area is subject to flooding or ponding of surface water.
- ____ Onsite soils cannot fully protect the source of well water. (No Aquaclude demonstrated.)
- ____ Other: ____

Should you wish to pursue this matter further, proceed with the directions following the indicated section below:

✓ Section A - It is suggested that you contract with a professional engineer to evaluate your property and determine whether a sewerage system could be designed and installed which would function properly under the adverse conditions that exist on your property. Plans should then be submitted to this division for review. If the engineer's proposed system is acceptable, your application for a permit will be approved. The system would then have to be constructed exactly as shown on the engineered drawings. After installation, the engineer would be required to submit a letter to us verifying the installation was according to his plans.

If the engineer's plan does not satisfactorily answer the reasons for denial, you have the right to appeal to the Sanitary Code Appeal Board. This appeal must be requested by you in writing, accompanied by a fee of $50.00, within 30 days from the date of this letter. Unless this process is initiated within 30 days, your application will expire and you will receive a $10.00 refund.

____ Section B - You may appeal this denial to the Water Resources Commission (WRC). To initiate action, you must file an application for a state discharge permit with the WRC. You may request the application by writing to the Michigan Department of Natural Resources, Waste Management Division, P.O. Box 30028, Lansing, Michigan, 48909 (Phone: (517) 373-8147). The application must be accompanied by an explanation of your reasons for appeal, the details of your proposal and the statement of the relief requested. The provisions of Act 245 and rules promulgated thereunder, regarding processing of discharge permits, shall apply.

Please contact this division if you need further assistance or have additional questions.

Yours truly,

0002172

Plan Review ??

Dear Sir:

Enclosed please find our check for $80 to cover the fee for the required Perk Test for the proposed Learning & Activities Facility at Bloomfield Hills Schools Farm.

We talked to Dave Norkis and he suggested we also submit the following information to you:

- exercise classes -

1. The building will be used as a part-time classroom and community activities building. → ?? nature of comm. activities

2. The building will be used as a classroom two hours per day, five days a week. The classroom size will be approximately twenty students. 20 students/day - } specify

3. The laboratory sinks shown on the Floor Plan will be used for various student experiments. The only toxic materials to be disposed down the sinks would be a small amount of acid. } specify

4. The shower shown on the Plans would be used for possible students accidents, such as a student falling into a pile of animal waste. The residential washer and dryer which are shown would also be used in such an event.

5. The kitchen sink shown on the Drawings would be used for coffee making and cup washing. The sink also shows a proposed garbage disposal. If this presents a problem, the garbage disposal can be removed from the project. food preparation

6. The building will have three water closets; one urinal; and two lavatories.

00024729

7. The activities program for the building usage is unclear at this time. It is difficult to give a population count for the building; however, it is safe to say the building will be used by approximately 20 to 25 people a day for 5 hours, 5 days a week, 9 months a year.

If you would like further information, please let us know.

Dear Sir:

We are writing this letter to answer your questions pertaining to our letter to you dated March 31, 1993.

The Classroom size for the proposed building will be twenty students per day for two hours duration, for five days a week.

The lab sink will be used for the following:

1. Biological dissections
2. Water quality tests

No acids will be used in the Classrooms. The only substances that will be used in experiments are a few drops of Phenol Red and Menthol Blue. Because of this, the neutralizing sump will be deleted from our project.

There will be no food preparation at the building. The garbage disposer will be used solely for the elimination of possible food scraps from a teacher's lunch. The room where the disposer is located is actually a Teacher's Lounge.

As we discussed, the building population should be approximately 20 to 25 people, 5 hours a day, 5 days a week, 12 months a year.

We hope this answers your questions. If we can be of further help, please contact us.

Sincerely,

O.E.M. ASSOCIATES, INC.

REO/dw

Re: Final Inspection Letter — HRC Job No. 93265.02
Learning and Activities Building Septic System
Charles Bower Farm Site
Bloomfield Hills Schools
O.C.H.D. Permit No. 21729

Gentlemen:

On behalf of the Bloomfield Hills Schools and their General Contractor on the subject project, P.R.S. Contracting, Inc., we submit this letter of final inspection for the building septic system.

Our office has made site visits during construction of the septic system, and authorizes that said improvements were completed in accordance with the approved plans issued by our office, and the conditions contained within the Oakland County Health Division Permit No. 21729.

Please contact our office, should you have any questions regarding this matter.

Very truly yours,

HUBBELL, ROTH & CLARK, INC.

Hello,

Your FOIA Request was sent to three departments for review; below are their responses.

1. **Building Department:** Request granted partially. A document has been uploaded to your file.
   - All Building permits from 2000 to present can be found on www.bsaonline.com. Attached to this request is a list from Cornerstone with permits issued prior to 2000. If the requester would like copies of any of these permits, the Building Dept. will estimate the fee amount for copies.
2. **Assessing Department:** Request granted. A document has been uploaded to your file.
3. **Fire Department:** No records pertaining to your request.

- **REMINDER**: You will need to log into your account in order to view your documents. If this is your first time using this portal, click the link to Finish Creating an Account.

Please view the link of the Notice of Your Rights under the FOIA.

A copy of the Township's Procedures and Guidelines as well as our Written Public Summary may be found on the Township website at Bloomfield Twp, MI - Request for Public Records.

Sincerely,

Catarina Yankey

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Applied Science & Technology were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

The LightBox City Directory Report is designed to assist environmental professionals in evaluating potential liabilities on select properties resulting from past activities. The report includes a search of available business directory data at approximately five-year intervals.

SOURCES

Through agreements with major city directory publishers, including Cole Information, InfoUSA, and Bresser, as well as our own collections (Haines & Stewart), the LightBox City Directory Report offers comprehensive national coverage.

LightBox is authorized to reproduce and redistribute all works featured in this report. The purchaser of this LightBox City Directory Report may include it in their final report(s).

This report includes a search of the following sources:

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Applied Science & Technology were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:

Bailey Bishop

Environmental Technician

ASTI ENVIRONMENTAL
A DIVISION OF PEA GROUP

Bailey Bishop is an environmental technician at ASTI Environmental, specializing in Hydrology, Geomorphology, GIS, and AQTESOLV. She supports Phase I Environmental Site Assessments (ESAs) across Michigan and Indiana, conducting site inspections, initiating projects, and preparing reports for various property types. In addition, Bailey reviews municipal and county Freedom of Information Act documents to ensure compliance.

Beyond Phase I work, Bailey is skilled in Phase II ESA investigations, including soil and water sampling, overseeing drillers, and conducting hydrological studies. Her technical expertise ensures thorough and accurate assessments, supporting project success.

Anthony Spencer

Project Manager

ASTI ENVIRONMENTAL
A DIVISION OF PEA GROUP

Anthony Spencer brings nearly 15 years of experience in Phase I and Phase II Environmental Site Assessments. He has worked on a variety of projects across Michigan, Ohio, Kentucky, Oklahoma, Pennsylvania, and North Carolina, including residential, commercial, and industrial sites. His portfolio features assessments for apartment complexes, shopping plazas, and auto dealerships.

Anthony's comprehensive evaluations encompass site inspections, historical research, interactions with federal, state, and local agencies, subsurface sampling, geophysical surveys, and underground tank closures.

Description of Landowner Liability Protections for All Appropriate Inquiry and User Continuing Obligations

In order to maintain a LLP, landowners must also comply with pre-acquisition and post-acquisition requirements under CERCLA and All Appropriate Inquiry. A summary of each LLP is provided below.

Innocent Landowner Defense (ILO): The defendant did not know and had no reason to know of the hazardous substance with respect to the Subject Property and must show that All Appropriate Inquiries into the past ownership and uses of the property in accordance with generally good commercial and customary standards and practices. All Appropriate Inquiries cannot result in knowledge of contamination.

Post- Acquisition Obligations

1. Cooperate, assist, and provide access to persons that are authorized to conduct response actions or natural resource restoration at the property.
2. Comply with any land use restrictions established or relied on in connection with the response action at a vessel or facility.
3. Must not impede on the effectiveness or integrity of any institutional control employed at the vessel or facility in connection with a response action.
4. Take reasonable steps to 1) stop any continuing release, 2) prevent any threatened future release, and 3) prevent or limit any human, environmental, or natural resources exposure to any previously released hazardous substance.

Bona Fide Prospective Purchaser (BFPP): Allows a purchaser to acquire a property with knowledge that it is contaminated. This applies to purchasers (and their tenants) that acquire ownership of a facility after January 11, 2002. To qualify, prior to acquiring title, a person must show 1) that all disposal of hazardous substances at the facility occurred before the person acquired the facility, 2) conducted All Appropriate Inquiry, and 3) the person is not a Potentially Responsible Party (PRP) or affiliated with any other PRP for the property through any direct or indirect familial relationship, any contractual, corporate or financial relationship or as a result of a reorganization of a business entity that was a PRP.

Post- Acquisition Obligations

1. Provide all legally required notices with respect to the discovery or release of any hazardous substances at the facility.
2. Exercise appropriate care with respect to hazardous substances by taking reasonable steps to stop any continuing release; prevent any threatened future release; and prevent or limit human, environmental, or natural resource exposure to any previously released hazardous substance.
3. Provide full cooperation, assistance, and access to persons who are authorized to conduct response actions or natural resource restoration (including the cooperation and access necessary for the installation, integrity, and maintenance of any complete or partial response actions or natural resource restoration).
4. Comply with any land use restrictions established or relied on in connection with the response action, and not impede the effectiveness or integrity of any institutional control employed at the vessel or facility in connection with a response action.
5. Comply with any request for information or administrative subpoena issues under CERCLA.

Explanation of LLPs and User Continuing Obligations Continued

Contiguous Property Owner (CPO): A CPO must not know or have reason to know following performance of All Appropriate Inquiries that their property was or could be contaminated by the adjacent or contiguous real property. The property owner must show that they did not cause, contribute, or consent to the release and is not a PRP or affiliated with any other PRP, and conducted All Appropriate Inquiries.

Post- Acquisition Obligations

1. Take reasonable steps to 1) stop any continuing release, 2) prevent any threatened future release, and 3) prevent or limit any human, environmental, or natural resources exposure to any previously released hazardous substance.
2. Provide full cooperation, assistance, and access to persons who are authorized to conduct response actions or natural resource restoration (including the cooperation and access necessary for the installation, integrity, and maintenance of any complete or partial response actions or natural resource restoration).
3. Comply with any land use restrictions established or relied on in connection with the response action at the facility.
4. Not impede the effectiveness or integrity of any institutional control employed in connection with a response action.
5. Comply with any request for information or administrative subpoena issues under CERCLA.
6. Provide all legally required notices with respect to the discovery or release of any hazardous substances at the facility.

ASTI ENVIRONMENTAL

A DIVISION OF PEA GROUP

Our services include:

- Asbestos, Lead, Mold, and Radon Assessments
- Brownfield/Greyfield Redevelopment Assistance
- Development Incentives and Grant Management
- Ecological Assessments and Restoration
- Environmental Assessments and Impact Statements
- Environmental Opportunities Assessment
- GIS Mapping
- Hazard Mitigation Planning
- Mining and Reclamation Assistance
- Phase I ESA and Environmental Due Diligence Assessments
- Regulatory Compliance and Permitting
- Remediation Implementation, Operation, and Maintenance
- Soil and Groundwater Assessments
- Soil and Groundwater Remediation
- Storage Tank Compliance and Closure
- Stream Assessments and Mitigation Design
- Threatened and Endangered Species Surveys
- Tree Surveys
- Watershed and Stormwater Management Programs
- Wetland Delineation, Permitting, Mitigation, and Banking

RE: Limited Phase II Environmental Site Assessment, 1219 East Square Lake Road, Bloomfield Hills, Oakland County, Michigan, ASTI Proposal P26-0480.01

Simon Rivers,

Thank you for your continued interest in the environmental services offered by ASTI Environmental (ASTI), a Division of PEA Group. ASTI is pleased to submit a cost quotation to conduct a Limited Phase II Environmental Site Assessment (ESA) of the above-referenced property. This proposal is based on the results of ASTI's Phase I ESA of the property, dated June 4, 2026.

If you have any questions or comments, please do not hesitate to call me at **800.395.ASTI**. We greatly appreciate the opportunity to work with you on this project.

Sincerely yours,

ASTI ENVIRONMENTAL, a Division of PEA Group

Jeremy Efros, EP, CPG
Senior Environmental Project Manager
Due Diligence/Remediation Group

ASTI
ENVIRONMENTAL

Proposal For Services

Proposal Name: Limited Phase II Environmental Site Assessment, Clinton River Oaks
Address: 1219 E. Square Lake Road, Bloomfield Hills, Oakland County, Michigan
To Be Completed For: Oakland County Parks and Recreation
ASTI Project: P26-0480.01

ASTI Environmental (ASTI), a Division of PEA Group, understands that the project is for the property located at 1219 E. Square Lake Road in Bloomfield Hills, Oakland County, Michigan (Subject Property). The Subject Property comprises 44.66 acres of land on one parcel with Parcel ID C-19-01-376-006. The Subject Property is developed with two dwellings, two barns, and a vacant cottage.

ASTI was not provided with information about the proposed use of the Subject Property, but Oakland County Parks and Recreation (OCP&R) will either be a new owner and/or operator of the Subject Property, and ASTI assumes that the project will use conventional financing if it is a purchase. Please note that a change in the intended use or financing source may require a change in the scope of services described in this proposal.

ASTI completed a Phase I Environmental Site Assessment (ESA), dated June 4, 2026, for the Subject Property and two parcels to the east, which identified the following recognized environmental condition (REC) regarding the Subject Property:

REC 1. It was reported that a diesel oil underground storage tank (UST) was recently discovered underneath the northern portion of a cottage at the Subject Property. The tank was located on the hill-facing façade behind a concrete retaining wall. A section of the retaining wall was removed to allow for tank removal. During site reconnaissance, ASTI observed posted signs prohibiting use of the cottage. A pungent oily odor was noted during inspection of the cottage. All that remains of the tank removal activity is a 55-gallon metal drum with impacted soil that was excavated after the discovery. No other information was given, but the former tank appears to have been an orphaned fuel oil tank. There is evidence of a release, which is a REC.

The purpose of this investigation is to evaluate whether environmental contamination is present on the Subject Property from the above-listed REC. This is a limited investigation that is not intended to assess all historical operations. Sampling is meant to be representative of site conditions and is not intended to delineate the extent of contamination identified.

The analytical results obtained during this investigation will be compared to the Michigan Department of Environment, Great Lakes, and Energy (EGLE) Part 201 Generic Residential Cleanup Criteria (GRCC). If contamination is identified at concentrations in soil or groundwater that exceed the EGLE Part 201 GRCC, the Subject Property will meet the definition of a “facility” under Part 201. In that case, ASTI can prepare a Baseline Environmental Assessment (BEA) and Due Care Plan (DCP) for the new purchaser and/or operator of the Subject Property.

Scope of Services

The following table summarizes our proposed sampling and analysis plan. The proposed scope of work is provided in further detail below.

Recognized Environmental Conditions	Sampling Points	Samples / Analyses
REC 1: Potential contamination from the former diesel UST used on the Subject Property	2 soil borings 5 to 20 feet bgs	4 soil samples will be collected and analyzed for VOCs and PNAs *If groundwater is encountered, 1 groundwater sample will be collected and analyzed for VOCs and PNAs in lieu of a deeper soil sample*
	QA/QC	1 duplicate soil sample will be collected and analyzed for VOCs and PNAs If a groundwater sample is collected, 1 duplicate groundwater sample will be collected and analyzed for VOCs and PNAs Methanol blank analyzed for VOCs

VOCs = Volatile Organic Compounds
PNAs = Polynuclear Aromatic Hydrocarbons
QA/QC = Quality Assurance/Quality Control
ft bgs = feet below ground surface

Limited Phase II ESA

ASTI will advance 2 soil borings at the Subject Property. Prior to advancement of the soil borings, ASTI will contact the MISS DIG system to locate public utilities. ASTI will use geophysical equipment in an attempt to locate any private utility lines near the soil boring locations. Any vehicles or significant quantities of metal materials remaining in the survey areas will limit the ability of the geophysical equipment to obtain readings within approximately five feet of any metal. The ground penetrating radar can be limited due to above ground interferences and subsurface conditions such as shallow groundwater, clay soils with high moisture content, buried objects, and rebar concrete. The client will be responsible for informing ASTI of any known private utility lines in the vicinity of the soil boring locations. ASTI will not be responsible for *damage or repairs* to utilities or resulting property damage related to damaged utility lines during subsurface drilling and field operations.

Sampling and analysis will be conducted in accordance with U.S. Environmental Protection Agency (EPA) and EGLE guidelines. Soils extracted from the soil borings will be visually inspected, classified, and screened with a photoionization detector (PID), or equivalent, for the presence of total volatile organic compounds (VOCs). The soil borings will be completed to evaluate the site lithology and to collect samples for laboratory analyses.

The soil borings will be completed using a direct-push drill rig or stainless-steel hand auger. The soil borings will be advanced to depths of approximately 5 to 20 feet below ground surface (bgs) and may be stopped at a lesser depth if groundwater or refusal is encountered. Two soil samples will be collected from each soil boring. If groundwater is encountered, one groundwater sample will be collected in lieu of one of the deeper soil samples.

The samples collected from each boring will be placed in laboratory-provided glass jars and kept on ice in a cooler. The soil samples will be submitted to a laboratory for the analyses listed in the table above under standard chain-of-custody procedures. The actual location and depth of each soil sample collected will be based on the site-specific geologic conditions, field observations, and PID measurements. Quality assurance/quality control (QA/QC) will include one duplicate soil sample and a methanol blank sample.

Temporary Groundwater Monitoring Wells

If groundwater is encountered, one soil boring will be completed as temporary groundwater monitoring well for the collection of groundwater samples in lieu of one soil sample. Modified low-flow sampling techniques will be used to collect groundwater samples. The well location will not be surveyed for groundwater elevation

data. QA/QC will include one groundwater duplicate sample. The groundwater samples will be kept on ice in a cooler, then submitted to a laboratory for the analyses listed in the table above under standard chain-of-custody procedures. If groundwater is not encountered by 20 feet bgs, the borings may be terminated, and groundwater samples will not be collected.

After completion of the borings, they will be backfilled to near grade with soil cuttings and/or bentonite. ASTI will not be required to repair the surfaces to the original condition beyond soil cuttings and/or bentonite. If any locations were paved or on concrete slabs, those holes will be patched with asphaltic or cement concrete.

Limited Phase II ESA Report
At the completion of the assessment, ASTI will prepare a report of the findings, and an electronic copy of the final report will be provided. The information will include an outline of the work completed during the investigation, a discussion of the items identified during the investigation, the results of the investigation, and appended copies of supporting materials. The laboratory analytical results will be compared to the EGLE Part 201 GRCC.

Limited Phase II ESA Schedule
The investigation can typically be scheduled within approximately 15 business days of authorization to proceed. Sample collection will require up to two days, and laboratory analysis typically requires approximately 10 business days. Expedited analysis may be available at an additional cost; however, you must inform ASTI prior to sample collection. The Limited Phase II ESA report will be provided approximately 10 business days following receipt of the final laboratory analytical report.

Baseline Environmental Assessment (if applicable)
If hazardous substances are identified in soil and/or groundwater at concentrations exceeding the EGLE Part 201 GRCC, the Subject Property will be considered a "facility" under Part 201 of Act 451. If the Subject Property is determined to be a facility, ASTI can prepare and submit a BEA to EGLE to provide statutory liability protection for pre-existing contamination. The BEA will summarize the results of ASTI's Phase I ESA and Limited Phase II ESA for the Subject Property, along with relevant information from previous investigations, if available. An electronic copy of the BEA will be provided to you and submitted to EGLE.

The BEA can typically be completed approximately 10 business days following completion of the Limited Phase II ESA report. **Per EGLE requirements, these reports must be completed prior to or within 45 days after purchase or occupancy** and must be submitted to EGLE prior to or within six months of purchase or occupancy.

Due Care Plan
Owners and/or operators of a facility that follow the procedures of Part 201 and have not caused the environmental contamination are not liable for historical contamination identified during the environmental due diligence process. However, in accordance with Part 201, a person who owns a property and has knowledge that it is a facility shall maintain documentation of compliance with Section 20107a and shall provide the documentation to EGLE upon request. This documentation of compliance is typically prepared as a written DCP.

Under Part 201, the owner of a facility must comply with the following due care obligations:

- Undertake measures as necessary to prevent exacerbation of the existing contamination
- Exercise due care by undertaking response activities necessary to mitigate unacceptable exposure to hazardous substances and to allow for the intended use of the facility in a manner that protects public health and safety
- Take reasonable precautions against the foreseeable acts or omissions of a third party and the resultant consequences of those acts or omissions

- Provide reasonable cooperation/access to persons conducting cleanup
- Comply with established land use or resource use restrictions
- Refrain from interfering with restrictions or response activities

If the Subject Property is determined to be a facility, ASTI will prepare a DCP to describe measures that will be taken to comply with the due care obligations. This proposal assumes that the DCP will not be provided to EGLE for review and approval. If EGLE review and approval is required, or a regulatory agency "No Further Action Letter" is required, additional costs will apply. Based on the results of the Limited Phase II ESA, completion of the DCP may also require additional sampling that is not included in this proposal to assess risk or determine whether response activities are needed. The DCP does not include design of any mitigation system/action or meetings with the regulatory authority.

The DCP can be completed approximately 10 business days following completion of the BEA, unless additional assessment is needed for evaluation of risk. ASTI will need information on the final site plan and intended use of the Subject Property for completion of the DCP.

Per EGLE requirements, due care obligations start immediately upon ownership or occupancy, **but this report must be completed no later than 8 months of ownership or occupancy**, and a copy must be retained at the Subject Property. An electronic copy of the DCP will be provided to you.

Required Materials
We will rely on the legal description from ASTI's Phase I ESA. We require a signed access agreement before we conduct any on-site activities. The field work described above will not be scheduled until receipt of the access agreement. If the Subject Property is owned by another entity, you will be responsible for obtaining that access agreement. This proposal assumes that the current owner will be cooperative in providing site access and allow soil borings to be advanced on the Subject Property and in the subject buildings as described above.

Confidentiality
The results of this assessment and any material provided by you will be kept confidential and will not be provided to third parties without your prior written authorization. However, please note that the BEA, once submitted to EGLE, may be obtained through a Freedom of Information Act request.

Fee
Our fees for conducting the services discussed in this proposal are provided below. These fees are based on the tasks, deliverables, and assumptions described in this proposal, and any changes in the tasks, deliverables, or assumptions may result in changes to project costs.

These services will be invoiced on a fixed fee basis, as indicated below. Any additional work outside the above scope of services will be performed at our standard fees; however, any additional work will not be performed without your prior authorization. Our standard rate schedule is included as Exhibit A

Services	Fixed Fee
Limited Phase II ESA, Sampling, Analysis, and Report	$ 10,000
Baseline Environmental Assessment (if applicable)	*$ 3,200*
Due Care Plan (if applicable)	*$ 3,500*

This proposal is firm for 45 days from the date of this proposal.

Additional site visits required to access sampling locations not accessible during the scheduled site visits will

be charged on a time-and-materials basis.

This proposal is subject to the terms and conditions contained in Exhibit B, which is made part of this agreement. The proposal, terms and conditions, and payment requirements specified in the proposal are applicable to the party to which the proposal is addressed. If a different party will be executing the proposal, please contact ASTI to determine whether a change in the terms and conditions and payment requirements will be required prior to authorization.

Your acceptance of this proposal indicates that the terms, conditions, and provisions of this proposal are understood, including payment to ASTI upon receipt of the invoice. Unless otherwise provided in writing, your acceptance of this proposal indicates that the billing address is the same as listed in the proposal.

Sincerely yours,

ASTI ENVIRONMENTAL,
a Division of PEA Group

Expert Testimony and/or Depositions 50% added to Hourly Rate Schedule.
This Hourly Rate Schedule represents standard rates for the hours between 7:00 am and 6:00 pm daily, Monday through Friday.
Premium rates may be charged for over eight (8) hours in a day, time on weekends and/or Holidays.
Half day and full day rates are portal to portal and include travel and time on-site. Jobs exceeding 4 hours portal to portal will be billed at the full day/rate.
All rates/fees are in USD.
Payments made by credit card are subject to a credit card processing service fee of 3%.

Client shall notify PEA Group in writing prior to the commencement of any services if the project is subject to the Davis Bacon Act or any State or Local prevailing wage rates. Any additional cost required to meet this requirement shall be added to rates set forth above as well as any adjustment to lump sum or “not to exceed” fee amounts stated in the agreement that are impacted by the prevailing wage requirement. Upon request, PEA Group shall provide the Client new rate or fee information based upon meeting this requirement.

East Side includes project locations east of Lansing and northern Ohio but not including the Upper Peninsula.
West Side includes project locations west of Lansing and northern Indiana but not including the Upper Peninsula.

EXHIBIT "B"

STANDARD AGREEMENT FOR PROFESSIONAL SERVICES

ARTICLE I – AGREEMENT. This Agreement between the parties identified herein consists of the terms in the "Standard Agreement for Professional Services" including if any attached Riders, the Rate Schedule (Exhibit A) and the Proposal. PEA Group refers to Professional Engineering Associates, Inc., which includes all Departments of PEA Group, as well as ASTI Environmental (a division of PEA Group being referred to herein as "PEA Group"). CLIENT refers to a person, as an individual, or a business entity representative with which PEA Group has contracted to perform professional services. "Project" refers to the scope of professional services outlined in the Proposal for the subject property including any offsite improvements set forth in the scope of services. The parties agree not to begin work until the Proposal is executed by both parties. In the event work must begin before the agreement is executed, the parties may elect to agree in writing to commence work while the agreement is being memorialized. If the parties fail to reach an agreement, PEA Group will send an invoice for the services provided during this period and will be compensated in accordance with PEA Group's current hourly billing rates.

ARTICLE II – SCOPE OF SERVICES/ ADDITIONAL SERVICES. **PEA Group's professional services under this Agreement extend only to those services specifically described in the Proposal. Other services not set forth in the Proposal will be considered as Additional Services**. If authorized in writing by the CLIENT, PEA Group agrees to furnish or obtain from others, additional professional services in connection with the Project for the amount quoted in writing or based upon a "Time and Material Basis" as set forth in a written "Additional Services Request" (hereinafter an "ASR").

The following are examples of other services that are not considered part of the Project's Professional Services unless specifically described in the Proposal. This list describes examples of professional services that are not incidental to the agreement; the excluded services are not limited to the following examples:

i. Obtaining or negotiating for lands, easements, rights-of-way, variances and special land use.
ii. Preparation, coordination or review of environmental assessments, investigations and impact statements.
iii. Providing ALTA/NSPS land title surveys, boundary, topographical, wetland, tree, as built (record drawings), easement exhibits, right-of-way dedications or other special surveys such as land divisions or consolidations.
iv. Engineering/Landscape Architecture Services required beyond the original scope resulting from changes in the scope of the improvements or their design including, but not limited to, changes in size, complexity, Owner's schedule, or character of construction; and revising previously accepted studies, reports, design documents or Contract Documents when such revisions are due to causes beyond PEA Group's control.
v. In the event the bids or negotiated cost of the Project exceed the CLIENT's budget, upon notice from the CLIENT, PEA Group agrees to modify, on an Additional Services basis, PEA Group's Contract Documents or those portions of the documents where bids exceeded the CLIENT's budget.
vi. PEA Group shall exercise usual and customary professional care in its efforts to comply with applicable statutes, codes, regulations, and laws in effect as of the date of this Agreement. Any changes in said statutes, codes, regulations or laws after the proposal date which requires services not quoted, revisions or redesign shall be an additional service.
vii. Obtaining, preparation or payment of permits or application fees. Please note that any and all application, review and/or processing fees associated with Environmental Services or Incentives that are not included in the Proposal and will be paid by the CLIENT. Application and/or processing fees may be based on the amount of credit requested and must be provided prior to approval of the requested incentive.
viii. Additional or extended services during construction made necessary by 1) work damaged during construction; 2) a significant amount of defective or negligent work of the contractor(s); 3) acceleration of the progress schedule involving services beyond normal working hours; 4) default by contractor(s); 5) requested by contractor beyond agreed upon terms in the Scope of Services.
ix. All meetings and/or site visits requested beyond the maximum number indicated in the Base or Initial Project Scope of Services.
x. Preparation of Computer Assisted Design (CAD) drawings of topographical surveys furnished by others.
xi. Construction Administration, including but not limited to opinions or review of shop drawings, construction budgets, construction scheduling, pay applications or site visits.
xii. Service planning coordination with utility company(s).
xiii. Hydraulic drainage analysis.
xiv. Traffic study and / or traffic signal design coordination.
xv. Structural design of retaining walls or structures of any kind.
xvi. Ecological Services and Wetland Mitigation and Design.
xvii. Construction monitoring, observance, inspection or supervision of work performed on the project.
xviii. Construction material testing, utility locating (including Ground Penetrating Radar and Electromagnetic methods), soil or pavement investigations (including boring and cores)
xix. Construction Staking.
xx. LEED Certification Documentation.
xxi. Storm water operator / Soil Erosion Control Inspection services.
xxii. Off Site Improvements to transportation or utility infrastructure.
xxiii. Management or transport of investigation derived waste.

The CLIENT may request at any time that any of the services listed above be added to the project and PEA Group will provide an ASR detailing the scope and the fees associated with that professional service.

ARTICLE III – CONFIDENTIALITY. PEA Group shall maintain as confidential such information obtained from CLIENT or developed as part of the Services as CLIENT expressly designates in writing as confidential. This obligation shall not apply to information which is or comes into the public domain, or which PEA Group is required to disclose by law or order of a court, administrative agency, or other legal authority, or as is required under this agreement to perform the services therein. Unless otherwise agreed, PEA Group may use and publish CLIENT'S name and a general description of the Services in describing PEA Group's experience to other clients or potential clients.

ARTICLE IV – STANDARD OF CARE. In providing services under this Agreement, the PEA Group shall perform in a manner consistent with that degree of care and skill ordinarily exercised by members of the same profession currently practicing under similar circumstances at the same time and in the same or similar locality. **PEA Group makes no warranty, express or implied, as to its professional services rendered under this Agreement**. PEA Group shall not be required to sign any documents, no matter by whom requested, that would result in PEA Group's having to certify, guarantee or warrant the existence of conditions whose existence that PEA Group cannot ascertain. CLIENT agrees not to make resolution of any dispute with PEA Group or payment of any amount due to the PEA Group in any way contingent upon PEA Group's signing any such certification.

ARTICLE V – CLIENT'S RESPONSIBILITIES. CLIENT shall be responsible for performing or providing the following:

i. Arrange for access to and make all provisions for PEA Group to enter upon public or private property to perform the above professional services. PEA Group will not access those portions of the subject property or adjacent properties where prearranged access has not been granted, or where personnel health and safety issues preclude entry. CLIENT shall defend PEA Group from any challenge to such right-of-entry and shall indemnify and hold PEA Group harmless from any claims of trespass which may occur, and all costs and attorneys' fees incurred by PEA Group as a result of any such claim.
ii. CLIENT acknowledges that certain procedures may cause some damage to land or disruption (i.e., soil borings, test pits, surveying, etc.). PEA Group will take reasonable precautions to minimize any damages to property; however, the correction of which shall not be PEA Group's responsibility unless otherwise agreed to by the parties.

iii. CLIENT shall provide a current title policy for all new private projects or PEA Group upon giving CLIENT written notice may order a title search for the project that shall be billed as reimbursable per the current rate schedule.

iv. Furnish all available information in CLIENT'S possession or control for the site where the services are to be performed, including, but not limited to surveys, the existence and location of underground utilities or structures, the existence and location of hazardous materials, wastes or substances, and any other information or documentation pertinent to PEA Group's services. Unless agreed to specifically in the proposal, PEA Group will not conduct an independent investigation or evaluation of subsurface utilities, structures, or hazardous conditions. PEA Group is not responsible for any undisclosed subsurface utilities, structures, or hazardous conditions by the CLIENT encountered on the project unless the proposal specifically includes an investigation or evaluation by PEA Group in the scope of the services.

v. The CLIENT warrants PEA Group has permission to use all information, plans, drawings, specifications, surveys, reports, and documents provided in connection with the Project. The CLIENT agrees, to the fullest extent permitted by law, to indemnify and hold PEA Group harmless of all expenses, damages, losses, and costs, including reasonable attorney fees, from any claims and/or liability, including copyright claims, resulting from the use of such information, plans, drawings, specifications surveys, reports, documents or other instruments of service.

vi. In the event the CLIENT has elected to use other firm(s) to perform certain services, for example but not limited to survey, geotechnical investigations, environmental or ecological investigations by providing one performed by another company, PEA Group, cannot ascertain the accuracy, completeness and sufficiency of the information provided. PEA Group shall be entitled to rely upon the completeness and accuracy of the information provided which includes but is not limited to surveys, investigative reports and documents provided by CLIENT, Municipal, State or Federal agencies. The CLIENT is responsible for any liability or damages that arise from the errors or omissions which the information provided by CLIENT , Municipal, State or Federal agencies may contain.

vii. CLIENT shall provide a program which sets forth the CLIENT's objectives, schedule, constraints and site requirements and render all decisions or provide all necessary approvals pertaining to the project in a timely manner to allow adequate time to perform services herein.

viii. CLIENT shall give prompt written notice to PEA Group whenever CLIENT observes or otherwise becomes aware of any project changes that materially affects the scope or timing of the PEA Group's professional services.

ix. Should the CLIENT or CLIENT'S representative encounter a conflict between plans and specifications, either among themselves, the CLIENT'S project expectations or with the requirements of any and all reviewing and permit-issuing agencies, CLIENT shall seek clarification in writing from PEA Group before commencement of construction. Failure to do so shall relieve PEA Group from any and all liability resulting in this matter.

x. During the Construction Phase CLIENT shall give prompt written notice to PEA Group of all defects or suspected defects in PEA Group's work or services of which the CLIENT or CLIENT's agent becomes aware, in order to allow PEA Group time to investigate said defected work and take measures to minimize the consequences of such defect. The CLIENT shall require that all contractors and subcontractors, at any level, on the Project to contain a like requirement in their contract. Failure by the CLIENT, the CLIENT'S contractors, or subcontractors to notify PEA Group shall relieve PEA Group of the costs of remedying the defect above the sum such remedy would have cost had prompt notification been given.

xi. CLIENT shall be the "Generator" responsible for any and all waste generated as a result of activities completed under this scope of work, including profiling of waste, and signing all waste related documentation. If CLIENT wishes PEA Group representatives to sign waste-related documentation (manifests, profiles, etc.) on behalf of CLIENT, CLIENT shall provide PEA Group written authorization to sign on behalf of CLIENT and this will be an additional service unless specifically set forth in the scope of services. In no event shall PEA Group be listed as the generator of any waste or associated with the EPA ID number for the facility generating the waste. In addition, PEA Group shall not move waste from one property to another or be liable for waste which is removed from the project site or disposed of improperly. CLIENT is responsible for providing a secure location for the storage of waste pending characterization and disposal and maintains full responsibility for waste from generation to final disposition (i.e., cradle to grave management)..

xii. CLIENT is responsible for maintaining a safe distance from all work conducted on the project site and complying with safety recommendations and procedures provided by PEA Group or subcontractors. PEA Group shall not be responsible for the safety of CLIENT, CLIENT representatives, or guests of the CLIENT on the project site.

ARTICLE VI – BILLING, PAYMENTS, AND COLLECTION. Unless otherwise agreed, CLIENT shall pay for the Services in accordance with PEA Group's Proposal and this Agreement. Methods of payment can be found at Payment Link . PEA Group reserves the right to collect credit card servicing fees. PEA Group reserves the right to adjust the rates periodically. Note, all hourly Projects are subject to any annual rate adjustments at the start of each calendar year unless the Parties agree otherwise.

Retainage – Should the CLIENT be required to make an initial payment (Retainer) as indicated in the Proposal this retainer shall be held by PEA Group and applied against the final invoice. PEA Group reserves the right to apply the retainer to invoices that are past due upon which the CLIENT agrees to reinstate the retainer prior to PEA Group resuming work.

Invoicing – Progress invoices will be submitted to the CLIENT approximately once a month and a final bill will be submitted upon completion of the services. Invoices shall be considered PAST DUE if not paid within thirty (30) calendar days of the invoice date. CLIENT agrees that the periodic billing from PEA Group to CLIENT are correct, conclusive, binding on CLIENT and due and payable in full unless CLIENT, within thirty (30) days from the date of the invoice, notifies PEA Group in writing of any alleged inaccuracies, discrepancies, or errors in billing that they are disputing. Any portion of the invoice not being disputed by the CLIENT shall be paid within thirty (30) days of the invoice date. CLIENT agrees that all invoices (except the portion they disputed) cannot be contested after said thirty (30) day period. All payments are owed directly from the CLIENT and are not contingent upon payments made by a third party, unless agreed to in writing by PEA Group. CLIENT also agrees that payments to PEA Group are not subject to or contingent upon local or state agency approvals, permit acquisitions, third party agreements, project financing, or closings.

Late Fees – If payment is not received by PEA Group within thirty (30) calendar days of the invoice date, the CLIENT shall pay interest on the PAST DUE amount at the rate of 18% per annum (for business entities) or 7% per annum (for individuals), as the case may be. Payment thereafter shall first be applied to costs of collection, then to interest and then to the unpaid contract amount.

Collection Costs – CLIENT shall pay to PEA Group all costs of collection (including the costs and fees of both in-house and outside counsel), whether or not an action or other proceeding is commenced. In the event legal action is necessary to enforce the payment provisions of this Agreement. PEA Group shall be entitled to collect from the CLIENT any judgment or settlement sums due, reasonable attorney's fees, court costs and expenses incurred by PEA Group in connection therewith and, in addition, the reasonable value of PEA Group's time, subconsultant's fees, and expenses spent in connection with such collection action, computed at PEA Group's prevailing Rate Schedule and expense policies.

Suspension of Services – If the CLIENT fails to make payment when due or otherwise is in breach of this Agreement, then PEA Group may, in addition to its other rights and remedies hereunder and under applicable law, terminate or suspend performance of services upon seven (7) calendar days' notice to the CLIENT. PEA Group shall have no liability whatsoever to the CLIENT for any costs or damages as a result of such suspension caused by any breach of this Agreement by the CLIENT. Failure to make payment within Sixty (60) days of invoice date shall constitute a release of PEA Group from any and all claims which CLIENT may have, whether in tort, contract or otherwise, and whether known or unknown at the time.

Set-Offs, Back Charges, Discounts – Payment of invoices shall not be subject to any discounts or set-offs by the CLIENT unless agreed to in writing by PEA Group. Payment to PEA Group for services rendered and expenses incurred shall be due and payable regardless of any subsequent suspension or termination of this Agreement by either party. Fees for disputed services may be withheld but only to the extent they are reasonable and necessary to protect the CLIENT's interests. CLIENT shall provide a detailed explanation of the basis for any planned withholding prior to any amounts being withheld from PEA Group. All amounts withheld shall be released to PEA Group as soon as the circumstances giving rise to the withholding are resolved. No payments to PEA Group may be withheld from another project or applied from this project to another PEA Group project with the CLIENT.

Termination of Services – If the CLIENT fails to make payment to PEA Group in accordance with the payment terms herein, this shall constitute a material breach of this Agreement and shall be cause for termination of this Agreement by PEA Group.

Lien Rights – PEA Group hereby notifies CLIENT that it intends to utilize all available lien rights it may have in connection with its provision of services under this Agreement and required by the Michigan Construction Lien Act, MCL 570.00 et seq. PEA Group may elect pursuant to the ACT to record a Notice of Professional Services Subcontract with the register of deeds for the county in which the property is located in accordance with MCL 570.1107b.

ARTICLE VII – LIMITATION OF LIABILITY. To the maximum extent permitted by law, the CLIENT agrees that the maximum aggregate amount of PEA Group's liability which includes any individual's professional liability employed by PEA Group shall be limited to Twenty-Five Thousand ($25,000.00) Dollars or to the sum of PEA Group's fee whichever is greater. This limitation shall apply regardless of the cause of action or legal theory pled or asserted subject to Article IX. **Under no circumstance shall PEA Group and/or PEA Group's professional employees be liable for CLIENT's loss of profits, delay damages, or any special, incidental, or consequential loss or damage of any nature arising at any time or from any cause whatsoever**. Where PEA Group's fee exceeds Two Hundred Fifty Thousand ($250,000.00) Dollars CLIENT's maximum recovery against PEA Group will not exceed Two Hundred Fifty Thousand ($250,000.00) Dollars.

ARTICLE VIII – INDEMNIFICATION. Subject to Article VII above, PEA Group agrees, to the fullest extent permitted by law, to indemnify and hold harmless the CLIENT, its officers, directors and employees (collectively, CLIENT) against all damages or liabilities, to the extent caused by PEA Group's negligent performance of professional services under this Agreement and that of its subconsultants or anyone for whom PEA Group is legally liable. The CLIENT agrees, to the fullest extent permitted by law, to indemnify

and hold harmless PEA Group, its officers, directors, employees and subconsultants (collectively, PEA Group) against all damages or liabilities, to the extent caused by the CLIENT's negligent acts, errors or omissions in connection with the Project as well as the acts, errors or omissions of its contractors, subcontractors or consultants or anyone for whom the CLIENT is legally liable. Neither the CLIENT nor PEA Group shall be obligated to indemnify the other party in any manner whatsoever for the other party's own negligence. In addition to the indemnity provided in this Agreement, and to the fullest extent permitted by law, CLIENT shall indemnify and hold harmless PEA Group and its officers, directors, partners, employees, consultants and its agents, from and against all costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals, and all court or arbitration or other dispute resolution costs) caused by, arising out of or resulting from a Hazardous Environmental Condition, provided any such cost, loss, or damage is attributable to bodily injury, sickness, disease, or death, or to injury to or destruction of tangible property (other than completed Work), including the loss of use resulting therefrom, except to the extent of any release of a hazardous substance caused by PEA Group's gross negligence or willful misconduct at the subject property.

ARTICLE IX – PHASE ONE ENVIRONMENTAL SITE ASSESMENT (ESAs). PEA Group will perform ESAs in accordance with the currently accepted American Society for Testing and Materials standard. As part of the ESA the CLIENT shall be responsible for providing a map showing the outline of the property for which an ESA is requested, including the parcel ID(s) of all properties and all the available information regarding the intended use of the outlined property. PEA Group shall not be responsible for additional costs incurred as a result of incorrect property information provided by the CLIENT. In addition, CLIENT shall be responsible for ensuring PEA Group has access to the property and all buildings for a site inspection, providing appropriate historic information (including any prior ESAs CLIENT has control of) to complete an All Appropriate Inquiry per ASTM standards, which includes the completion of the Phase I ESA User Questionnaire. Should any of the required information need to be obtained from a third party (i.e., the seller) to complete the All Appropriate Inquiry, CLIENT shall obtain this information from the third party. The CLIENT's failure to provide the required information shall relieve PEA Group from liability and damages arising from the missing information. In conformance to the requirements set forth by the Small Business Administration and lenders relying upon Phase One ESAs, PEA Group agrees to waive the limitation of liability set forth in Article VII up to a limit of $1,000,000 for this service. This waiver is strictly limited to the Phase One ESAs and does not apply to other services.

ARTICLE X – SAFETY. PEA Group will comply with CLIENT'S reasonable rules and regulations governing PEA Group's activities on CLIENT'S premises to the extent that the same are provided to PEA Group prior to the start of the Services. PEA Group is only responsible for its employees while onsite performing services pursuant to the Agreement. All site work is expected to be performed under Level D health and safety conditions. If the work is upgraded to Level C or higher, the scope of work, fees and delivery dates will need to be re-negotiated. (See the Safety Plan for descriptions of each level.) PEA Group's Safety Plan is available upon request. DISCOVERY OF UNANTICIPATED HAZARDOUS MATERIALS OR CONDITIONS PEA Group and the CLIENT agree that the discovery of unanticipated hazardous materials or conditions may make it necessary for PEA Group to take immediate measures to protect the health and safety of its employees, agents, or subcontractors. CLIENT agrees to pay the reasonable costs of such protective measures as well as any equipment decontamination or other costs incident to the discovery of unanticipated hazardous materials or conditions. PEA Group will notify CLIENT of such discovery as soon as practically possible. In the event PEA Group or any other party encounters a Hazardous Environmental Condition, PEA Group may, at its option and without liability for consequential or any other damages, suspend performance of services on the portion of the Project affected thereby until CLIENT: (i) retains appropriate specialist consultant(s) or contractor(s) to identify and, as appropriate, abate, remediate, or remove the Hazardous Environmental Condition; and (ii) warrants that the site is in full compliance with applicable Laws and Regulations. To the extent PEA Group is able to assist with handling the Unanticipated Hazardous Environmental Condition, an ASR will be provided to the CLIENT for their approval prior to commencing services.

ARTICLE XI – CONSTRUCTION/ REMEDIATION PHASE SERVICES. Any Services under this Agreement that include site visits, project observation, material testing, layout and any other Construction Phase Services, none of these professional activities of PEA Group, nor the presence of the PEA Group's employees or subconsultants at a construction/project site, shall impose any duty on PEA Group, nor relieve the General Contractor of its obligations, duties and responsibilities including, but not limited to, construction means, methods, sequences, techniques, procedures, or jobsite safety of others, including, whatever is necessary for performing, superintending or coordinating the Work in accordance with the Contract Documents and any health or safety precautions required by any regulatory agencies ("Contractor Duties"). PEA Group and its personnel have no authority to exercise any control over any construction contractor or its employees in connection with their work or any health or safety programs or procedures. The CLIENT agrees that the General Contractor shall be solely responsible for jobsite and worker safety and warrants that this intent shall be carried out in the CLIENT's contract with the General Contractor. The CLIENT also agrees that the General Contractor and subcontractors shall defend and indemnify the CLIENT, PEA Group and the PEA Group's subconsultants from and against any claims, causes of action, demands or damages arising out of or relating to Contractor Duties. The CLIENT also agrees that the CLIENT, PEA Group and PEA Group's subconsultants shall be made additional insureds under the General Contractor's policies of general liability insurance.

ARTICLE XII – LIMITATIONS OF FIELD OBSERVATION, TESTING AND ANALYSIS. Information obtained from observations, analysis, and testing of sample materials is considered evidence with respect to the area defined in the scope of services, but any inference or conclusion based thereon is an opinion based upon professional judgment and shall not be construed as a representation of fact. Soil and groundwater data may vary due to seasonal and climatological changes and extrinsic conditions, and pollutants may or may not be found to exist at the specific time of inspection. CLIENT understands that, due to intervening causes such as natural groundwater flows, seasonality, sampling method, or human intervention, such sampling and analysis may or may not indicate the presence of contamination. **There is a risk that sampling techniques may result in contamination of certain subsurface areas such as when a probe or boring device moves through a contaminated area linking it to an aquifer or other medium not previously contaminated and capable of transporting pollutants. BECAUSE SUCH RISKS ARE UNAVOIDABLE AND BECAUSE THE SAMPLING TECHNIQUES TO BE EMPLOYED ARE A NECESSARY ASPECT OF PEA Group's WORK ON CLIENT'S BEHALF, CLIENT AGREES TO ASSUME THESE RISKS, except those caused by PEA Group's gross negligence or willful misconduct.**

ARTICLE XIII – REUSE OR ALTERATION OF DOCUMENTS. PEA Group shall retain ownership of all reports, drawings, plans, specifications, electronic files, field data, notes, calculations, and other documents and instruments prepared by PEA Group as instruments of service. PEA Group retains all common law, statutory and other reserved rights, including copyright. Subject to the timely payment and performance by CLIENT of its obligations hereunder, PEA Group grants CLIENT a limited license to use such documents in connection with the Project. Any reuse of Documents which includes, but is not limited to the following: calculations, drawings, and specifications prepared by PEA Group pursuant to this Agreement, whether in hard copy or machine-readable form, are related exclusively to the Projects described herein. No documents prepared by PEA Group pursuant to this Agreement are intended or represented to be suitable for use by the CLIENT or others on extensions of this current Project, or for reuse on any other project.

Further, in the event that PEA Group's services under this Agreement are terminated for any reason prior to completion of the services described herein, then PEA Group shall not be responsible for any incomplete documents. Any continued use of PEA Group's documents on this Project, whether in hard copy or machine readable form, or any use on any other location, with or without any changes or adaptations, made after termination of PEA Group prior to completion of PEA Group's services according to this Agreement will be at the CLIENT's sole risk and without liability or legal recourse to PEA Group; and the CLIENT shall indemnify and hold PEA Group harmless from all claims, damages, losses, and expenses, including but not limited to attorneys' fees, arising out of or resulting therefrom.

The CLIENT recognizes that changes or modifications to PEA Group's instruments of professional service introduced by anyone other than PEA Group may result in adverse consequences that PEA Group cannot predict nor control. Therefore, in consideration of PEA Group's Agreement to deliver its instruments of professional service in machine-readable form, the CLIENT agrees, to the fullest extent permitted by law, to hold harmless and indemnify PEA Group from and against all claims, liabilities, losses, damages, and costs, including but not limited to attorney's fees, arising out of or in any way connected in the modification, misinterpretation, misuse, or reuse by other of the machine readable information and data provided by PEA Group under this Agreement. The foregoing indemnification applies to any use of the Project documentation on other projects, for additions to this Project, or for completion of this Project by others, excepting only such use as may be authorized, in writing, by PEA Group.

Photographs of any completed Project embodying the services of PEA Group provided hereunder may be considered as its property, and may be used in publications, marketing materials, and other literature prepared by or on behalf of PEA Group unless specifically forbidden in the Agreement.

ARTICLE XIV – CHANGED CONDITIONS/ FAST TRACK/ FORCE MAJEURE. If, during the term of this Agreement, circumstances or conditions that were not originally contemplated by or known to PEA Group are revealed, to the extent that they affect the scope of services, compensation, schedule, allocation of risks or other material terms of this Agreement, PEA Group may call for renegotiation of appropriate portions of this Agreement. The PEA Group shall notify the CLIENT of the changed conditions necessitating renegotiation, and PEA Group and the CLIENT shall promptly and in good faith enter into renegotiation of this Agreement to address the changed conditions. If terms cannot be agreed to, the parties agree that either party has the absolute right to terminate this Agreement in accordance with the Termination provision hereof.

In recognition that a CLIENT may to their benefit elect to employ a "fast track process" (in which some of PEA Group's design services overlap the construction work and are out of sequence with the traditional project delivery method), and in recognition of the inherent risks of fast tracking to PEA Group, the CLIENT agrees to waive all claims against PEA Group for design changes and modifications of portions of the work already constructed due to the CLIENT's decision to employ the "fast track process". The CLIENT further agrees to compensate PEA Group for all Additional Services required to modify, correct or adjust the Construction Documents and coordinate them in order to meet the CLIENT's program requirements because of the CLIENT's decision to construct the Project in a fast track manner.

If an event or circumstance beyond the PEA Group's reasonable control occurs, including without limitation an act of God, fire, flood, hurricane, wind event, storm,

weather disturbance, earthquake, pandemic, disease, epidemic, or other viral or bacterial outbreak, government-ordered shutdown, quarantine or shelter-in-place order, an act or omission of a third party, war, riot, terrorism or threat of terrorism, civil unrest, labor problems (including lockouts, strikes and slowdowns) of a third-party, inability to obtain power, internet connectivity or services interruptions, scarcity of ingredients or supplies, or court injunction or order, new laws or governmental regulations or other causes that are beyond the reasonable control of the PEA Group, whether similar or dissimilar to any of the foregoing, that cause PEA Group delay or additional expense ("Force Majeure Event"), then the PEA Group is entitled to an equitable adjustment in the contract price or time for performance, or both. If any Force Majeure Event renders the PEA Group's performance impossible or impracticable, PEA Group has the right to terminate performance under this Agreement consistent with any termination requirements that might exist in this Agreement. If a Force Majeure Event lasts more than thirty (30) days, upon written notice either party may terminate this Agreement without liability to the other for such termination.

ARTICLE XV – PERFORMANCE SPECIFICATION. PEA Group may incorporate "Performance Specifications" as a component of Construction Documents. Performance Specifications rely upon a statement of systems, equipment and/or materials to be incorporated into the project in terms of required results, without mandating specific means for achieving the required results. Performance Specifications establish minimum standards which must be met by defining the functional requirements, the operating conditions and/or environment in which it must operate and/or related matters such as general standards which must be satisfied, warranty requirements, etc. Where performance specifications are used, they will be identified as such. Where Performance Specifications are used, the Contractor, Subcontractors, Manufacturer and/or Supplier of the materials or equipment to be furnished assume design responsibility and liability for the applicable systems, equipment or materials. The Contractor, their Subcontractors, and others who actually manufacture and supply the items will be the sole parties liable to the CLIENT for loss or damage caused by defective or deficient design, manufacture or performance. PEA Group's shop drawing review is strictly limited to determine that the manufacturers and suppliers have referenced the appropriate operating conditions and environment..

ARTICLE XVI – DISPUTE RESOLUTION. All disputes are to be handled as follows:

i. The Parties to this Agreement intend, to the maximum extent feasible, to resolve all disputes at the project level. Disputes not resolved at the project level shall be timely escalated to the Parties' senior management, senior management will then use good faith efforts to settle the dispute. If after a reasonable time the Parties' senior management are unable to resolve the dispute, the Parties shall mediate as set forth below. The inability of the senior executives to resolve the dispute is a condition precedent to mediation, then ultimately to arbitration (if mutually agreed to by the Parties) or the institution of legal or equitable proceedings by either party. During this dispute mitigation or resolution proceedings PEA Group shall continue perform conditioned upon the CLIENT continuing to make timely payments in accordance with the Agreement for all work performed during this process.

ii. If direct discussions do not result in resolution of the matter, the Parties shall endeavor to resolve the matter by mediation through the current Construction Industry Mediation Rules of the American Arbitration Association (AAA), or the Parties may mutually agree to select another set of mediation rules. The administration of the mediation shall be as mutually agreed by the Parties. The mediation shall be convened within thirty (30) Business Days of the matter first being discussed and shall conclude within forty-five (45) Business Days of the matter first being discussed. Either Party may terminate the mediation at any time after the first session by written notice to the non-terminating Party and mediator. The costs of the mediation shall be shared equally by the Parties.

iii. Arbitration, if mutually agreed upon by the Parties, in writing, shall be decided in accordance with the Construction Industry Arbitration Rules of the AAA then in effect. This agreement to arbitrate shall be specifically enforceable under the prevailing arbitration law. An award entered in an arbitration proceeding shall be final, and judgment may be entered upon it in accordance with applicable law in any court having jurisdiction. The venue shall be the location of the Project, unless the Parties agree on a mutually convenient location.

iv. If the Parties do not mutually agree to Arbitrate, the commencement of any legal or equitable proceedings by either Party shall be in the State or Federal court having jurisdiction of the matter in the location of the Project. This Agreement shall be governed by the law in effect at the location of the Project.

v. In the event there is a third-party claim against the CLIENT, PEA Group agrees to reimburse the CLIENT, its officers, directors, and employees (collectively, CLIENT), its reasonable defense costs, but only to the extent caused by PEA Group's actual negligent act, error, or omission in the performance of professional services, and only if such defense costs are awarded by a court or arbitrator of competent jurisdiction. In the event there is a third-party claim against PEA Group, the CLIENT agrees to reimburse PEA Group, its officers, directors, employees, and subconsultants (collectively, PEA Group) its reasonable defense costs, but only to the extent caused by the CLIENT's negligent act, error, or omission, and only if such defense costs are awarded by a court or arbitrator of competent jurisdiction. Neither the CLIENT nor PEA Group shall be obligated to reimburse the other party its defense costs in any manner whatsoever for the other party's own negligence.

ARTICLE XVII – SUSPENSION OF SERVICES. The CLIENT may suspend services performed by PEA Group with cause upon seven (7) days written notice. PEA Group shall submit an invoice for services up to the effective date of the suspension and the CLIENT shall pay PEA Group all outstanding invoices within fourteen (14) days. If suspension of services exceeds thirty (30) days from the effective date of the suspension, PEA Group shall be entitled to renegotiate the Project schedule and the compensation terms for the Project.

If PEA Group's services are delayed or suspended in whole or in part by CLIENT, act of God or other reason beyond PEA Group's control, or if PEA Group's services are extended by Contractor's actions or inactions for more than ninety (90) days through no fault of PEA Group, PEA Group shall be entitled to equitable adjustment of rates and amounts of compensation and extension of deadline provided for elsewhere in this Agreement to reflect reasonable costs incurred by PEA Group in connection with, among other things, such delay or suspension and reactivation. PEA Group may suspend services if CLIENT upon seven (7) days written notice.

ARTICLE XVIII – TERMINATION. The obligation to provide further services under this Agreement may be terminated by either party upon seven (7) calendar day's written notice. Upon receipt of notice of termination from CLIENT, PEA Group shall immediately cease work and take all reasonable steps to minimize costs relating to termination. In the event of any termination, PEA Group will be paid for all services rendered to the date of termination, all expenses subject to reimbursement hereunder and other reasonable expenses incurred by PEA Group as a result of such termination. In the event PEA Group's compensation under this Agreement is a Fixed Fee/Lump Sum, upon such termination the amount payable to PEA Group for services rendered will be determined using a proportional amount of the total fee based on a ratio of the amount of the services done, as reasonably determined by PEA Group, the total amount of services, which was to have been performed, less prior partial payments, if any, which have been made.

ARTICLE XIX – SUCCESSOR, ASSIGNS. This Agreement shall be binding upon the parties and their respective successors and assigns. Neither party shall assign its interest in this Agreement without the prior written consent of the other. The PEA Group shall not be required to execute any documents subsequent to the signing of this Agreement that in any way might, in the sole judgment of the PEA Group, increase PEA Group's contractual or legal obligations or risks, create a fiduciary obligation or an uninsurable risk, or adversely affect the availability or cost of its professional or general liability insurance or otherwise materially change the terms of this Agreement. Subcontracting to subconsultants, normally contemplated by the Consultant as a generally accepted business practice, shall not be considered an assignment for purposes of this Agreement.

ARTICLE XX – THIRD-PARTY BENEFICIARIES. Nothing contained in this Agreement shall create a contractual relationship with or a cause of action in favor of a third party against either the CLIENT or PEA Group. PEA Group's services under this Agreement are being performed solely for the CLIENT's benefit, and no other party or entity shall have any claim against PEA Group because of this Agreement or the performance or nonperformance of services hereunder. The CLIENT and PEA Group agree to require a similar provision in all contracts with contractors, subcontractors, subconsultants, vendors and other entities involved in this Project to carry out the intent of this provision.

ARTICLE XXI – SEVERABILITY. Any provision of these terms later held to violate any law shall be deemed void and all remaining provisions shall continue in force. In such event, the CLIENT and PEA Group will work in good faith to replace an invalid provision with one that is valid and as close to the original meaning as possible.

ARTICLE XXII – ENTIRE AGREEMENT. CLIENT, by signing the attached Proposal, acknowledges that this Agreement has been read, understands it, and agrees to be bound by its terms. The terms and conditions of this Agreement, together with the PEA Group Proposal (including attachments thereto) and any applicable Addendum, constitute the entire Agreement between the parties and supersede all prior oral or written representations, understandings, and agreements. The CLIENT is expressly prohibited during the term of, and for one year following the expiration or termination of this Agreement, and it will be considered a material breach of this Agreement, to solicit for the purposes of employment an employee of PEA Group without the prior written consent of PEA Group. The parties agree that any purchase orders, work orders, acknowledgments, form agreements or other similar documents delivered to PEA Group shall be null, void and without legal effect to the extent that they conflict with the terms of this Agreement. This Agreement may be amended or modified only by a written instrument signed by both parties. Each person signing the Proposal represents that he or she has full legal authority to bind the parties to the terms and conditions contained in this Agreement. No terms or conditions referenced in or attached to any Customer generated purchase order issued to Service Provider shall alter or change this Agreement.

Stormwater Management Program Plan

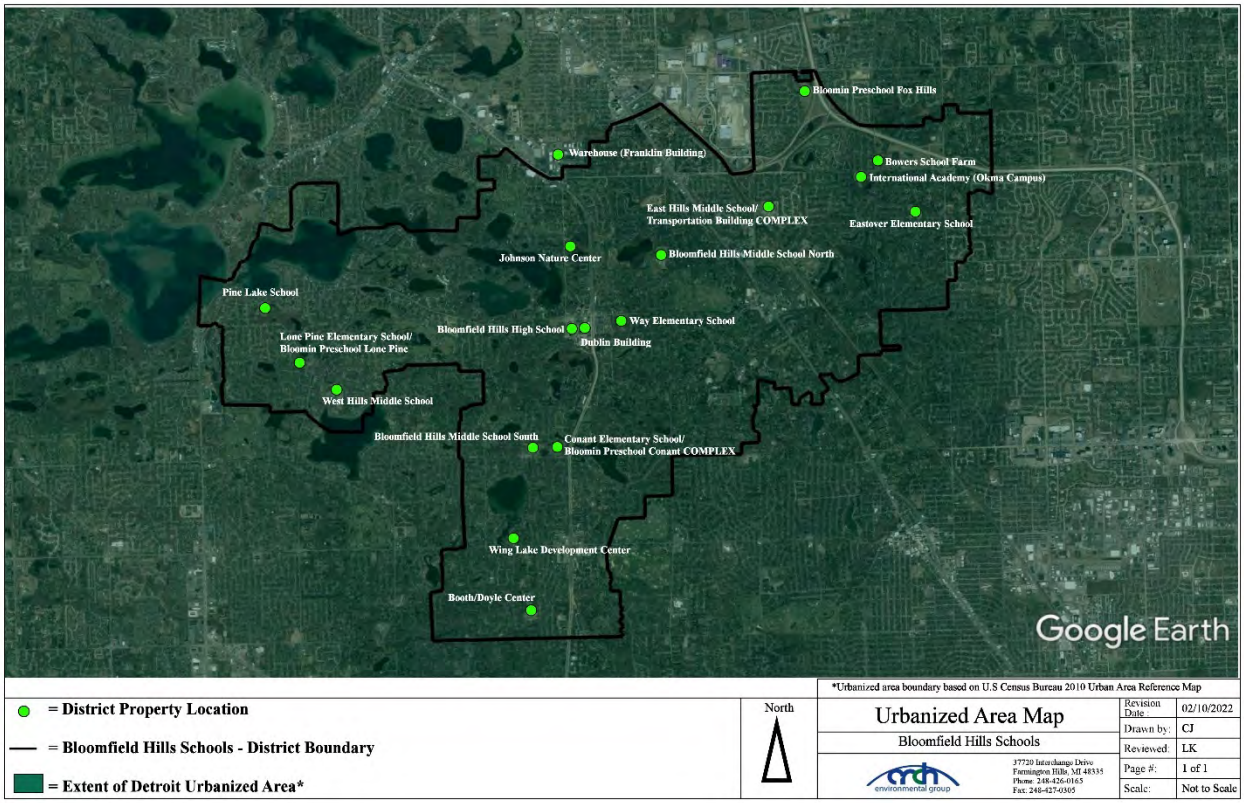
1.0 Introduction

Bloomfield Hills Schools is a public school district based in Bloomfield Hills, Michigan that owns or operates a regulated Municipal Separate Storm Sewer System (MS4). This Stormwater Management Plan (SWMP) has been developed to retain authorization to discharge stormwater to surface waters and reduce the discharge of pollutants from the MS4 to the Maximum Extent Practicable and protect water quality. Bloomfield Hills Schools will implement and enforce this SWMP to the Maximum Extent Practicable.

This Stormwater Management Plan commits to actions throughout the permit cycle. This SWMP includes measurable goals for Best Management Practices (BMP), focusing on the six minimum measures. Measurable goals describe the actions Bloomfield Hills Schools will take to implement each BMP and allow Bloomfield Hills Schools to evaluate progress toward meeting key objectives outlined in the following sections.



Bloomfield Hills Schools owns and operates seventeen (17) public properties within the boundaries of the "Detroit Urbanized Area". All Bloomfield Hills Schools properties are within the urbanized area based on the 2010 Census data, and the facilities include:

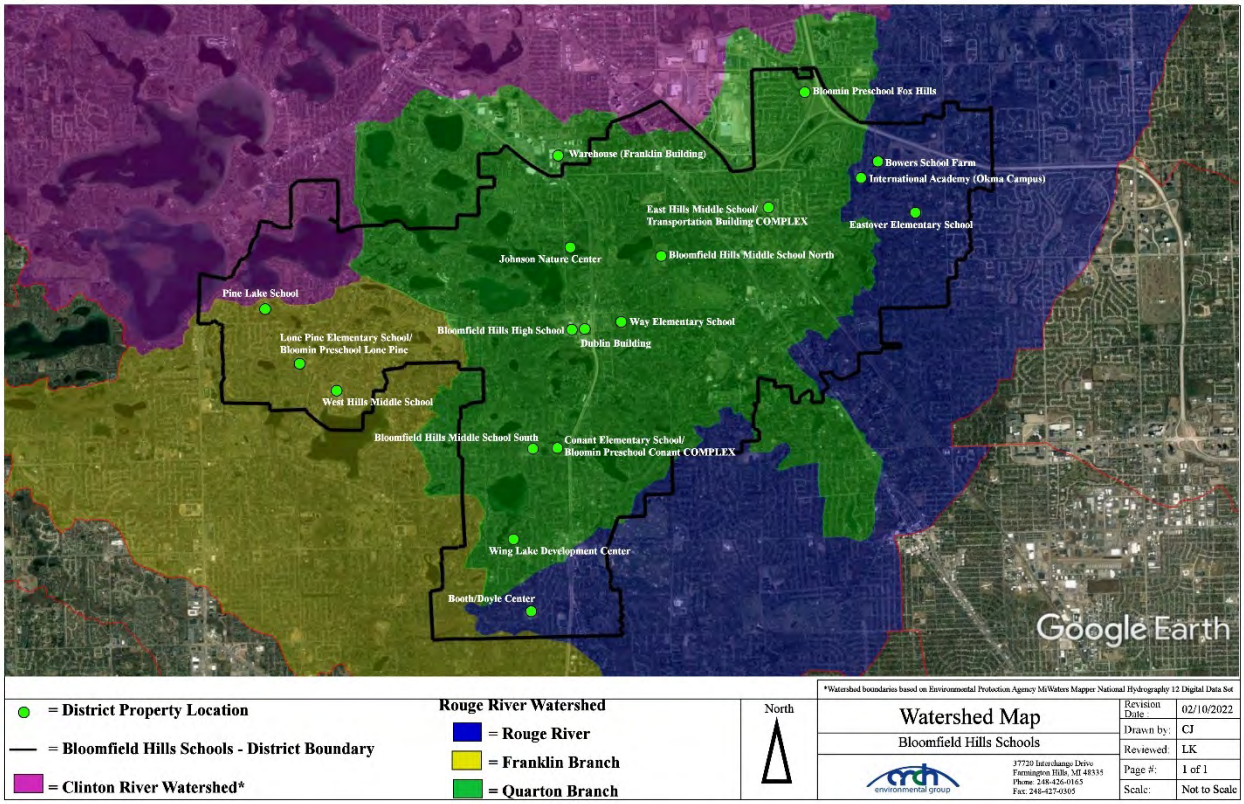
1. **Bloomfield Hills High School,** 4200 Andover Rd, Bloomfield Hills, MI 48302
2. **Bloomfield Hills Middle School South-Conant Elementary School-Bloomin' Preschool Conant Complex** -4200 W Quarton Rd, Bloomfield Hills, MI 48302; 4100 W Quarton Rd, Bloomfield Hills, MI 48302; 4100 W Quarton Rd, Bloomfield Hills, MI 48302
3. **Bloomfield Hills Middle School North -** 3456 Lahser Rd, Bloomfield Hills, MI 48302
4. **Booth-Doyle Center -** 7273 Wing Lake Rd, Bloomfield Hills, MI 48301
5. **Bowers School Farm -** 1219 E Square Lake Rd, Bloomfield Hills, MI 48304
6. **Dublin Building (Physical Plant Services) -** 4174 Dublin Dr, Bloomfield Hills, MI 48302
7. **East Hills Middle School-Transportation Building Complex -** 2780 Kensington Rd, Bloomfield Hills, MI 48304; 2780 Kensington Rd, Bloomfield Hills, MI 48304
8. **Eastover Elementary School -** 1101 Westview Road, Bloomfield Hills, MI 48304
9. **Fox Hills Elementary School & Bloomin' Preschool Fox Hills** - 1661 Hunters Ridge, Bloomfield Hills, MI 48304; 1661 Hunters Ridge, Bloomfield Hills, MI 48304
10. **International Academy (Okma Campus) -** 1020 E Square Lake Rd, Bloomfield Hills, MI 48304
11. **Johnson Nature Center -** 3325 Franklin Rd, Bloomfield Hills, MI 48302
12. **Lone Pine Elementary School & Bloomin' Preschool Lone Pine** - 3100 Lone Pine Rd, West Bloomfield, MI 48323
13. **Pine Lake School -** 3333 W Long Lake Road, West Bloomfield, MI 48323
14. **Warehouse (Franklin Building) -** 2258 Franklin Rd, Bloomfield Hills, MI 48302
15. **Way Elementary School -** 765 W Long Lake Rd, Bloomfield Hills, MI 48302
16. **West Hills Middle School -** 2601 Lone Pine Rd, West Bloomfield, MI 48323
17. **Wing Lake Development Center -** 6490 Wing Lake Rd, Bloomfield Hills, MI 48301

1.1 Regulated Area

A map identifying the urbanized area within the Bloomfield Hills Schools urbanized area as defined by the 2010 Census is provided below in Map 1.

Map 1 – District Jurisdictional Boundary Map – Urbanized Area[1]

1.2 Outfalls & Discharge Points / Receiving Waters



The permit authorizes the discharge of stormwater from municipal separate stormwater drainage systems to waters of the state from all existing outfalls or points of discharge.

Bloomfield Hills Schools has identified outfalls that discharge directly into surface waters of the state and discharge points that discharge into other MS4 drainage systems. The Bloomfield Hills Schools drainage system discharges directly or indirectly into the Rouge River and Clinton River Watersheds as detailed in Map 2 below.

Bloomfield Hills Schools has completed site specific storm sewer system maps which identify outfall and discharge point locations, discharge point source identification numbers, and receiving waters. A receiving water table and site-specific storm sewer system maps are provided in Appendix "A". Any changes to the Bloomfield Hills Schools storm sewer system will be reflected on the storm sewer system maps and reported provided to the EGLE during progress reporting. The district watershed boundary map is provided below in the map listed as "Map 2".

[1] Urbanized area boundary based on U.S. Census Bureau 2010 Urban Area Reference Maps.

Map 2 – District Watershed Map[2]

1.3 Enforcement Response Procedures

The Bloomfield Hills Schools properties are regulated as an MS4 under the NPDES Permit program. Environmental compliance staff members from Bloomfield Hills Schools have the authority to inspect and monitor stormwater-related activities on campus and require full compliance with all stormwater permit requirements. Enforcement of Bloomfield Hills Schools policies, procedures, and best management practices (BMPs) outlined in this SWMP is the responsibility of the Stormwater Program Manager or their designee. Any questions regarding this policy and procedure will be directed to the Stormwater Program Manager.

The primary role of the Superintendent or their designee is to ensure that the ERP is followed in a timely and consistent manner and track compliance issues and schedules. To achieve compliance, the following steps may be conducted:

1. Reviews reported violation.
2. Contact business or non-district individual responsible for the violation.
3. Ensures that compliance actions taken are consistent and timely.
4. Tracks instances of noncompliance.
5. Review compliance reports and schedules to ensure that appropriate enforcement actions are taken, and compliance goals are met.

[2] Watershed boundaries based on Environmental Protection Agency MiWaters Mapper National Hydrography Dataset Mapper 12-Digit Watersheds.

E-03 | original source page 6 | APP 1103

6. Conduct follow-up inspection(s) to verify the violation has been corrected.
7. Legal action may be pursued for the most serious violations including where the response to previous enforcement actions is inadequate.

The tracking of instances of noncompliance includes the following information:

- Name
- Date
- Location of Violation (address, cross streets, etc.,)
- Business/Agency/Organization (as appropriate)
- Description of Violation
- Description of Enforcement Response
- Date Violation was Resolved

Information shall be placed into the Districts Noncompliance Enforcement Tracking Sheet.

This procedure will be reviewed on an annual basis by the Stormwater Manager for any updates. A copy of the SW Illicit Discharge Regulatory Policy is included with and an example of the Municipal Separate Storm Sewer System Noncompliance Enforcement Tracking Sheet in Appendix "B".

2.0 Stormwater Management Program Plan (SWMP) Minimum Control Measures

This SWMP has been developed to describe the Best Management Practices (BMPs) Bloomfield Hills Schools will implement to meet the six minimum control measures and water quality requirements. The six minimum control measures include:

- **Public Participation/Involvement Program (PPP)**
  To share components of the SWMP and encourage participation in its review and implementation.
- **Public Education Program (PEP)**
  To promote, publicize, and facilitate education for the purpose of encouraging the public to reduce the discharge of pollutants to stormwater to the maximum extent practicable.
- **Illicit Discharge Elimination Program (IDEP)**
  To detect and eliminate illicit connections and discharges to the MS4.
- **Construction Stormwater Runoff Control Program**
  To augment Part 91 rules dealing with soil erosion, offsite sedimentation, and other construction-related wastes.
- **Post-Construction Stormwater Runoff Program**
  To address post-construction stormwater runoff from projects that disturb one acre or more, including projects less than one acre that are part of a larger common plan of development that would disturb one acre or more.
- **Pollution Prevention/Good Housekeeping Program**
  To minimize pollutant runoff to the maximum extent practicable from municipal operations that discharge stormwater to the surface waters of the state.

Each BMP includes a measurable goal, implementation schedule, and measure of assessment.

2.1 Public Involvement/Participation Program (PPP)

Engaging and empowering the public in the effort to reduce the impacts of stormwater runoff is a key element of the public involvement/participation program.

2.1.1 Public Involvement/Participation Program Objectives

1. Process for making the Stormwater Management Plan available for public inspection and comment.
2. Process for inviting public involvement and participation in the implementation of SWMP best management practices and periodic review of the SWMP.

2.1.2 Public Involvement & Participation Procedure

1. As required, the approved Stormwater Management Program (SWMP) will be made available to the public via the district website throughout the permit cycle.
2. The stormwater webpages will include contact information for public comments.
3. The public will be notified through announcements or newsletters that a copy of the SWMP is available on the district stormwater webpage.
4. A public survey has been developed and placed on the Bloomfield Hills Schools stormwater webpage in an effort to provide input into stormwater implementation.
5. A link to a stormwater blog "Cleanwater Chronicles" has been added to the Bloomfield Hills Schools stormwater webpage. The stormwater blog explains water quality issues and promotes opportunities for public involvement.
6. Cooperation with local watershed protection groups.

2.1.3 Public Involvement & Participation Assessment

1. Bloomfield Hills Schools will review the public involvement & participation BMPs as part of annual SWMP review to determine level of district involvement and identify areas of improvement.

2.1.4 Public Involvement & Participation Program (PPP) BMP Table

BMP	Implementation of BMP	Timeframe	Measurable Goal	Measure of Assessment	Responsible Party
BMP #2.1.4.1 Public Notice of SWMP	Make SWMP available for public review through stormwater webpage.	Annually Throughout Permit Cycle	Public notice published in annual district wide newsletter announcing the availability of the SWMP for review, including contact information for comments.	Verify SWMP available on stormwater webpage, and track changes webpage posting of SWMP.	Bloomfield Hills Schools
	Notification in annual district newsletter, website, or school posting to publicize updated SWMP and locations for review.			Keep copies of official SWMP posting notifications.	
	Contact information will be available on the stormwater webpages to forward comments regarding the SWMP.			Compile and track comments from the public.	
BMP #2.1.4.2 Stormwater Blog	Post link to stormwater blog on district website.	Ongoing Throughout Permit Cycle	A link to a stormwater blog established and maintained on the district stormwater webpage to assist in distributing information and updating the public on the watershed and activities.	Copies of monthly stormwater blog postings for reporting period.	Bloomfield Hills Schools
BMP #2.1.4.3 Stormwater Education Program Survey	Post survey on district website.	Ongoing Throughout Permit Cycle	Survey posted on the stormwater webpages and link maintained throughout the permit term to assess community knowledge and provide input into stormwater implementation.	Results of completed surveys.	Bloomfield Hills Schools
BMP #2.1.4.4 Participation Activities	Engage in environmental education activities.	Ongoing Throughout Permit Cycle	Increase in public participation in environmental activities and outreach events. Participation activities include water quality issues, stormwater management initiatives, home toxics, recycling, compost, and disposal.	Reports of participation.	Bloomfield Hills Schools

BMP	Implementation of BMP	Timeframe	Measurable Goal	Measure of Assessment	Responsible Party
BMP #2.1.4.5 Public Involvement & Participation Program Assessment	Evaluate the effectiveness of the public involvement program.	Annually Throughout Permit Cycle	Complete as part of annual SWMP review to determine level of district involvement and identify areas of improvement. Program activities may be adjusted based on the results of the assessment.	Copies of annual SWMP review noting any areas of needed improvement.	Bloomfield Hills Schools

2.2 Public Education Program (PEP)

Bloomfield Hills School's "Public Education Program (PEP)" is designed to promote, publicize, and facilitate education for the purpose of encouraging the public to reduce the discharge of pollutants into the Bloomfield Hills Schools separate storm sewer system.

The term "Public" as referred in to in this program is defined to include all persons who could potentially affect the quality of stormwater discharges from Bloomfield Hills Schools properties including but not limited to Bloomfield Hills Schools faculty, staff, contractors, and students of Bloomfield Hills Schools, as well as area residents, visitors, public employees, local businesses, industries, construction contractors and property developers. This PEP will include a variety of mechanisms and venues to provide watershed awareness and pollution prevention education throughout the Bloomfield Hills Schools jurisdiction.

2.2.1 Public Education Program Objectives

1. Responsibility and stewardship in their watershed.
2. Inform and educate the public about the connection of the MS4 to area waterbodies and the potential impacts discharges could have on surface waters of the state.
3. Educate the public on illicit discharges and promote public reporting of illicit discharges and improper disposal of materials into the MS4.
4. Promote preferred cleaning materials and procedures for car, pavement, and power washing.
5. Inform and educate the public on the proper application and disposal of pesticides, herbicides, and fertilizers.
6. Promote proper disposal practices for grass clippings, leaf litter, and animal wastes that may enter the MS4.
7. Identify and promote the availability, location, and requirements of facilities for collection or disposal of household hazardous wastes, travel trailer sanitary wastes, chemicals, yard wastes, and motor vehicle fluids.
8. Inform and educate the public on proper septic system care and maintenance, and how to recognize system failure.
9. Promote methods for managing riparian lands to protect water quality.
10. Provide training for staff.

2.2.2 Public Education Program Procedure

Bloomfield Hills Schools is targeting all community wide issues as high priority. No prioritization will be needed, as educational activities to ensure that all community wide issues are reached to the public. It is anticipated that during this permit a combination of educational approaches will be used to convey the individual components of the PEP. Educational mechanisms will include cooperation with the distribution or posting of community newsletters and other watershed partner literature, and event notices. Bloomfield Hills Schools has developed and implemented a comprehensive "Stormwater Management" webpage on the district's website. Additionally, program posters, are strategically placed throughout school facilities. Copies of SEMCOG posters are provided in Appendix "C".

2.2.3 Public Education Program BMP Table

BMP Topic	Description of BMP	Timeframe	Measurable Goal & Key Messages	Measure of Assessment	Target Audience	Responsible Party
BMP #2.2.3.1 Promote public responsibility and stewardship in watershed.	Watershed website. Watershed specific website hosted by district, featuring watershed map, description of watershed, and links to watershed groups.	Ongoing Throughout Permit Cycle	Supply watershed information and promote watershed membership information. Educate the public on local water body health.	Update webpages as necessary. Confirm posting & track webpage reviews. Provide watershed membership information.	Students, faculty, and community	Bloomfield Hills Schools
	Place SEMCOG "7 Simple Steps to Clean Water" information on stormwater webpages.		SEMCOG "7 Simple Steps to Clean Water" information and links.	Update webpages as necessary. Confirm posting & track webpage reviews.		
	Publicize environmental related events through email, newsletters, or social media.	Ongoing Throughout Permit Cycle	Promote public awareness on environmental issues and increase district environmental participation.	Date, time location and name of event attended.	Students, faculty and community	
				Maintain copies of email notices (watershed announcement) of educational materials provided to district staff.		

BMP Topic	Description of BMP	Timeframe	Measurable Goal & Key Messages	Measure of Assessment	Target Audience	Responsible Party
BMP #2.2.3.2 Educate the public about the connection of the MS4 to the area waterbodies and the potential impacts discharges could have on surface waters of the state.	Posting of the training video "When it Rains, it Drains…The Stormwater Question" on the district webpage.	Ongoing Throughout Permit Cycle	Educate the public on local water bodies, water quality issues, and impacts of discharges on surface waters through visual media.	Update webpages as necessary. Confirm posting & track webpage reviews.	Students, faculty, and community	Bloomfield Hills Schools
	Include information and links to USEPA and EGLE Stormwater information on district stormwater webpage.		Provide resources to water quality issues and impacts of discharges on surface waters.	Update webpages as necessary. Confirm posting of links & track webpage reviews.		
	SEMCOG posters placed strategically throughout the district.		Maintain three (3) various SEMCOG posters at each facility. Strategic locations include Main Office, Lounge, and Receiving Area (if available).	Annual review of postings. Number of posters placed throughout district.		
	General Stormwater Awareness Training	Ongoing Throughout Permit Cycle	Encourage teachers, administrative and support staff to watch the General Awareness Stormwater Video "When it Rains it Drains".	Copy of sign in sheets and Agenda (if available).	Faculty	
			Post stormwater training video on stormwater webpage.	Update webpages as necessary. Confirm posting & track webpage reviews.	Students, faculty, and community	

BMP Topic	Description of BMP	Timeframe	Measurable Goal & Key Messages	Measure of Assessment	Target Audience	Responsible Party
BMP #2.2.3.3 Educate the Public on Illicit Discharges and promote public reporting of illicit discharges and improper disposal of materials into the MS4.	Publicize 24-hour environmental hot-line phone numbers and instructions for reporting spills, illicit discharges, or connections.	Ongoing Throughout Permit Cycle	Track # of calls received on hotline per year. All calls to be addressed and record outcome of calls. Goal of an overall decrease in number of illicit discharges in improper disposal of materials into MS4s.	Number of calls to the Stormwater Manager.	Students, faculty, and community	Bloomfield Hills Schools
			Place 24-hour environmental hot-line posters throughout the district.	Promotion/ publicizing efforts; number of posters placed throughout district.		
	Pollutants & Illicit Discharges webpage; featuring information regarding sources of pollution, how pollutants cause damage, illicit discharges. How to Report/Hotline Numbers poster; describing illicit discharges and how to report illicit discharges.		Maintain illicit discharge webpage.	Update webpages as necessary. Confirm posting & track webpage reviews.		
			Place "How to spot illicit discharge/ How to Report-Hotline Numbers" posters placed in Receiving Rooms at each district facility. Goal is to have one poster at each facility.	Annual review of postings. Number of posters placed throughout district.		
	SEMCOG posters placed strategically throughout the district.		Goal to maintain three (3) various SEMCOG posters at each facility. Strategic locations include Main Office, Lounge, and Receiving Area (if available).	Annual review of postings. Number of posters placed throughout district.		
	The district implements an active storm drain labeling/ marking program.	Update as needed Throughout Permit Cycle	Visually making a connection of storm drains to local waterways and the impacts of dumping pollutants into these drains, increase number of staff, students and visitors who can identify the connection. Mark all drains on pervious surfaces.	Annual inventory of stenciled basins.		

BMP Topic	Description of BMP	Timeframe	Measurable Goal & Key Messages	Measure of Assessment	Target Audience	Responsible Party
BMP #2.2.3.4 Promote preferred cleaning materials and procedures for car, pavement, and power washing.	SEMCOG posters placed strategically throughout the district.	Ongoing Throughout Permit Cycle	Goal to maintain three (3) various SEMCOG posters at each facility. Strategic locations include Main Office, Lounge, and Receiving Area (if available).	Annual review of postings. Number of posters placed throughout district.	Students, faculty, and community	Bloomfield Hills Schools
	Discontinue practice of allowing school or other private groups from holding car wash fund raising project on school property.	Annually Throughout Permit Cycle	Send reminder email notice to all school Principals, Athletic Directors regarding the policy.	Copy of annual notice.	Faculty & students	
BMP #2.2.3.5 Inform and educate the public on proper application and disposal of pesticides, herbicides, and fertilizers.	Maintain a district "Good Housekeeping" informational page on stormwater management webpages.	Ongoing Throughout Permit Cycle	Address the environmental (including water quality) and resulting from improper handling and disposal of pesticides, herbicides, and fertilizers.	Update webpages as necessary. Confirm posting & track webpage reviews.	Students, faculty, and community	Bloomfield Hills Schools
	SEMCOG posters placed strategically throughout the district.		Goal to maintain three (3) various SEMCOG posters at each facility. Strategic locations include Main Office, Lounge, and Receiving Area (if available).	Annual review of postings. Number of posters placed throughout district.		

BMP Topic	Description of BMP	Timeframe	Measurable Goal & Key Messages	Measure of Assessment	Target Audience	Responsible Party
BMP #2.2.3.6 Promote proper disposal practices for grass clippings, leaf litter, and animal wastes that may enter into the MS4.	SEMCOG posters placed strategically throughout the district.	Ongoing Throughout Permit Cycle	Goal to maintain three (3) various SEMCOG posters at each facility. Strategic locations include Main Office, Lounge, and Receiving Area (if available).	Annual review of postings. Number of posters placed throughout district.	Students, faculty, and community	Bloomfield Hills Schools
BMP #2.2.3.7 Identify and promote the availability, location, and requirements of facilities for collection and disposal of household hazardous wastes, travel trailer wastes, chemicals, and motor vehicle fluids.	Maintain a district "Household Hazardous Waste" informational page on stormwater management webpages.	Ongoing Throughout Permit Cycle	Address the environmental (including water quality) and public health effects resulting from improper handling and disposal of household hazardous waste, reduce the use of home toxics, keep citizens informed about the choices and responsibilities associated with purchasing, handling, and disposing of toxic substances. Increase the number of residents using the program to dispose of home toxics.	Update webpages as necessary. Confirm posting & track webpage reviews.	Students, faculty, and community	Bloomfield Hills Schools
BMP #2.2.3.8 Inform and educate the public on proper septic system care and maintenance, and how to recognize system failure.	Maintain a district "Sewer Overflows and Septic Systems" informational page on stormwater management webpages.	Ongoing Throughout Permit Cycle	Educate why sewer overflows and septic systems are pollution issues. Promote proper and consistent maintenance of septic systems.	Update webpages as necessary. Confirm posting & track webpage reviews.	Students, faculty, and community	Bloomfield Hills Schools

BMP Topic	Description of BMP	Timeframe	Measurable Goal & Key Messages	Measure of Assessment	Target Audience	Responsible Party
BMP #2.2.3.9 Promote methods for managing riparian lands to protect water quality.	Maintain a district "Riparian Zone Management" informational page on stormwater management webpages.	Ongoing Throughout Permit Cycle	Educate on why riparian zones are important, what riparian zona management is (river friendly lawn care, riparian buffer zones, stream bank stabilization, woody debris management, river maintenance). Increase number of riparian landowners who implement BMPs.	Update webpages as necessary. Confirm posting & track webpage reviews.	Students, faculty, and community	Bloomfield Hills Schools
	Encourage teachers and students to participate in stream bank monitoring programs.		Increase awareness, inspire people to take actions that lead to better river protection at home and in their communities.	Report on schools that participated in monitoring programs.	Students and faculty	
	Include guidance and links on Stormwater webpage on native vegetation.	Ongoing Throughout Permit Cycle	Maintain a district "Native, Non-Native, & Invasive Species" and "Why Use Native Plants?" informational page on stormwater management webpages. Increase the use of native plants and encourage the use of gardens at school facilities.	Update webpages as necessary. Confirm posting & track webpage reviews.	Students, faculty, and community	Bloomfield Hills Schools
BMP #2.2.3.10 Stormwater Education Program Effectiveness Survey	Post survey on district website	Annually Throughout Permit Cycle	A survey has been posted on the stormwater webpages and will be posted throughout the permit term to ascertain behavioral changes.	Annual results of survey.	Students, faculty, and community	Bloomfield Hills Schools
BMP #2.2.3.11 Public Education Program Effectiveness Assessment	Summary of annual public education activities for the "Public Education" component to evaluate the effectiveness.	Annually Throughout Permit Cycle	Determine if the public education best management practices have been implemented and identify areas of improvement.	Annual SWMP review. Summary of public education activities. Survey results review.	Students, faculty, and community	Bloomfield Hills Schools

2.2.4 Public Education Program Effectiveness

The effectiveness of the public education program will be evaluated based on progress made towards meeting the BMP objectives described above.

The District has implemented a "Watershed Awareness Survey" to be used as an evaluation. The purpose of these surveys is to provide an assessment of public understanding of issues in the watershed related to pollution from stormwater runoff. Results would be used to guide Bloomfield Hills Schools in identifying opportunities for enhancement of the PEP. Additionally, Bloomfield Hills Schools will conduct an annual review of the public education best management practices to determine if they have been implemented and identify areas of improvement.

2.3 Illicit Discharge Elimination Program (IDEP)

The following Bloomfield Hills Schools Illicit Discharge Elimination Program is designed to identify, locate, prohibit, and effectively eliminate illicit discharges, including discharges of sanitary wastewaters, to the permitted separate stormwater drainage systems.

2.3.1 Illicit Discharge Elimination Program (IDEP) Program Objectives

1. Establish authority to investigate, inspect and monitor suspected illicit discharges.
2. Maintain maps of the MS4, points of discharge, and outfalls.
3. Prohibit non-stormwater discharge into the MS4.
4. Provide regular training to staff.
5. Instruct contractors to prevent dumping into the MS4.
6. Conduct routine dry weather screening.
7. Conduct source investigations if the source of an illicit discharge/connection is not identified by field screening.
8. Illicit discharge identification and elimination program performance & effectiveness.

2.3.2 Facility Site Storm Sewer System Maps and Lists

Bloomfield Hills Schools and consultants completed storm sewer system mapping at each of the owner operated properties identified in Section 1.0 of this Stormwater Management Plan. Storm sewer system maps include detailed information of the storm sewer system, including the locations of outfalls, points of discharge, and waters of the State that receive the discharges. The maps include a unique identification number for each storm sewer location identified on the map. Latitude and longitude are also noted for outfall and points of discharge location. Storm sewer system information will be maintained and updated and reported in Progress Reports.

Outfalls are discharge points where stormwater is discharged directly to surface waters of the state. Surface waters of the state include streams, lakes, ponds, county drains, and wetlands. Outfalls can be pipes, ditches, or even sheet flow from the facility. Some facilities will have an outfall where they can manually control the discharge.

Points of Discharge are discharge points where stormwater is discharged to a municipal or private separate storm sewer system. The visual assessment will be conducted as close to the point of discharge as possible before the storm water enters the municipal or private separate storm sewer system. Points of discharge include on-site catch basins and trench drains, in-street catch basins, and conveyances to roadside ditches.

Copies of the current facility storm sewer system maps are available at 281 Enterprise Ct, Suite 300, Bloomfield Hills, MI 48303. Additionally, copies of the storm sewer system maps and a list of the outfalls and points of discharge are provided in Appendix "A".

2.3.3 Illicit Discharge Identification & Investigation Procedure – Field Observations

Bloomfield Hills Schools will conduct field observations for 100% of all outfalls and points of discharge locations during dry weather or more expeditiously if Bloomfield Hills Schools becomes aware of a non-stormwater discharge. Outfalls and points of discharge will be inspected by personnel trained to recognize all signs of possible illicit discharges. Dry weather screening will occur at once per permit cycle. Bloomfield Hills Schools will conduct DWS once during this 5-year permit cycle. Preferably, each outfall and points of discharge will be inspected and evaluated following a period of at least 48-72 hours of dry weather.

The field observations will focus on visual inspection for the following:

- Outfall/point of discharge number
- Date/name of inspector
- Date of last rainfall
- Presence or absence of flow
- Presence or absence of standing water
- Water clarity and color
- Presence of oil sheen, trash and or other floatable materials
- Presence of bacterial sheen or slimes
- Excessive vegetative growth
- Odor
- Suds
- Presence of oil

❖ These characteristics are documented even if no flow is observed at the time of the inspection.

All field observations are detailed on a "Screening Inspection Log". A copy of the Screening Inspection Log is provided in Appendix "D".

During field observations, in instances where the storm sewer outfalls and points of discharge is submerged or is connected to another enclosed sewer, the inspector will observe the nearest upstream storm sewer location or access point. Additionally, if dry weather flow is observed and it is obvious that an illicit discharge is present and the source of the discharge is obvious, Bloomfield Hills Schools will document the observations and the source and follow-up with applicable parties. Once a potential discharge is indicated at an outfall or point of discharge, additional inspection, field screening and source investigation activities are conducted.

2.3.4 Illicit Discharge Identification & Investigation Procedure – Field Screening & Source Investigation

At the time of the outfall or discharge point inspection, if dry weather flow is observed and the source is not obvious, the inspector who identified the discharge shall continue and conduct an upstream source investigation to determine the origin of the flow. The initial investigation includes visual and olfactory observations upstream from the outfall/point of discharge. If necessary, relevant indicator field screening or dye tracing will be conducted.

If the origin of the flow is not identified during the visual upstream investigation, a grab sample is collected from the discharge for indicator field screening analysis. Indicator monitoring/field screening is the secondary tool utilized for dry weather flow without obvious indicators such as very high turbidity, strong odors, or visible discharge. Screening may include some or all of the indicator parameters:

- Temperature
- pH
- Detergents (i.e., surfactants)
- Chlorine
- Ammonia
- Turbidity
- Conductivity

Indicator parameters used to assess the dry weather flow shall be determined by the visual and olfactory observations and upstream source investigation.

Additional grab samples may be collected and delivered for external laboratory analysis, only if additional test parameters are required for the source investigation. The laboratory analysis parameters for grab samples are determined by the type of contamination suspected at the time of the source investigation.

Laboratory indicator parameters are based on EGLE guidance and as specified in the reference sources identified above. The selected laboratory parameters are:

- Fluoride
- Coliform
- E-coli
- Potassium
- Color
- Ammonia

The exact procedure for tracking the illicit discharge will depend on the particular facts of each incident. At the time of the identification of the observed dry weather flow, the flow will be tracked upstream until the source is isolated. Once the source has been isolated down to a specific site location, the work will become source confirmation. If the source is not confirmed, additional fieldwork, building evaluation, or dye testing may be necessary. Additional source investigations will be conducted within 30 days of the original observed dry weather flow.

Once the elimination of an illicit connection or illicit discharge has occurred, an elimination report detailing the corrective actions with attached work orders, photos or dye tracing results will be compiled for documentation purposes. Field inspections will continue until it can be reported that no illicit connection or discharge is present at that outfall/point of discharge.

2.3.5 Illicit Discharge/Connection Elimination Procedure

Illicit discharges and connections are identified through reporting, routine storm sewer system inspections and dry weather screening inspections. A “How to Spot Illicit Discharges” poster along with a “How to Report/Hotline Numbers” posters are placed in the receiving/custodial areas in each facility to report concerns. Bloomfield Hills Schools goal is to evaluate all potential unauthorized or suspected illicit discharge to the municipal separate storm

sewer system (MS4) and perform any necessary notifications and reporting to the applicable agencies (i.e., EGLE, local drain commission, etc.) within the required time period(s).

Bloomfield Hills Schools will evaluate and conduct the following actions regarding reported or observed illicit discharges/illegal dumping spills into the storm drainage system.

- Suspected discharges will be investigated within 24 hours. The Bloomfield Hills Schools will ensure enforcement actions within 7 days.
- Conduct source investigations, including applicable field screening to trace the origin of the materials within 14 days of the reported/observed illicit discharge.
    - Bloomfield Hills Schools will follow existing spill response procedures outlined in Section 2.3.10, under Spill Response, Policy & Procedures, if required.
- Once the source has been isolated down to a specific site location, the work will become source confirmation.
- If the responsible party is identified, educate the party on the impacts of their actions, explain the stormwater requirements, and provide information regarding Best Management Practices.
- Evidence of illicit discharges traced to other MS4 jurisdictions will be provided to the responsible MS4 operator along with any collected data to assist that MS4 operator in completing their investigations to correct the illicit discharge or connection.
- Bloomfield Hills Schools will cooperate with the MS4 operator in determining the source or type of illicit discharge and/or connection and will follow-up to ensure that appropriate action has been completed by the MS4 operator to eliminate the discharge.
- Continue inspection and follow-up activities until the illicit discharge activity has ceased.
- Document all activities utilizing the Illicit Discharge/Illegal Dumping Reporting form.

A copy of the Illicit Discharge/Illegal Dumping Reporting form is located in Appendix “B”.

Once an illicit discharge has been confirmed from a Bloomfield Hills Schools facility, the discharge will be corrected using the most expedient method possible based on the type and configuration of the discharge or connections. Other illicit discharges or releases of polluting materials will be corrected through administrative measures including employee training, placement of signs or markings, policy revisions, or any other steps necessary to eliminate the continued release of polluting materials to the MS4.

Within 60 days of a confirmed illicit connection from a Bloomfield Hills Schools facility, Bloomfield Hills Schools will take steps to fix or eliminate the illicit connection. These steps include a review of corrective methods to be used to repair or eliminate the connection, determine the length of time the repair or elimination will take to complete, the cost of the elimination, the pollution potential and consider how the removal of the illicit connection will be confirmed. Corrective methods include capping, closing, or re-routing illicit connections to the sanitary sewer or other collection systems.

2.3.6 Illicit Discharge Regulatory Mechanism/Policy

The district developed a “Stormwater Management – Illicit Discharge Regulatory Policy”. This illicit discharge regulatory policy was developed as a regulatory policy for prevention of pollution from storm water runoff and to protect the quality of the waters of the State of Michigan through the regulation of non-stormwater discharges to the municipal separate storm sewer system (MS4) to the maximum extent practicable as required by federal and state law. This regulatory mechanism establishes methods for controlling the introduction of pollutants into the MS4

in order to comply with the requirements of the National Pollutant Discharge Elimination System (NPDES) permit through the Michigan Department of Environment, Great Lakes, and Energy (EGLE). The objectives of the regulatory mechanism are:

Department of Environment, Great Lakes, and Energy (EGLE). The objectives of the regulatory mechanism are:

1. To regulate the contribution of pollutants to the MS4 by stormwater discharges by any user.
2. To prohibit illicit connections and discharges into the MS4.
3. To establish authority to investigate, inspect, and monitor suspected illicit discharges.

The Stormwater Program Manager or designee will be provided full access to all the district facilities and properties owned and operated by the district as required to inspect, investigate, and monitor suspected or confirmed illicit discharges or connections to the MS4.

This policy is posted on the district stormwater webpage. Additionally, the district stormwater webpage includes information on how to notify the district if a discharge is witnessed taking place. Finally, the "Stormwater Management – Illicit Discharge Regulatory Policy" will be emailed to district staff members. The "Stormwater Management – Illicit Discharge Regulatory Policy" is available in Appendix "B".

Illicit Discharge means any discharge to, or seepage into the separate stormwater drainage system that is not composed entirely of stormwater or uncontaminated groundwater except discharges pursuant to an NPDES permit. Illicit discharges include but are not limited to the following:

- Dumping of motor vehicle fluids
- Improper disposal of household hazardous wastes
- Grass clippings
- Leaf litter
- Pet & other animal wastes
- Unauthorized discharges of sewage
- Industrial wastes
- Restaurant wastes
- Vehicle & equipment wash waters
- Any non-stormwater waste

All activities are documented utilizing the Illicit Discharge/Illegal Dumping Reporting form.

Illicit Connection means a physical connection to the MS4 separate stormwater system that primarily conveys non-stormwater discharges other than uncontaminated groundwater into the MS4 separate storm sewer system; or a physical connection not authorized or permitted by the local authority, where a local authority requires authorization or a permit for physical connections.

Bloomfield Hills School's policy is to eliminate all illicit connections or discharges from their facilities and restrict the discharge of polluting substances to the separate storm sewer system. The process to achieve these goals will consist of the inspection and screening of all storm sewer systems and elimination of any improper connection from any Bloomfield Hills Schools facility to any waterway or the municipally owned separate storm sewer system (MS4).

Prohibitions of Illicit Discharges

1. Prohibition of Illicit Discharges:
    a. Bloomfield Hills Schools prohibits the discharge of non-stormwater discharges into the storm drain system, including but not limited to pollutants or waters containing any pollutants.
2. The following discharges are NOT prohibited:
    a. This policy excludes prohibitions from the discharge or flows from firefighting activities to the Bloomfield Hills Schools MS4. Discharge or flows from firefighting activities will be addressed only if they are identified as significant sources of pollutants to surface waters of the state.
    b. The following activities are not prohibited under this policy unless they are determined to be significant sources of pollutants to surface waters of the state:
        - Water line flushing and discharges from potable water sources.
        - Landscape irrigation runoff, lawn water runoff, and irrigation waters.
        - Diverted stream flows and flows from riparian habitats and wetlands.
        - Rising groundwater and springs.
        - Uncontaminated groundwater infiltration and seepage.
        - Uncontaminated pumped groundwater, except groundwater cleanups specifically authorized by NPDES permits.
        - Foundation drains, water from crawl space pumps, footing drains, and basement sump pumps.
        - Air conditioning condensation.
        - Waters from noncommercial car washing (runoff from family home).
        - Street wash water.
        - Dechlorinated swimming pool water from single, two, or three family residences. (A swimming pool operated by the permittee shall not be discharged to a separate storm sewer or to surface waters of the state without NPDES permit authorization from the MDEQ.)

Identifying a discharge or flow as a significant contributor is completed on a case-by-case basis and is dependent on many factors, including the type of pollutant, amount discharged, and impacts to surface waters of the state.

Prohibition of Illicit Connections

1. Improper connections in violation of this regulatory mechanism must be disconnected and redirected.
2. Illicit discharge and connections will be eliminated.
3. The construction, use, maintenance, or continued existence of illicit connections to the storm drain system is prohibited by Bloomfield Hills Schools. This prohibition expressly includes, without limitation, illicit connections made in the past, regardless of whether the connection was permissible under law or practices applicable or prevailing at the time of connection.

2.3.7 Illicit Discharge Elimination Training

A training program is an important component of to an effective IDEP. Training is required for all employees whose job responsibilities involve illicit discharge related activities, or indicate a potential to cause, witness, or report an illicit discharge or connection. Training is discussed in detail in Section 3.0 of this SWMP.

2.3.8 Illicit Discharge Elimination Program Effectiveness

Bloomfield Hills Schools is required to track implementation of the illicit discharge elimination program stormwater management items and evaluate its effectiveness. Documentation of these items includes documentations of

actions taken to eliminate illicit discharges. The following are examples of the types of performance measures and effectiveness measures that may be used to evaluate the effectiveness of the IDEP program. The following information will be reviewed annually, and will be used to focus and modify activities to maximize environmental benefits of the plan:

- Verify the distribution of public education posters.
- Number of outfalls/discharge points screened.
- Number of illicit connections found.
- Number of illicit connections eliminated.
- Number and type of discharges that are investigated.
- Actions conducted to follow-up discharges that are identified or reported.
- Number of scheduled clean-outs and routine maintenance work conducted.

The District shall evaluate:

1. Evaluate the number of illicit discharges and determine if discharges have decreased throughout the permit cycle.
2. Evaluate if the number of reported potential discharges has increased due to improved awareness.
3. Evaluate dry weather screening monitoring data to measure changes in water quality.

2.3.9 Illicit Discharge Elimination Program – BMP Table

BMP	Description of BMP	Timeframe	Measurable Goal	Measure of Assessment	Responsible Party
BMP #2.3.9.1 Facility Storm Sewer System Maps	Provide an up-to-date storm sewer system map. The maps shall identify the storm sewer system, location of outfalls and points of discharge, and names and locations of the surface waters of the state receive the discharge.	Maps Completed in 2022 Updates Ongoing as Needed throughout Permit Cycle Within 30 days of new outfalls, discharge points, structures, and conveyances.	100% of facilities mapped, and 100% of storm sewer system updates mapped.	Maintain facility site maps at Facility Plant Services (281 Enterprise Ct, Suite 300 Bloomfield Hills, MI 48303)	Bloomfield Hills Schools
				Update facility map with sewer system updates. Maintain maps for progress report submittal.	Bloomfield Hills Schools
BMP#2.3.9.2 Enforcement	Written policy to enforce elimination of illicit discharges into MS4 owned by the Permittee.	Illicit Discharge Regulatory Policy Developed and Implemented	Illicit Discharge Regulatory Policy developed and implemented.	Copy of the Illicit Discharge Regulatory Policy and distribution to staff.	Bloomfield Hills Schools
				Copy of policy available on the district stormwater webpage.	
BMP #2.3.9.3 Dry Weather Screening	Dry Weather Screening conducted once per permit cycle. Dry weather screening will be conducted by personnel trained to recognize all signs of possible illicit discharges.	DWS Scheduled to be completed once during the permit cycle	100% of outfalls and point of discharges inspected and evaluated following a period of 48-72 hours of dry weather. Outfalls/points of discharges re-inspected if necessary.	Maintain dry weather screening inspection logs/reports.	Bloomfield Hills Schools

BMP	Description of BMP	Timeframe	Measurable Goal	Measure of Assessment	Responsible Party
BMP #2.3.9.4 Illicit Discharge Reporting	Eliminate illicit discharges and connections through reporting, routine storm sewer system inspections and dry weather screening inspections.	Ongoing Throughout Permit Cycle	Place "How to spot illicit discharge/ How to Report-Hotline Numbers" posters placed in Receiving Rooms at each Bloomfield Hills Schools facility. Goal is to have one poster at each facility.	Annually verify number of posters in place throughout the district.	Bloomfield Hills Schools
			Advertise reporting hotline on district webpage.	Track number of calls and document calls onto Illicit Discharge/Illegal Dumping Reporting form. (Appendix "B").	
BMP #2.3.9.5 Unauthorized Discharge/ Illicit Discharge Complaint Response	The District will immediately evaluate any potential unauthorized or suspected illicit discharge to the municipal separate storm sewer system (MS4) and perform any necessary notifications and reporting to the applicable agencies (i.e., EGLE, local drain commission, etc.) within the required time period(s). This procedure is outlined in Section 2.3.10 Polluting Materials Emergency and Spill Response Policy & Procedures.	Suspected discharges will be investigated within 24 hours. The Bloomfield Hills Schools will ensure enforcement actions within 7 days	100% of unauthorized or suspected illicit discharges evaluated (field observation, field screening, and source investigation) and eliminated.	Documentation of relevant field observations, field screening or source investigations.	Bloomfield Hills Schools
		Within 14 days of reported suspected discharge.			
BMP #2.3.9.6 Illicit Connections	Reroute, repair, or disconnect any illicit connections.	Within 60 days of identified illicit connection	Take steps to eliminate 100% of identified illicit connections.	Work order, receipt or report detailing the illicit connection correction activities.	Bloomfield Hills Schools
BMP #2.3.9.7 Illicit Discharge Elimination Training	Train staff on the identification and reporting of illicit discharges or improper connections and the cleanup/notification procedures for spills of polluting materials.	Once per permit cycle or during the 1st year of employment Throughout Permit Cycle	Goal of providing illicit discharge elimination training to all maintenance, transportation, custodial and skilled trade staff who work for Bloomfield Hills Schools. **[All Stormwater Training is outlined in Section 3.0 Training]**	Copy of sign in sheets and Agenda (if available).	Bloomfield Hills Schools

BMP	Description of BMP	Timeframe	Measurable Goal	Measure of Assessment	Responsible Party
BMP #2.3.9.8 Notice of Intent to Discharge Tracer Dyes	Maintain approval from the EGLE for authorization to discharge tracer dyes in surface waters per General Rule 97 to conduct source investigations.	As needed Throughout Permit Cycle	EGLE approval to discharge tracer dyes.	Documentation of EGLE approval.	Bloomfield Hills Schools
BMP #2.3.9.9 IDEP program Performance & Effectiveness	Review performance measures to evaluate the effectiveness of the IDEP program. Items include posting of IDEP public education posters, number of outfalls/discharge points screened, number of illicit connections found, number of illicit connections eliminated, number and type of violations investigated, and number of scheduled clean-outs and routine maintenance work conducted.	Annually Throughout Permit Cycle	Annual review of SWMP IDEP program performed. Evaluate reduced illicit discharges, increase reporting, and evaluate dry weather screening data.	Maintain copy of SWMP annual review and evaluation information for progress reporting.	Bloomfield Hills Schools

2.3.10 Polluting Materials Emergency and Spill Response Policy and Procedures

Purpose

This policy and associated procedures have been developed to define appropriate and safe response procedures for spill or accidental releases of hazardous materials or substances at all Bloomfield Hills School's facilities.

Policy

Only trained and authorized personnel are permitted to respond to hazardous materials incidents! Employees must be trained in the safe use of chemicals or chemical management prior to working in a lab or cleaning up minor spills. The Stormwater Program Manager will immediately report any release of any polluting materials from the MS4 to surface waters or groundwater of the state, unless a determination is made that the release is not in excess of the threshold reporting quantities in the Part 5 Rules and comply with all Federal, State, and local regulatory requirements for the management and reporting of all hazardous materials and/or waste releases.

If it is determined that the release poses a threat to the safety or the environment outside the facility or in excess of the threshold reporting quantities, the Stormwater Program Manager will report the release immediately or within 24 hours of knowledge of the release to:

- The EGLE Warren District Office at (586)-753-3700 during regular working hours.
- The 24-hour Michigan Pollution Emergency Alerting System (PEAS) at 1-800-292-4706 after working hours.

Any release of oil (includes gasoline, diesel fuel, used oil and mineral spirits) to navigable waters or adjoining shorelines will be reported to the immediately or within 24 hours of knowledge of the release to:

1. The 24-hour National Response Center (NRC) at 1-800-424-8802

The Stormwater Program Manager will maintain responsibility for monitoring any changes in regulatory requirements regarding hazardous materials and waste spills or accidental releases. This policy will be revised as necessary based upon any changes in the regulatory requirements or internal experiences. All hazardous materials spills or releases will be thoroughly investigated by the Stormwater Program Manager.

Emergency Spill Response Procedures

Each facility having the potential for the release of a hazardous material or substance shall have trained and knowledgeable staff members to respond and/or implement spill response procedures for that facility. Spill containment materials such as absorbent pigs, pads, booms, diking materials, storm drain covers, etc. are to be stored and maintained at all facilities for use by trained employees in the event of a spill or accidental release.

The following general guidelines are to be implemented as applicable in managing spills and accidental releases:

1. **Minor Spill or Leak**

- Attempt to contain the spill.
- Wear proper Personal Protective Equipment (PPE) while cleaning up the spill/leak.
- Notify supervisor and call Stormwater Program Manager at (248) 830-9475.

2. **Major Spill or Leak**

- Call the Stormwater Program Manager immediately at (248) 830-9475.

- Do not attempt to clean up the spill yourself.
- Provide clean-up/rescue personnel with appropriate Safety Data Sheets (SDS) and other important information.

Refer to sections **2.3.4 Illicit Discharge Identification & Investigation Procedure – Field Screening & Source Investigation** and **2.3.5 Illicit Discharge/Connection Elimination Procedure** for implementation timeframes.

This guidance has been developed in anticipation of potential releases of hazardous materials and substances. The procedures outlined in this guidance will only be implemented by those persons who have received sufficient training and are competent in the handling of the released material.

As appropriate, illicit discharges or releases of polluting materials will be corrected through administrative measures including employee training, placement of signs or markings, policy revisions, or any other steps necessary to eliminate the continued release of polluting materials to the MS4. The district will conduct follow-up inspections and sampling as needed to ensure that appropriate action has been completed.

2.4 Construction Site Stormwater Runoff Control Program

Bloomfield Hills School's goal is to establish procedures for construction stormwater runoff control to meet minimum measure requirements to maximum extent practicable.

Construction refers to actions that result in a disturbance of the land, including clearing, grading, excavating, and other similar activities.

Construction-related activities are activities that support the construction project such as stockpiles, borrow areas, concrete truck washouts, fueling areas, material storage areas and equipment storage areas.

2.4.1 Construction Site Stormwater Management Program Objectives

A. Process for notify the Part 91 Agency appropriate staff when soil or sediment is discharged to the MS4 from a construction activity.
    - The procedure shall allow for the receipt and consideration of complaints or other information submitted by the public or identified internally as it relates to construction stormwater runoff control.
B. Procedure for when to notify the EGLE when soil, sediment, or other pollutants are discharged to the MS4.
    - Other pollutants include pesticides, petroleum derivatives, construction chemicals, and solid wastes that may become mobilized when land surfaces are disturbed.
C. Procedure for ensuring that construction activity one acre or greater in total land disturbance obtains a Part 91 Permit.

2.4.2 Construction Notification Procedure

The EGLE certified construction stormwater operator inspector conducting site inspections will normally detect any soil or sediment entering the MS4.

In the event an inspector identified a discharge during an inspection:

1. The inspector shall document all details of the soil erosion and sedimentation control deficiency and report to the Bloomfield Hills Schools Stormwater Manager.

2. The Bloomfield Hills Schools Stormwater Manager (or designee) is responsible for assessing any suspected or confirmed discharge and notifying the appropriate agency.
3. Bloomfield Hills Schools will notify the local Part 91 agency and EGLE when significant runoff of soil, sediment, or other pollutants such as pesticides, petroleum derivatives, construction chemicals, or solid wastes from the construction site discharges to the MS4 or surface waters of the state within 24 hours of discovery or as otherwise required by the issuing agency.

In the event of a public complaint:

Bloomfield Hills Schools will track the receipt of complaints submitted by the public or noted by staff during regular course of business of soil, sediment, or other pollutants such as pesticides, petroleum derivatives, construction chemicals, and solid wastes are being discharged into the MS4.

The tracking will include:

- Name of person providing the complaint.
- Location (address or nearest cross street).
- Description of follow up (e.g., date referred to the Part 91 enforcing agency).

Bloomfield Hills Schools will notify the Part 91 Agency, when soil, sediment, and other pollutants such as pesticides, petroleum derivatives, construction chemicals, and solid wastes are discharged into MS4.

Bloomfield Hills Schools ensures that construction activity one acre of greater in total earth disturbance with the potential to discharge to the MS4 does obtain a Part 91 Permit and State of Michigan Permit by Rule.

2.4.3 Part 91 Permit

Bloomfield Hills Schools will ensure that any construction activity that result in a land disturbance meeting the following criteria:

- Greater than or equal to one (1) acre, or
- Disturb less than one (1) acre that is part of a common plan of development or sale.

Will obtain a Part 91 Permit through the site plan review process with the appropriate county or municipal permitting agency.

2.4.4 Permit by Rule Compliance

Bloomfield Hills Schools shall comply with the State of Michigan Permit by Rule (Rule 323.2190) for stormwater discharge from construction activity. Sites disturbing one (1) to five (5) acres with a point source discharge to the waters of the state receive automatic storm water coverage upon securing a SESC permit from the appropriate Part 91 recognized County Enforcing Agency, Municipal Enforcing Agency, or Authorized Public Agency (APA) under the authority of Part 91.

1. Construction sites with at least one (1) acre but less than five (5) acres of soil disturbance with a surface water discharge, must obtain a county or municipal SESC permit, and are required to follow the provisions of the Permit by Rule, but do not need to notify the EGLE of the construction activity.

2. Construction sites disturbing over five (5) acres with a point source discharge to the waters of the state must obtain a county or municipal SESC permit and submit a Notice of Coverage (NOC) and other pertinent documents and the appropriate fee to the EGLE.

Requirements of Permit by Rule include, but are not limited to:

- Weekly site inspections conducted by a Certified Construction Stormwater Operator.
- Inspection within 24 hours of a precipitation event that results in a discharge from the site by a Certified Construction Stormwater Operator.

2.4.5 Construction Site Stormwater Management-BMP Table

BMP	Description of BMP	Timeframe	Measurable Goal	Measure of Assessment	Responsible Party
BMP #2.4.5.1 Notification of Deposit during Inspection	Bloomfield Hills Schools will notify the local part 91 agencies or EGLE when runoff from the construction site discharges significant pollutants to the MS4 or surface waters of the state within 24 hours of discovery or as otherwise required by the issuing agency. The Bloomfield Hills Schools Stormwater Manager (or designee) is responsible for assessing any suspected or confirmed discharge and notifying the appropriate agency. (Refer to section 2.4.2)	As necessary Throughout Permit Cycle	100% discharges identified and appropriate agencies notified. Control of potential system failure.	Documentation of Construction Stormwater Operator site inspection.	Bloomfield Hills Schools
	Track complaints submitted by the public or noted by staff during regular course of business of soil, sediment, or other pollutants such as pesticides, petroleum derivatives, construction chemicals, and solid wastes are being discharged into the MS4.			Documentation of public complaint (Name of person providing the complaint, location [address or nearest cross street] description of follow up [e.g., date referred to the Part 91 enforcing agency]).	Bloomfield Hills Schools
BMP #2.4.5.2 Part 91 Permit	Bloomfield Hills Schools will ensure that any construction activity that result in a land disturbance greater than or equal to one (1) acre or disturb less than one (1) acre that is part of a common plan of development or sale will obtain a Part 91 Permit through the site plan review process.	As necessary Throughout Permit Cycle	100% of permits obtained.	Copy of permit and associated soil erosion and sedimentation control plans.	Bloomfield Hills Schools

BMP	Description of BMP	Timeframe	Measurable Goal	Measure of Assessment	Responsible Party
BMP #2.4.5.3 Permit by Rule	Construction sites between (1) acre but and five (5) acres of soil disturbance follow the provisions of the Permit by Rule, but do not need to notify the EGLE of the construction activity.	As necessary Throughout Permit Cycle	Goal of 100% of weekly and precipitation event inspection completed by certified Construction Stormwater Operator.	Copy of inspections.	Bloomfield Hills Schools
	Construction sites disturbing over five (5) acres with a point source discharge to the waters of the state must follow provisions of the Permit by Rule and submit a Notice of Coverage (NOC) and other pertinent documents and the appropriate fee to the EGLE.		Goal of 100% of weekly and precipitation event inspection completed by certified Construction Stormwater Operator.	Copy of inspections.	Bloomfield Hills Schools
			100% NOC obtained.	Copy of NOC	Bloomfield Hills Schools

2.5 Post Construction Stormwater Controls for New Developments & Redevelopments

Post-construction storm water runoff is the storm water that would flow from a project site to the Municipal Separate Storm Sewer System (MS4) after completion of a development or redevelopment project (not during the project).

A post-construction stormwater runoff program compliance assistance document is available via the internet at https://www.michigan.gov/documents/deq/wrd-storm-MS4-ComplianceAssistance_470350_7.pdf.

2.5.1 Post Construction Stormwater Management Program Objectives

The post-construction stormwater run-off controls are necessary to maintain or restore stable hydrology in receiving waters by limiting surface runoff rates and volumes and reducing pollutant loadings from sites that undergo development or significant redevelopment.

Projects that change the existing footprint (e.g., increase impervious surface) or offer new opportunities for storm water control (e.g., reconstruction to the subbase layer with a change in underdrainage) are considered redevelopment projects.

The objects of this program and associated procedures are to:

- Develop and implement regulatory mechanisms to address post-construction stormwater runoff for new development and redevelopment projects, including preventing or minimizing water quality impacts.
- Develop and implement regulatory mechanisms for projects that disturb one or more acre, including projects less than an acre that are part of a larger common plan of development or sale and discharge into the applicants MS4.
- Ensure post construction controls to minimize water quality impacts by following water quality treatment standards.
- Require that BMPs be designed on a site-specific basis to reduce post-development total suspended solids loading.
- Procedure to meet water quality treatment and channel protection standards of new development or redevelopment projects.
- Address “hot spots”.
- Require adequate long-term O&M of BMPs by ordinance or other regulatory means.

2.5.2 Post-Construction Policy and Procedure

The district has developed a “Stormwater Management - Post-Construction Policy & Procedure” to direct compliance with these requirements. The “Stormwater Management - Post-Construction Policy & Procedure” is located in Appendix “B”.

Development and redevelopment projects on district properties are regulated under and must comply with the Bloomfield Hills Schools individual NPDES permit for stormwater discharges, as issued by the Michigan Department of Environment, Great Lakes and Energy (EGLE). The Stormwater Management Post-Construction Policy & Procedure has been developed to provide guidance regarding responsibilities and actions to meet the NPDES permit conditions for development and redevelopment projects on Bloomfield Hills Schools properties.

The post-construction plan for stormwater management on regulated sites **must** include:

- A minimum treatment volume standard to address water quality impacts.
- Channel protection criteria to address resource impairment resulting from flow volumes and rates.
- Review sites with known soil and/or groundwater contamination, including potential "hot spots" and evaluate the use of infiltration BMPs to meet water quality treatment and channel protection criteria to ensure that infiltration BMPs do not exacerbate existing conditions. Hot spots include areas with the potential for significant pollutant loading such as vehicle service and maintenance facilities, vehicle equipment cleaning facilities, fleet storage areas for buses, and outdoor liquid container storage.
- Drawings showing the location of stormwater control measures and the storm system.
- Details on the proposed stormwater control measures.
- Operation & Maintenance (O&M) requirements.
- Supporting information:

    - Calculations used for designing all components of the stormwater management systems.
    - Total suspended Solids (TSS) design removal rates and supporting manufacturer documentation, if applicable.
    - Geotechnical report including soil boring and infiltration test data.

The project team [Architecture, Engineering & Construction, Other Project Manager, Project Developer and/or Contractors] shall develop the post-construction plan for stormwater management in accordance with this guideline and the NPDES permit.

The Stormwater Program Manager will administer and enforce the stormwater management program, including maintaining procedures, guidance, information, etc. to aid district staff and contractors in complying with the post-construction requirements for stormwater management.

2.5.3 Water Quality Treatment Standard

Bloomfield Hills Schools goal is to include water quality treatment volume standards for each new construction or redevelopment project where the area of development or redevelopment exceeds one (1) acre. One or more of the following treatment standards will be included as part:

1) Treat the first one inch of runoff from the entire site, or
2) Treat the runoff generated from ninety percent (90%) of all runoff-producing storms for the project site.

The source of the rainfall data for the water quality treatment standard of requiring the treatment of the runoff generated from the ninety percent (90%) of all runoff-producing storms is:

- The EGLE memo dated March 24, 2006, which is available via the internet at http://www.michigan.gov/documents/deq/wrd-hsu-ninety-percent_557709_7.pdf

Treatment methods shall be designed on a site-specific basis to achieve the following:

1. A minimum of eighty percent (80%) removal of total suspended solids (TSS), as compared with uncontrolled runoff, or
2. Discharge concentrations of TSS not to exceed 80 milligrams per liter (80mg/L).

A minimum treatment volume standard is not required where site conditions are such that TSS concentrations in storm water discharges will not exceed 80mg/L.

Treatment methods shall be designed on a site-specific basis to reduce the discharge of sedimentation or TSS from the site. Such methods may include:

1. Standpipe filters in storm water detention basins
2. Sediment filter tanks
3. Catch basin sumps
4. Aqua-Swirls®
5. Treatment trains
6. Rain Gardens
7. Pervious pavement systems

2.5.4 Channel Protection Performance Standard

Bloomfield Hills Schools understands that channel protection criteria are necessary to maintain post-development stormwater runoff volumes and peak flow rates at or below existing levels for all storms up to the 2-year, 24-hour event. "Existing Levels" means the runoff volume and peak flow rate for the last land use prior to the planned new development or redevelopment. More restrictive channel protection criteria may be utilized on a case-by-case basis, as appropriate.

Rainfall Data
The rainfall data for calculating runoff volume and peak flow rate shall be the Rainfall Frequency Atlas of the Midwest, 1992 [National Oceanic & Atmospheric Administration (NOAA) - Huff & Angel].

2.5.5 Site-Specific Requirements

Because each site has its' own special circumstances and conditions, the following BMPs will be considered as appropriate according to site conditions:

- Reduce runoff from the site to greatest extent possible (provide holding basins, divert water through grassed swales).
- Prevent spills and discharges.
- Control waste such as building materials, concrete washout, chemicals, litter, and sanitary waste.
- Phasing will be considered to limit amount of exposed soils.
- Interim soils stabilization methods are to be considered (temporary seeding, mulching etc.).
- Buffer preservation (avoid exposing soils to property limits).
- Inspection staff will be trained in the proper maintenance and operation of Soil Erosion and Silt Prevention measures.

Construction plans will be reviewed for sites with known soil and/or groundwater contamination, including potential "hot spots" and evaluate the use of infiltration BMPs to meet water quality treatment and channel protection criteria to ensure that infiltration BMPs do not exacerbate existing conditions. Hot spots include areas with the potential for significant pollutant loading such as vehicle service and maintenance facilities, vehicle equipment cleaning facilities, fleet storage areas for buses, and outdoor liquid container storage.

Additional water quality standards or pretreatment measures may be required in addition to those included in the water quality criteria in order to remove potential pollutant loadings from entering either groundwater of surface water systems.

Pretreatment measures include:

Stormwater Hot Spots	Minimum Pre-Treatment Options
Vehicle service and maintenance facilities	1. Oil/Water Separators/Hydrodynamic Devices 2. Use of Drip Pans and/or Dry Sweep Material under Vehicles/Equipment 3. Use of Absorbent Devices to Reduce Liquid Releases 4. Spill Prevention Response Program
Fleet storage areas for buses	BMPs that are part of a Stormwater Pollution Prevention Plan (SWPPP)
Vehicle Fueling Stations	1. Oil/Water Separators/Hydrodynamic Devices 2. Water Quality Inserts for Inlets 3. Spill Prevention Response Program
Vehicle equipment cleaning facilities	BMPs that are part of a Stormwater Pollution Prevention Plan (SWPPP)
Outdoor liquid container storage	Spill Prevention Response Program

2.5.6 Site Plan Review

This policy is to establish a requirement to submit a site plan for review as required by the EGLE NPDES Stormwater Discharge Permit and ensure that water quality objectives, erosion and sediment control requirements, and BMP maintenance are considered to the maximum extent practicable.

Bloomfield Hills Schools shall evaluate proposed construction activities to determine:

- If the activity meets the criteria of a development or redevelopment project with an earth disturbance greater than or equal to 1 acre, or part of a common plan of development resulting in a development or redevelopment activity greater than or equal to 1 acre in size.
- Does the development or redevelopment project discharge to waters of the state, or to a county, city, or township MS4.

If the development or redevelopment project discharges directly to waters of the state, Bloomfield Hills Schools shall comply with the post-construction standards outlined in this SWMP.

If the development or redevelopment project discharges to a regulated county, city, or township MS4, Bloomfield Hills Schools shall submit the site plan for review and approval. Site plan approval by the county, city, or township of an equivalent post-construction standard ensures acceptable compliance with the Bloomfield Hills Schools NPDES MS4 Stormwater Discharge Permit. Bloomfield Hills Schools shall obtain and maintain a copy of the site plan approval document.

If the development or redevelopment project discharges to a county, city, or township MS4 that is not regulated or require site plan review, Bloomfield Hills Schools shall comply with the post-construction standards outlined in this SWMP.

2.5.7 Long-Term Operation & Maintenance of Stormwater Controls

Ongoing operation and maintenance of the stormwater BMPs is a critical component of the Stormwater Management Plan. All structural and vegetative stormwater control measures installed as a requirement under this section of the permit shall include guidance for maintaining maximum design performance through long-term operation and maintenance.

- Update and revise the stormwater structural controls on facility site diagrams as identified during scheduled inspections or within 30 days following the completion a new facility or reconstruction/redevelopment site project.
- Follow long-term guidance for inspection and operation to maintain maximum design performance.
- Stormwater runoff facilities shall be maintained in good condition, in accordance with the approved storm water plan.

Trained staff or certified contractors will conduct routine inspection of all identified structural controls and complete maintenance, repair, or replacement, as necessary.

2.5.8 Post Construction Stormwater Management-BMP Table

BMP	Description of BMP	Timeframe	Measurable Goal	Measure of Assessment	Responsible Party
BMP #2.5.8.1 Regulatory Mechanism	Develop and implement regulatory mechanisms to address post-construction stormwater runoff for new development and redevelopment projects, including preventing or minimizing water quality impact. Develop and implement regulatory mechanisms for projects that disturb one or more acre, including projects less than an acre that are part of a larger common plan of development or sale and discharge into the applicants MS4.	Post-Construction Policy & Procedure Developed & Implemented	Post-Construction Policy & Procedure adopted by the district.	Copy of the Post-Construction Policy and Procedure.	Bloomfield Hills Schools
BMP #2.5.8.2 Post Construction Standards	Ensure post-construction channel protection standards and water quality treatment standards are met.	As necessary Throughout Permit Cycle	All development or redevelopment projects meet water quality and channel protection standards outlined in the districts SWMP or meets an equivalent post-construction standard for the township, city, or county.	Copy of calculations.	Bloomfield Hills Schools
BMP #2.5.8.3 Site Specific	Bloomfield Hills Schools will review construction plans for sites with known soil and/or groundwater contamination, including potential “hot spots” and evaluate the use of infiltration BMPs to meet water quality treatment and channel protection criteria.	As necessary Throughout Permit Cycle	Reduce or eliminate discharge of pollutants during construction on contaminated sites.	Documentation of additional stormwater controls.	Bloomfield Hills Schools

BMP	Description of BMP	Timeframe	Measurable Goal	Measure of Assessment	Responsible Party
BMP #2.5.8.4 Site Plan Review	Prepare and submit a written application, including site plan for construction of storm water management systems for all new construction or redevelopment projects where the area of development or redevelopment exceeds one (1) acre.	As necessary Throughout Permit Cycle	If the development or redevelopment project discharges to a regulated county, city, or township MS4, the district shall submit the site plan for review and approval. Site plan approval by the county, city, or township of an equivalent post-construction standard ensures acceptable compliance with the districts NPDES MS4 Stormwater Discharge Permit.	Obtain and maintain a copy of the site plan approval document and copy of calculations.	Bloomfield Hills Schools
			If the development or redevelopment project discharges directly to waters of the state, the district shall comply with the post-construction standards outlined in this SWMP. If the development or redevelopment project discharges to a county, city, or township MS4 that is not regulated or require site plan review, Bloomfield Hills Schools shall comply with the post-construction standards outlined in this SWMP.	Copy of calculations.	Bloomfield Hills Schools
BMP #2.5.8.5 Long-Term Operation & Maintenance of Stormwater Controls	All structural and vegetative stormwater control measures installed as a requirement under this section of the permit shall include guidance for maintaining maximum design performance through long-term operation and maintenance.	Within 30 days of following the completion a new facility or reconstruction/redevelopment site project. Throughout Permit Cycle	Follow long-term guidance for inspection and operation to maintain maximum design performance. Stormwater runoff facilities shall be maintained in good condition, in accordance with the approved storm water plan.	All storm sewer site maps updated. Maintain all inspection, maintenance, and repair reports conducted by staff or contractors.	Bloomfield Hills Schools

2.6 Pollution Prevention & Good Housekeeping Program

Develop, implement, and ensure compliance through a program of operation & maintenance of BMPs, with the ultimate goal of preventing or reducing pollutant runoff to the maximum extent practicable from operation that discharge stormwater to surface waters of the state.

2.6.1 Pollution Prevention & Good Housekeeping Program Objectives

a. Maintain an up-to-date inventory of owned facilities and stormwater structural controls.
b. Procedure for updating and revising inventory of stormwater structural controls.
c. Procedure for assessing each facility for the potential to discharge pollutants.
d. Develop an SOP (SWPPP) for all facilities with a high potential for pollutant runoff.
e. Procedure identifying BMPs currently implemented or to be implemented to prevent or reduce pollutant runoff at each facility with medium and lower potential to discharge.
f. Procedure for prioritizing of catch basins/manholes for maintenance and cleaning.
g. Schedule for routine catch basin/manhole inspection, maintenance, and cleaning.
h. Provide the geographic location of stormwater structures.
i. Procedure for dewatering, storage and disposal of materials extracted from storm sewer cleaning.
j. Procedure for inspecting and maintaining storm water controls.
k. Procedure for new structural controls to be designed and implemented in accordance with post-construction stormwater runoff control performance standards.
l. Best management practices for operation and maintenance activities.
m. Procedure for street sweeping.
n. Procedure for pesticide application.
o. Training.
p. Contractor requirements and oversight.

It is the ultimate goal of Bloomfield Hills Schools to prevent and reduce pollutant/contaminant runoff from Bloomfield Hills Schools facilities to the maximum extent practicable. All BMPs are implemented at all low, medium, and high priority facilities.

2.6.2 Structural Control Inventory & Schedule Table

No prioritization will be needed, as all structures are to be inspected and maintained equally. All structural controls will have routine inspection, maintenance schedules, and long-term procedures which adequately control, to the maximum extent practicable, pollution removal and control. Structural control effectiveness will be determined based on the results of these inspections and repaired, upgraded, or replaced as indicated.

The structural Control Inventory and Schedule Table for each property are in Appendix E.

2.6.3 Facility Assessment & Prioritization

Bloomfield Hills Schools has identified all applicant owned facilities with a discharge of stormwater to surface waters of the state, and during mapping of each facility, inventoried the number of stormwater structural controls (i.e., catch basins, detention basins, etc.) at each site. Each location was assessed to determine high, medium, and low potential to discharge pollutants to surface waters of the state.

Bloomfield Hills Schools considered the following when assessing each facility:

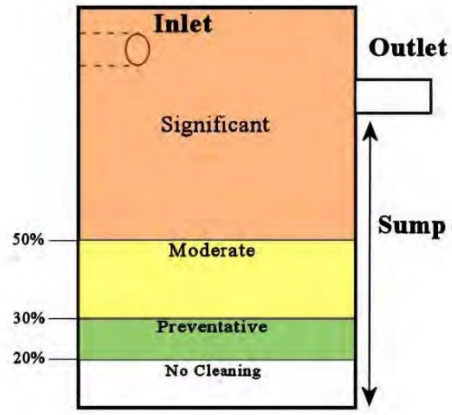
- Absence of any factors,

- Presence of urban pollutants stored at the site (i.e., sediment, nutrients, metals, hydrocarbons, pesticides, fertilizers, herbicides, chlorides, trash, bacteria, or other site-specific pollutants,
- Identification of improperly stored materials,
- Potential for polluting activities to be conducted outside (i.e., vehicle washing),
- Proximity to water bodies,
- Poor housekeeping practices,
- Discharge of pollutants of concern to impaired waters.

For facilities that have a high potential to discharge pollutants to surface waters of the state, a Stormwater Pollution Prevention Plan (SWPPP) and/or Pollution Incident Prevention Plan (PIPP) for salt storage facilities will continue to be implemented.

BMPs currently implemented by Bloomfield Hills Schools at facilities with medium and lower potential for the discharge of pollutants to surface waters of the state include:

1. Good housekeeping practices,
2. Employee training,
3. Routine visual inspections,
4. Spill prevention and response.



This inventory will be updated as facilities and structural stormwater controls are added, removed, or no longer owned or operated by the applicant following routine inspections or following new construction or redevelopment projects. Priority level assessments will be revised within 30 days following the completion a new facility or reconstruction/redevelopment.

2.6.4 Storm Sewer Structure Controls Inspection & Maintenance Policy & Procedure

1. Develop a schedule for inspecting and maintaining catch basins and stormwater controls at each facility, for the reduction of pollutant runoff. A schedule is included in Appendix E.
2. Visually inspect all stormwater controls identified on facility maps. Inspection includes:
    a. Structural integrity of the structure.
        - Areas of significant cracking or sinkholes.
    b. Sediment build-up.
        - Areas with high amounts of build-up sediment. A build-up of accumulated solid material that is greater than or equal to the one-third guideline established by the EPA or between 30 and 50% of the total sump depth, as established by the EGLE[3].

[3] Michigan Department of Environment, Great Lakes, and Energy EGLE NPS BMP Manual – Catch Basins

E-03 | original source page 42 | APP 1139

   c. Color, odor, sheen, and flow.
   d. Overall functionality and presence of erosion.
   e. Pond evaluation.
3. Note inspection information on the inspection form. A copy of the inspection form "Structural BMP Table" is located in Appendix "D".
4. When inspecting stormwater controls, review the site for non-structural BMPs currently implemented to prevent or reduce pollutant runoff at each facility. BMPs include:
   a. Review of "No Dumping" stencils at storm drains.
   b. Review of catch basins/manholes cleaned.
   c. Dumpster good housekeeping practices.
   d. Garden, green space and signage inventories.
   e. "SEMCOG" poster placement at facilities.
   f. Illicit discharge reporting numbers poster placement at facilities.
   g. "How to spot illicit discharge/ How to Report-Hotline Numbers" poster placement at facilities.
   h. Spill kit availability at facilities.
5. Following the inspection, the stormwater controls will be prioritized for cleaning and maintenance in a timely manner. Prioritize locations based on the following:
   - Drainage structures that are designated as consistently generating the highest volumes of trash and/or debris.
   - Areas with high amounts of build-up sediment. Refer to number 2 (b) above.
   - Areas of significant erosion.
   - Areas of significant cracking or sinkholes.
6. Once the inspection is complete, the stormwater manager or designated person will review the report and determine if a work order or other item is needed to work with relevant departments or contractors to fix any problems.
7. If an illicit discharge is suspected, follow the procedure outlined in Section 2.3 Illicit Discharge Elimination Program.
8. Retain inspection forms for each stormwater structural control inspected.
9. Retain documentation regarding the scheduling or completion of the repair/maintenance if completed.
10. Debris and maintenance waste removed as part of the maintenance and/or repairs shall be disposed of in accordance with the Structural BMP Operation & Maintenance Waste Disposal procedures.

Furthermore, staff members conducting maintenance and grounds activities are provided IDEP and pollution prevention/good housekeeping training. All structural controls will have routine inspection, maintenance schedules, and long-term procedures which adequately control, to the maximum extent practicable, pollution removal and

control. Structural control effectiveness will be determined based on the results of these inspections and repaired, upgraded, or replaced as indicated. This procedure will be reviewed on an annual basis and updated as needed or 30 days following the implementation of a new stormwater structural control.

2.6.5 Structural BMP Operation & Maintenance Waste Disposal Procedures

Waste materials generated from operation, maintenance, and cleaning activities associated with storm sewer systems has typically been discharged back into the storm sewer system. This type of discharge is unauthorized per Part 31, Water Resources Protection (Part 31) of the Natural Resources and Environmental Protection Act, 1994 PA 451, as amended (NREPA) and is therefore illegal. The combined solid and liquid waste stream (solid/liquid waste) from cleaning storm sewer systems is legally defined as "Liquid Industrial By-products" pursuant to Part 121, Liquid Industrial By-products (Part 121) of NREPA.

Bloomfield Hills Schools will ensure that all waste materials generated during operation and maintenance of structural stormwater controls are properly characterized, transported, and disposed as required under State of Michigan PA 451 Part 111 (hazardous wastes), Part 121 (liquid industrial by-products), and Part 115 (solid wastes). At a minimum, the following procedures will be implemented for wastes generated from cleaning or maintaining storm sewer structural controls.

Waste Disposal Methods for Non-Contaminated Materials

Non-contaminated waste materials generated during cleaning or maintenance of storm sewer structures will be properly disposed using one of the following methods:

1. Have the waste transported to drying beds to separate the solid/liquid waste. This is usually performed at a publicly owned treatment plant or at a privately-owned permitted facility where the liquid portion of the waste stream is separated from the solids and treated.
2. Request permission from the local wastewater treatment plant operator to discharge the combined solid/liquid waste into the sanitary system. Most treatment plants will require pre-treatment prior to the discharge. All applicable local ordinance provisions must be followed.
3. When conducting catch basin maintenance activities where the above options are not available, the following methods can be used as long as there are no discharges to surface waters during dry weather conditions:
    - Conduct visual inspection to ensure the water in the sump has not been contaminated. If necessary, collect a grab sample of the water and look for signs of contamination such as visible sheen, discoloration, obvious odor, etc. If there is any doubt of the quality of the water, it will be collected into a vacuum truck and treated as Liquid Industrial By-Products under Part 121 or Part 115 of PA 451 (NREPA).
    - Using a sump pump, or any other pumping mechanism, remove the majority of water in the sump of the basin without disturbing the solid material below. Do not use pumps connected to the vacuum truck's holding tank.
    - The clear water may then be directly discharged to one of the following:
        - Sanitary system (with prior approval from local sewer authority).
        - Curb and gutter.
        - Back into the storm sewer system as long as it is contained within the system during dry weather condition to ensure no discharge into surface water.
        - Applied to the ground adjacent to the catch basin (evenly distributed at a maximum rate of 250 gallons/acre/year).

- The remaining liquid/solid in the sump will be collected with a vacuum truck and disposed of off-site in accordance with MI P.A. 451 Parts 115 or 121.

Bloomfield Hills Schools does not currently own or operate storm sewer cleaning or transportation equipment. If Bloomfield Hills Schools contracts with a private contractor to transport liquids generated from cleaning of catch basins or other structures, that contractor must be registered and permitted as a Uniform Liquid Industrial By-Product Hauler under the provisions of HMTA.

Waste Disposal Methods for Contaminated Materials

Waste materials generated during operation and maintenance of storm sewer systems found or suspected to be contaminated with pollutants or hazardous substances will be characterized, packaged, marked, labeled, stored, transported, and disposed as a liquid industrial by-product under Part 121 or Part 115 of PA 451 (NREPA).

2.6.6 Pollution Prevention/Good Housekeeping – Municipal Operations & Maintenance Activities

Bloomfield Hills Schools recognizes the importance of reducing pollutant runoff from maintenance activities. The following procedure will include an assessment of the potential activities for the potential to discharge pollutants. The assessment shall identify the pollutants that could be discharged from the applicable operation and maintenance activity and the BMPs implemented or to be implemented to prevent or reduce pollutant runoff.

PROCEDURE

Applicable operations and maintenance activities include parking lot and sidewalk maintenance, cold weather operations, vehicle washing, maintenance of vehicles, land disturbance and landscape. Bridge maintenance, right-of-way maintenance and unpaved road maintenance do not apply to Bloomfield Hills Schools.

Roadways/Parking Lots

Maintenance: Pothole, sidewalk, curb, and gutter repair.

Possible Pollutants: Fuel, oil, sediment, concrete.

BMPs to address Pollutants:

1. Contractors and in-house staff contracted to complete for these jobs are informed of stormwater management practices to reduce pollution in stormwater.
2. Avoid mixing excess amounts of fresh concrete or cement.
3. Never dispose of washout into the street, storm drains, ditches, or creeks.
4. Stencil storm drains to prevent disposal of wash water.
5. Schedule patching, resurfacing and surface sealing during dry weather.
6. If it rains unexpectedly, take appropriate action to prevent pollution of stormwater runoff (e.g., divert runoff around work areas, cover materials).
7. Maintain pollution prevention/good housekeeping practices, which is to remove stockpiles (asphalt materials, sand, etc.) by the end of the day to a covered location. Alternatively, cover the piles if they cannot be moved.

Process for updating assessment: Contractor or project is assessed on an ongoing basis, and problems are addresses when found.

Cold Weather Operations

Maintenance: Plowing, sanding, deicing, snow pile disposal.

Possible Pollutants: Sodium, magnesium, calcium, potassium, chloride, turbidity.

BMPs to address Pollutants:

1. Keep all deicing material covered or in waterproof containers.
2. Prevent deicer drainage to storm sewers.
3. Mechanical removal of as much snow or ice as possible prior to applying deicing chemicals.
4. Proper salt storage management.
5. Maintain application equipment per manufacturer's recommendations. Calibration is not available.

Process for updating assessment: BMPs will be assessed for effectiveness within 30 days following their addition or removal.

Vehicle Washing

Maintenance: Washing of buses, staff vehicles and maintenance equipment.

Possible Pollutants: Petroleum based wastes, metals, and nutrients.

BMPs to address Pollutants:

1. All vehicle washing and maintenance is to be performed indoors where drains connecting to the sanitary system can receive all wastes. The district has an interior bus wash on site.
2. Alternatively, vehicle washing can be performed at a commercial auto wash facility.
3. Alternatively, rinse grass from lawn care equipment on permeable (grassed) areas.
4. School car wash fundraising events will not be permitted on school grounds.

Process for updating assessment: BMPs will be assessed for effectiveness within 30 days following their addition or removal.

Vehicle Maintenance

Possible Pollutants: Petroleum based wastes, metals, and nutrients.

BMPs to address Pollutants:

1. Oil-water separators will be inspected routinely and serviced as necessary to maintain efficiency.
2. All vehicle or equipment maintenance will take place inside or away from storm drains where drains connecting to the sanitary system can receive all wastes.
3. Any floor drain suspected to drain to the stormwater system will be dye traced as needed.
4. Recycle used motor oil, diesel oil, other vehicle fluids, and vehicle parts whenever possible.

Process for updating assessment: BMPs will be assessed for effectiveness within 30 days following their addition or removal.

Landscaping

Possible Pollutants: Wood chips, sediment, sand, and compost.

BMPs to address Pollutants:

1. Place temporary stockpiled material away from storm drains, and berm or cover stockpiles to prevent material releases into the storm drain. Alternatively, place stockpiles on permeable (grassed) areas.
2. Conduct annual stream back inspections.
3. Provide adequate buffer areas at stream banks.
4. Proper Storage, handling, and use of pesticides, herbicides, and fertilizers.

Process for updating assessment: BMPs will be assessed for effectiveness within 30 days following their addition or removal.

Land Disturbance

Possible Pollutants: Sediment runoff.

BMPs to address Pollutants:

1. Plan land clearing so soil is not exposed for long periods of time.

2. Place temporary stockpiled material away from storm drains, and berm or cover stockpiles to prevent material releases into the storm drain.
3. Protect against sediment flowing into drains.
4. Install sediment barriers.

Process for updating assessment: BMPs will be assessed for effectiveness within 30 days following their addition or removal.

ASSESSMENT

Pollution prevention inspections ensure that these BMPs are carried out properly. Any issues identified during the inspections will be reviewed and addressed by the Stormwater Manager.

2.6.7 Street Sweeping Procedure, Prioritization & Schedule

PRIORITIZATION

The EGLE Stormwater Discharge Permit requires a procedure for prioritizing owned streets, parking lots, and other impervious infrastructure for street sweeping based on the potential to discharge pollutants. Bloomfield Hills Schools evaluated each facility for the presence of the following factors:

- Potential for polluting activities to be conducted outside
- Proximity to water bodies
- Traffic volume
- Land use
- Absence of any factors

PROCEDURE

Bloomfield Hills Schools does not own or operate sweeping equipment. However, Bloomfield Hills Schools will be proactive and undertake the following activities to reduce the potential to discharge pollutants to surface waters of the state from parking lots and other impervious infrastructures.

1. Conduct seasonal efforts to remove leaves.
2. Inspect parking lot and street areas.
3. Conduct hand sweeping of debris to prevent accumulated wastes in the spring and the fall.
4. Waste disposal areas will be kept free of litter and debris.
5. Analyze sediment, removed from an inlet cleaning if it is suspected of being contaminated with a hazardous material, prior to disposal. Sediment or materials determined to be hazardous waste will be disposed of in accordance with the Structural BMP Operation & Maintenance Waste Disposal procedures.
6. Contract out street cleaning when appropriate.

This prioritization will be updated as facilities and structural stormwater controls are added, removed, or no longer owned or operated by the applicant following routine inspections, or as traffic volume, land use or sediment and trash accumulation increases.

PRIORITIZATION LEVELS & SCHEDULE

All low, medium, and high prioritized parking lots and streets are inspected on the same schedule in an effort to reduce pollutants.

Facility Name	Priority Level of Potential Discharge* (High, Med, Low)	Street Sweeping Schedule
Bloomfield Hills High School	Medium	Hand Sweeping, Spring and Fall
Bloomfield Hills Middle School South-Conant Elementary School-Bloomin' Preschool Conant Complex	Medium	Hand Sweeping, Spring and Fall
Bloomfield Hills Middle School North	Medium	Hand Sweeping, Spring and Fall
Booth-Doyle Center	Low	Hand Sweeping, Spring and Fall
Bowers School Farm	Low	Hand Sweeping, Spring and Fall
Dublin Building (Physical Plant Services)	Low	Hand Sweeping, Spring and Fall
East Hills Middle School	Medium	Hand Sweeping, Spring and Fall
Eastover Elementary School	Low	Hand Sweeping, Spring and Fall
Fox Hills Elementary School-Bloomin' Preschool Fox Hills	Low	Hand Sweeping, Spring and Fall
International Academy (OKMA Campus)	Low	Hand Sweeping, Spring and Fall
Johnson Nature Center	Low	Hand Sweeping, Spring and Fall
Lone Pine Elementary School-Bloomin' Preschool Lone Pine	Low	Hand Sweeping, Spring and Fall
Pine Lake School	Low	Hand Sweeping, Spring and Fall
Transportation Facility	High	Monthly Inspections, Hand Sweep as Needed
Warehouse (Franklin Building)	High	Monthly Inspections, Hand Sweep as Needed

Facility Name	Priority Level of Potential Discharge* (High, Med, Low)	Street Sweeping Schedule
Way Elementary School	Low	Hand Sweeping, Spring and Fall
West Hills Middle School	Medium	Hand Sweeping, Spring and Fall
Wing Lake Development Center	Low	Hand Sweeping, Spring and Fall

*If required, following inspections indicating higher traffic volume, land use or sediment and trash accumulation at all low, medium, and high prioritized parking lots and streets, the District shall contract a commercial street sweeping company.

DISPOSAL

If a commercial street sweeper is contracted to clean a parking lot and street areas for Bloomfield Hills Schools, the street sweeping activities are subject to the solid waste requirements. Solid waste must be managed under Part 115 requirements. Dispose of the solid waste in a licensed landfill. The contractor hired to do the street sweeping is responsible for proper disposal of the waste material. The contracted sweeping will not be completed when streets are wet, so dewatering of the collected debris will not be required.

2.6.8 Managing Vegetated Properties

Bloomfield Hills Schools has established this policy to prevent or reduce pollutant runoff from vegetated land:

1. Bloomfield Hills Schools requires all contracted personnel who participate in the application of pesticides, to will be trained and licensed by the State of Michigan under the Commercial Pesticide Application Certification Program for relevant categories as applicable, to prevent or reduce pollutant runoff from vegetated land.
2. Whenever practicable, an integrated pest management technique will be implemented.

2.6.9 Contractor Requirements & Oversight

Bloomfield Hills Schools requires contractors to comply with pollution prevention and good housekeeping BMPs. Bloomfield Hills Schools will perform the following activities for applicable contractors and projects to comply with all pollution prevention and good housekeeping BMPs as appropriate and comply with pollution as well as provide oversight to ensure compliance:

- Contractor Notification
- Contractor Training
- Pre-project Meeting/Review
- Periodic Inspections

Prior to conducting work, contractors shall be provided a “Stormwater Contractor Oversight Record” form. This will allow the district to review stormwater compliance with contractors hired to perform municipal operation and maintenance activities and to obtain signatures. The “Stormwater Contractor Oversight Record” form is located in Appendix “F”.

2.6.10 Pollution Prevention/Good House Keeping Training

A training program is an important component to effective pollution prevention. Training is required for all employees whose job responsibilities involve municipal or maintenance activities. Training is discussed in detail in Section 3.0 of this SWMP.

2.6.11 Pollution Prevention/Good Housekeeping –BMP Table

BMP	Description of BMP	Timeframe	Measurable Goal	Measure of Assessment	Responsible Party
BMP #2.6.11.1 Structural Control Inventory	Provide an up-to-date inventory of the number of stormwater structural controls for each facility's (i.e., catch basins, detention ponds). Update facilities potential to discharge pollutants (high, medium, low) following the update.	Updated as needed within 30 days following the completion a new facility or development/ redevelopment. Ongoing Throughout Permit Cycle	100% of stormwater structural controls inventoried.	Maintain list of inventories and potential to discharge priority level. Submit updated list with progress report, noting if priority levels have changed.	Bloomfield Hills Schools
BMP #2.6.11.2 SWPPP development & implementation (SOP)	Develop a "Stormwater Pollution Prevention Plan (SWPPP)" for maintenance, transportation, and storage facilities/Implement policies & procedures.	Developed & Implemented Ongoing Throughout Permit Cycle	SWPPP completed and 100% of inspections implemented.	Copy of SWPPP and copy of inspections.	Bloomfield Hills Schools
BMP #2.6.11.3 Stormwater Structural Control Inspections	Visually inspect stormwater controls identified on facility maps.	Annually Throughout Permit Cycle	Routine schedule implemented and inspections reviewed by stormwater manager.	Maintain inspection forms/reports.	Bloomfield Hills Schools
BMP #2.6.11.4 Review for BMP's Implemented	While inspecting stormwater controls, review the site for BMPs currently implemented to prevent or reduce pollutant runoff at each facility, such as storm drain stencils, garden areas, areas cleaned, areas repaired, SEMCOG poster placement, Illicit discharge education posters, and spill kits.	Annually Throughout Permit Cycle	Annual inspections completed and reviewed by stormwater manager.	Documentation of inspection findings (number of posters, number of spill kits, inventory of gardens, pictures of stencils, pictures of spill kits).	Bloomfield Hills Schools

BMP	Description of BMP	Timeframe	Measurable Goal	Measure of Assessment	Responsible Party
BMP #2.6.11.5 Prioritization of Storm Sewer Locations for Maintenance & Cleaning	Following the inspection, the stormwater controls will be prioritized for cleaning and maintenance. Prioritize locations based on: (1) drainage structures that are designated as consistently generating the highest volumes of trash and/or debris, (2) areas with high amounts of build-up sediment, (3) areas of significant cracking or sinkholes.	Annually Throughout Permit Cycle	Prioritization locations identified.	Copy of prioritization.	Bloomfield Hills Schools
BMP #2.6.11.6 Cleaning & Maintenance (Catch Basin/ Manhole Cleaning)	Bloomfield Hills Schools will ensure that cleaning of the catch basins/manholes occur, and all waste materials generated during operation and maintenance of structural stormwater controls are properly characterized, transported, and disposed as required under State of Michigan PA 451 Part 111 (hazardous wastes), Part 121 (Liquid Industrial By-Products), and Part 115 (solid wastes).	Once per permit cycle Or More often if prioritized due to a build-up of accumulated solid material that is greater than or equal to the one-third guideline outlined in the Storm Sewer Structure Controls Inspection & Maintenance Policy & Procedure	Cleaning completed once per permit cycle or more often if build-up of accumulated solid material reaches the action level per the procedure in section 2.6.4. All waste disposed as required.	Copies of Waste Manifests.	Bloomfield Hills Schools
BMP #2.6.11.7 Roadways & Parking Lots	Storm drains stenciled to prevent disposal of wash water into storm drains.	As needed Throughout Permit Cycle	Storm drain stencils inspected and maintained as need.	Copy of work order. Photos of stenciling.	Bloomfield Hills Schools
BMP #2.6.11.8 Cold Weather Operations	Proper salt storage management. Maintain storage bags/equipment in good working condition and maintain application equipment per manufacturer's recommendations.	Ongoing Throughout Permit Cycle	Continue proper salt storage and management as previously implemented.	Copy of SWPPP comprehensive inspection report.	Bloomfield Hills Schools

BMP	Description of BMP	Timeframe	Measurable Goal	Measure of Assessment	Responsible Party
BMP #2.6.11.9 Vehicle Washing	All vehicle washing and maintenance is to be performed indoors where drains connecting to the sanitary system can receive all wastes. Alternatively, vehicle washing can be performed at a commercial auto wash facility.	Ongoing Throughout Permit Cycle	100 % of applicable staff trained on were to wash vehicles.	Copy of sign-in sheets and Agenda (if available).	Bloomfield Hills Schools
	Alternatively, rinse grass from lawn care equipment on permeable (grassed) areas.		100 % of applicable staff trained on were to wash vehicles.	Copy of sign-in sheets and Agenda (if available).	
	School car wash fundraising events will not be permitted on school grounds.		Notice sent to staff regarding policy.	Copy of e-mail or policy.	
BMP #2.6.11.10 Vehicle Maintenance	Any floor drain suspected to drain to the stormwater system will be dye traced as needed.	Throughout Permit Cycle	100% of floor drains inspected.	Copy of inspection report.	Bloomfield Hills Schools
	Oil-water separators will be inspected routinely and serviced as necessary to maintain efficiency.	Annually Throughout Permit Cycle	Oil-water separators cleaned and functioning properly.	Copy of invoices or shipping papers.	
	Recycle used motor oil, diesel oil, other vehicle fluids, and vehicle parts whenever possible.	As needed Throughout Permit Cycle	Reduction in amount of disposed material and amount of material shipped for off-site disposal.	Copy of invoices or shipping papers.	
BMP #2.6.11.11 Stream Bank Inspection	Conduct stream bank inspections. Inspect banks along properties to identify erosion or potential erosion problems and check for water clarity conditions. Properly maintain buffer areas.	Annually Throughout Permit Cycle	100% of bank inspections completed.	Copy of inspection sheets/reports.	Bloomfield Hills Schools

BMP	Description of BMP	Timeframe	Measurable Goal	Measure of Assessment	Responsible Party
BMP #2.6.11.12 Land Disturbance	Place temporary stockpiled material away from storm drains, and berm or cover stockpiles to prevent material releases into the storm drain. Protect against sediment flowing into drains.	As needed Throughout Permit Cycle	100 % of applicable staff trained.	Copy of sign-in sheets and Agenda (if available).	Bloomfield Hills Schools
BMP #2.6.11.13 Street Sweeping	Conduct hand sweeping in the parking lots/roadways in the spring and fall.	Spring & Fall Throughout Permit Cycle	Inspections completed.	Copy of work order or schedule.	Bloomfield Hills Schools
	Street sweeping conducted by a professional sweeping company.	As needed Throughout Permit Cycle		Copy of invoice or disposal documentation.	
BMP #2.6.11.14 Vegetated Properties (Pesticides)	Bloomfield Hills Schools requires all contracted personnel who participate in the application of pesticides will be trained and licensed by the State of Michigan under the Commercial Pesticide Application Certification Program for relevant categories as applicable, to prevent or reduce pollutant runoff from vegetated land.	Ongoing Throughout Permit Cycle	Application of pesticides will only be completed by trained and licensed applicators.	Documentation of in-house staff license or copy of contractor receipt.	Bloomfield Hills Schools
BMP #2.6.11.15 Contractor Oversight	Bloomfield Hills Schools requires contractors to comply with pollution prevention and good housekeeping BMPs. Bloomfield Hills Schools will complete contractor notification, pre-project meeting and periodic inspections to provide oversight to ensure compliance.	As needed Throughout Permit Cycle	Contractors trained and informed of pollution prevention and good housekeeping techniques.	Copy of sign-in sheets, pre-project meeting notes or inspections.	Bloomfield Hills Schools & Contractors/ Vendors
	Prior to conducting work, contractors shall be provided a “Stormwater Contractor Oversight Record” form.				

BMP	Description of BMP	Timeframe	Measurable Goal	Measure of Assessment	Responsible Party
BMP #2.6.12.16 Training	Pollution prevention and good housekeeping training.	Once per permit cycle or during the 1st year of employment Throughout Permit Cycle	Goal of providing training to maintenance staff who work for Bloomfield Hills Schools. **[All Stormwater Training is outlined in Section 3.0 Training]**	Copy of sign-in sheets and Agenda (if available).	Bloomfield Hills Schools
BMP #2.6.12.17 Pollution Prevention & Good Housekeeping Activities Effectiveness Review	Summary of annual activities for the "Pollution Prevention and Good Housekeeping".	Annually Throughout Permit Cycle	Annual review of SWMP performed. Maintain copy of SWMP annual review. Determine the level of district involvement and identify areas of improvement.	Maintain copy of SWMP annual review and evaluation information for progress reporting.	Bloomfield Hills Schools

3.0 Training

Bloomfield Hills Schools will provide education and training for applicable employees and contractors using a variety of methods depending on their specific job function. At a minimum, all applicable Bloomfield Hills Schools employees will be required to have general awareness training on the topics included in the PEP. All applicable Bloomfield Hills Schools employees will be required to attend or otherwise obtain general awareness training at least once per permit cycle or during the 1st year of employment.

Bloomfield Hills Schools has implemented a comprehensive staff training program based on each employee's participation and responsibilities under this program. The employee training program is categorized in three (3) separate levels summarized as follows:

LEVEL I TRAINING-General Awareness Training

Level I training is encouraged for all district employees, parents, and students. General Awareness training is provided in the form of an 11-minute video produced by Arch Environmental Group titled, **"When it Rains, It Drains…The Stormwater Question".** This video is also available on the stormwater webpage.

LEVEL II TRAINING-General Awareness, Pollution Prevention & Good Housekeeping, and Illicit Discharge Reporting

Level II training is required for all employees whose job responsibilities involve illicit discharge related activities, or indicate a potential to cause, witness, or report and illicit discharge or connection. This training includes the previously described video as well as a review of the districts Stormwater Management Program Plan and instruction on identification and notification of illicit discharges or connections. This training is provided to applicable transportation, maintenance, custodial, and food service employees.

LEVEL III TRAINING-Maintenance and Storage Facility Stormwater Pollution Prevention Plans, Lawn Maintenance, and Structural Control Inspection, Maintenance, and Repair Training

Level III training is provided in the form of videos, PowerPoint presentations, and hands-on training. This training is provided to district supervisors, maintenance, and lawn service staff.

LEVEL IV (CONTRACTORS) – Contractor Training/Oversight

Contractors employed by Bloomfield Hills Schools to conduct activities with a potential to impact water quality. Prior to conducting work, contractors shall be provided a "Stormwater Contractor Oversight Record" form.

3.1 Training Table

BMP	Description	Measurable Goal	Target Audience	Timeframe
I **General Awareness Training**	Encourage teachers, administrative and support staff to watch the General Awareness Stormwater Video "When it Rains it Drains".	Maintain on district website and Record attendance with sign-in sheets. Bloomfield Hills Schools will retain records of trainings for future review regarding SWMP.	Teachers, administrative and support staff.	Ongoing Throughout Permit Cycle
II **IDEP & PPGH Training**	General Awareness, Pollution Prevention & Good Housekeeping, and Illicit Discharge Elimination Program	Record attendance with sign-in sheets for each training session. Bloomfield Hills Schools will retain records of trainings for future review regarding SWMP.	In-house custodial, maintenance, transportation, and food service employees.	Required once during permit cycle current employees and during the 1st year of employment for new employees. Throughout Permit Cycle
III **Routine Storm Sewer Inspection Training**	Train appropriate employees how to conduct a storm sewer system inspection.	Record attendance with sign-in sheets for each training session. Bloomfield Hills Schools will retain records of trainings for future review regarding SWMP.	District supervisors, in-house maintenance, and lawn service staff.	As Needed Throughout Permit Cycle
IV **Contractor Training/ Oversight**	Stormwater specific training for on-site contractors.	Utilize a "Stormwater Contractor Oversight Record" form to review stormwater compliance with contractors hired to perform municipal operation and maintenance activities and to obtain signatures. Obtain records of training for future review of the SWMP.	Contractors employed by Bloomfield Hills Schools to conduct activities with a potential to impact water quality.	Required at the time of employment. Throughout Permit Cycle

4.0 Total Maximum Daily Load (TMDL) Restrictions

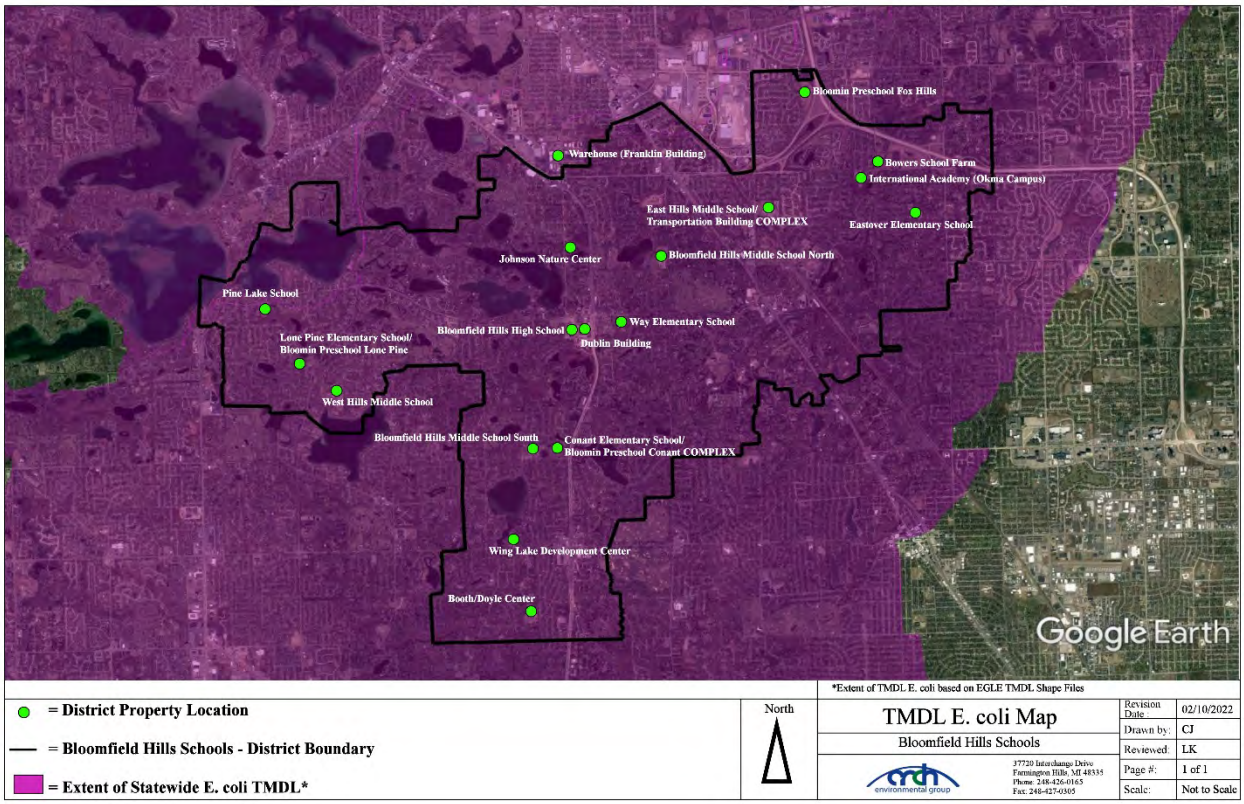
4.1 What are TMDLs

When a lake or stream fails to meet federal water quality standards, the Clean Water Act requires that a "Total Maximum Daily Load (TMDL)" limit be developed. Studies are completed to determine the sources impacting the water body and to develop goals so that the water body can meet the applicable standards.

A TMDL describes the process used to determine how much of a particular pollutant a lake or stream can assimilate and sets pollution reduction targets for the water body.

Bloomfield Hills Schools will review and prioritize BMPs currently implemented or to be implemented during the permit cycle to make progress toward achieving the pollutant load reduction requirement in each TMDL identified. TMDLs assigned the discharges for Bloomfield Hills Schools are described in the below sections.

4.2 Statewide E. coli TMDL



The Statewide **E. coli** TMDL was approved by the United States Environmental Protection Agency (USEPA) on July 29, 2019. This TMDL addresses all surface waters (inland lakes, Great Lakes, streams, rivers, wetlands, and beaches) in the state of Michigan that are impaired by E. coli. The goal of the TMDL is to identify problem areas, address sources of E. coli statewide, and provide guidance to restore these waters.

The targets in this TMDL are concentrations of E. coli per 100 milliliters (mL) of water, set equal to Michigan's Water Quality Standard (WQS) for recreation (described in Section 3). This target is easier to understand and communicate than a load-based target, which would vary by water body, and is also easier to measure with limited resources.

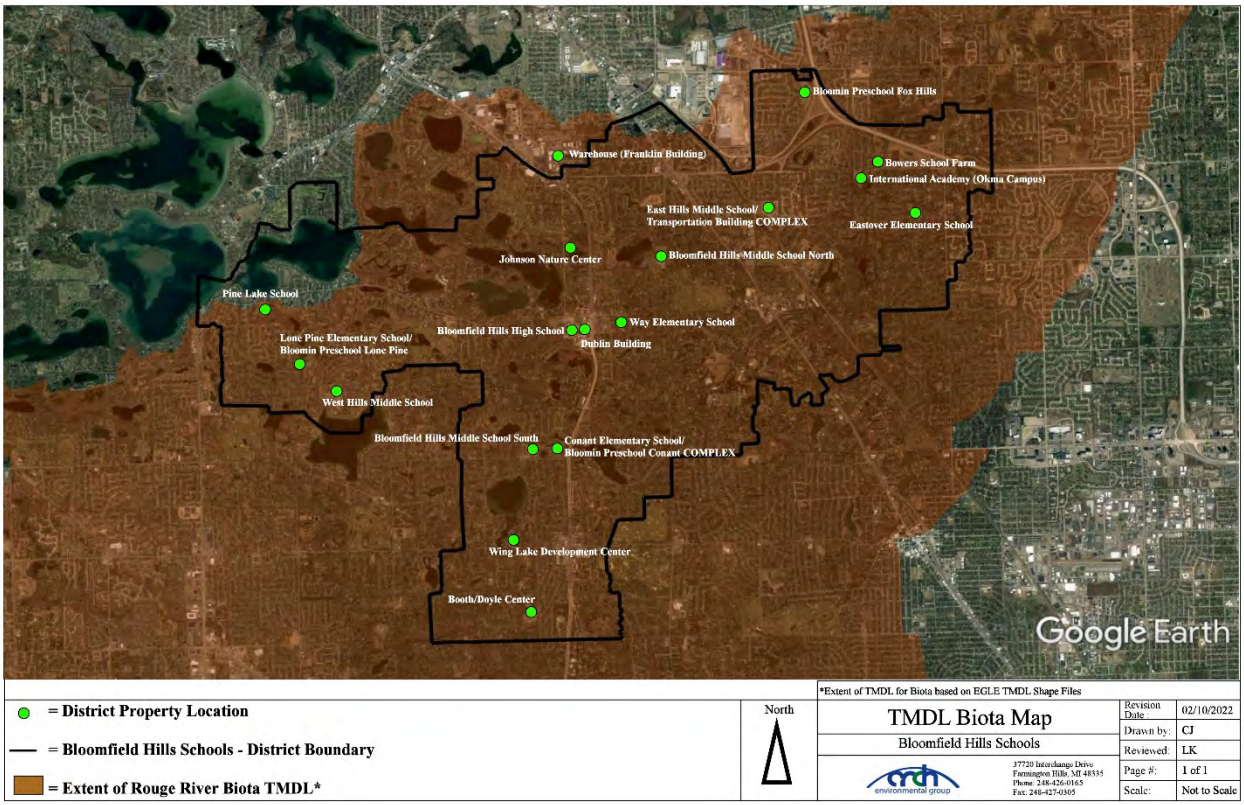
Each District facility was evaluated for the Statewide E. coli TMDL applicability using the Michigan Department of Environment, Great Lakes, and Energy TMDL Watershed Screening Tool. The following District facilities discharge stormwater either directly or indirectly to watersheds included within the Statewide TMDL boundaries as identified in Map 3 below:

1. Bloomfield Hills High School
2. Bloomfield Hills Middle School South-Conant Elementary School-Bloomin' Preschool Conant Complex -
3. Bloomfield Hills Middle School North
4. Booth-Doyle Center
5. Bowers School Farm
6. Dublin Building (Physical Plant Services)
7. East Hills Middle School-Transportation Building Complex
8. Eastover Elementary School
9. Fox Hills Elementary School & Bloomin' Preschool Fox Hills
10. International Academy (Okma Campus)
11. Johnson Nature Center
12. Lone Pine Elementary School & Bloomin' Preschool Lone Pine
13. Pine Lake Property
14. Warehouse (Franklin Building)
15. Way Elementary School
16. West Hills Middle School
17. Wing Lake Development Center

Map 3 – Total Maximum Daily Load Map[4]

4.3 Rouge River TMDL

The Rouge River was placed on the Section 303(d) list for **biota (sedimentation/siltation)**. The Rouge River was place on the list for biota due to poor macroinvertebrate and fish community levels. Surveys conducted indicated that lack of habitat along with siltation/sedimentation were the predominate issues.



The following District facilities discharge stormwater either directly or indirectly within the Rouge River TMDL boundaries as identified in Map 4 below:

1. Bloomfield Hills High School
2. Bloomfield Hills Middle School South-Conant Elementary School-Bloomin' Preschool Conant Complex -
3. Bloomfield Hills Middle School North
4. Booth-Doyle Center
5. Bowers School Farm
6. Dublin Building (Physical Plant Services)
7. East Hills Middle School-Transportation Building Complex
8. Eastover Elementary School
9. Fox Hills Elementary School & Bloomin' Preschool Fox Hills
10. International Academy (Okma Campus)
11. Johnson Nature Center

[4] Total maximum daily load boundaries based on Michigan Department of Environment, Great Lakes, and Energy Shapefiles.

12. Lone Pine Elementary School & Bloomin' Preschool Lone Pine
13. Pine Lake Property
14. Warehouse (Franklin Building)
15. Way Elementary School
16. West Hills Middle School
17. Wing Lake Development Center

Map 4 – Total Maximum Daily Load Map[5]

4.4 TMDL Implementation – Monitoring Plan

4.4.1 Prioritized TMDL Best Management Practices

The below lists stormwater BMPs that are targeted to improve water quality impairments associated by the TMDL.

E. COLI/BIOTA

1. Bloomfield Hills Schools will use its website to provide the public with information regarding pet waste (SEMCOG links). Additionally, SEMCOG pet waste posters are placed at various school buildings.
2. Bloomfield Hills Schools will prohibit illicit discharges, inspect, and monitor suspected illicit discharges, and enforce elimination of the illicit discharges and connections.
3. Bloomfield Hills Schools has reviewed all facilities for cross-connections between the sanitary and storm sewer systems.
4. Bloomfield Hills Schools will conduct hand sweeping in the parking lots/roadways in the spring and fall.

[5] Total maximum daily load boundaries based on Michigan Department of Environment, Great Lakes, and Energy Shapefiles.

5. Bloomfield Hills Schools has established programs for soil erosion and sediment control from new or redevelopment construction. Such developments require permits and inspections for practices to keep exposed soils on site or controlled from runoff.
6. Bloomfield Hills Schools has implemented routine visual inspections of stormwater structural controls.
7. Bloomfield Hills Schools will remove excessive sediments from structural sediment removal systems to maintain the maximum designed performance. Sediments will be disposed of offsite in accordance with Parts 115 or 121.

ALL TMDLs

1. Bloomfield Hills Schools will continue to use its website to provide the public information regarding local TMDL issues (phosphorous, E. coli, biota, and dissolved oxygen TMDL Best Management Practice).
2. Bloomfield Hills Schools will continue to educate staff, faculty, and students using various venues including the **"Seven Simple Steps to Clean Water"** program educational materials developed by the various watershed groups specifically related to these issues on the stormwater management webpage.
3. The district has implemented an Illicit Discharge Regulatory Policy.
4. The district has implemented a Post-Construction Policy and Procedure.
5. The district has implemented an Enforcement Response Procedure.
6. Adequately maintains vegetation around stormwater facilities, ditches, and ponds.
7. Provide training to applicable staff and confirm training from contractors including restrictions on the use of phosphorous containing fertilizers, soaps, cleaners, and other chemicals that could impact the separate storm drain system.

Procedure

Prioritization of BMPs is based on Bloomfield Hills Schools targeted TMDL pollutants. Priority is given to BMPs that reduce E. coli loads and address water quality for biota.

Assessment

The EGLE Stormwater Discharge Permit Application requires a monitoring plan for assessing the effectiveness of the BMPs currently being implemented, or to be implemented, in making progress toward achieving the TMDL pollutant load reduction requirement. Monitoring shall be specifically for the pollutant identified in the TMDL. Monitoring may include wet weather outfall/discharge point monitoring and dry-weather screening. A summary of the monitoring results and conclusions related to TMDLs will be provided during progress reporting.

Bloomfield Hills Schools will conduct the following for applicable TMDLs:

1. Samples will be collected at least twice during the permit cycle; including previous monitoring. The goal is to collect samples from at least 50% of the outfall/discharge points at facilities associated with the TMDL. An effort will be made to sample water quality parameters during a representative (i.e., >0.25" and <1.5") wet weather event over a 24-hour period, and within 30 to 60 minutes of the start of the wet weather event in order to capture the first flush. Monitoring shall be specifically for the pollutant identified in the TMDL. TMDL Sample locations are in Appendix "G".
2. The results of the sampling will be assessed and summarized in a brief assessment report to be shared with the public if requested.

3. Based on a review of the sampling results, BMP implementation will be reviewed for effectiveness and BMPs may be updated or revised to ensure progress toward achieving TMDL pollutant load reductions.

4.4.2 TMDL - BMP Table

BMP	Description of BMP	Timeframe	Measurable Goal	Measure of Assessment	Responsible Party
BMP #4.4.2.1 Webpage	The District will use its website to provide the public with information regarding pet waste (SEMCOG links). Additionally, SEMCOG pet waste posters are placed at various school buildings. The District will continue to use its website to provide the public information regarding local TMDL issues (E. coli and biota (TSS) TMDL Best Management Practice).	Ongoing Throughout Permit Cycle	Posters placed throughout Bloomfield Hills Schools facilities. Material available on webpages.	Maintain links on webpage. Maintain copies of webpage review.	Bloomfield Hills Schools
BMP #4.4.2.2 Outfall Monitoring	Samples will be collected at outfall/discharge points at facilities associated with the TMDL. An effort will be made to sample water quality parameters during a representative (i.e., >0.25" and <1.5") wet weather event over a 24-hour period, and within 30 to 60 minutes of the start of the wet weather event in order to capture the first flush. Monitoring shall be specifically for the pollutant identified in the TMDL.	Twice per Permit Cycle Throughout Permit Cycle	The goal is to collect samples from at least 50% of the outfall/points of discharge at facilities associated with the TMDL.	Copy of inspection paperwork and sample results.	Bloomfield Hills Schools
BMP #4.4.2.3 Effectiveness Review	The results of the sampling will be assessed for the effectiveness of the BMPs currently being implemented for TMDL pollutant load reduction and summarized in an assessment report.	Once per Permit Cycle Throughout Permit Cycle	Report available for public review if requested.	Assessment report completed.	Bloomfield Hills Schools

Enforcement Policies and Tracking Forms

Creation Date: March 29, 2022

District Illicit Discharge/Illegal Dumping Reporting Form
Bloomfield Hills Schools

Date:_____ Time_____

Inspectors:_____

I. ORIGIN OF REPORT

1. Describe the reason for conducting the investigation.

- ❑ Illicit Discharge Inspection (Routine)
- ❑ Facility Staff
- ❑ Citizen Complaint
- ❑ Other _____

II. SOURCE

1. Describe location of source of discharge (company name, address, cross streets, physical features, etc.)

_____

_____

2. Describe the Source:

- ❑ Residential
- ❑ Transportation Facility
- ❑ Construction Site
- ❑ Custodial
- ❑ Other _____

3. Facility of the Source:_____

_____

III. TYPE

1. Describe the type of material discharged:

- ❑ Sanitary Leak/Spill
- ❑ Paint Discharge
- ❑ Dumpster Discharge
- ❑ Cleaning Discharge
- ❑ Unhardened Cement Discharge
- ❑ Paint Discharge
- ❑ Vehicle Repair
- ❑ Vehicle Washing
- ❑ Grey Water Discharge
- ❑ Landscape Material Dumping
- ❑ Cooling Water Discharge
- ❑ Allowable Discharge
- ❑ Other _____

Provide Additional Information:_____

_____

2. Other Sources:

- ❑ Illicit Connection
- ❑ Construction Site
- ❑ Other _____

IV. FOLLOW-UP AND ENFOREMENT ACTIVITIES

1. Describe Corrective Actions:_____

_____

2. Describe Enforcement Action:

- ❑ None/Incident Resolved
- ❑ Verbal Notice
- ❑ Administrative Action
- ❑ Cleaning Discharge

3. Date Resolved:_____

Stormwater Management – Illicit Discharge Regulatory Policy

Bloomfield Hills Schools
Permit Number: MI0060026
Issue date: March 29, 2022

This illicit discharge regulatory policy was developed as a regulatory policy for prevention of pollution from storm water runoff and to protect the quality of the waters of the State of Michigan through the regulation of non-stormwater discharges to the municipal separate storm sewer system (MS4) to the maximum extent practicable as required by federal and state law. This regulatory mechanism establishes methods for controlling the introduction of pollutants into the MS4 in order to comply with the requirements of the National Pollutant Discharge Elimination System (NPDES) permit through the Michigan Department of Environment, Great Lakes, and Energy (EGLE). The objectives of the regulatory mechanism are:

1. To regulate the contribution of pollutants to the MS4 by stormwater discharges by any user.
2. To prohibit illicit connections and discharges into the MS4.
3. To establish authority to investigate, inspect, and monitor suspected illicit discharges.

District properties include all Bloomfield Hills Schools properties.

Illicit Discharge means any discharge to, or seepage into the separate stormwater drainage system that is not composed entirely of stormwater or uncontaminated groundwater except discharges pursuant to an NPDES permit.

Illicit Connection means a physical connection to the MS4 separate stormwater system that primarily conveys non-stormwater discharges other than uncontaminated groundwater into the MS4 separate storm sewer system; or a physical connection not authorized or permitted by the local authority, where a local authority requires authorization or a permit for physical connections.

Prohibitions of Illicit Discharges

1. Prohibition of Illicit Discharges:
    a. Bloomfield Hills Schools prohibits the discharge of non-stormwater discharges into the storm drain system, including but not limited to pollutants or waters containing any pollutants.
    b. No person shall throw, drain, or otherwise discharge, cause, or allow others under its control to throw, drain, or otherwise discharge into the MS4 any pollutants or waters containing any pollutants, other than stormwater.

2. The following discharge is **not prohibited**:
    a. This policy excludes prohibitions from the discharge or flows from firefighting activities to the Bloomfield Hills Schools MS4. Discharge or flows from firefighting activities will be

addressed only if they are identified as significant sources of pollutants to surface waters of the state.

b. The following activities are **not prohibited** under this policy unless they are determined to be significant sources of pollutants to surface waters of the state:
    - Water line flushing and discharges from potable water sources.
    - Landscape irrigation runoff, lawn water runoff, and irrigation waters.
    - Diverted stream flows and flows from riparian habitats and wetlands.
    - Rising groundwater and springs.
    - Uncontaminated groundwater infiltration and seepage.
    - Uncontaminated pumped groundwater, except groundwater cleanups specifically authorized by NPDES permits.
    - Air conditioning condensation.

Prohibition of Illicit Connections

1. The construction, use, maintenance or continued existence of illicit connections to the MS4 is prohibited.
2. This prohibition expressly includes, without limitation, illicit connections made in the past, regardless of whether the connection was permissible under law or practices applicable or prevailing at the time of connection.
3. A person is considered to be in violation of this regulatory mechanism if the person connects a line conveying sewage to the MS4 or allows such a connection to continue.
4. Improper connections in violation of this regulatory mechanism must be disconnected and redirected.
5. Illicit discharge and connections will be eliminated immediately.

Enforcement

The District Stormwater Program Manager will administer and enforce the stormwater management program, including investigate, inspect, and monitor suspected illicit discharges or illicit connections.

If you witness or think a discharge is taking place, please contact the Bloomfield Hills Schools at (248) 830-9475.

Stormwater Management - Post-Construction Policy & Procedure

Bloomfield Hills Schools
Permit Number: MI0060026
Issue date: October 1, 2022

Applies To: As required by the National Pollutant Discharge Elimination System (NPDES) permit for Bloomfield Hills Schools, the scope of this Guideline includes all development and redevelopment projects on District properties that involve either:

a. earth disturbance of one (1) acre or greater,
   OR
b. earth disturbance of less than one (1) acre, but which are part of a larger common plan of development or sale that would disturb one (1) acre or more.

Post-Construction Requirements Policy Statement

Bloomfield Hills Schools development and redevelopment projects on District property are regulated under and must comply with the Bloomfield Hills Schools NPDES permit for stormwater discharges, as issued by the Michigan Department of Environment, Great Lakes and Energy (EGLE). The Stormwater Management Post-Construction Requirements Guideline has been developed to provide guidance regarding responsibilities and actions to meet the NPDES permit conditions for development and redevelopment projects on district owned properties.

Post-Construction Plan for Stormwater Management

The post-construction plan for stormwater management on regulated sites **must** include:

- A minimum treatment volume standard to address water quality impacts.
- Channel protection criteria to address resource impairment resulting from flow volumes and rates.
- Review sites with known soil and/or groundwater contamination, including potential "hot spots" and evaluate the use of infiltration BMPs to meet water quality treatment and channel protection criteria to ensure that infiltration BMPs do not exacerbate existing conditions. Hot spots include areas with the potential for significant pollutant loading such as vehicle service and maintenance facilities, vehicle equipment cleaning facilities, fleet storage areas for buses, and outdoor liquid container storage.
- Drawings showing the location of stormwater control measures and the storm system.
- Details on the proposed stormwater control measures.
- Operation & Maintenance (O&M) requirements.
- Supporting information
    - Calculations used for designing all components of the stormwater management systems.
    - Total Suspended Solids (TSS) design removal rates and supporting manufacturer documentation, if applicable.

- Geotechnical report including soil boring and infiltration test data.

The project team [Architecture, Engineering & Construction, Other Project Manager, Project Developer and/or Contractors] shall develop the post-construction plan for stormwater management in accordance with this guideline and the NPDES permit.

Water Quality Treatment Volume Standard

The minimum treatment volume standard **must** be either:

a. Treat the first one (1) inch of runoff from the entire site.
   OR
b. Treat the runoff generated from ninety percent (90%) of all runoff-producing storms for the project site, as summarized in MDEQ's memo dated March 24, 2006 https://www.michigan.gov/documents/deq/wrd-hsu-ninety-percent_557709_7.pdf

Total Suspended Solids

The treatment methods must be designed on a site-specific basis to achieve the following:

a. A minimum of eighty percent (80%) removal of total suspended solids (TSS), as compared with uncontrolled runoff.
   OR
b. Discharge concentrations of TSS not to exceed 80 milligrams per liter (80mg/L).

A minimum treatment volume standard is not required where site conditions are such that TSS concentrations in storm water discharges will not exceed 80mg/L.

Channel Protection Criteria

The channel protection criteria must maintain post-development site runoff volume and peak flow rate at or below existing levels for all storms up to the 2-year, 24-hour event. "Existing levels" means the runoff volume and peak flow rate for the last land use prior to the planned new development or redevelopment. More restrictive channel protection criteria may be utilized on a case-by-case basis, as appropriate.

Site Plan Review

This policy is to establish a requirement to submit a site plan for review as required by the EGLE NPDES Stormwater Discharge Permit and ensure that water quality objectives, erosion and sediment control requirements, and BMP maintenance are considered to the maximum extent practicable.

Bloomfield Hills Schools shall evaluate proposed construction activities to determine:

- If the activity meets the criteria of a development or redevelopment project with an earth disturbance greater than or equal to 1 acre, or part of a common plan of development resulting in a development or redevelopment activity greater than or equal to 1 acre in size.
- Does the development or redevelopment project discharge to waters of the state, or to a county, city, or township MS4.

If the development or redevelopment project discharges directly to waters of the state, Bloomfield Hills Schools shall comply with the post-construction standards outlined in this SWMP.

If the development or redevelopment project discharges to a regulated county, city, or township MS4, Bloomfield Hills Schools shall submit the site plan for review and approval. Site plan approval by the county, city, or township of an equivalent post-construction standard ensures acceptable compliance with the Bloomfield Hills Schools NPDES MS4 Stormwater Discharge Permit. Bloomfield Hills Schools shall obtain and maintain a copy of the site plan approval *document*.

If the development or redevelopment project discharges to a county, city, or township MS4 that is not regulated or require site plan review, Bloomfield Hills Schools shall comply with the post-construction standards outlined in this SWMP.

Operations & Maintenance Plans

All structural and vegetative stormwater control measures installed as a requirement under this section of the permit shall include a plan for maintaining maximum design performance through long-term operation and maintenance.

Enforcement

The Bloomfield Hills Schools Stormwater Program Manager will administer and enforce the stormwater management program, including maintaining procedures, guidance, information, etc. to aid district staff and contractors in complying with the post-construction requirements for stormwater management.

Appendix "C"

SEMCOG Posters & Illicit Discharge Poster

Creation Date: March 29, 2022

How to Spot Illicit Discharges

Sanitary Sewer Discharge Observations:

- Sanitary Debris
- Staining on pipe
- Heavy Foam
- Gray or Discolored Water
- Odors (sewage, chlorine, rotten eggs and detergents)

Illegal Dumping, Spills, or Floor Drain Connection Observations:

- Oily Sheen
- Trash, non-sanitary debris
- Petroleum odors
- Stained sediment, rocks, and vegetation
- Vehicle bay washout

Agricultural Runoff, Fertilizers, or Sanitary Sewer Waste Observations:

- Algae growth at or near outlet
- Heavy vegetation at or near outlet

What to Report

- **Spills and Contamination to lakes, river and streams**
  District Stormwater Coordinator, MDEQ, Environmental Health Department, Drain Commissioner's Office
- **Suspicious dumping or discharges from pipes**
  District Stormwater Coordinator, MDEQ, Environmental Health Department, Drain Commissioner's Office
- **Sewage on the ground or in surface water**
  District Stormwater Coordinator, Environmental Health Department
- **Large number of dead fish in waterways**
  District Stormwater Coordinator, MDEQ, Environmental Health Department
- **Failing or leaking septic systems**
  District Stormwater Coordinator, Environmental Health Department
- **Construction site soil erosion to waterways**
  District Stormwater Coordinator, local SESC Enforcing Agency
- **Polluted runoff from storage piles/dumpsters entering waterways**
  District Stormwater Coordinator, Environmental Health Department, Drain Commissioner's Office

Remember, you're not just washing your car

Our Water. Our Future.

Ours to Protect

Practice good car care

Did you know there are over four million vehicles in Southeast Michigan? **Practicing good car care helps protect our lakes and streams.**

How? Storm drains and roadside ditches lead to our lakes and streams. So, if motor fluids or dirty water from washing our cars are washed or dumped into the storm drain, it pollutes our local waterways.

What can you do? Simple. **Keep your car tuned and fix leaks** promptly, **recycle used motor oil** and other fluids, **take your car to the carwash or wash your car on the grass.**

Find out more at www.semcog.org.

Brought to you by the Southeast Michigan Partners for Clean Water.

Support provided by SEMCOG, the Southeast Michigan Council of Governments (313-961-4266) and the Rouge River National Wet Weather Demonstration Project.

Remember, you're not just fertilizing your lawn

Our Water. Our Future.

Ours to Protect

Fertilize sparingly and caringly

Storm drains found in our streets and yards empty into our lakes and streams. So, **when we fertilize our lawn we could also be fertilizing our lakes and streams**. While fertilizer is good for our lawn, it's bad for our water. Fertilizer in our lakes and streams causes algae to grow. Algae can form large blooms and uses up oxygen that fish need to survive. With 1.5 million homes in Southeast Michigan, all of us need to be aware of the far-reaching effects of our lawn care practices.

What can you do? Simple. Use a **no or low phosphorus fertilizer,** select a **slow release** fertilizer where at least half of the nitrogen is water insoluble (check the ingredients on the label), keep fertilizer away from lakes, streams, and storm drains, and **sweep excess fertilizer** back onto your lawn. Not only will our lakes and streams thank you, but so will your pocketbook!

Find out more at www.semcog.org.

Brought to you by the Southeast Michigan Partners for Clean Water.

Seven Simple Steps to Clean Water

Our Water. Our Future.

Ours to Protect

1. Help keep pollution out of storm drains
2. Fertilize sparingly and caringly
3. Carefully store and dispose of household cleaners, chemicals, and oil
4. Clean up after your pet
5. Practice good car care
6. Choose earth friendly landscaping
7. Save water

Our Water. Our Future. Ours to Protect.

Find out more at www.semcog.org.

Brought to you by the Southeast Michigan Partners for Clean Water.
Support provided by SEMCOG, the Southeast Michigan Council of Governments (313-961-4266) and the Rouge River National Wet Weather Demonstration Project.

Remember, it's not just toxic to you

Our Water. Our Future.

Ours to Protect

Carefully store and dispose of household cleaners, chemicals, and oil

Did you know that many **household products are dangerous to our pets, kids, and the environment?**
These materials get into our lakes and rivers if washed or dumped into a storm drain or roadside ditch.

What can you do? Simple.

Proper disposal is key. Take household cleaners, pesticides, gasoline, antifreeze, used oil, and other dangerous products to your **community's household hazardous waste collection day.** Contact your community for more information on these events.

Find out more at www.semcog.org.

Brought to you by the Southeast Michigan Partners for Clean Water.

Support provided by SEMCOG, the Southeast Michigan Council of Governments (313-961-4266) and the Rouge River National Wet Weather Demonstration Project.

Remember, you're not just getting rid of weeds and pests

Our Water. Our Future.
Ours to Protect

Choose earth-friendly landscaping

Did you know you can **protect your kids, pets, and the environment** from the harmful effects of herbicides & pesticides by choosing earth-friendly landscaping? These chemicals wash off our lawns and gardens into our storm drains, which lead to our lakes and rivers.

What can you do? Simple.
Spot treat for specific pests and weeds or remove by hand. Mulch around plants. **Water your lawn only when it needs it.** Attract butterflies and birds by **adding plants that are native to Southeast Michigan.**

Find out more at www.semcog.org.

Our Water. Our Future.

Ours to Protect

Clean up after your pet

Did you know that pet waste has bacteria that makes our lakes and rivers unsafe for swimming and other recreational activities?
That happens when **pet waste left on sidewalks or yards gets washed into storm drains**
or roadside ditches that lead directly to our lakes and rivers.

What can you do? Simple.
No matter where you are **dispose of your pet's waste promptly** in the toilet or trash.

Find out more at www.semcog.org.

Brought to you by the Southeast Michigan Partners for Clean Water.

Support provided by SEMCOG, the Southeast Michigan Council of Governments (313-961-4266) and the Rouge River National Wet Weather Demonstration Project.

Remember, it ALL drains to our lakes and rivers

Our Water. Our Future.

Ours to Protect

Keep pollution out of storm drains

Storm drains and roadside ditches lead to our lakes and streams. **So, any oil, pet waste, leaves, or dirty water from washing your car or other outside activities** that enters a storm drain gets into our lakes and streams.

How can you help? Simple. **Use a broom instead of a hose** to clean your driveway. Keep leaves, grass clippings, and trash away from the storm drain, and **never dump motor oil, pet waste, or dirty, soapy water** down the storm drain.
Remember, only rain in the drain!

Find out more at www.semcog.org.

Brought to you by the Southeast Michigan Partners for Clean Water.

Support provided by SEMCOG, the Southeast Michigan Council of Governments (313-961-4266) and the Rouge River National Wet Weather Demonstration Project.

No Cleaning

Routine Storm Sewer System Inspection Table

Building:	"School/Location"		**Client:**	"School District"	
Inspectors:	"Inspectors Name"		**Start Date:**	"Start Date"	"End Date"
			Inspection Type:	"Routine Storm Sewer Inspection or other"	

ID #	Type	Inspected	Standing Water	Color	Odor	Structure Staining	Suds	Oil Sheen	Bacterial Sheen	Sewage	Algae	Slimes	Abnormal Vegetation	Flow Observed	Velocity of Flow	Color of Flow	Blockages	Erosion	Needs Cleaning?	Structural Issues	Structural Trend	Stenciled
"Storm Structure ID" Ex. ADM-01.CB(ADM represents building such as Admin, 01=number of structure, and CB=structure type.	Type of Structure (Catch Basin, Manhole, Pond, Swale, Pipe, etc.)	Was it inspected this round. (Yes or No)	Was there standing water in the structure? (Yes or No)	What color is the standing water if present? (Clear, Cloudy, Brown, White, etc.)	Does the basin have a noticeable odor? (Yes or No)	Is there staining on the interior of the structure? (Yes or No) This could be staining caused by a current illicit discharge, remnants of a past illicit discharge, or natural staining from iron oxidizing bacteria etc.	Are there suds present in the structure (organic suds - caused by aeration/natural causes, soapy suds, or no)	Is there oil sheen present on the water surface in the structure? (Significant - indicative of an illicit discharge, OR No)	Is there bacterial sheen on water surface of the structure? (Yes or No) - We ask this to confirm that a sheen in a photo was bacterial instead of oil.	Is evidence of sewage present in water in structure? (toilet paper, poo, etc.) - (Yes or No)	Is Algae growth present in the structure? (Yes or No)	Are there slimes present in the structure? (Yes or No)	Is there abnormal veg. growth in structure? (Yes or No)	Was there water flow observed in the structures pipes? (No, Trickle(light flow), Intermittent(Indicative of a sump), or continuous(usually occurs during/after a rain event))	What is the estimated velocity of the water flow if present? (N/A, Trickle, slow, moderate, or substantial) Substantial occurs during or after a rain event.	What is the color of the flow within the structure? (N/A, Brown, Yellow, Clear, Cloudy, etc.) Used to be sure there is no evidence of illicit activities during or after rain events.	Are any pipes blocked? (Yes or No) This would be evident if there was a visible blockage in a pipe OR if the water level in the structure is high.	Is there erosion occurring around the structure? (Yes or No)	Does the structure have sediment build-up in the sump or bottom? (Significant - for 50% full sump depth below outpipe or higher, moderate - for 30% to 50% sump depth below outpipe, preventative - for 20% to 30% sump depth, OR no cleaning for below 20%. Or Cleaned)	Are there any issues with the structure itself and how severe is it? - This could be for cracking on the interior/exterior, sink holes, erosion, etc. (Significant, Moderate, Preventative, or None, Repaired-since last inspection, or Partial Repair)	If there is a structural issue, is the structural issue worsening since the previous inspection? (Stable - appears the same/hasn't worsened, Improving - appears better/usually for a repair or for erosion lessening, OR deteriorating - the condition has worsened)	Does the structure have a "No Dumping - Drains to River" stencil in place? (No - means it needs one, Yes - it has one, Update - it has one, but it is fading, OR N/A - the structure is in the grass)

environmental group

Pond Inspection Form

Building:		**Client:**	
Inspectors:			
Date of Inspection:			

Structure Information:

Structure ID:		Number of Inlet(s) (OP):	
Pond Type:		Number of Outlet(s) (DR):	
Age of Pond:		Number of Stabilized Outlets (SO):	

Inlet(s)/Outlet(s) (OP/DR) Observations:

Are there any structural issues with the inlet(s)/outlet(s) (OP/DR)?		Structural Comments:	
Is there excess sediment buildup at the inlet(s)/outlet(s) (OP/DR)?		Are the inlet(s)/outlet(s) (OP/DR) below the water level?	

Are the inlet(s)/outlet(s) (OP/DR) accessible or overgrown with vegetation?

Pond Structure Observations:

Is there grass along the sides of the pond cut between 4" and 9"?		Is there excess vegetation along the sides of the pond (not grass)?	
Are there signs of erosion along the side slopes, berms and/or emergency spillway?		Is there evidence of animal burrows around the sidewalls of the pond?	

Pond Vegetation Observations:

How much emergent vegetation is present in the pond bottom?		Vegetation Comments:	
Is emergent vegetation made up of native or invasive species?		Is there decomposing vegetation or organic matter decaying on the pond bottom?	

General Pond Observations:

Is the pond free of trash/other debris?		Types of trash/debris present:	

General Comments:

Fax: (248) 426-0136
www.archenvgroup.com

Pond Inpsection Table Description

ID #	Enter structure ID
Type	Select from the following options: Retention Pond, Detention Pond, Retention Basin, Detention Basin
Inspected	Select Yes or No. If unable to inspect the structure, please make a comment under "General Comments" as to why you could no inspect the structure
Approximate Age of the Pond	This can be found using the history function in Google Earth for the site. Remember, this is an approximate age determination. We are interested in this information because pond life spans are between 15 and 20 years
Number of Inlet(s) (OP)	Select the number of inlet pipe(s) from the drop down menu
Number of Outlet(s) (DR)	Select the number of outlet pipe(s) from the drop down menu
Number of Stabilized Outlet(s) (SO)	Select the number of stabilized outlet(s) from the drop down menu
issues with the inlet(s)/outlet(s) (OP/DR)?	Examples include detached pipes, missing riprap around the inlet(s), missing stone around DR, etc. Select one of the following options: None, Preventative, Moderate, Signficant, or Repaired. Preventative = beginning signs of deterioration Moderate = signs of deterioration present but does not hinder the function of the structure Significant = deterioration has hindered the function of the structure as it was designed
Structural Comments	Describe the structural issues observed
buildup at the inlet(s)/outlet(s) (OP/DR)?	Examples include pipes that are buried under sediment or sediment levels higher than the bottom of the inlet(s)/outle
/outlet(s) (OP/DR) below the water level?	This could be a sign that the MS4 is backed up causing water to back up into the pond. If you suspect that, please investigate if that is the case. If the MS4 is not backed up, this could be a sign that the pond is not functioning as designed
) accessible or overgrown with vegetation (native or invasive)?	Overgrown vegetation at the inlet(s)/outlet(s) can prevent water from freely flowing in/out of the structure
sides of the pond cut between 4" and 9"?	This is an ideal height range of grass around the pond to stabilize the sidewalls of the pond and to prevent erosion around the side walls of the pond
along the sidewalls of the pond (not grass)	Does the area look overgrown and unkept? Select from the following options: Yes or No
the side slopes, berms and/or emergency overflow?	Select from the following options: Yes or no
urrows around the sidewalls of the pond?	Select from the following options: Yes or No. Animal burrows can destabilize the sidewalls of the pond
vegetation is present in the pond bottom?	Select from the following options: 0%-25%, 25%-50%, or 50%-100%. Use your best judgement to determine this percentage. Ideally, the pond bottom should be made up of around 25% emergent vegetation Emergent Vegetation Definition: Aquatic plants that grow with their roots under water but their leaves and stems above the surface of the water
f native or invasive species (phragmites or purple loosestrife)?	See reference page in the Pond Inspection Reference page for photos of Phragmites and Purple Loosestrife to see if it is present.
Vegetation Comments	If there are invasive species present, please write which ones are present
nic matter decaying on the pond bottom?	Select from the following options: Yes, No, or Unknown. If you can tell, great, this could have impact on DO or could cause flow issues through the pond
Is the pond free of trash/other debris?	Select from the following options: Yes or No. This can include trash/inorganic debris or organic material (like grass clippings, leaves, etc.)
Types of trash/debris present	Select from the following options: Trash, Natural Debris (organic material) or N/A
General Comments	Please add any other comments that you feel are important to note about the pond condition

SOIL EROSION AND SEDIMENTATION CONTROL (SESC) INSPECTION REPORT

DEPARTMENT OF MANAGEMENT AND BUDGET
INFRASTRUCTURE SERVICES, DESIGN AND CONSTRUCTION DIVISION
Second Floor, Stevens T. Mason Building
P.O. Box 30026, Lansing, Michigan 48909

This report is required to document soil erosion and sedimentation control on State of Michigan projects. (Authority: Part 91, PA 451)

REPORT NUMBER	SESC PERMIT NUMBER	REPORT DATE		PERIOD (FROM WHEN - TO WHEN)
INDEX NUMBER(S)	AGENCY NUMBER	FILE NUMBER	CONTRACT NUMBER	DEPARTMENT/UNIVERSITY/COLLEGE
PROJECT NAME				
CONTRACTOR				
PROFESSIONAL				

A. REASON FOR INSPECTION: ☐ Regular Inspection ☐ Post-Rain Event Inspection (explain below)

☐ Weekly ☐ Daily

B. CURRENT WEATHER CONDITIONS:

☐ Sunny ☐ Cloudy ☐ Partly Cloudy ☐ Windy Temperature_____

Precipitation: ☐ Rain ☐ Snow ☐ Sleet ☐ Hail Other (explain) _____

C. DESCRIBE SEVERE WEATHER (if applicable):

D. DESCRIBE WEATHER CONDITIONS SINCE LAST INSPECTION (Date of Last Inspection _____):

E. ARE THE CONTROLS INSTALLED ACCORDING TO THE PLANS AND SPECIFICATIONS? ☐ Yes ☐ No (Describe):

F. ARE THE CONTROLS IN PLACE FUNCTIONING PROPERLY? ☐ Yes ☐ No (Describe):

G. ARE THE CONTROLS BEING PROPERLY MAINTAINED? ☐ Yes ☐ No (Describe):

H. INDICATE THE SESC CONTROLS IN PLACE ON SITE (According to the DMB SESC Keying System):

BLOOMFIELD HILLS SCHOOLS
STORMWATER CONTRACTOR OVERSIGHT RECORD

Bloomfield Hills Schools (BHS) shall implement the procedure requiring contractors hired by the BHS to perform municipal operation and maintenance activities that comply with the BHS pollution prevention and good housekeeping program and contractor oversight to ensure compliance with the BHS National Pollutant Discharge Elimination System (NPDES) Municipal Separate Storm Sewer System (MS4) Storm Water Discharge Permit, Section A. Limitations and Monitoring Requirements, #7 Contractor Requirements and Oversight.

1. Identify the potential pollutant-generating activities and pollutants expected to be exposed to stormwater.
2. Describe the location where the potential pollutant-generating activities will occur.
3. Identify the person responsible for implementing the pollution prevention practice or practices for each pollutant-generating activity.

Please initial each line of the procedure.

_____ Prevent and respond to leaks, spills, and other releases;

_____ Prevent the discharge of spilled and leaked fuels and chemicals from vehicle fueling and maintenance activities;

_____ Prevent the discharge of soaps, solvents, detergents, and wash water from construction materials, including the clean-up of stucco, paint, form release oils, and curing compounds. Collection and proper disposal in a manner to prevent contact with stormwater and prevent discharge of these pollutants.

_____ Minimize the discharge of pollutants from vehicle and equipment washing, wheel wash water and other types of washing (e.g., locating activities away from surface waters and stormwater inlets or conveyance and directing wash waters to sediment basins or traps, using filtration devices such as filter bags or sand filters or using similarly effective controls);

_____ Direct concrete wash water into a leak-proof container or leak-proof settling basin. The container or basin shall be designed so that no overflows can occur due to inadequate sizing or precipitation. Hardened concrete wastes shall be removed and disposed of in a manner consistent with the handling of other construction wastes. Liquid concrete wastes shall be removed and disposed of in a manner consistent with the handling of other construction wash waters and shall not be discharged to surface waters;

_____ Minimize the discharge of pollutants from storage, handling, and disposal of construction products, materials and wastes including (i) building products such as asphalt sealants, copper flashing, roofing materials, adhesives, concrete admixtures; (ii) pesticides, herbicides, insecticides, fertilizers, and landscape materials; and (iii) construction and domestic wastes such as packaging materials, scrap construction materials, masonry products, timber, pipe and electrical cuttings, plastics, Styrofoam, concrete, and other trash or building materials;

_____ Prevent the discharge of fuels, oils, and other petroleum products, hazardous or toxic wastes, and sanitary wastes.

_____ Report any other discharge from the potential pollutant-generating activities not addressed above to Bloomfield Hills Schools.

1.0 INTRODUCTION

ASTI Environmental (ASTI) was retained by Oakland County Parks and Recreation (OCP&R) to conduct a Limited Phase II Environmental Site Assessment (ESA) for the property located at 1219 E. Square Lake Road, Bloomfield Hills, Oakland County, Michigan 48304 (Subject Property). The Subject Property encompasses 85.54 acres of land on three parcels with Parcel IDs C-19-01-376-006 (1219 E. Square Lake Road), C-19-01-451-002 (no address), and C-19-01-451-004 (1383 E. Square Lake Road). A Site Location Map is provided as Figure 1 – Site Location Map. This Limited Phase II ESA was prepared for the benefit of OCP&R and ASTI acknowledges that said party may rely upon the contents and conclusions presented in this report. ASTI understands that OCP&R became an operator of the Subject Property on July 1, 2026.

This Investigation was conducted in accordance with ASTI's proposal dated June 12, 2026.

2.0 PURPOSE AND PROPERTY HISTORY AND INFORMATION

Purpose

ASTI conducted a Phase I ESA of the Subject Property that was completed on June 4, 2026. The Phase I ESA was conducted in accordance with United States Environmental Protection Agency (US EPA) Standards and Practices for All Appropriate Inquiries (AAI, 40 CFR Part 312) and the American Society for Testing and Materials (ASTM) Practice E1527-21. The Phase I ESA results reported the following recognized environmental condition (REC) regarding the Subject Property:

REC: "It was reported that a diesel oil underground storage tank (UST) was recently discovered underneath the northern portion of a cottage at the Subject Property. The tank was located on the hill-facing façade behind a concrete retaining wall. A section of the retaining wall was removed to allow for tank removal. During site reconnaissance, ASTI observed posted signs prohibiting use of the cottage. A pungent oily odor was noted during inspection of the cottage. All that remains of the tank removal activity is a 55-gallon metal drum with impacted soil that was excavated after the discovery. No other information was given, but the former tank appears to have been an orphaned fuel oil tank. There is evidence of a release, which is a REC."

During the site reconnaissance for the Phase I ESA, a buried diesel UST was reported beneath the cottage building but had been removed. When ASTI conducted the Limited Phase II ESA sampling, a cement slab was in-place and intact at the location of the former tank. Therefore, the tank was most likely a heating oil above ground storage tank (AST) used to heat the cottage. The size of the AST was not reported. The purpose of this Limited Phase II ESA was to evaluate whether environmental contamination is present on the Subject Property from the above-listed REC.

Historical Uses of the Subject Property

According to the Phase I ESA, the Subject Property was used for agricultural and residential purposes from at least 1937 until the mid-1970s when it was repurposed as the current farm school. The farm school development continued into the 2010s. The eastern portion appears to have been used as a surface mine in the 1960s, which is around the time the adjoining highway was constructed.

Current Uses of the Subject Property

The Subject Property is currently used as a farm school.

Existing Infrastructure Features

The Subject Property is developed with eight buildings that include two commercial buildings, two farmhouses, three barns, and one cottage used for storage.

Potable water, sewerage, and storm sewers are available to the Subject Property through the City of Bloomfield Hills. Electrical and natural gas utilities are available to the area from DTE Energy.

3.0 SAMPLING LOCATIONS

On September 29, 2026, ASTI advanced three soil borings (SB-1, SB-2, and HA-1) at the Subject Property. The soil borings SB-1 and SB-2 were advanced to depths of 20 feet below ground surface (bgs) using a direct-push Geoprobe® drill rig. Soil boring HA-1 was advanced with a hand auger. The soil boring locations are depicted on Figure 2 – Sample Location Map.

Boring ID, boring location rationale, and boring depth were as follows:

Boring ID	Boring Location	Depth of Boring (bgs)
SB-1	On the central portion of the Subject Property, approximately 330 feet north of Square Lake Road and northwest of the cottage building that housed the AST within a basement enclosure.	20 feet
SB-2	On the central portion of the Subject Property, approximately 330 feet north of Square Lake Road and northwest of the cottage building that housed the AST within a basement enclosure.	20 feet
HA-1	Within the enclosure of the cottage where the AST was formerly located	3 feet

4.0 SAMPLE COLLECTION PROCEDURES

Using the drill rig, soil was extracted from the ground in pre-cleaned, 5-foot-long, acetate liners. For the boring advanced with a stainless-steel hand auger, soil was extracted from the ground in the auger bucket after the floor was cut with a concrete coring machine. Soil encountered during field activities was classified by ASTI's field personnel, examined for visual and/or olfactory evidence of impact, and screened for total volatile organic compounds (VOCs) using a photoionization detector (PID), with notes recorded in a field logbook. Prior to sampling, the PID was calibrated to manufacturer specifications using 100 parts per million (ppm) isobutylene calibration gas. All down-hole equipment was decontaminated using an Alconox® wash and clean water rinse prior to and between borings to minimize the risk of cross contamination of the samples.

One or two soil samples were collected from each soil boring. Each soil sample was collected into one 40-milliliter (ml) glass vial preserved with methanol and one unpreserved 4-ounce glass jar. ASTI collected one duplicate soil sample, DUP-1S, with parent sample SB-2 (9-10') for quality assurance/quality control (QA/QC) purposes. In addition, a methanol blank was retained with the samples during sampling and transport. The samples were placed on ice and submitted to Merit Laboratories, Inc. of Holt, Michigan (Merit), under standard chain-of-custody procedures. The soil samples were analyzed for a combination of the following: VOCs by US EPA Method 8260C and polynuclear aromatic hydrocarbons (PNAs) by US EPA Method 8270D.

Sample depth, sample depth rationale, and analysis are provided in the following table.

Boring	Sample Matrix	Sample Depth (feet bgs)	Rationale for Sample Depth	Analyses
HA-1	Soil	2-3	PID reading of 269.5 ppm and petroleum odor	VOCs and PNAs
SB-1	Soil	5-6	PID reading of 6.3 ppm and petroleum odor	VOCs and PNAs
		9-10	At a clayey sand/sandy clay interface and the anticipated depth beneath a UST	VOCs and PNAs
SB-2	Soil	9-10	At the interface where silty clay went from medium soft to stiff and the anticipated depth beneath a UST	VOCs and PNAs

5.0 PATHWAY EVALUATION

The Michigan Department of Environment, Great Lakes, and Energy (EGLE) Generic Residential Cleanup Criteria (GRCC), under Part 201 of the Natural Resources and Environmental Protection Act 451 of 1994 (NREPA), as amended (Part 201), were used for comparison to the soil analytical data. The specific GRCC were for the following exposure pathways, Drinking Water Protection (DWP), Groundwater Surface Water Interface Protection (GSIP), Direct Contact (DC), Finite Source Volatile Soil Inhalation (VSIC), Soil Volatilization to Indoor Air Inhalation (SVIAI), and Particulate Soil Inhalation (PSI).

Additionally, the soil results were compared to the residential volatilization to indoor air pathway screening levels (VIAP SLs) from EGLE's Guidance Document for the Vapor Intrusion Pathway dated February 2024.

6.0 SOIL AND GROUNDWATER CHARACTERISTICS

The following sections describe the encountered soil and groundwater conditions during the investigation.

Soil

The general subsurface lithology underlying concrete in HA-1, advanced beneath the building basement slab, was a silty sand exhibiting petroleum odors and VOC readings up to 269.5 ppm during screening with the PID. The silty sand extended to at least 3 feet bgs in that boring, which was where drilling refusal was encountered. However, no staining was observed in HA-1. In soil borings SB-1 and SB-2, underlying topsoil, a soil fill comprised of silty sand with trace brick was observed to 7.25 and 5.5 feet bgs, respectively. Petroleum odors were noted in this soil fill with the highest PID reading of 6.3 ppm in SB-1. No staining was observed in the soil fill. In SB-1 and SB-2, underlying the soil fill, a silty clay was present to 20 feet bgs except for occasional clayey sand or silty sand layers. Other than as noted above, no staining or odors were noted, and no VOCs were detected on the PID apart from SB-2 where the VOC readings extended 2 feet into the underlying stratum, but with a maximum reading of 1.8 ppm. For more detail on the encountered stratigraphy, refer to the boring logs included as Attachment A.

Groundwater

No groundwater was encountered in the soil borings advanced during this investigation.

7.0 ANALYTICAL RESULTS

Table 1 presents the laboratory analytical results for the soil samples in comparison to the EGLE Part 201 GRCC and the EGLE residential VIAP SLs.

PNAs

The laboratory reported 2-methylnaphthalene and phenanthrene in soil sample HA-1 (2-3') at concentrations exceeding the GRCC for GSIP and the residential VIAP SL. In addition, acenaphthene, fluorene, 1-methylnaphthalene, and pyrene were detected in this sample, but at concentrations less than the GRCC and VIAP SLs. No other PNAs were detected at or exceeding the laboratory reporting limits in the remaining soil samples.

VOCs

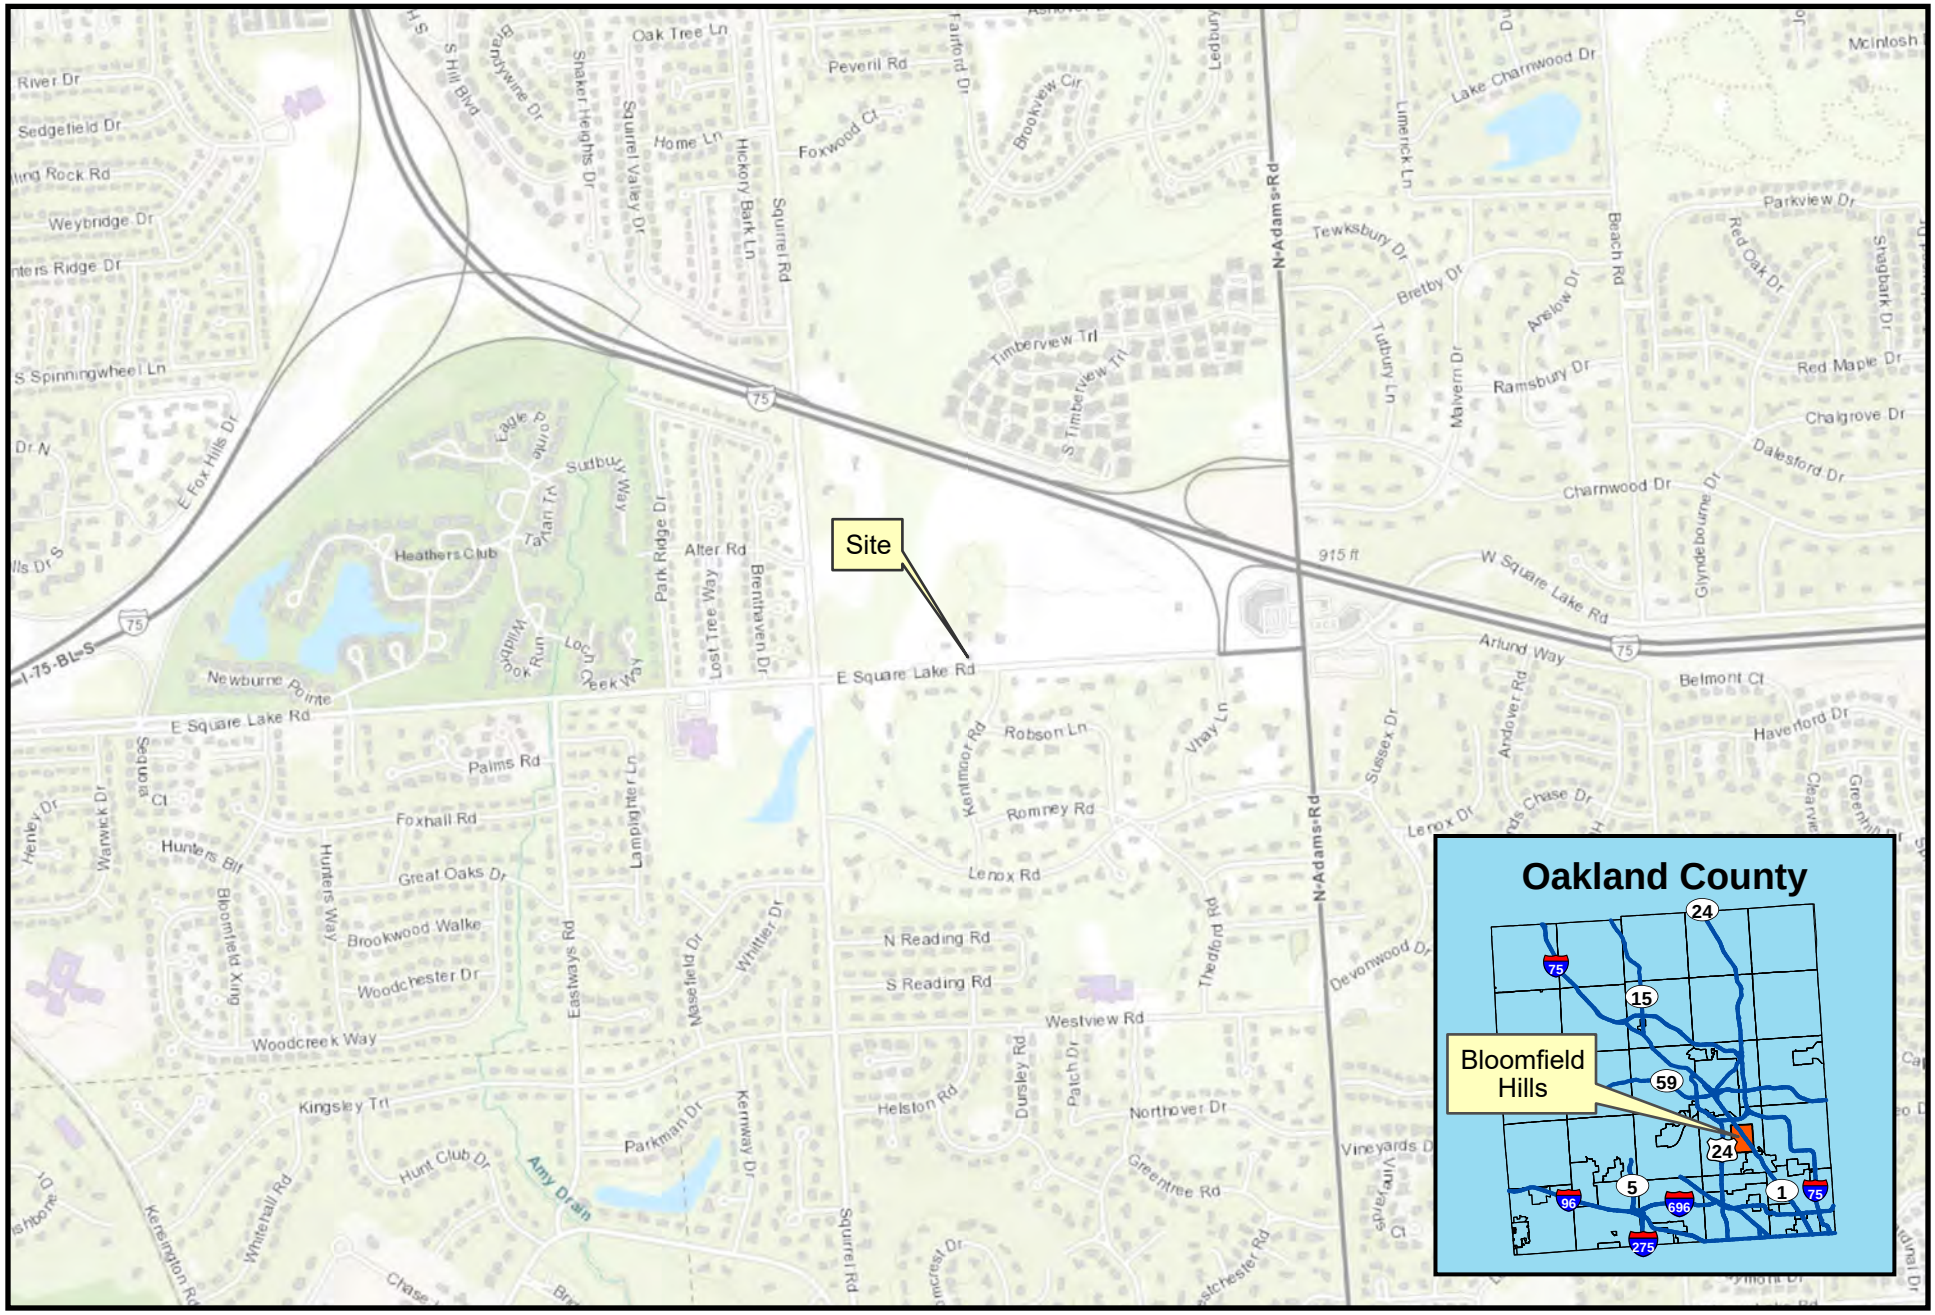
The laboratory reported 1,2,3-trimethylbenzene, 1,2,4-trimethylbenzene, and 1,3,5-trimethylbenzene at concentrations exceeding the residential VIAP SLs in soil sample HA-1 (2-3'). Several other VOCs were detected in this sample, but at concentrations less than the GRCC and VIAP SLs. Acetone and xylenes were detected in SB-1 (5-6') at concentrations less than the

GRCC and VIAP SLs. No other VOCs were detected at or exceeding the laboratory reporting limits in the remaining soil samples.

QA/QC

The duplicate soil sample (DU-1S) results were within acceptable ranges of the parent sample (SB-2 [9-10']). In addition, no VOCs were reported at or exceeding laboratory reporting limits in the methanol blank sample.

The laboratory analytical reports and chain-of-custody documentation are provided in Attachment B.



8.0 CONCLUSIONS

The laboratory analytical results for the samples collected at the Subject Property during this investigation indicate that 2-methylnaphthalene and phenanthrene are present in soil at concentrations exceeding the EGLE Part 201 GRCC for GSIP, therefore, the Subject Property qualifies as a "facility" under Part 201. Specifically, the parcel 19-01-376-006 with address 1219 E. Square Lake Road is the only "facility" parcel.

Because OCP&R became an operator of the Subject Property on July 1, 2026, a Baseline Environmental Assessment (BEA) will not secure liability protection for the pre-existing contamination. However, a Due Care Plan can be completed to assist OCP&R with EGLE Part 20107a due care obligations for the operator of a facility under Part 201. Depending on the use of the cottage building, additional sampling in the form of sub-slab soil gas sampling, or exterior soil gas wells may be installed and sampled to assess the vapor intrusion risk before preparation of the Due Care Plan.

µg/kg - micrograms per kilogram
*Generic Residential Cleanup Criteria (GRCC) per R299.46, October 12, 2023
**Per VI Guidance Document, updated September 2024
Bold and highlighted results exceed one or more GRCC and/or the VIAP SL
~ Parameter not tested for at this location.
CS - Compound specific.
<RL - Not detected. Below the laboratory reporting limit.
DATA- Insufficient physical chemical parameters to calculate a VIAP screening level for specified media. If detections arepresent in specified media, health-based soil vapor value should be used to evaluate risk.
J-Hazardous substance may be present in several isomer forms. Isomer-specific concentrations must be added togetherfor comparison to criteria.
JT- Hazardous substance may be present in several isomer forms.
M- The VIAP screening level may be below target detection limits (TDL).
MM- Hazardous substance is a carcinogen with a mutagenic mode of action.
ID - Inadequate data to develop criterion.
NA - Not available.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
C- The VIAP screening level exceeds the chemical-specific soil saturation screening level (Csat).
D - Calculated criterion exceeds 100%, hence it is reduced to 100% or 1.0e+9 ppb.

General Report Notes

Analytical results relate only to the samples tested, in the condition received by the laboratory.
Methods may be modified for improved performance.
Results reported on a dry weight basis where applicable.
'Not detected' indicates that parameter was not found at a level equal to or greater than the reporting limit (RL).
When MDL results are provided, then 'Not detected' indicates that parameter was not found at a level equal to or greater than the MDL.
40 CFR Part 136 Table II Required Containers, Preservation Techniques and Holding Times for the Clean Water Act specify that samples for acrolein and acrylonitrile, and 2-chloroethylvinyl ether need to be preserved at a pH in the range of 4 to 5 or if not preserved, analyzed within 3 days of sampling.
QA/QC corresponding to this analytical report is a separate document with the same Merit ID reference and is available upon request.
Starred (*) analytes are not NY NELAP accredited.
Samples are held by the lab for 30 days from the final report date unless a written request to hold longer is provided by the client.
Report shall not be reproduced except in full, without the written approval of Merit Laboratories, Inc.
Limits for drinking water samples, are listed as the MCL Limits (Maximum Contaminant Level Concentrations)
PFAS requirement: Section 9.3.8 of U.S. EPA Method 537.1 states "If the method analyte(s) found in the Field Sample is present in the FRB at a concentration greater than 1/3 the MRL, then all samples collected with that FRB are invalid and must be recollected and reanalyzed."
Samples submitted without an accompanying FRB may not be acceptable for compliance purposes.
Wisconsin PFAs analysis: MDL = LOD; RL = LOQ. LOD and LOQ are adjusted for dilution.
All accreditations/certifications held by this laboratory are listed on page 3. Not all accreditations/certifications are applicable to this report.
For a specific list of accredited analytes, please feel free to contact the laboratory or visit https://www.meritlabs.com/certifications.

Report Narrative

Samples SB-2 (9-10') and HA-1 (2-3') mislabeled in lab, the Merit ID numbers have been switched as seen on the COC to accurately reflect the samples analyzed.

Laboratory Accreditations (For Reference Only)

Authority	Accreditation ID
Michigan EGLE	#9956
DOD ELAP & ISO/IEC 17025:2017	#69699 PJLA Testing
WBENC	#2005110032
Ohio VAP	#CL0002
Indiana DOH	#C-MI-07
New York NELAC	#11814
North Carolina DENR	#680
North Carolina DOH	#26702
Pennsylvania DEP	#68-05884
Wisconsin DNR	FID# 399147320

Qualifier Descriptions

Qualifier	Description
!	Result is outside of stated limit criteria
B	Compound also found in associated method blank
E	Concentration exceeds calibration range
F	Analysis run outside of holding time
G	Estimated result due to extraction run outside of holding time
H	Sample submitted and run outside of holding time
I	Matrix interference with internal standard
J	Estimated value less than reporting limit, but greater than MDL
L	Elevated reporting limit due to low sample amount
M	Result reported to MDL not RDL
O	Analysis performed by outside laboratory. See attached report.
R	Preliminary result
S	Surrogate recovery outside of control limits
T	No correction for total solids
X	Elevated reporting limit due to matrix interference
Y	Elevated reporting limit due to high target concentration
b	Value detected less than reporting limit, but greater than MDL
e	Reported value estimated due to interference
j	Analyte also found in associated method blank
o	Associated EIS outside of control limits
p	Benzo(b)Fluoranthene and Benzo(k)Fluoranthene integrated as one peak.
q	Qualifier ion ratio outside of control limits
x	Preserved from bulk sample

Charles Bowers School Farm

Short Summary of how it came to be

The present 85.3 acre Farm was acquired over more than 20 years in three (3) separate transactions - on from the Dowling piece in the E 1/2 of the SW 1/4 and two (2) from the Beardslee property in the SE 1/4.

First Acquisition – 1967

In January 1967 Sydney G Dowling (widow of Wm. E. Dowling) sold 47.9 acres to Wm. Pulte of Pulte Land Development Company. Mr. Pulte had been in the process of purchasing the land via a land contract from Mrs. Dowling with the intention of developing it into a residential subdivision. He determined that the cost per acre to develop the land was too high (over $5,000 per acre) and decides not to proceed with the development project. Pulte sold almost all of this property (46.877 acres) to the Bloomfield Hills School District. This property included the Barn and the various out building. The cost was not listed in the deed.

Second Acquisition – 1975

The BHSD expanded the Farm in 1975 through the acquisition of 7.04 acres of land immediately to the east of the Dowling parcel. This was composed of 300 feet of frontage on Square Lake Road and went back to a depth of about 1,000 feet. This was acquired from the Michigan State Highway Commission which had acquired it back in 1963 from the family of Floyd Beardslee. The MSHC used the land during the construction of I-75. The BHSD paid $80,000 for these 7.04 acres. It was on this parcel that the BHSD build the present Bowers Academy building.

Third Acquisition – 1981 – 1992

The 85.3 acre farm was completed with the acquisition of 33.48 acres from the Michigan Department of Transportation (MDOT) through a land contract entered into in February 1981 and complete with a deed from MDOT in July 1992. This land forms the east most portion of the Farm in the SE ¼ of Section 01. The cost to the BHSD was $243,900.

Bloomfield Hills, MI 48302

RE: Land Lease Between Bloomfield Hills School District
and Preservation Bloomfield
Our File No. 5284 BLT

Dear Steve:

In reviewing my file, I was unable to find a signed copy of the Land Lease between the Bloomfield Hills School District and Preservation Bloomfield for the property on which the Log Cabin and the Barton House are currently located. It is possible that you may have already executed a copy of the Land Lease and I just never received a copy of the same.

Enclosed please find a copy of the Land Lease, which has already been signed by Pat Hardy on behalf of Preservation Bloomfield. If you have not already signed the Land Lease, it would be greatly appreciated if you could fill in the two blanks in Sections 1.01 and 1.02, sign the Land Lease and have your signature witnessed. Once you have signed the Land Lease, please forward the same to me and I will assemble a fully executed copy (in counterparts) and forward a it to both you and Pat.

I will note that the Land Lease refers to an Exhibit A to depict the land that is being leased by the School District to Preservation Bloomfield. It would be greatly appreciated if you could review the enclosed Exhibit A to ascertain whether the same accurately reflects the land being leased.

Thank you very much for your cooperation and courtesy.

Very truly yours,

Derk W. Beckerleg

ARTICLE I GRANT AND TERM

Section 1.01 Leased Premises

In consideration of the mutual promises, covenants and agreements herein contained, the adequacy of which consideration is by both parties confessed and acknowledged, and in further consideration of the rents, covenants and agreements hereinafter reserved and contained on the part of the Tenant to be observed and performed, the Landlord leases to the Tenant, and the Tenant leases from the Landlord certain land located in the Charter Township of Bloomfield, Michigan, which land shall hereinafter be referred to as the "leased premises" and shall consist of those portions of the land depicted on attached **Exhibit A** upon which the Barton House and the Log Cabin are placed upon and areas immediately adjacent to the Barton House and Log Cabin necessary for appropriate landscaping, with the location of the Barton House and Log Cabin on such land to be designated by Landlord. The term "Barton House" as hereinafter used in this Lease, shall mean both the Barton House and the Log Cabin.

The leased premises shall consist of approximately _____ square feet of land located on the Bowers Farm Property in Bloomfield Township where it is contemplated the Barton House structure will be moved from its present location in the City of Bloomfield Hills to the leased premises and the Log Cabin will be moved from its present location in Bloomfield Township to the leased premises. During the term of this lease and thereafter the Barton House shall be the property of and owned by the Tenant or its successors, assigns or transferees. Upon termination of this Lease, the Tenant shall be responsible for the removal of the Barton House from the subject property and/or other disposition of the Barton House as may be agreed to between the Landlord and the Tenant.

Section 1.02 Length of Term

To have and to hold, together with appurtenances, for a term of ninety-nine (99) years, upon the terms and conditions as are herein set forth. Notwithstanding the foregoing, if Landlord determines to sell the leased premises and certain other property because of financial need to Bloomfield Township pursuant to a separate agreement between Landlord and Bloomfield Township, Landlord may terminate this Lease upon not less than _____ (__) prior written notice to Tenant.

Section 1.03 Moving of Barton House

Tenant agrees at Tenant's sole cost and expense to pay for the cost of moving the Barton

F-02 | original source page 2 | APP 1284

premises are ready for use. In conjunction with the Tenant's use of the leased premises and the Barton House, the Landlord shall provide to the Tenant the access to and use of certain parking on the Landlord's property adjacent to the leased premises for the Landlord and Tenant, together with invitees of both the Tenant and the Landlord, with the amount of said parking not being less than that which currently exists on the Landlord's property. In the event that the aforementioned parking is not sufficient to provide adequate parking for the Tenant and the Tenant's invitees for its use of the Barton House and the leased premises, then the Tenant can request the Landlord's approval to allow the Tenant to construct, install and locate an additional hard surface parking lot in a location in the general proximity of the leased premises approved by Landlord and, provided the Landlord approves said additional hard surface parking lot, the Tenant may, at its own expense, construct and install the hard surface parking lot to be utilized by the Tenant and/or its invitees in conjunction with the Barton House and leased premises. The Landlord and/or its invitees shall have equal access to utilize any additional parking constructed and/or installed on the Landlord's property by the Tenant provided that there is no conflict with and/or impairment of Tenant and/or Tenant's invitees parking on said parking lot in connection with a planned event of the Tenant. The Tenant shall be responsible at its sole expense to pay for the cost of bringing all utilities to the leased premises and Barton House subject to the Landlord's prior approval of the plans and specifications of the same. In addition, the Tenant shall be responsible for site improvements including, but not limited to, grading, the installation of retaining walls, if necessary, parking, etc, provided Landlord approves such improvements. All construction and other work performed by Tenant pursuant to this Section 1.04 shall be performed (a) expeditiously, (b) in accordance with plans and specifications approved by Landlord and in compliance with all applicable laws, (c) in a good and workmanlike manner and using new materials of good quality, and (d) in a lien-free manner. Tenant shall restore any portion of Landlord's property damaged or disturbed in connection with the performance of any such construction or work to a condition at least as good as the condition that existed immediately prior to the performance of any such construction or work.

ARTICLE II RENT

Section 2.01 Minimum Rent

The fixed minimum annual rent during the terms of this lease shall be payable by Tenant on the first day of each year, in advance, at the office of the Landlord without any prior demand therefore. The Tenant shall pay to the Landlord the sum of One Dollar ($1.00) per year.

ARTICLE III USE OF PREMISES

F-02 | original source page 3 | APP 1285

affecting the leased premises and the Barton House, and other improvements made by Tenant pursuant to this Lease, and the cleanliness, safety, occupation, condition and use of same. In effecting such compliance, Tenant may require the cooperation and consent of Landlord, which cooperation and consent shall not be unreasonably withheld.

Section 3.02 Care of Premises

A. Tenant shall not perform any acts or carry on any practices which may injure the leased premises and/or the Barton House and shall keep the premises under its control, including the sidewalks and landscaped areas adjacent to the premises, clean and free from rubbish and dirt at all times, and shall store all trash and garbage within the Leased premises and arrange for the regular pickup of such trash and garbage at Tenant's expense. Tenant shall not burn any trash or garbage of any kind in or about the Barton House. If Landlord shall provide any service or facilities for such pickup, then Tenant shall be obligated and shall pay the actual cost as determined by Landlord. Tenant may request a verification of any charge imposed upon Tenant pursuant to this Section.

B. Tenant shall maintain the windows in the Barton House in a neat and clean condition. Tenant shall not make any structural changes in the leased premises without the written consent of Landlord.

C. In the event that the Tenant constructs, installs and locates an additional hard surface parking lot on the Landlord's property, as referred to in Section 1.04 of this Land Lease, the Tenant shall keep said parking lot clean and free from rubbish and shall be responsible for the maintenance of said additional hard surface parking lot and all other improvements made by Tenant pursuant to this Lease (including repairs necessary to keep such improvements in good condition and repair and necessary replacements) and the Landlord shall be responsible for the snow removal from the sidewalks and the snow removal from said additional hard surface parking lot.

D. Tenant shall not erect or install any signs without the previous written consent of the Landlord.

ARTICLE IV UTILITY SERVICES

Section 4.01 Landlord's Obligation to Make Utility Services Available and Option to Supply Such Services.

F-02 | original source page 4 | APP 1286

time to time covering such services. Separate meters shall be installed at Tenant's expense that measure Tenant's usage of such utilities. Landlord shall not be responsible to pay for any utility services.

ARTICLE V MAINTENANCE OF LEASED PREMISES

Section 5.01 Tenant's Obligations For Maintenance

The leased premises, Barton House and appurtenances and all other improvements made by Tenant pursuant to this Lease shall at all times be kept in good order, condition and repair by Tenant, and shall also be kept in a clean, sanitary and safe condition in accordance with the laws of the State of Michigan, and in accordance with all directions, rules and regulations of the health officer, fire marshal, building inspector or other proper officers of the governmental agencies having jurisdiction, at the sole cost and expense of Tenant, and Tenant shall comply with all requirements of law and ordinance. Tenant shall permit no waste, damage or injury to the leased premises, including the Barton House, and Tenant shall at its own cost and expense replace any glass windows, doors, door hardware and frames in the Barton House which may be broken. At the expiration of the tenancy created hereunder, Tenant shall surrender the leased premises in good condition, reasonable wear and tear, loss by fire or other unavoidable casualty excepted. The Landlord shall maintain and/or replace all parking lot poles and ensure that all parking lot lights are operable in the existing parking lots on the Landlord's property and the Tenant shall maintain and/or replace all parking lot poles and ensure that all parking lot lights are operable in any additional parking lots constructed and installed by the Tenant on the Landlord's property.

ARTICLE VI ACCESS RIGHTS

Section 6.01

Landlord shall provide unfettered access to the leased premises from Square Lake Road whereby Tenant and its invites shall have the right to enter the Landlord's property so as to access the leased premises.

ARTICLE VII INSURANCE AND INDEMNITY

Section 7.01 Covenant to Hold Harmless

Tenant shall defend and hold harmless Landlord from any liability for personal injury, injury to property and/or damages that Landlord may incur as a result of claims, demands, costs

F-02 | original source page 5 | APP 1287

negligence. Tenant's obligations under this Section 7.01 shall survive the expiration or earlier termination of this Lease.

Section 7.02 Tenant's Obligation to Carry Public Liability Insurance

Tenant shall, during the entire term hereof, keep in full force and effect a policy of public liability insurance with respect to the demised premises and the business operated by Tenant in the demised premises, in which both Landlord and Tenant shall be named as parties covered thereby, or which provides equivalent protection to and is approved by Landlord, and in which the limits of liability shall be not less than One Million ($1,000,000.00) Dollars per person and Five Million ($5,000,000.00) Dollars for each accident or occurrence for bodily injury and One Million ($1,000,000.00) Dollars for property damages. Such insurance shall provide for coverage on an "occurrences" basis and at least thirty (30) days prior written notice to Landlord of the cancellation of coverage.

Tenant shall furnish Landlord with a certificate or certificates of insurance, or other acceptable evidence that such insurance is in force at all times during the term hereof.

Section 7.03 Insurance Costs

Tenant shall obtain fire and extended coverage insurance (including umbrella coverage) on the full replacement value of the Barton House with no deduction for depreciation and all improvements thereon in any Lease year or portion thereof following the commencement date. The insurance policy provided herein shall provide for thirty (30) day written notice to Landlord of an intent to cancel by the insurance company. The insurance required by this section shall be in an amount acceptable to Landlord and issued by an insurance company acceptable to Landlord within ten (10) days after receipt of written request for same from Landlord.

Tenant shall furnish Landlord with a certificate or certificates of insurance, or other acceptable evidence that such insurance is in force at all times during the term hereof.

ARTICLE VIII ASSIGNMENT AND SUBLETTING

Section 8.01

Tenant agrees not to assign or in any manner transfer this Lease or any estate of interest therein without the previous written consent of Landlord, and not to sublet said leased premises or any part or parts thereof without the previous written consent by Landlord.

F-02 | original source page 6 | APP 1288

refund by Landlord of such rent as may have been paid in advance.

Section 9.02 Partial Condemnation

If all or any portion of the Leased premises including the Barton House, parking lot and landscaped areas shall be taken under eminent domain, the Tenant shall have the right to either rebuild that portion of the building taken or replace that portion of the landscaped area or parking lot taken and the Tenant under said circumstances shall be obligated to continue to be governed by the provisions of this Lease. Provided, however, that in the event that the Tenant shall not rebuild or replace that portion of the Barton House and/or leased premises which are taken then the Tenant shall have the right either to terminate this Lease and declare the same null and void, or, continue in the possession of the remainder of the Leased premises, and shall notify Landlord in writing prior to any such taking of Tenant's intention. In the event Tenant elects to remain in possession, all of the terms herein provided shall continue in effect.

ARTICLE X DESTRUCTION OR DAMAGE TO LEASED PREMISES AND/OR BARTON HOUSE

Section 10.01 Reconstruction of Damages to Premises

In case the leased premises and/or the Barton House shall be partially or totally destroyed by fire or other casualty insurable under full standard extended coverage insurance, as to become partially or totally untenantable, the same shall be repaired as speedily as possible at the expense of Tenant, unless Tenant shall elect not to rebuild as hereinafter provided, in which case the Tenant must terminate this Lease and declare the same null and void by notifying the Landlord in writing of the termination of the Lease.

ARTICLE XI DEFAULT

Section 11.01 Legal Expenses

In case suit shall be brought by Landlord for recovery of possession of the Leased premises, for the recovery of rent or any other amount due under the provisions of this Lease, or because of the breach of any other covenant herein contained on the part of Tenant to be kept or performed, and breach shall be established, Tenant shall pay to Landlord all expenses incurred therefor, including reasonable attorneys' fees. In case suit shall be brought by Tenant for the breach of any covenant herein contained on the part of the Landlord to be kept or performed and said breach shall be established, the Landlord shall pay to Tenant all expenses incurred therefor, including reasonable attorney fees.

F-02 | original source page 7 | APP 1289

the Lease. In addition to the remedies provided in this section, the Landlord may pursue other legal and equitable remedies as provided for by law.

B. Notwithstanding anything contained herein to the contrary, if the Landlord should be in default in the performance of any of the terms or provisions of this Lease and if Tenant shall give to Landlord notice in writing of such default specifying the nature of the default and, if, Landlord shall fail to cure such default within forty-five (45) days, then the Tenant may forward to the Landlord written notice of termination of this Lease. In addition to the remedies provided for in this section, the Tenant may pursue other legal and equitable remedies as provided for by law.

ARTICLE XII TENANT'S PROPERTY

Section 12.01 Notice by Tenant

Tenant shall give immediate notice to Landlord in case of fire or accidents in the Leased premises or in the Barton House, or of defects therein or in any fixtures or equipment

ARTICLE XIII QUIET ENJOYMENT

Section 13.01 Landlord's Covenant

Upon payment by the Tenant of the rents herein provided, and upon the observance and performance of all the covenants, terms and conditions on Tenant's part to be observed and performed, Tenant shall peaceably and quietly hold and enjoy the Leased premises and the Barton House for the term hereby provided without hindrance or interruption by Landlord or any other person or persons lawfully or equitably claiming by, through or under the Landlord, subject, nevertheless, to the terms and conditions of this Lease.

ARTICLE XIV HOLDING OVER, SUCCESSORS

Section 14.01 Holding Over

Any holding over after the expiration of the term hereof, with the consent of the Landlord, shall be construed to be a tenancy from month to month at the rents herein specified (prorated on a **monthly** basis) and shall otherwise be on the terms and conditions herein specified, so far as applicable.

Section 14.02 Successors

F-02 | original source page 8 | APP 1290

Section 15.01 Waiver

One or more waivers of any covenant or condition by Landlord shall not be construed as a waiver of a subsequent breach of the same covenant or condition, and the consent or approval by Landlord to or of any act of Tenant requiring Landlord's consent or approval shall not be deemed to waive or render unnecessary Landlord's consent or approval to or of any subsequent similar act by Tenant.

Section 15.02 Subordination

Tenant hereby grants the right to Landlord to, and Landlord hereby reserves the right to, subject and subordinate this Lease (at all times) to mortgage(s) or deed(s) of trust that may hereafter be placed upon the leased premises and to any and all advances to be made thereunder and to the interest thereon and all renewals, replacements and extensions thereof. Landlord may execute and deliver any instrument or instruments subordinating this Lease to any such mortgage or deed of trust without any further action or consent by Tenant, and Tenant hereby irrevocably appoints the Landlord the attorney-in-fact of the Tenant to execute and deliver any such instrument or instruments for and in the name of the Tenant.

Section 15.03 Notices

Whenever under this Lease a provision is made for notice of any kind, it shall be deemed sufficient notice and service thereof of such notice to Landlord if it is in writing, addressed to the Bloomfield Hills School District, 4175 Andover Rd, Bloomfield Hills, MI 48302 and sent by registered or certified mail with postage prepaid, and if such notice to Tenant is in writing, addressed to the last known post office address of Tenant and sent by registered or certified mail with postage prepaid. Notice need be sent to but one Tenant or Landlord where Tenant or Landlord is more than one person or entity.

Section 15.04 Construction

Nothing contained herein shall be deemed or construed by the parties hereto, nor by any third party, as creating the relationship of principal and agent or of partnership or of joint venture between the parties hereto, it being understood and agreed that neither the method of computation of rent, nor any other provision contained herein, nor any acts of the parties herein, shall be deemed to create any relationship between the parties hereto other than the relationship of Landlord and Tenant. Whenever herein the singular number is used, the same shall include the plural. In the event any language is deleted from this Lease, said language shall be deemed

F-02 | original source page 9 | APP 1291

Section 15.06 Net Lease

It is the intent of the parties that the within Lease be a net Lease.

Section 15.08 Captions and Section Numbers

The captions, section numbers, article numbers and index appearing in this Lease are inserted only as a matter of convenience and in no way define, limit, construe or describe the scope or intent of such sections or articles of this Lease nor in any way affect this Lease.

Section 15.09 Partial Invalidity

If any term, covenant or condition of this Lease or the application thereof shall, to any extent, be invalid or unenforceable, the remainder of this Lease, or the application of such term, covenant or condition other than those to which it is held invalid or unenforceable, shall not be affected thereby and each term, covenant or condition of this Lease shall be valid and be enforced to the fullest extent permitted by law.

Section 15.10 No Option

The submission of this Lease for examination does not constitute a reservation of or option for the Leased premises and this Lease becomes effective as a Lease only upon execution and delivery thereof by Landlord and Tenant.

Section 15.11 Recording

Tenant shall not record this Lease without the written consent of Landlord. Tenant agrees to sign a short form Lease in recordable form at Landlord's request, which may be recorded.

Section 15.12 Set-Off Statement

Tenant agrees within ten (10) days after any request therefor by the Landlord to execute in recordable form and deliver to Landlord a statement, in writing, certifying (a) that this Lease is in full force and effect, (b) the date of commencement of the term of this Lease, (c) that rent is paid currently without set-off or defense thereof, (d) the amount of rent, if any, paid in advance, and (e) that there are no uncured defaults by Landlord or stating those claimed by Tenant.

F-02 | original source page 10 | APP 1292

Section 15.14 Laws of the State of Michigan

This Lease shall be governed by and construed in accordance with the laws of the State of Michigan.

Section 15.15 Consent Not Unreasonably Withheld

Landlord agrees that whenever under this Lease provision is made of Tenant securing the written consent of the Landlord, such consent shall not be unreasonably withheld.

IN WITNESS WHEREOF, Landlord and Tenant have signed their names and affixed their seals on the day and year first above written.

F-02 | original source page 11 | APP 1293

Barton House

Pros:

1. House location sim. to original Farmhouse.
2. Recreates farmyard connection between house, windmill and root cellar for educational opportunities.
3. Locates Log Cabin in natural setting of tree border and gardens.
4. Incorporates Bus turn around area at barn.

Cons:

1. Requires relocation of entrance drive to farm.
2. Potential utility locations (power & water).
3. Future sewer connection.

AGREEMENT

This Agreement made and entered into this _____ day of _____, 2010, by and between the CHARTER TOWNSHIP OF BLOOMFIELD (hereinafter referred to as "the Township"), whose address is 4200 Telegraph Road, P.O. Box 489, Bloomfield Hills, MI 48303-0489, and the BLOOMFIELD HILLS SCHOOL DISTRICT (hereinafter referred to as "the School District"), whose address is 4175 Andover Road, Bloomfield Hills, MI 48302.

RECITALS

A. The School District is the owner of an approximately 5.9 acre parcel of property having the legal description contained on Exhibit A, which is attached hereto and incorporated herein by reference, said property being hereinafter referred to as the "School District Property."

B. A portion of the School District Property is currently being leased by the School District to Preservation Bloomfield for the purpose of the location and operation of the Barton House and Log Cabin, said property being hereinafter referred to as the "Preservation Bloomfield Leased Property," subject to the terms and conditions of a certain Land Lease entered into between the School District and Preservation Bloomfield.

C. In the event that because of financial need and/or any other reason the School District decides to sell the School District Property, the parties hereto are desirous of entering into this Agreement to provide that subject to the terms and conditions contained herein, the School District will be obligated to sell the School District Property to the Township and the Township will be obligated to purchase the School District Property from the School District, and upon said purchase of the School District Property by the Township, the Township shall continue to lease the Preservation Bloomfield Leased Property to Preservation Bloomfield pursuant to the terms and

conditions contained in the existing Land Lease between Preservation Bloomfield and the School District.

D. The parties by entering into this Agreement desire to memorialize their agreement as it relates to the School District's possible sale of the School District Property to the Township.

NOW, THEREFORE, IT IS HEREBY AGREED by and between the parties hereto based upon good and valuable consideration, the receipt of which is acknowledged by both parties, as follows:

1. In the event that the School District decides to sell the School District Property, as legally described on Exhibit A, it shall be obligated to sell the School District Property to the Township and the Township shall be obligated to purchase the School District Property from the School District as provided herein. Upon the School District deciding to sell the School District Property, it shall send a written notice to the Township, which written notice shall indicate the sales price that the School District is seeking for the School District Property and, if the sales price is agreeable to the Township, the Township shall notify the School District of the same in writing and the parties shall, subject to the terms, conditions and provisions contained herein, within sixty (60) days from the date of the Township's written notice of acceptance of the sales price to the School District, close on the sale of the School District Property to the Township. In the event that the sales price that the School District is seeking for the sale of the School District Property is not agreeable to the Township, the Township shall notify the School District of the same in writing, and the Township and School District shall mutually select three independent appraisers who will appraise the School District Property, valuing said property as having a highest and best use as vacant single-family residential property and the median of the three independent appraisers' final conclusions of value shall be the sales price that the School District shall sell the School District Property to the

F-03 | original source page 2 | APP 1296

Township for with the closing on the sale of the School District Property to the Township to take place subject to the terms, conditions and provisions contained herein, within sixty (60) days from the date that the parties are advised in writing as to what the median of the three independent appraisers' final conclusions of value is.

2. On the date that the parties close on the sale of the School District Property, the School District shall convey to the Township by warranty deed fee simple title to the School District Property, subject only to the permitted encumbrances (as defined in Section 3 below), and the Township shall pay to the School District the sales price as established in this Agreement in the form of cash and/or certified check, said payment to be made in one lump sum. The closing of the sale of the School District Property shall take place at a mutually agreed upon location and, except as otherwise provided herein, the School District shall, at closing, deliver and the Township shall accept possession of the School District Property free and clear of the rights of all others and the School District Property shall be vacated at closing. At closing, each party agrees to execute and deliver such other documents called for by this Agreement and any additional documents as are reasonably requested by the other party in order to effectuate the purposes of this Agreement and the consummation of the transactions contemplated hereby.

3. As evidence of title of the School District Property, the School District agrees to furnish to the Township within thirty (30) days from the date that the sales price is established, a commitment for title insurance in an amount not less than the sales price and bearing a date later than the date that the sales price has been established, said title commitment to be from a title company agreeable to both parties, with said title commitment guaranteeing the title of the subject property required for performance of this Agreement. The cost of the title commitment and title insurance policy shall be split equally between the School District and the Township and the School

District and Township will each pay for one half (1/2) of the total cost of the title commitment and title insurance policy. If title can be conveyed as required by this Agreement and all other conditions of this Agreement are met, the Township agrees to complete the purchase of the School District Property when the conditions stated in Section 5 of this Agreement have been satisfied. If the Township objects to the title of the School District Property, the School District shall have twenty-eight (28) days from the date it is notified in writing of the particular defects claimed by the Township to either (1) remedy the title or (2) obtain title insurance as required above satisfactory to the Township. If the School District is unable to remedy the title or obtain title insurance within the time specified, the Township, in its sole discretion, shall have the right to terminate this Agreement unless the Township waives such objections. The exceptions to title shown on the title commitment that the Township does not object to are referred to as the "permitted encumbrances."

4. All taxes and assessments that have become a lien upon the School District Property, whether recorded or not recorded, as of the date of closing shall be paid for by the School District. Current taxes, if any, shall be prorated and adjusted as of the date of the closing in accordance with a due date basis of the municipality or taxing unit in which the School District Property is located. Interest, rents and water bills shall be prorated and adjusted as of the date of closing. The School District shall be responsible for and pay all transfer taxes with respect to the sale of the School District Property to the Township. The School District shall be responsible to pay all special assessments or liens against the property, or past due bills of any kind whatsoever associated with the property, including, but not limited to, water, sewer, natural gas, electricity, telephone, etc., prior to closing.

5. The Township shall have thirty (30) days "due diligence" from the date that the sales price for the School District Property is established to perform feasibility studies, examine the

property and obtain necessary approvals, as well as other required approvals and permits. The School District shall provide to the Township within fourteen (14) days from the date of commencement of the due diligence period all documents within the School District's possession related to the School District Property, including, but not limited to, topographical studies, boundary surveys, mortgage surveys, engineering studies and environmental studies. Within twenty-one (21) days from the date of commencement of the due diligence period, the School District shall provide a current ALTA or mortgage survey to the Township, certified to the Township if applicable. The cost of the current ALTA or mortgage survey to the Township shall be split equally between the parties and both the School District and the Township shall for one half (1/2) of the total cost of the current ALTA or mortgage survey to the Township.

6. At the closing, the School District shall execute an Affidavit attesting to the following:

(a) The property has been used by the School District in compliance with all environmental laws, and that the School District knows of no pollutants, contaminants, toxic waste, hazardous substances or other environmental hazards at, on or under the property.

(b) Other than the Lease between the School District and Preservation Bloomfield pertaining to the Preservation Bloomfield Leased Property, there are no other leases, agreements of sale, options, mortgages, encumbrances, or any other agreements or arrangements, oral or written, relating to, affecting or binding on the School District Property or any part thereof.

(c) The School District has not failed to disclose, in writing, to the Township any material fact or matter relating to the property.

7. In the event that the School District decides to sell the School District Property to the Township and the Township actually purchases and becomes the owner of the School District Property, the Township agrees to continue to lease to Preservation Bloomfield the Preservation

Bloomfield Leased Property subject to the same terms and conditions of the existing Lease between Preservation Bloomfield and the School District.

8. In the event that the School District decides to sell the School District Property to the Township and the Township actually purchases and becomes the owner of the School District Property, the School District shall have the option to notify the Township in writing at the same time it notifies the Township in writing that it is selling the School District Property, that the School District is exercising an option to have the Bowers Academy to remain located and in operation on the School District Property and, if said option is exercised by the School District, the parties agree to and shall execute a lease agreement allowing the Bowers Academy building to remain on the School District Property for a lease term of ninety-nine (99) years with rent of One Dollar ($1.00) per year, with the Bowers Academy to be limited to use only by the School District or its successor entity and to be used only for educational purposes. The School District's use of the Bowers Academy shall not interfere with or impair the Township's use of the remaining portion of the School District Property.

9. Within ninety (90) days from the date the parties close on the sale of the School District Property, the School District shall have the right to remove any of the School District's personal property located on the School District Property and, in the event said personal property is not removed by the School District within the ninety (90) day period, the Township shall at no cost become the owner of the personal property and shall have the right to use and/or dispose of said property in any way the Township desires.

10. The provisions of this Agreement and the covenants, promises, agreements, rights, responsibilities and obligations contained herein shall be binding upon and inure to the benefit of the parties and their successors and assigns.

11. This Agreement shall be construed under the laws of the State of Michigan.

12. This Agreement may be amended and/or modified only by the agreement of the parties in writing.

13. This invalidity or unenforceability of any part or provision of this Agreement shall not affect the validity or enforceability of any other part or provision.

IN WITNESS WHEREOF, the parties hereto have signed their names and affixed their seals on the day and year first above written.

BILL OF SALE AND TERMS OF DONATION

BLOOMFIELD HILLS OAKS, L.L.C., hereinafter referred to as the "Donor," whose address is 6850 Nineteen Mile Road, Sterling Heights, Michigan 48314, and PRESERVATION BLOOMFIELD, hereinafter referred to as the "Donee," whose address is P.O. Box 332, Bloomfield Hills, Michigan 48303, for and in consideration of their respective agreements as set forth herein in the amount of One Dollar ($1.00), agree to the following terms and conditions for Donee to remove a building known as the Barton House from Donor's real property located at 586 East Long Lake Road, Bloomfield Hills, Michigan, hereinafter referred to as "the premises," and for the automatic transfer and conveyance by Donor to Donee of all rights, title and interest in the Barton House upon Donee's commencement of the removal process as described below:

1. Donor, with the intention of severing, conveying and disposing of the Barton House separate from the premises that it is currently part of, effective July 14, 2008, hereby transfers and conveys to Donee all rights, title and interest in the Barton House. Donee and Donor agree and acknowledge that upon Donee commencing with the dismantling and moving of the Barton House from the premises, the Barton House will be personal property, considered as severed and detached from the premises with any possession and ownership rights, title and interest of the Barton House thereby being automatically transferred and conveyed to Donee, subject to Donee's obligations to remove the Barton House from the premises as described herein.

2. Donee has exercised its rights of inspection prior to entering into this agreement and will be accepting the transfer and conveyance of all of Donor's rights, title and interest in and to the Barton House "as is."

3. Upon the automatic transfer and conveyance to Donee of title and possession of the Barton House, risk of loss, destruction or damage of or to the Barton House is upon Donee, notwithstanding the location at which any such loss, destruction or damage may occur.

4. In the absence of a written extension by Donor, Donee must complete the removal of the Barton House from the premises no later than July 15, 2008.

5. Donor has made no verbal or written representations, promises, warranties or statements to Donee regarding the Barton House and its condition, including whether it complies with applicable laws, rules, regulations or standards, its suitability or adaptability to Donee's intended use or any other matter.

6. Donor grants to Donee and its contractors the right to enter in and upon the premises to perform the dismantling and moving of the Barton House. *In consideration for being granted permission to enter upon the Premises for the purpose of the removal of the Barton House, Donee and its contractors agree to defend, indemnify and hold harmless Donor from any and all claims, actions, suits, or damages by Donee or its agents, employees, volunteers, contractors, subcontractors, suppliers or third parties against Donor, its owners, agents, employees or designees arising out of or related in any way to these Terms of Donation, including, but not limited to, the entry upon the premises or removal of the Barton House by Donee or its agents, employees, volunteers, contractors, subcontractors, suppliers or third parties.*

7. Donee further agrees to provide proof of insurance for general liability and workmen's compensation insurance for itself and all contractors entering upon the premises. Such insurance shall name Donor as an additionally insured party and be of a stated minimum amount acceptable to Donor.

8. Donee further agrees that upon conclusion of its activities it shall remove its personal property ~~and restore, at its sole expense, the premises to its original condition~~, except that the Barton House itself shall be removed and not restored or replaced.

9. Donee further agrees to obtain from any and all contractors entering upon the Premises, the contractor's written acknowledgement that its agrees to these Terms of Donation.

10. This Bill of Sale and Terms of Donation shall be governed by and construed in accordance with the laws of the State of Michigan.

In witness whereof, the parties have signed their names and affixed their seals on this 14th day of July, 2008.

EDITOR'S NOTE: Not every house started out as a house. First tenants in some houses were pigs, chickens or students. This is the first in a series of articles on Detroiters who have remodeled unusual buildings into homes.

BY NANCY AYER
Free Press Staff Writer

Everything is topsy-turvy at "Ups and Downs," the Bloomfield Hills home of Mr. and Mrs. William E. Dowling.

A pigsty is a house . . .
A root cellar is a garage . . .
A chicken loft is a bedroom . . .
Doors that pigs ran in and out of are woodboxes . . .
A barn milk room is a laundry . . .
The cattle stalls are a maternity ward for lambs . . .
And a farmhouse was hauled away because it spoiled the view of pigsty and barn.

A

THIS IS the pigsty after remodeling. The wing at right is a recent addition. Mrs. Kemp, Freddy and Christine, and Jacques the dog, frolic around the white fence which surrounds the former pigsty.

TEXT page 1

3 of 4

(A)

SYDNEY DOWLING didn't plan it that way when she first drove down Squirrel Road and saw the white farmhouse, frame sty and red barn on a hill.

She thought of it being just two miles from the commuter's station.

She looked at the hill sloping away from the sty and shadowed with fruit trees and at the baby brook in the orchard. She knew that here she and her husband wouldn't miss their "Windy Hill" home near Oxford so keenly.

As soon as the deed was safe in their files, Mrs. Dowling took a critical look at the house, mentally cutting new windows, and ripping off gingerbread.

But the little pig sty, snuggling in front of the big red barn, kept creeping back like a teasing puppy. And Mrs. Dowling was dreaming of it, remodeled and without the farmhouse cluttering the view from the road.

●

SHE SUMMONED workmen and in a few days the farmhouse was on its way down Squirrel Road to a level spot on their property.

Not too many days later, a carpenter stamped away from the sty. Mrs. Dowling's plan brought an irrated, "Nonsense!"

Then she hired two boys from Auburn Heights. "They could hardly manage hammer and nails," she recalls, but they did what we told them."

Cut came the concrete feeding troughs under the wide windows.

Old white-washed brick covered the frame siding. Slate covered the cement floor.

The boys tore out rendering kettles to make room for a tiny entrance hall and a modern bathroom.

They carried beams and boards from the old carriage shed and used them for a ceiling.

A fireplace went into the living room.

A tiny loft that had been a home for chickens became a bedroom reached by a pulldown stairway.

●

BEFORE THE last coat of paint was dry, the Dowlings had decided to turn the pigsty over to her son,

TEXT-page 2

(B)

They Live In a Pigsty

● Continued from Page One ●

Lt. Comm. Ward Kemp and to remodel the farmhouse for themselves.

This year the former pigsty has a new family and a new room. Mrs. Dowling's other son, Jim Kemp, his wife, Phoebe, and their four children, a cat and a dog moved in.

And a bedroom was added on the orchard side of the house.

A small white board fence encloses the house and keeps little Christine (and the dog, Jacques) away from her grandmother's lambs.

Phoebe does her laundry in the milk room of the barn. It's just a few steps across the yard.

Jim's car is driven nightly into the grass covered garage that was once a root cellar. The top of it, growing with flowering bushes, is a play spot for the children.

●

JUST ACROSS the circular drive from this is the maternity ward of the barn. Here Mrs. Dowling hovers over each new crop of lambs.

Every house has its own quality and at the remodeled pigsty, it's the view. Every room and every window has a special one.

While Phoebe washes dishes in the pullman kitchen, she can watch the white lambs playing in the front yard.

At night when the curtains are open, a flood lamp lights a fir tree and the barn and, in winter, shadows the snow in the fenced pasture.

NEXT SUNDAY: "They Live in a Schoolhouse."

Board of Trustees Meeting
Charter Township of Bloomfield
December 10, 2007

COPY
RECEIVED
JAN 17 2008
BLOOMFIELD HILLS SCHOOLS
BUSINESS SERVICES

PRESENT: Barnett, Buckley, Devine, Payne, Roncelli, Savoie, Stefanes
Also present, Attorney William Hampton

ABSENT: None

ITEM #14 Barton Farmhouse Resolution

The resolution, if adopted, indicates the Township's intent to join with the City of Bloomfield Hills to form a non-profit corporation (501c3). Eventually, the Bloomfield Hills School District and the Bloomfield Historical Society will become part of this corporation.

There has been discussion of the Township and City contributing money, but no decisions have been made. The idea is to have enough funds in the corporation so that the City and Township would not need to contribute.

The resolution incorrectly listed the Bloomfield Historical Society as the Bloomfield Hills Historical Society.

MOTION by Barnett and SUPPORT by Roncelli to APPROVE the Barton Farmhouse Resolution with the Correction Regarding the Historical Society.

STATE OF MICHIGAN
COUNTY OF OAKLAND
CHARTER TOWNSHIP OF BLOOMFIELD

Resolution Establishing Intent to Create Non-Profit Corporation

WHEREAS, the Charter Township of Bloomfield (the "Township") has engaged in discussions with the Bloomfield Hills Board of Education (the "Board of Education"), the City of Bloomfield Hills (the "City") and the Bloomfield Historical Society ("Historical Society") regarding whether to accept the offer of the Barton Farmhouse located in the City for relocation to the Charles L. Bowers Farm owned by the Bloomfield Hills School District (the "School District"); and

WHEREAS, various meetings have been held by the above entities in order to discuss the raising of funds for anticipated costs as well as the various options to create an entity to own the Farmhouse once it is relocated to the School District property known as the Charles L. Bowers Farm; and

WHEREAS, the Bloomfield Hills Board of Education has accepted the offer of the Barton Farmhouse for relocation of the farmhouse to the Charles L. Bowers Farm provided there are no present or future financial obligations for moving, renovating, maintaining, operating or otherwise sustaining the farmhouse; and

WHEREAS, it is the intent of the Township to create a non-profit corporation and enter into an inter-governmental agreement with the City in order to maintain the structure and pay for anticipated expenses including, but not limited to, insurance and

COPY

utilities. It is contemplated that the Historical Society and the School District would be involved in the governance of the non-profit corporation.

NOW, THEREFORE BE IT RESOLVED by the Township Board of the Charter Township of Bloomfield that the Township Board hereby indicates its intent and willingness to join in the formation of a non-profit corporation in conjunction with City of Bloomfield Hills and enter into an intergovernmental agreement with the City and to thereafter apply for 501C-3 designation by the Internal Revenue Service.

AYES: Barnett, Buckley, Devine, Payne, Roncelli, Savoie, Stefanes
NAYS: None

STATE OF MICHIGAN)

THE BENJAMIN-BARTON HOUSE

EXISTING CONDITIONS ASSESSMENT AND MASTER PLAN

JUNE 2011

PRESERVATION BLOOMFIELD

HopkinsBurns DESIGN STUDIO
historic preservation & communities by design

1	Introduction
2	Existing Conditions Assessment
3	Evolution of The Benjamin-Barton House
4	Master Plan
5	Appendix

AVERY READY INDEX 6D0076

Introduction

Preservation Bloomfield is seeking to define the future development of the historic Benjamin-Barton House (the House). To assist in establishing a preferred direction they requested the development of an Existing Conditions Assessment and Master Plan, to:

- Evaluate the condition and historic integrity of the House,
- Provide treatment recommendations to address conditions and facilitate its future use, and
- Identify the potentials for reuse.

This document is intended to help inform the Board of Directors in their decision making process as to next steps in the future restoration/adaptive reuse of the Benjamin-Barton House.

HopkinsBurns Design Studio was retained by Preservation Bloomfield to produce this Existing Conditions Assessment and Master Plan. The HopkinsBurns team consisted of:

Eugene C. Hopkins, FAIA	Historic Preservation Architect
Gregory A. Jones, AIA	Technical Preservation Architect
David Rochlen, Assoc. AIA	Technical Staff/Intern Architect

The Benjamin-Barton House and the Charles L. Bowers School Farm on which it is located are key components of the educational programs of Bloomfield Hills Schools, providing educational opportunities and experiences that benefit all ages. The preservation and restoration of the historic Benjamin-Barton House, moved to the farm site in 2008, is one of the goals of Preservation Bloomfield, a non-profit organization established jointly by the Charter Township of Bloomfield, the City of Bloomfield Hills, the Bloomfield Hills Schools and the Bloomfield Historical Society. This organization is dedicated to the preservation of the heritage of the Bloomfield Hills/Bloomfield Township area. As such, these organizations, as well as the Board of Directors of Preservation Bloomfield are all key stakeholders in the restoration and future development of the House, and the role that it will play in enhancing the educational experiences provided at the School Farm.

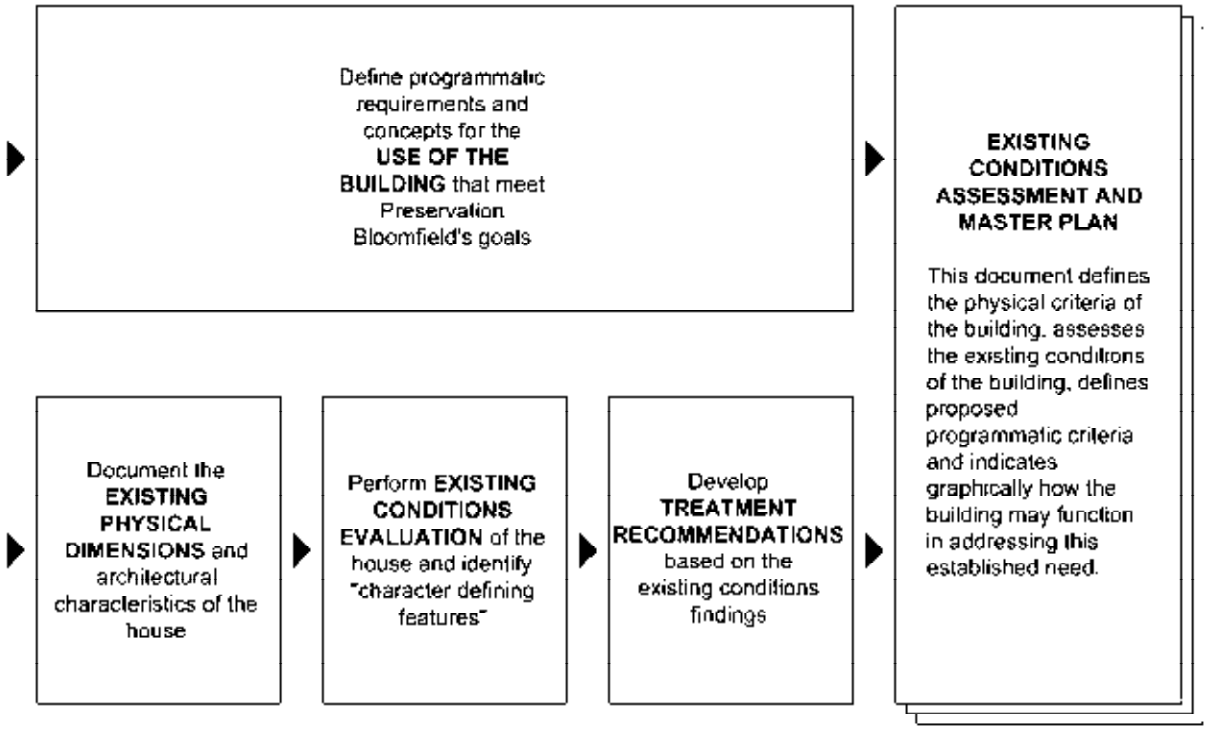
Methodology

The HopkinsBurns Project Team approached this assessment and master plan in a three-pronged effort:

1. Assessment and Treatments: Under the direction of Eugene C. Hopkins, HopkinsBurns staff members Gregory A. Jones and David Rochlen conducted a physical assessment of the House to determine its condition, historic integrity, and evolution. The assessment consisted of visual observations in the basement, first and second floors, and attics, as well as the exterior of the structure. Visual observations were supplemented by minimally invasive probes using small hand tools such as pocket knives and screwdrivers. Observations included selective

demolition and observation holes. Physical assessment was supplemented by examination of the few historic photographs available, and other written historic documentation provided by Preservation Bloomfield. In addition, photographs taken by HopkinsBurns during the 2008 disassembly and moving of the House were studied to determine concealed conditions for clues relating to the evolution of the structure.

Work included the preparation of architectural base drawings that document the existing physical configuration of spaces and architectural characteristics of the structures. These drawings will also serve as the base documents for future design efforts.



The team evaluated the existing conditions of the structure, and character-defining features were identified. Treatments were developed to address conditions and correct deficiencies, while providing the amenities needed to accommodate the activities that will take place in the structure to serve the needs of the School Farm and the community. Other treatments are intended to preserve the historic integrity of the House. Recommended treatments are in compliance with the U. S. Secretary of Interior's Standards for Rehabilitation of Historic Structures.

2. Programming: Eugene C. Hopkins, assisted by David Rochlen met with key project stakeholders in a series of meetings to understand how they envisioned the reuse and preservation of the Benjamin-Barton House as a functioning and useful component of the Bowers Farm to serve community needs and educational goals.

3. Development of Concepts: The desires of stakeholders were merged with historic preservation goals of educating the community and building users about the history of the area in general, as well as the specific history of the House and its meaning in the context of the City and Township. From these meetings, concepts were developed indicating the House's potential reuse as a facility and interpretation as a historic site.

   This effort defined the physical criteria of the building and proposed programmatic criteria. The information is presented graphically in this report, and indicates how the building may function in addressing this established programmatic and historic preservation needs.

The results of three components were merged into a set of recommendations that addressed need treatments to historically rehabilitate the house, as well as provide the necessary building code, life safety, accessibility and infrastructure upgrades to support the new use. The following graphic depicts the components of the methodology.

EXISTING CONDITIONS ASSESSMENT AND MASTER PLAN METHODOLOGY

History

The Benjamin-Barton House, currently located on the Charles L. Bower Farm on East Square Lake Road in the Charter Township of Bloomfield, is a classic example of Greek Revival residential architecture, of the "Upright-and-Wing" style, with an "Umbrage Porch" on the front elevation. It was most likely built by James D. Benjamin sometime after 1842 on Bloomfield Centre Road (now Long Lake Road). The exact date of construction is unknown. During this time period, Bloomfield and the surrounding areas were agrarian communities and the Benjamins used this home as a functional farmhouse.

Until circa 1900, changes to the House were primarily shifts in use of interior rooms, but overall the House still retained its essential original exterior and interior character. Circa 1905, Robert Heacock purchased the House, and it is believed that he made the first major change to the House by expanding the Upright to the rear.

After the turn of the twentieth century, with the subsequent burgeoning prosperity of the city of Detroit, many city-dwellers bought country homes in the accessible farmland of the Bloomfield area. In the 1920s the Hendrie sisters, daughters of George Hendrie, a highly successful businessman in Detroit, purchased the home. Jessie, Margaret and Sarah Hendrie, wealthy socialites from Grosse Pointe, known for their involvement in

charitable activities, significantly expanded the House, making changes to its interior organization and shifting the functional entry to the side of the House. This converted the pragmatic farmhouse into the country estate, suitable for entertaining and weekend retreats, that they dubbed "The Covert."

In 1937, Carl Barton, the founder of the internationally known Barton Malow Construction Company purchased the home. Like the Hendrie family, he too was successful in business and a philanthropist. Over the next seventy years, his family created their version of a comfortable single-family suburban home. They converted the Garage to occupied space, added another attached Garage, and made interior changes.

By 2007, the accumulated changes by the Hendries and Bartons had radically changed the original character of and interior organization of James Benjamin's original house. However, its original Greek Revival core was still generally respected by previous modifications, and was still present even after 150-plus years of modifications.

In February 2006 the farm site and house was purchased by residential developers, the Mancini Development Company, who planned to build large suburban estate homes on the farm site. The House did not fit into their plans, and they offered it to the city of Bloomfield Hills for $1, provided that the city would move the home from the site. The home was saved by the City and Preservation Bloomfield and moved to its current location at Bower's farm in 2008.

Executive Summary

The Benjamin-Barton House, originally built in approximately 1842 on Long Lake Road evolved over 160-plus years from a Greek Revival farmhouse, to an early 20th century rambling country retreat, to a late 20th century comfortable suburban home. At its core, however, it retained most all of the elements of its original farm house character, and as such, is a rare example of the type of residential design and farm lifestyle that once predominated in Bloomfield Township, but has now been almost totally lost to suburban development. Indeed, in 2008, the Benjamin-Barton House itself was threatened by development, and was sold by the developer to Preservation Bloomfield for $1, and its fundamental Greek Revival core was moved to its current site on the Bower's Farm.

Preservation Bloomfield wishes to use the House as part of their educational and outreach programs at the School Farm while preserving it as an example of mid19th century life on a rural farm in Bloomfield Township. To support this effort they commissioned HopkinsBurns Design Studio (HBDS) to produce an Existing Conditions Assessment and Master Plan for the Benjamin-Barton House. The Plan's intent was to assess the condition of the house and its historical integrity, as well as to work with stakeholders to identify programming needs and potential uses for the House. Based on these activities, HBDS and stakeholders collaborated further to determine overall treatments for the house that would preserve and present it as a specimen of 19th century farm house design and life, and as a multi-purpose venue to host community events, tours, and educational activities.

The Master Plan contains a detailed assessment of conditions for all spaces in the house, and recommended treatments to preserve and restore it, as well as to adaptively reuse it for contemporary uses. The west Wing and Parlor on the first floor will be restored to their pre-1920s configuration, while the north portion of the building will be adaptively reused to accommodate modern activities. The north portion of the house will be expanded to the west by rebuilding an interpretation of the pre 1920s kitchen. The existing first floor bathroom will be adapted to be a unisex accessible toilet room. The second floor will be adaptively reused for office functions to support the Bloomfield Historical Society's activities. The building's Period of Significance is circa 1842 to circa 1920. This is the period during which the house evolved to its maturity as a Greek Revival farmhouse. Following this period, the house underwent significant modifications that changed its overall character. The building's Period of Interpretation is pre-Civil War and therefore it will be restored, furnished and decorated as a farm home from that period.

All recommendations are in compliance with the U. S. Secretary of the Interior's Standards for the Rehabilitation of Historic Properties. The building will be brought up to modern building code standards, and provide accessibility to disabled individuals to the maximum extent possible considering its historic character. Recommendations include new infrastructure to support modern needs.

The Master Plan finds that the building is in fundamentally good condition, with necessary repairs addressing the accumulated impact of age, weathering, and the move to the current site. Significant components of the recommended treatments and improvements include a new geothermal heating/cooling system, new plumbing piping throughout the house, new electrical wiring throughout the house, and provision of access to disabled individuals

The Master Plan also provides a five-part evolution of the House that will aid Preservation Bloomfield in their interpretation of the House for users and visitors, and contribute to the historical record of the house. The plan concludes with a documentation of the results of the programming activity, makes recommendations for uses, and proposes changes necessary to accommodate the new uses.

Implementation

In the Implementation Section, recommended treatments and improvements are divided into the following six levels of priorities:

- Priority 1: Stabilize the Building
- Priority 2: Provide Code Compliance and Partial First Floor Restoration
- Priority 3: Complete First Floor Restoration
- Priority 4: Provide Space For Activities
- Priority 5: Reuse Second Floor
- Priority 6: Building Context

Priorities One and Two must be completed before the building can be inhabited.

Costs

Preliminary cost estimates have been developed for the six priority levels. All costs are in 2011 dollars.

- Priority One $73,206
- Priority Two $33,950
- Priority Three $43,033
- Priority Four $82,999
- Priority Five $30,686
- Priority Six $60,000

The sum of Priorities One and Two must be expended before the building can be inhabited. The sum of those two priority levels is $107,156. These numbers do not include Contractor's Profit and Overhead, Support Services, Construction Contingency, Architectural, Structural, Mechanical and Electrical Engineering Fees, Owner Direct Costs or Abatement. Those items amount to an additional amount of $136,969. That amount should be proportionately distributed over the six priority levels to obtain the total cost for each package of work. The total project cost for all phases, including known owner costs, is $470,843. This amount is subject to adjustment as costs are finalized.

Existing Conditions Assessment

Introduction

In this section the assessment observations and recommendations for treatment are presented. Information is provided first for the House's exterior, followed by the interior. Exterior items are depicted on elevation drawings. For the interior, significant items are indicated on floor plans. More routine treatments are indicated on room-by-room inventory sheets. Inventory sheets also indicate the level of surviving historic integrity in each room and identify the character-defining features of each room that should not be compromised so as to protect the building's historic character.

Next, assessment and recommendations for the building's mechanical, electrical and plumbing systems are presented. Finally a building code and accessibility overview is provided, accompanied by recommendations.

Retention of historic materials and components should be given the highest priority as restoration is undertaken. Materials should be repaired where possible rather than replaced. However, when removal is necessary, it is encouraged that materials from the house be donated to a building material reuse center or recycled.

Recommendations address needs for historic rehabilitation of the structure, as well as present improvements necessary to accommodate the proposed new uses for the House.

Exterior Conditions

The exterior is generally in fair to good condition. When the House was moved to the current location, some exterior repairs were carried out, and the House was painted. Some areas that are to receive future treatments or restoration were covered over with an EPDM membrane to provide weather protection until additional treatments are determined.

However, the exterior was not fully restored, and paint covers some areas where additional restoration and repairs are needed.

Refer to the exterior elevations for specific indications of necessary repairs.

Interior Conditions

This portion of the report starts with a *General* section containing discussion of conditions and recommendations for several items that apply universally to most rooms throughout the House that warrant detailed explanation. It is followed by the *Interior Assessments and Recommendations*, where specific conditions in each room are recorded, along with recommendations for treatment. Specific repair items are further noted on the floor plans and elevations that follow the room-by-room survey.

The following items address general issues that apply over the entire structure and are not shown on drawings.

Walls and Wallpaper:

The house had been unheated and vacant for a period of time and this contributed to some cracking and water damage to the plaster and wallpaper. It appears that considerable additional plaster cracking occurred throughout the structure due to the House moving process. This is not surprising because the structure was subject to unavoidable flexure in transit, and after being set on the new foundation, settling has likely occurred. Cracking is concentrated at points where stresses are concentrated, typically radiating out from corners of windows and doors, and at corners where plaster is weak, but also occurs in open flat wall and ceiling areas. Plaster cracking also affects wallpaper because it can cause wallpaper to buckle, distort, or even tear.

Repair of plaster cracks is impossible without at least partial removal of wallpaper. Even if wallpaper can be surgically sliced and peeled back, it is nearly impossible to get cut edges of patterned wallpaper to precisely match again when attempting to re adhere after plaster repairs. Attempting to selectively replace plaster at repaired areas is not advised, because there is almost no likelihood of finding a new paper identical to the existing. Even on the outside chance that a matching paper is still available, slight differences in lots due to inks used could make repairs unattractive and patchy.

Consequently, repair of plaster cracking generally necessitates total removal and replacement of wallpaper. Removal will also more fully reveal the condition of underlying plaster, in that wallpaper can sometimes hide considerable plaster cracking.

It is unfortunate to lose the wallpaper history, however, field investigations suggest that extant wallpaper layers may not be very old. Wallpaper was investigated by peeling back existing layers to reveal underlying layers, and by examining earlier layers concealed behind pieces of trim and crown moldings with the intent of comparing the layers to photographs from the Hendrie era found in the *Afterglow* and *Antiquarian* articles. It was hoped that layers would be found matching the Hendrie photographs and that even earlier layers might be found below that, perhaps giving an indication of wallpaper treatments from the period of significance.

Although earlier layers were observed during the wallpaper investigation, results were inconclusive. Layers found did not clearly match patterns visible in the Hendrie era photographs. It appears that early layers may have been removed as part of previous redecorating campaigns. The only definitive information that was gleaned from this investigation is that it appears that wall surfaces have always been wallpapered and that plaster surfaces did not receive any paint finishes until perhaps the Barton era.

Figure 1. Wallpaper in Parlor, showing earlier layers and picture molding.

It is still possible that total wallpaper removal may provide additional information about early wallpaper finishes in a room, and reveal early or original treatments for possible replication, or assist in identifying compatible off-the-shelf replacement materials and patterns. It is the recommendation of this report that off-the-shelf period wallpaper suitable for the period of interpretation is available and should be used in lieu of custom printed wallpaper.

As part of the restoration and interpretive efforts the Board may wish to leave certain areas of the historic construction visible to visitors as "vignettes" behind clear windows as an educational opportunity.

Windows:

Windows were removed when the House was moved. Five windows (three in the first floor Parlor, and two in the second floor South Bedroom) were restored by Lorri D. Sipes in 2009. The remaining double hung windows are in storage; ankle windows at second floor are still in place. All remaining windows should be restored and reinstalled.

Interior Floors:

It is believed that the original finished floors of the original House were the 1 ¼" X 7 ½" tongue-and-groove boards that are currently visible from the basement, and form the

substrate for the more recent existing finished flooring. It is speculated that the flooring is at least partially intact, however the condition of the boards is not known.

The original floors in all rooms except the Bathrooms have been covered with twentieth century tongue-and-groove strip flooring. The flooring in the Wing is 3 ¼" wide. In other rooms it is 2 ¼" wide. There is clear evidence that the flooring in the Wing and the Parlor has been shimmed to level it, and there is some evidence that shimming has been provided in other rooms as well. It is believed that the Hendries installed all of wood strip flooring, however there is a possibility that they only installed part of the Wing flooring.

The integrity and appearance of the original flooring (current subfloor) is not known, although various cut-outs have been observed in the basement. Exposure of this floor may open up a variety of difficult-to-predict restoration challenges related to patching and matching old worn boards. This may significantly add to the cost of the restoration. It is the judgment of this report that even though the strip flooring dates from after the period of significance, it is compatible with the interpretation of the House. For this reason, it is recommended that the contemporary oak strip flooring not be removed. This does not rule out future removal of the top layer of flooring from the Hendrie period. At that time assessment, repair and restoration of the historic floor can be carried out.

It appears that the subfloor and framing under the Multi-purpose Room are replacements, likely built by the Hendries. Prior to the moving of the House, it was noted that the floor framing under the Hendries' Sitting/Dining Room was all identical and of a more recent vintage that the remainder of the Upright, as evidenced by the 1 ½" wide joists, diagonal subflooring and cross-bracing between joists (20th century construction techniques). It appears that the Hendries completely replaced the floor and framing when they combined the two earlier rooms into their Sitting/Dining space.

Refer to *Open Questions* later in this report for a detailed discussion of the evolution of the floors and framing.

Code /Accessibility Life Safety

The Benjamin-Barton House was evaluated under the Michigan Rehabilitation Code for Existing Buildings (MRCEB), 2009 edition. Within this code, Chapter 11 provides for special provisions for historic structures. Since the House is not designated as a historic structure on the national, state or local level the Historic Buildings chapter (Chapter 11) of the MRCEB cannot be applied.

Preservation Bloomfield is encouraged to pursue determination of eligibility for the National Register of Historic Places from the Michigan Historic Preservation Office (SHPO) for the Barton-Benjamin House. Such designation would protect certain historic elements of the House from modifications necessitated by code and accessibility requirements. It should be noted, however, that if a determination of eligibility is pursued, the fact that the house has been moved from its original context may have an impact on its eligibility.

Under the MRCEB, the House is considered a building undergoing Level Two Alterations with a Change of Occupancy. Evaluation is made under MRCEB Chapter 9 – Change of Occupancy

Occupancy: A3 (Museums, Assembly Halls, Lecture Halls)

Change of Occupancy: from R3 to A3

Construction Type: V-B (combustible)

Fire Sprinklers: Required*

- Per MRCEB, change of occupancy to A3 requires compliance with Michigan Building Code (MBC), which requires sprinklers because the building has an A3 occupancy floor above the level of exit discharge.
- However, the Building Official has indicated that the second floor can be considered a business, non-public occupancy, which may eliminate the sprinkler requirement. The building Official must confirm that the business occupancy can exist without being separated from the A3 occupancy by a fire rated separation.

** May require consultation with Building Official*

Fire Alarm and Detection System: Not Required

- Change of occupancy to A3 requires compliance with MBC; MBC does not require system if occupant load is less than 300. May be provided as an option.

Floor Areas:	Basement	1221 sf
	First Floor	1243 sf
	Second Floor	655 sf
	Total	3119 sf

Occupants:	Basement	3 (@ 1 person/500 sf)
	First Floor	50 (Based on Building Official's opinion of maximum number of occupants)
	Second Floor	5 (@ 1 person/100 sf, excluding stair, hallway and bath)
	Total	58

Number of Exits Required (Change of Occupancy to higher hazard requires compliance with MBC)

Basement	1 required for storage occupancy, 29 or less occupants 1 provided via exterior door
First Floor	2 required for greater than 49 occupants 2 provided via exterior doors
Second Floor	1 required for 49 or less occupants 1 provided via interior stair

Minimum Total Exit Width Required (@ 0.2" per occupant)

Basement	0.6" – Requirement met
First Floor	14.6" – Requirement met
Second Floor	1.4" – Requirement met

Maximum Permitted Floor Area (A3 occupancy; Type V-B Construction):

- 6,000 sf per floor (9,000 sf with automatic sprinkler system).
- Building complies.

Maximum Permitted Height (A3 occupancy; Type V-B Construction):

- 1 story / 40' (2 stories / 60' per with automatic sprinkler system.
- 1 story limitation exceeded without sprinkler system.*

** May require consultation with Building Official*

Exterior Wall Fire Resistance Rating:

- Change of Occupancy to and equal hazard category.
- Existing walls and openings acceptable.

Panic Bars: Not Required

- Occupant load less than 100.

Means of Egress Lighting: Required

- Emergency lights are generally of a style that would detract from the historic character of the House.
- It is recommended that Preservation Bloomfield work with the Building Official to develop strategies emergency lighting that meets life safety needs, while respecting the character of the House.
- A recommended strategy is to wire decorative period fixtures with concealed battery packs to function as emergency lights.
- Contemporary means of egress lighting will be provided in the basement

Exit Signs (MRCEB requires compliance with MBC):

- Basement: Not required
  - Space with only one required exit does not require exit light.
- First Floor: Possibly Not Required*
  - Building Official has stated the opinion that the exits are obviously and clearly identifiable as exits, thus exit lights not required (MBC 1011.1 – Exception 2)
- Second Floor: Not Required
  - Space with only one required exit does not require exit light.

** May require consultation with Building Official*

Vertical Exit Enclosure: Not required

- Stairway not serving more than one adjacent floor.

Accessibility Requirements –MBC Chapter 9:

- Accessible parking required (this can be readily provided).
- Accessible route from accessible parking to building required (this can be readily provided).
- Minimum of one accessible building entrance required (this is provided by the proposed rehabilitation).
- Minimum of one accessible route from entrance to primary function areas is required.
    - First Floor: Primary function areas would be considered Multi Purpose Room, Kitchen/Living, Parlor, and first floor Bathroom. This accessibility requirement would not be met by the proposed rehabilitation because clear door openings are less than 32" measured from face of door to stop.
    - Removal of door leafs and stops at doors between the Multi Purpose Room and Kitchen/Dining Room, and the Kitchen/Dining Room and the Parlor may meet this requirement, but would be detrimental to the character and historic fabric of the House. The door to the first floor bathroom is only 2'-6" wide and thus would have to be widened to meet this requirement. *

      ** The Building Official may rule that the existing conditions meet the intent of the code requirements when combined with alternative means of compliance. Further consultation is recommended.*

    - Second Floor: It is the opinion of this report that the second floor office use does not qualify as a primary function area, because it would contain functions that are not accessible to the public, and that School Farm employees would have access to equivalent facilities at accessible buildings elsewhere on the site.

Accessibility Requirements – Americans with Disabilities Act (ADA)

- Accessible route must be provided to all accessible spaces.
- Alterations to primary function areas that could affect their usability must include an accessible path to the altered area.
- Accessible route to second floor not required (2 story building with 5 or fewer occupants at second floor.
- Altered elements must comply with accessibility requirements.

The general effect of the ADA requirements is the same as the MRCEB requirements above. It should be noted, however, that even if the Building official grants relief from the accessibility requirements of the Michigan Building Code that *does not* provide relief from the similar requirements of the ADA, and the building still would not be in compliance with the ADA. Since the ADA is civil federal rights legislation, the building official cannot grant exemptions from its requirements. It is only

enforced by lawsuits that may be raised by individuals who believe that their accessibility rights have been violated.

Hazardous Materials

Hazardous building materials are often present in historic structures due to the ubiquity of the offending building materials during certain eras and the longevity of the building in question. There is a high probability that at some point in the life of the House, some building products that contain hazardous materials, including asbestos and lead, were utilized and may still be present. HopkinsBurns Design Studio is not certified to identify and assess the risks of hazardous building materials. To that end, it is the recommendation of this report that (1) a hazardous materials specialist is hired to assess the risks and propose an abatement strategy; and (2) the proposed abatement is carried out by contractors who are specifically licensed to perform hazardous material abatement.

Lead

Prior to the late 1970s, lead pigment was a major component in oil-based paints because it contributed to superior hiding power, weathering, resistance to wear and decreased drying times. Lead poisoning is a disease initiated by eating, drinking or inhaling lead and can cause severe health issues and, in extreme cases, death. During the building renovation process, when building materials containing lead may be demolished, scraped, stripped or sawn, there is a high danger of ingesting airborne lead particles. Lead-based paints were banned in 1978. For more information, visit www.epa.gov/lead/.

Asbestos

Asbestos mineral fibers were used in many building materials beginning in the late 1800s and continuing through the first half of the twentieth century. It has been determined that, when inhaled, airborne asbestos fibers can penetrate lung tissue and increase the risk of contracting several serious lung diseases. Today, asbestos is no longer used as a constituent in building products and materials, and has been classified as a carcinogen by regulatory agencies. For more information, visit www.epa.gov/asbestos/.

Building Systems

Electrical Systems:

A new electrical service was provided to the House when it was moved to its current location. The authors of this report have some concern that this service may not be adequate to handle that loads of the new use and building systems. It is recommended that the power requirements of the new use and systems be analyzed to determine the service capacity required.

The new service is not connected to any distribution system at this time.

The existing power and lighting distribution wiring was present when the house was moved, and likely dates from several eras and may represent code requirements that are no longer valid. More importantly, the new use of the House represents a Change of Occupancy from Residential to Assembly under the building and electrical codes. A

Change of Occupancy requires that wiring be brought up to the code requirements of the new occupancy as if it were a new building. This renders the existing distribution system unusable.

In addition, the quantity and distribution of power outlets and switches is not adequate to serve the propose uses in the House, such as for flexible use of the Multi-Purpose Room where a variety of functions might require flexible and convenient access to electrical outlets. Similarly, at the second floor where there will be office use, adequate outlets must be required to accommodate a variety of electrical devices necessary in even the simplest modern office space.

Lighting is viewed in two ways in the House, depending on whether the space in question is a Preservation/Restoration zone, or an Adaptive Reuse zone. In Preservation and Restoration zones, permanent wall or ceiling mounted lighting would not be used so that the historic character from the period of significance can be respected. Instead lighting would be provided by lamps or concealed indirect sources. For energy conservation purposes and to achieve the appropriate color temperature, we recommend using LED lamps in a standard light fixture sockets throughout the building.

In adaptive reuse zones, wall or ceiling fixtures would be permitted to accommodate flexible needs of the various activities that may take place in those spaces. It is recommended that recessed cans or track lighting be used in the Multi-Purpose Room. Rooms such as bathrooms may utilize simple ceiling or wall mounted fixtures period fixtures, or "neutral" design fixtures such as round or elliptical globes.

Similarly, second floor office spaces may use simple period or neutral fixtures on the ceiling or wall, perhaps supplemented with recessed cans or track lights. In office areas, consideration should be given to maintaining low ambient lighting levels and providing task lamps at work areas. This has the combined effect of reducing electrical energy consumption, while avoiding the use of large or numerous modern fixtures that could detract from the historic character of even the Adaptive Reuse spaces.

Code requirements call for Exit Lights and Emergency lights to illuminate the egress path in an emergency.

Telephone and Data:

At a minimum, telephone and data wiring should be provided in the Multi-Purpose Room and the second floor offices. Consideration should be given to providing wi-fi access in the House as an amenity for organizations holding business meetings, conferences or seminars in the House.

Heating and Cooling:

Past heating/cooling systems at the House consisted of hot water boilers, and forced air. These systems were disconnected when the house was moved. Radiators and return and supply grilles still remain in the house.

It is recommended that the House be provided with a new forced air heating and cooling with a ground source heat pump. The heat pump should be connected to the existing geothermal wells already in existence serving the Bowers Farm Academy Building. The wells have capacity to handle the loads of the House. The use of a geothermal heating/cooling system would provide long-term economies in cost and energy usage, and provide an additional opportunity to educate the public on the use of sustainable technologies already started at the Academy Building.

The use of a forced air system necessitates the installation of ductwork in the house. It is challenging to install ductwork in a historic house without compromising the character through the introduction of shafts for vertical ductwork. It appears that the only concealed locations available in the house for vertical ducts are the two triangular spaces formed by the curvature of the stairway. It is not clear at this time if this space is adequate.

As an alternative to a standard forced air system, consideration should be given to use of a high velocity heating and cooling system. These systems use small diameter insulated round flexible ducts that will fit into 2 X 4 stud walls. Heated or cooled air is provided through these ducts at high velocity to compensate for their small diameter. Air is introduced into rooms through approximately 2" diameter orifices which have much less impact on historic character than large air grilles. High velocity systems are fully compatible with ground source heat pumps and geothermal systems.

Plumbing

The House's plumbing system was disconnected from all supply and waste piping at the underside of the line of the first floor when the house was moved. Plumbing piping above the first floor is still intact in walls and cavities. Due to the stresses from the flexing of piping during the moving the house, it possible that the piping has lost its integrity, and is subject to leakage. It is recommended that all supply and waste plumbing piping in the house be replaced with modern code compliant materials. Provide new domestic water and sanitary piping in the basement. Connect domestic water lines to existing line from street. Provide new lift chamber w/ grinder pump and connect to the new sanitary drainage systems serving the Bower's Academy.

It is recommended that existing plumbing fixtures be retained, except as required for accessible bathrooms. It is intended that the existing first floor bathroom become a unisex accessible bathroom, retaining as much of the room's existing tile as possible.

Interior Assessments and Recommendations

Room:	**BASEMENT**
Floor:	Basement
Level of Historic Integrity:	Low. Recent construction, however original first floor framing above has high level of historic integrity.
Character Defining Features:	Wood framing for first floor.

Location	Description	Condition	Recommendations
Basement	Varies	Refer to Sheet 2-4 for conditions and recommendations.	Refer to Sheet 2-4 for conditions and recommendations.

Room:	**THE WING**
Floor:	First
Level of Historic Integrity:	Moderate. Although this room has been much modified during its history, it retains a large portion of its historic integrity from the period of significance, and the portions lost (former bedroom walls) is easily restored. All but one of the original windows with trim survive, with the exception being a window on the north wall that may have once been located where the northwest exterior door is currently located. The northeast door appears to be original. The south door is said to date from the Barton era. Wood base on the west wall appears original; north and south base is newer, likely dating from the Hendrie era, but matches the original closely. The door to the parlor is also original and survives. Some of the existing plaster may be original, however, there have been many repairs. A non-original fireplace has been removed. Portions of the gilded molding survive and have been confirmed to be extant during the Hendrie period. Refer to the Building Evolution for detailed information on changes to this space over the building's history.
Character Defining Features:	Windows with divided lights, paneled doors, opening locations (except non-original opening to stairway and east door on north wall), window and door trim, base, concealed picture molding, spatial configuration (if missing bedroom walls are restored).

Location	Description	Condition	Recommendations
Floor	3 1/4" oak strip, dark stain	Good. Installed over board subfloor Dates from after period of significance, but compatible with character of space.	Clean and selectively refinish.
Walls	Wallpaper on rough grey plaster.	Fair. Scattered plaster cracking, buckled wallpaper. Older wallpaper present under top layer but appears to be after period of significance.	Remove wallpaper to repair plaster cracks; install new period-appropriate wallpaper. Patch plaster at removed door on north wall.
Ceiling	Wallpaper on plaster	Poor Peeling wallpaper in several areas, plaster generally wavy. Plaster & wallpaper likely not original.	Remove wallpaper to repair plaster cracks; paint ceiling.
Base	Painted wood Type 2 (original) on E wall; Type 2	Good.	Scrape, prep and paint.

Location	Description	Condition	Recommendations
	(newer) on N, S & W walls.		
Crown Molding	Large non-original ogee and cove, painted wood; installed over older small gold painted wood molding (visible @ N. wall).	Non-original molding: Fair. Missing on E wall Partially missing on N & S wall. Extent of older concealed molding not known, but believed to be present under non-original molding.	Remove non-original molding; replace any missing older molding to match existing; refinish to match gilding.
Doors	Painted wood paneled	Only two doors (south entrance and north east doors) currently installed; others in storage. Good condition.	Remove west door on north wall, infill. Reinstall stored doors. Scrape, prep and paint remaining doors.
Door Trim	Painted wood Type A	Good. Trim from east wall removed and in storage.	Remove trim for west door on north wall. Reinstall stored trim on east wall. Scrape, prep and paint remaining door trim.
Windows	Wood Double hung, 6/6. South windows restored by Lorri Sipes; west windows removed and in storage.	South windows: Excellent. West windows: need restoration	Restore west windows.
Window Trim	Painted wood Type A	Good.	Reinstall removed trim on west wall. Scrape, prep and paint.
Built-ins	Painted wood book shelves and cabinets	Good. Date from after period of significance.	Remove
Light Fixtures	None	N/A	Provide new historically appropriate light fixtures as needed
HVAC	Radiators under 3 of 4 windows Supply registers in floor	Physical: Fair Operation: Unknown. Radiators are contemporary style.	Remove. New heating system will be forced air. Provide compatible grilles.
Plumbing	None	N/A	N/A
Power	5 duplex outlets in base, 1 in wall. No switches.	Unknown. Not in compliance with current building codes.	Replace all switches and outlets, add new to accommodate new use.

Room:	**PARLOR**
Floor:	First
Level of Historic Integrity:	High. All doors, windows and trim except door to bathroom, appear to be original. The opening to the bathroom is believed to be original, however, the paneled door has a paint scheme that matches wing (presumably it was relocated from the former bedroom in the wing). The highly ornamental wood base appears to be original. Plaster appears to be original. Original coffin door has been covered over.
Character Defining Features:	Windows with divided lights, paneled doors, opening locations, window and door trim, base, spatial configuration.

Location	Description	Condition	Recommendations
Floor	2 1/4" oak strip	Good. Dates from after period of significance, but is judged to be compatible.	Clean and selectively refinish.
Walls	Painted grass cloth on plaster.	Fair. Peeling from plaster at corners; buckled. Dates from after period of significance.	Remove; provide new period wallpaper.
Ceiling	Painted plaster	Good	Prep and paint.
Base	11 1/4" painted wood Type 1	Good. Highly ornamental profile. Shoe mold fully removed on W, S & E walls, partially removed on N wall	Replace missing shoe mold. Scrape, prep and paint.
Crown Molding	Small, painted wood	Good	Scrape, prep and paint.
Doors	Painted wood paneled	Good. Door to bathroom not original.	Scrape, prep and paint. Provide new coffin door.
Door Trim	Painted wood Type B - Greek Revival with taper.	Good. Door trim at bathroom door not original.	Scrape, prep and paint. Provide trim for new coffin door.
Windows	Wood Double hung, 6/6. Restored by Lorri Sipes	Excellent	N/A
Window Trim	Painted wood Type B - Greek Revival with taper	Good	Scrape, prep and paint.
Built-ins	Two painted wood closets	Good. Date from after period of significance.	Remove
Light Fixtures	None	N/A	N/A
HVAC	Radiators under the two south	Physical: Good	Remove. New heating system will

Location	Description	Condition	Recommendations
	windows Supply registers in floor	Operation: Unknown	be forced air. Provide compatible grilles.
Power	3 duplex outlets in base, 1 in wall, 2 in floor. No switches.	Unknown. Not in compliance with current building codes.	Replace all switches and outlets, add new to accommodate new use.

Room:	**MULTI-PURPOSE**
Floor:	First
Level of Historic Integrity:	Low. French doors, projected window (now removed), fireplace (now removed) date from after period of significance. West wall was removed by the Hendries (currently infilled by temporary wall). These modifications obliterated original window configuration in room. Current trim appears to date from the Hendrie period. It is an imitation of the Parlor window trim, but lacks the taper. Portions of wood base appear to be original. Some plaster appears to be original, but there have been several modifications and infills.
Character Defining Features:	Crown molding, base. If restored: Double hung windows and locations.

Location	Description	Condition	Recommendations
Floor	2 1/4" oak strip, dark stain	Good. Floor, subfloor, and framing are believed to replacements. Considered compatible with the period of significance.	Clean and selectively refinish.
Walls	Painted on fabric wallpaper on plaster	Fair. 20 LF of plaster cracking	Remove wallpaper; prep and paint. Remove plaster and replace with gypsum wallboard.
Ceiling	Painted plaster	Fair Some peeling paint	Prep and paint. Remove plaster and replace with gypsum wallboard.
Base	7 1/4" Type 3	Good	Scrape, prep and paint.
Crown Molding	Painted wood, small	Good Some portion missing on N wall	Scrape, prep and paint; replace missing parts.
Doors	Wood/Glass French doors on north wall	Good	After period of significance – remove; infill opening to accommodate new double hung windows.
Door Trim	Painted wood Type D	Good	Existing French door opening will not be retained. Remove trim, salvage for possible reinstallation at new windows
Windows	One projected window – removed, temporary infill.	Removed	East wall: remove projected window remnants; rebuild jambs, partially infill opening, provide new wood double hung, 6/6 window to match typical. Provide

Location	Description	Condition	Recommendations
			two new wood 6/6 double hung windows at north wall
Window Trim	Painted wood Type D - Greek Revival with no taper	Good	Existing window opening will be resized to accommodate a new window. Remove trim, salvage for possible reinstallation, provide new trim where required.
Light Fixtures	None	N/A	Provide new light fixtures as required
HVAC	Radiator under E wall	Physical: Good Operation: Unknown	Remove. New heating system will be forced air. Provide compatible grilles.
Power	2 duplex outlets in base, 4 in wall. No switches.	Unknown. Not in compliance with current building codes.	Replace all switches and outlets, add new to accommodate new use.

Room:	**BATH**
Floor:	First
Level of Historic Integrity:	Low from period of significance, but high integrity from an era after the period of significance (bathroom dates from circa 1920-1926). It is a relatively pristine example of a bathroom from that era, with all fixtures and features consistent with the era of the bathroom. Compatible with the house's character. Plaster appears to be non-original (plaster on metal lath).
Character Defining Features:	Windows with divided lights, paneled doors, opening locations, window and door trim, spatial configuration, ceramic tile, sconces and fixtures.

Location	Description	Condition	Recommendations
Floor	Hexagonal porcelain ceramic tile	Fair Some cracking	Retain, repair and clean.
Walls	Painted wallpaper on plaster	Fair Buckled at corners	Remove wallpaper, prep. and paint.
Walls – Wainscot	Rectangular high gloss glazed 3 x 6 ceramic tile	Good A few minor cracks	Retain, repair and clean.
Ceiling	Painted wallpaper on plaster.	Fair Buckled at corners	Remove and paint ceiling.
Base	High gloss glazed ceramic tile	Good	Retain, repair and clean.
Crown Molding	None	N/A	N/A
Doors	Painted wood	Good	Scrape, prep and paint.
Door Trim	Painted wood Type A	Good	Scrape, prep and paint.
Windows	Wood 6/6 double hung	Removed, in storage Sash contains glass with etched historic signature	Restore, reinstall Alternative: retain sash with signature as historic artifact and replace with new to match
Window Trim	Painted wood Type A	Good	Scrape, prep and paint.
Built-ins	None	N/A	N/A
Light Fixtures	Wall-mounted switched incandescent "flame" fixtures	Physical: Fair – needs cleaning	Restore

Location	Description	Condition	Recommendations
	flanking mirror	Operation: Unknown	
HVAC	Radiator under window, circa 1940's.	Physical: Fair Operation: Unknown	Remove. New heating system will be forced air. Provide compatible grilles.
Plumbing	Cast-iron tub Ceramic toilet Ceramic sink with 2 metal legs	Physical: Fair Operation: Unknown	Retain
Power	1 duplex outlet on wall. 1 switch on wall.	Unknown. Not in compliance with current building codes.	Replace all switches and outlets, add new to accommodate new use.

NOTE: This bathroom is to be retained and modified to accommodate disabled individuals. Interior features will be retained where possible.

Room:	**STAIR HALL**
Floor:	First
Level of Historic Integrity:	Low from period of significance. High from period after period of significance (current configuration of this space underwent major modifications during a remodeling by the Hendries, circa 1920 -1926) that removed the original stair configuration. A door on north wall from Hendrie period, (possibly earlier) has been removed. Plaster and gypsum wallboard are generally not original.
Character Defining Features:	From period after period of significance: paneled doors, opening locations, door trim, base, detailing related to stair, spatial configuration.

Location	Description	Condition	Recommendations
Floor	2 1/4" oak strip, dark strip	Good	Clean and selectively refinish.
Walls	Painted plaster (south wall), gypsum wallboard and plaster on north wall.	Fair Peeling, and buckled at corners.	Remove, repair plaster cracks. Replace with period wallpaper.
Ceiling	Painted wallpaper	Fair. Cracking plaster, buckled wallpaper (30 lf)	Prep and paint
Base	Painted wood, Type 3 (north, west and east walls); a composite base on south wall.	Good	Scrape, prep and paint.
Crown Molding	None	N/A	N/A
Doors	Painted wood paneled	Good	Scrape, prep and paint.
Door Trim	Painted wood Type D	Good	Scrape, prep and paint.
Light Fixtures	None	N/A	N/A
HVAC	Modern return air grille on north wall.	Currently not connected.	Possibly retain for new HVAC system.
Power	3 duplex outlets in base, 1 double switch in wall.	Unknown. Not in compliance with current building codes.	Replace all switches and outlets, add new to accommodate new use.

Room:	**STAIR**
Floor:	First to Second
Level of Historic Integrity:	Low from period of significance. High from period after period of significance (current configuration of this space dates a remodeling by the Hendries circa 1920 -1926). Door on north wall from Hendrie period (and possibly earlier) removed.
Character Defining Features:	From period after period of significance: Stairway, handrail, balusters and related detailing and trim.

Location	Description	Condition	Recommendations
Risers	14 risers, 7 3/4" height Medium-stained oak	Good	Clean, selectively refinish.
Tread	Outside depth: 14” Inside depth: 5 1/2" Medium-stained oak	Good.	Clean, selectively refinish.
Handrail	Inside handrail: medium-stained 26” height No outside handrail	Good; slightly loose.	Clean, tighten.
Balusters	Painted wood	Good	Clean
Walls	Painted plaster on metal lath (curved).	Good. Previous wallpaper appears to have been removed.	Install period wallpaper.
Ceiling	See Second floor Stair Hall.	N/A	N/A
Base	Painted wood. Composite design	Good	Scrape, prep and paint.
Light Fixtures	See second floor hall.	N/A	N/A
Power	None	N/A	N/A

Room:	**STAIR HALL**
Floor:	Second
Level of Historic Integrity:	Low from period of significance. High from period after period of significance (current configuration of this space underwent major modifications during a remodeling by the Hendries, circa 1920 -1926) that removed the original stair configuration.
Character Defining Features:	From period after period of significance: paneled doors, opening locations, door trim, base, detailing related to stair, spatial configuration.

Location	Description	Condition	Recommendations
Floor	2 1/4" oak strip, light stain	Good	Scrape, prep and paint.
Walls	Painted wallpaper on plaster.	Good	Minor spackle repairs; prep and paint
Ceiling	Painted wallpaper	Good	Minor spackle repairs; prep and paint
Base	Painted wood Type 3	Good	Scrape, prep and paint.
Doors	Painted wood paneled	Good	Scrape, prep and paint.
Door Trim	Painted wood Type A	Good	Scrape, prep and paint.
Windows	None	N/A	N/A
Window Trim	None	N/A	N/A
Built-ins	Wood cabinets on west wall - painted	Good	Prep and paint
Light Fixtures	Switched overhead porcelain socket.	Non-historic, utilitarian.	Replace with compatible modern fixture.
HVAC	None	N/A	N/A
Power	1 switch on wall.	Unknown. Not in compliance with current building codes.	Replace all switches and outlets, add new to accommodate new use. Provide new light fixtures as needed.

Room:	**NORTH BEDROOM**
Floor:	Second
Level of Historic Integrity:	Moderate. Original east window with trim, and spatial configuration survive. North window and trim was relocated to current location during the Hendrie era, after the period of significance. Wood base appears to be original. Built-ins on south wall date from after the period of significance. Plaster throughout room likely non-original.
Character Defining Features:	Windows with divided lights, paneled doors, opening locations, window and door trim, base, spatial configuration.

Location	Description	Condition	Recommendations
Floor	2 1/4" oak strip	Good	Clean and selectively refinish.
Walls	Wallpaper over plaster	Fair. Some plaster cracking. Plaster is very hard – entire room may have been replastered.	Remove wallpaper, repair cracked plaster, Provide new period wallpaper.
Ceiling	Wallpaper over plaster	Fair Some plaster cracking	Remove wallpaper, repair cracked plaster, Provide new period wallpaper.
Base	7 1/2" Type 3	Good	Scrape, prep and paint.
Doors	Painted wood	Good	Scrape, prep and paint.
Door Trim	Painted wood Type A	Good	Scrape, prep and paint.
Windows	East wall: wood side-hinged, inswinging casement, 3 lights. North wall: Paired wood double hung 6/6.	Casement: good: North double hung windows removed, in storage. North window location not original.	Install two new or salvaged double hung windows on north wall at original locations. Casement: Restore
Window Trim	Painted wood Type A	Good. North windows not at original location.	At casement: Scrape, prep and paint. Provide new trim at new/salvaged north windows.
Built-ins	Closet and built in desk/shelves: painted wood	Good. Date from after period of significance (Barton era, post 1937)	Retain, prep and paint.
Light Fixtures	None	N/A	Provide new light fixtures as needed

Location	Description	Condition	Recommendations
HVAC	Radiator in corner	Physical: Fair Operation: Unknown	Remove. New heating system will be forced air. Provide compatible grilles.
Power	4 duplex outlets, 1 switch in wall at door.	Unknown. Not in compliance with current building codes.	Replace all switches and outlets, add new to accommodate new use.

Room:	**SOUTH BEDROOM**
Floor:	Second
Level of Historic Integrity:	High. Original south windows trim, base, and original east door remains. Small window on east wall is later, but still within the period of significance. West door dates from after the period of significance. Plaster appears to be original. Built-ins date from after period of significance (likely a Hendrie addition, circa 1920 – 1926). Presumed original perched brick masonry chimney survives concealed behind the built-ins.
Character Defining Features:	Windows with divided lights, paneled doors, opening locations, window and door trim, spatial configuration.

Location	Description	Condition	Recommendations
Floor	2 1/4" oak strip, dark stain Subfloor visible under built-in dresser	Good	Clean, selectively refinish.
Walls	Wallpaper on plaster	Fair. Some plaster cracking	Remove wallpaper, repair plaster cracking, provide new period wallpaper
Ceiling	Wallpaper on Plaster	Fair. Some plaster cracking	Remove wallpaper, repair plaster cracking, provide new period wallpaper
Base	6 1/2" Painted wood above finished floor Type B Shoe mold: stained wood	Condition: Good. Bottom edge of plaster wall terminates on top of base. Base sits on top of old floor. Shoe mold sits on top of new floor.	Scrape, prep and paint.
Doors	Painted wood	Good	Scrape, prep and paint.
Door Trim	Painted wood Type A	Good	Scrape, prep and paint.
Windows	South: two double hung windows. East: wood side-hinged, inswinging casement, 3 lights.	South windows: Excellent - restored by Lorri Sipes. East window – needs restoration	Restore west casement window
Window Trim	Painted wood Type A	Good	Scrape, prep and paint.
Built-ins	2 closets with drawers: painted wood	Good	Retain. Prep and paint.

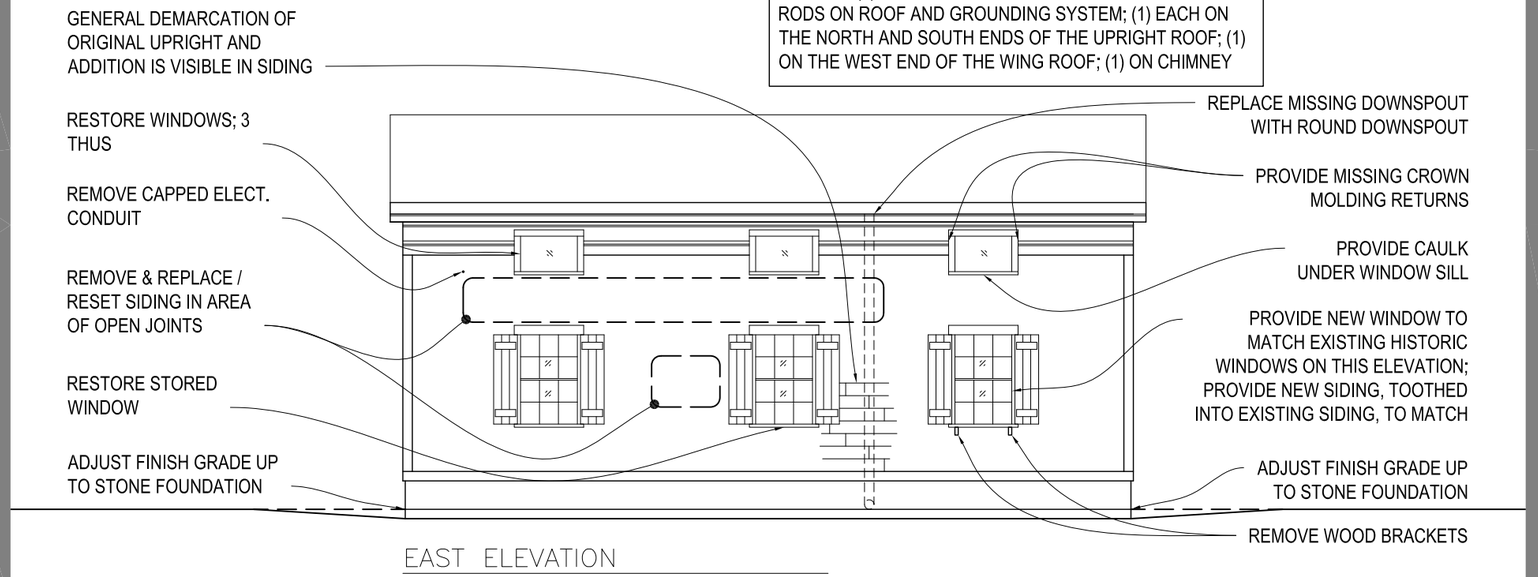
Location	Description	Condition	Recommendations
Light Fixtures	None	N/A	Provide new light fixtures as needed.
HVAC	2 radiators, 1 in each exterior corner	Physical: Fair Operation: Unknown	Remove. New heating system will be forced air. Provide compatible grilles.
Power	3 duplex outlets in base.	Unknown. Not in compliance with current building codes.	Replace all outlets, add new to accommodate new use. Provide new light switch.

Room:	BATH
Floor:	Second
Level of Historic Integrity:	Low from the period of significance. This space has been modified three times over its history. Its north, east and south walls and wood base, date from the original upright construction. The west wall and base are later, likely from the date of construction of the addition to the upright, circa 1905. Its current configuration is believed to date from a circa 1920-1926 Hendrie remodeling. It retains high integrity from this period, which is after the period of significance. The bathroom fixtures are from a variety of periods. Refer to the Building Evolution for a detailed description of the evolution of this space.
Character Defining Features:	Elements from the period of significance: Window with divided lights, paneled doors, opening locations, window and door trim, wood base, spatial configuration. Because of changes made to the stairs by the Hendries, this space cannot be restored to the period of significance without a major reconfiguration of the stairs and the entire second floor layout.

Location	Description	Condition	Recommendations
Floor	+/-3 1/4" pine strip No subfloor.	Poor. Covered in linoleum adhesive.	Remove adhesive, provide new linoleum flooring.
Walls	Wallpaper on plaster	Fair Some plaster cracking	Remove wallpaper, repair cracks. Provide new period wallpaper or paint.
Ceiling	Wallpaper on plaster	Fair Some plaster cracking	Remove wallpaper, repair cracks. Provide new period wallpaper or paint.
Base	Type 3 on W wall Type 2 on N, S & E walls	Good	Scrape, prep and paint.
Doors	Painted wood paneled	Good	Scrape, prep and paint.
Door Trim	Painted wood Type A	Good	Scrape, prep and paint.
Windows	Wood top-hinged inswinging awning, 3 light	Fair	Restore
Window Trim	Painted wood Type A	Good	Scrape, prep and paint.
Light Fixtures	Incandescent sconce above vanity mirror Incandescent flush mount ceiling	Physical: Good Operation: Unknown	Replace sconce with period fixture. Replace ceiling fixture with neutral design modern fixture.

Location	Description	Condition	Recommendations
	light (switched).	Physical: Good Operation: Unknown	
HVAC	Radiator	Physical: Fair Operation: Unknown	Remove. New heating system will be forced air. Provide compatible grilles.
Plumbing	Cast-iron tub Ceramic toilet Ceramic sink on 2 metal legs	Physical: Fair Operation: Unknown	Reconnect to new supply lines. Verify sanitary drain function. Retain lavatory and toilet. Remove tub.
Power	1 duplex outlet on light over vanity, 1 switch on wall.	Unknown. Not in compliance with current building codes.	Replace all switches and outlets, add new to accommodate new use.

Room:	WING ATTIC
Floor:	Attic
Level of Historic Integrity:	High
Character Defining Features:	Wood framing, three covered abandoned stovepipe roof penetrations.



Location	Description	Condition	Recommendations
Roof Deck Stove Pipe Roof Penetrations	N/A	Good. Covered over on exterior with sheet metal panels.	Retain as is. No work recommended.

Room:	UPRIGHT ATTIC
Floor:	Attic
Level of Historic Integrity:	High. Depicts evolution of house by showing lumber differences and lack of ridge board in original section of Upright (addition of Upright has ridge board).
Character Defining Features:	Wood framing, at least one covered abandoned stovepipe roof penetrations.

Location	Description	Condition	Recommendations
Roof Deck Stove Pipe Roof Penetration	N/A	Good. Covered over on exterior with sheet metal panels.	Retain as is. No work recommended.

Evolution of the Benjamin-Barton House

This section describes the various configurations that the Benjamin-Barton House went through between its original construction and the present day. An *Open Questions* section that presents discussion of unresolved historical evolution questions and alternative interpretations for inconclusive observations follows the descriptions of the five Episodes.

Historical Sources

At this time, limited detailed historical documentation on the Benjamin-Barton House has been found. Preservation Bloomfield has conducted diligent research that has yielded some historical information, including a few historic photographs, contemporaneous articles from the August-September issue 1926 *Afterglow* and the May 1927 *Antiquarian*, some information about owners transfers of ownership of the House, early tax records, and some records related to work done on the House, plus conversations with the Barton sisters. Little has been found regarding specific dates and events. Although Preservation Bloomfield continues to search for additional information, at this point much of the information we know about the evolution of the House has been gleaned from examinations of the construction details of the building. The following Episodes and timeline has been developed as an aid to establishing a period of historic significance for the House, and guiding the interpretation of the restored building. Although there are few firm dates, the sequence is fairly certain.

The information in this *Evolution* is based on the historical research provided by Preservation Bloomfield, as noted above, supplemented by targeted forensic investigations at the House carried out by HopkinsBurns Design Studio. Forensic investigations included the following:

- Limited selective demolition and cutting of observation holes to examine selected concealed conditions.
- Examination of cavities where rough construction can be observed.
- Close examination of building framing lumber, construction techniques, and materials such as plaster, lath, doors, windows and trim to determine differences in appearance, texture, profile, dimensions, configuration and composition that might inform the sequence of changes in the House.
- Basic paint serrations to identify the number of paint layers and general color sequence to help identify recent vs. old components, and to determine whether components have been relocated.
- Historic Paint Analysis, April 5, 2010 by HopkinsBurns Design Studio (included in Appendix).

The purpose of this *Evolution* description is to present the reader with an understanding of how the House evolved over its 160-plus years. It is beyond the scope of this report to provide a full *Developmental History* such as found in a full *Historic Structure Report* as defined by the National Park Service. Such a history would be documented by extensive

and exhaustive research, with a high level of detail presented in the text, and can run many dozens of pages in length for a house of this size and age.

Consequently, in this *Evolution*, detailed background for the information presented is provided only where it is germane to the understanding or justification of items that may not be immediately evident.

Preservation Bloomfield has provided a more detailed history of the building that can be found in the Appendix of this document.

Note: For the purposes of this report, references to compass directions refer to the current orientation of the House at the Bower's Farm site, not the original orientation on East Long Lake Rd.

Evolution Overview

The Benjamin-Barton House has undergone many changes over its 160-plus-year history. Changes such as the major additions by the Hendries are obvious when viewing the footprint of the House over its history. However, some interior changes are much less obvious. In addition, some changes obliterated previous configurations, making it difficult to find definitive physical evidence of original arrangements. To some extent it is impossible to determine, with absolute certainty, early configurations of spaces or components that no longer exist. In some cases various pieces of information and evidence are in conflict, and in other cases there may be no information or evidence. Information presented here is based on the best physical evidence available, historic photographs, documented history and interviews with living occupants. This is combined with knowledge of Greek Revival residential architecture and historic construction techniques, and represents the most plausible explanation of observations.

The areas of the interior which have seen the most change are the room(s) in the one-story Wing, and the Stair/Bathroom core of the Upright. The evolution of those areas is highlighted in detail in the following *Episodes.*

All history is subject to change as new information is discovered, and future discoveries may shed more light on the evolution of the Benjamin-Barton House. It is the belief of the authors of this report that the fundamental *Episodes* presented are well substantiated and will stand the test of time, although future discoveries may expand on the details within the Episodes.

Episode One (Circa 1842-Circa 1905)

According to Preservation Bloomfield's research, the House is estimated to have been built sometime after 1842. It is known that Mills Gillet paid taxes on the property in 1842 and the property was purchased by James D. Benjamin in 1844. The original configuration consisted of the one story Wing and the front portion of the 1½ story Upright, a common Upright-and-Wing configuration found in Greek Revival homes (refer to Sheet 3-1, Episode 1).

As this report developed, questions were raised as to whether the Wing was a non-original addition. However, during the move of the House in 2008, portions of the west wall of the Upright that are normally within the attic of the 1 story Wing were exposed, revealing the original west wall studs. The studs were not covered with siding, nor was there any evidence of nail holes corresponding to siding that may have been removed. There were in fact no nail holes in the west face of the studs, except for very small tack holes that precisely corresponded to the location of modern wire tacks that held a sheet cardboard sheathing in place, (removed by the authors of this report). If the Wing had been an addition, there would have been some evidence of siding attachment at this location.

The northern extent of the original 1½ story Upright portion was verified by examining roof construction in the attic. There is a clear change in roof construction technique and lumber size and type just north of the south wall of the North Bedroom. There is also a change in the internal roof ridge construction at that location, with the original portion of the House having no ridge board, while the addition to the Upright has a 1 X 6 ridge board. This corresponds exactly to where the original gable overhang would have terminated. Finally, "toothed in" siding can be seen on the east wall of the House at the juncture between the old and new sections. Clearly the north portion of the current Upright is a later addition.

There had also been some speculation that the recessed Porch was a non-original modification. However examination of attic framing suggests that it is part of the original construction. Furthermore, the Greek Revival Upright-and-Wing style of house with a recessed Umbrage Porch is common in books about Greek Revival architecture, and is found in other locations in Michigan.

One undated indistinct image from the August-September 1926 edition of the publication *Afterglow* shows the House in the Episode 1 configuration (Figure 2). The caption indicates that it shows the House "…before it was rejuvenated by the Hendries." Because it is indistinct, there was some speculation as to whether it showed the original configuration of the Upright, or the expanded Upright configuration that exists today. Computer models were made of the original and expanded configurations and were overlaid on the historic image. Using the relationship between the brick chimney (which clearly shows in the undated photograph, and still exists today) and the north end of the roof as a reference points, the models demonstrate that the image depicts the original unexpanded Upright. (Sheet 3-2)

Although the photograph in Figure 2 is undated, it is known that it can be no later than 1926 – the date of the *Afterglow* article. On the other end of the possible date range, we know that photography was still considered novel in the mid 1840s, and was primarily an in-studio practice, although itinerant photographers using cumbersome wet plates and tent darkrooms were taking photographs in the field during that time. However it is hard to imagine that someone would hire a photographer to take this rather nondescript photo of the back of a farmhouse. It instead has the look of an amateur photograph. By the 1880's dry plate and paper film processes had been developed, and the first consumer

cameras had been introduced by Kodak. Thus it is speculated that the photo dates from circa 1880s.

The image shows the immediate context of the farmhouse consisting of two outbuildings. The light colored building appears to be separated from the main house by a few feet, and is believed to have been a Summer Kitchen, a separate structure where the heat of the cooking in the summer could be kept away from the Living area of the main house. In the winter, cooking reverted to the main Kitchen in the House and helped warm the interior while the Summer Kitchen building typically served as storage. The Summer Kitchen structure appears to have either one double hung window and a door, or possibly two double-hung windows, and thus appears intended for habitation. The relationship of the two buildings implies the presence of a door at the rear of the main house Kitchen, and a corresponding door into the Summer Kitchen. The photograph also shows what appears to be a window or door at the rear corner of the Upright at the first floor.

The second darker colored building is clearly a farm-oriented outbuilding.

Figure 2. Photo of house, circa 1880s.Note outbuilding in foreground, presumed Summer Kitchen (center), and original Upright (left). Note sloped wall just to the right of the Upright: this is believed to be part of a porch covering than protected the back door. See Figure 3 for possible silhouette of this wall.

Examination of photographs from the 2008 move show a silhouette of early construction on the west wall of the Upright, offering evidence of a support for a small roof overhang over a portion of the rear of the House that extended up to the underside of the west eave of the Upright and covered the siding on the Upright above the west slope of the Wing. The circa 1880s photo from the *Afterglow* article also appears to show such a structure (Figure 2). The presumed configuration is shown in Figure 4, and is labeled “Storm

House Roof" on the rear of the House. A work log by Benjamin's son-in-law Miles Lowes references construction of "storm houses" being built in 1887, and that one was over "the stoop," and it is speculated that this refers to the Porch.

Figure 3. This picture was taken during preparation for the house move in 2008 showing silhouette of former construction at northwest corner of original upright. Note possible siding profile. This suggests a possible early porch overhang at the north wall of the wing. Note gutter on north wall of wing.

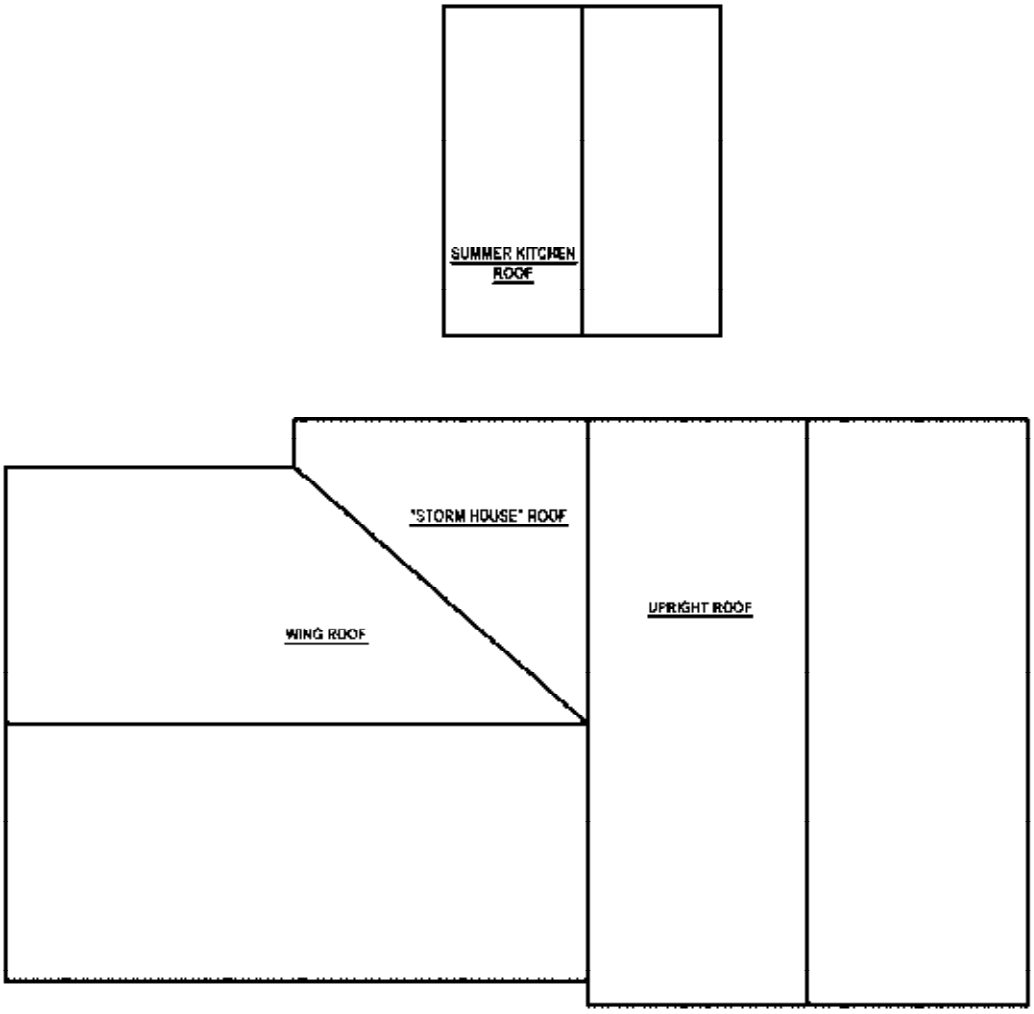

Figure 4. Presumed configuration of roof over rear door (labeled "storm house" roof).

It should be noted that the small "ankle windows" currently at the second floor were not present in Episode One. At first glance, the circa 1880s *Afterglow* photograph seems to show black blotches that have been interpreted as the ankle windows, however the blotches are not aligned with the first floor windows, and do not cut through the dark horizontal molding, and thus cannot be the ankle windows. Refer to Episode Two for additional information about these windows.

At the interior, the Parlor was clearly the finest room in the House, and features beautiful "elephant ear" trim, with an elegant taper on the jamb trim. Paint serrations suggest that this trim is original or very nearly so, based on its heavy paint buildup (6-7 layers), which

is consistent with the 8-9 layers found in the more aggressively used (and thus possibly more frequently painted) Winter Kitchen. The Parlor once had a “coffin door” opening on to the Umbrage Porch. Evidence of this door is found in a picture of the house during the Hendrie period (Figure 7). Joints in the wood base are visible in the Parlor, and the modern framing infill was visible during the moving of the House in 2008. There is some question regarding the door to the small Bedroom north of the Parlor. Its current door leaf appears to have paint stratigraphy that is identical to that of the Bedrooms in the Wing, suggesting that it is not original or has been modified at some point. The reason for this is not clear.

The one-story Wing of the House was originally partitioned into three rooms. Studies of other Upright-and-Wing Greek Revival homes with Umbrage Porches (including the Delano House in Kalamazoo, Michigan) support without exception the presumed three room arrangement in the Wing. There is written evidence that the Wing was once subdivided into two Bedrooms (*Afterglow* article, 1926), and studies of other houses of this type shows that the larger third room was typically a Winter Kitchen, and functioned as a Living space in the summer.

Figure 5. Evidence of former bedrooms walls in wing.

Forensic investigations revealed a joint and mismatched wood lathing where a north/south wall would be expected, as well as a trimmed-off window head trim where the wall would have interfered with the trim (Figure 5). Additionally, three covered-over

hexagonal holes in the roof decking in the attic further support the two Bedrooms and Kitchen arrangement, suggesting locations for earlier cook stove and/or heating stove flues that relate to the presumed wall locations. Finally paint serrations showed a different sequence of colors at trim in what would have been two of the three original rooms.

Some other Upright-and-Wing houses have a front-facing window in the alcove in the front Bedroom in the Wing (south west corner, south wall), however partial removal of plaster in that area showed no evidence of an earlier window in this house (Figure 6).

Figure 6. Investigations at south wall of wing show no indication of a window frequently found in house of this style. If a window had been covered at this location, a former header likely would have been found.

The east door on the north wall is believed to be original. Its heavy paint buildup (approximately 8 layers) is similar to all other samples taken in the room, and it is in a logical location to access the Summer Kitchen structure to the north. It is believed that there may have been a window west of the door, roughly where the current west door on the north wall is located. The current west door is not original. Its trim would have interfered with the Bedroom wall, and paint serrations revealed only 3-4 paint layers, compared to 8-9 layers on other trim in the room. A member of the Barton family recalled that the window was removed and replaced with a door.

The south door opening and flanking windows are original, having 9 paint layers, matching the paint accumulation on other trim in the room.

There is clear evidence that the current wide opening in the east wall of the Winter Kitchen is not original, due to details of construction, differences in the manner in which the trim is installed compared to other trim in the room, and presence of modern wood in south jamb of the opening. It is speculated that there were two openings in the wall, with the south opening serving the Stair to the second floor, and the north one serving a Hall (Sheet 3-1, Episode 1 and 2 plans).

It is speculated that the Hall to the north of the Stair provided access to the basement Stairs as shown. It is clear from examination of the mortise and tenon joinery of existing floor framing that there was an original floor opening to the basement at this location that has since been filled in with modern framing techniques. The location shown for the door to the basement is speculative, however plaster was observed on the east wall of the basement Stair opening, suggesting that there was no door there. Also, it seems unlikely that the basement would be accessed from the Bedroom or Parlor. As noted in the exterior description above, a circa 1880s photograph indicates either a door or window on the north wall, that would have served the Hall north of the Stairs.

It is known that the current Stair dates from the Hendrie era, but there is no documentation of the configuration of the original Stair. Field investigation revealed an angled gap in plaster behind the curved Stair wall that suggests the presence of an earlier stair stringer at that location. The angle of the plaster and size of the gap almost exactly corresponds to the dimension of a 2 X 12 stringer. It is therefore believed that the original stair to the second floor was a steep straight run stair. (Figure 10, top). This is consistent with other examples of Upright-and-Wing houses, including the Delano House in Kalamazoo.

The stair to the second floor is believed to have terminated into an open Hall at the second floor (the current location of the west Bathroom wall). The Hall provided access to the Bedroom to the south (Figure 10, top). It is possible that part of the Hall could have been partitioned off for storage.

Episode Two (Circa 1905-Circa 1920-1926)

Episode two is characterized by the northward extension of the Upright and the addition of a shed-roofed structure and Porch on the west wall of new Upright addition. These additions necessitated removal of the separate Summer Kitchen structure.

There is no precise historical documentation of when this addition was made, however it was after the grainy 1880's photo of the Episode 1 configuration, and based on the visual characteristics of the lumber observed in the attic of the addition, it is estimated to be during or after the early 1900s. Since Robert Heacock purchased the House in 1905, it is believed that the addition is his, and may have come soon after he purchased it, although this is not certain, and the date could have been later in his ownership.

It is obvious that the new second floor space in the Upright addition was a Bedroom, however the exact functions of the other new rooms are not known with certainty. At the first floor, it is speculated that the new shed roofed structure housed the year-round Kitchen, and the former Kitchen became a Living space such as a Sitting Room. This evolution – addition of a year-round Kitchen component, and conversion of the former Winter Kitchen component to Living space – was common in Upright-and-Wing houses. The first floor of the Upright addition may have become a Dining area.

Although the existence of the shed addition is certain based on evidence of a roof tucked under the Upright addition roof , the exact configuration is not certain. Based on examination of construction exposed during the moving of the House in 2008, it appears that the shed may have gone through at least two iterations over the building's history (see *Open Questions* below). Although a shed roof existed in this location at the time of the 2008 move, it was several inches above what appeared to be a piece of metal flashing that may have been part of an earlier roof tucked under the original eave of the Upright. This is believed to be the Episode 2 shed roof.

The west and north walls of the shed is believed to have been the same wall as the corresponding walls of the Episode Four Dining Room (Sheet 3-1, Episode 2 and Sheet 3-4, Episode 4). At the time that the House was moved in 2008, the west wall contained a door and two double hung windows, and had siding on the outside. Although in 2008 it was an interior wall, it clearly had once been an exterior wall. The windows and door appeared old, but well maintained, and were in a configuration that would be consistent with the wall of the Kitchen. The north wall had been much modified and contained a pair of French doors and a single door to the Hendries' Kitchen addition, and gave no indication of its original configuration.

Although this portion of the structure was not moved from the original building site on Long Lake Rd. in 2008, the two double-hung windows, door and related trim were removed and retained for future reinstallation.

At the second floor of the Upright addition, it is speculated that a new door was cut into the new Bedroom in the center, where the former window was located (Figure 10, bottom). Although this is not certain, it is logical, considering that a headered opening already existed there for the window. It is reinforced by the fact that the *current* door to the north Bedroom was clearly relocated from one of the first floor west Bedrooms by the Hendries when they removed the first floor Bedrooms, as evidenced by the matching paint stratigraphy on the door and the first floor Bedroom trim.

The small ankle windows along the east wall and west walls were added at the time of the Upright addition. This is evidenced by the fact that all ankle windows have bull nose jamb trim, which is used for the first time at the trim on addition. In addition, the paint stratigraphy for the ankle windows matches that on other trim in the addition at the second floor, and clearly shows fewer paint layers (approximately 3) than is evident on the trim on other older windows in the south Bedroom (approximately 6 layers). It seems logical that an ankle window would be added at this time to the landing room at the top of

the stairs because the addition to the north otherwise would have rendered the space windowless. Because ankle windows are a common Greek Revival characteristic that permitted introduction of light into long low second floor walls, their addition is not surprising.

A second floor Bathroom may have also appeared during Episode Two (see Figure 11, top), but its exact date is unknown. An alternative interpretation is that this Bathroom was not built until Episode 3 (Figure 11, bottom). Because of the range of time during which the Bathroom could have been constructed, and the significant changes that have occurred to the Stairway and Bathroom core, and the limited amount of physical evidence, the evolution of the second floor Bathroom is somewhat speculative. What is presented here is a possible logical evolution based on limited physical evidence.

Assuming that the addition was built circa 1905, it is unlikely that the Bathroom was built at the same time, since American-made vitreous china water closets first appeared in 1907. The use of elevated tank water closets ended circa 1910-1915. The water closet in second floor Bathroom is not elevated, but is of an early wall-mounted tank design, so it is speculated that the Bathroom is circa 1915.

It is also speculated that the current configuration of the Bathroom could not have coexisted in Episode Two with the straight run stair because it would require a person to go through the Bathroom to access the north and south Bedrooms. Instead it is believed that the Bathroom was smaller, as shown in Figure 11, top. This would mean that the current bathtub was a later addition, and that the original bathtub was smaller. It is known that the current lavatory sink is identical to the sink installed by the Hendries in the first floor Bathroom circa 1926, so it is clearly a replacement, supporting the theory that the earlier sink was much smaller, and perhaps a corner sink to conserve space.

The arrangement of other rooms during Episode Two was unchanged from Episode One.

Episode Three (Circa 1920-1937)

Episode 3 represents ownership and occupancy of the House by the Hendrie sisters. In this episode, major modifications to the footprint and interior organization of the House were made, transforming its character significantly, and turning it into a rambling country estate (Figure 7). However, much of the integrity of the early Upright-and-Wing was respected.

Figure 7. The House during the Hendrie era, circa 1926. The Hendries' addition is to the left. The original Greek Revival core is to the right. Note coffin door in the recessed Umbrage Porch at right.

Between 1920 and 1926, the Hendrie sisters carried out a major transformation of the House. A two-story addition with a separate basement was built at the northwest corner of the House. On the first floor it contained large Kitchen and informal Dining area, as well as a butler's pantry, Bathroom, storage, and support areas. Off the Kitchen, a service stairway led to the second floor. On the second floor the addition contained Bedrooms and a Bathroom. The second floor rooms in the addition were joined to the Upright by a door into the north Bedroom.

An attached Garage with carriage doors with multiple lights was built on the west side of the new addition.

In the older portion of the House, the former Dining Room and Kitchen to the north were combined into one formal Living Room, with a brick fireplace flanked by French doors. In the northwest corner of the room was a door that accessed the Kitchen in the new addition. The trim in this room was replaced with trim that mimicked the "elephant ear" Greek Revival trim in the Parlor, but lacked its elegant subtle taper. A terrace was built immediately north of the large Living area, accessed by the French doors. Sometime prior to 1926 the terrace gained a metal pipe framed canvas roof/awning. Finally a new Porch was built on the northeast corner of the Upright, also accessed by French doors from the enlarged Living Room.

The Porch on the west side of the House was retained, however it is speculated that its roof may have been raised at this point, based on examination of framing when the House was moved. Significantly, however, with the addition to the House and the changes to its

interior organization, the west Porch now became the main entry to the home. The original front entry facing the street remained, but was secured shut.

In the original Wing, the walls that defined the two Bedrooms and Kitchen were removed, converting the whole Wing into a formal Parlor, also with a new brick fireplace. The old Parlor became a Bedroom and the small Bedroom behind it was converted into a new tiled Bathroom. The door to this Bathroom was clearly relocated from one of the first floor west Bedroom walls in the Wing that were removed during this remodeling. Evidence of this is the matching paint stratigraphy on the door and the first floor window trim on windows located in the former Wing Bedrooms. It is not clear why this door was relocated. It is possible that the door opening location was shifted slightly in the wall during this period for improved functionality of the Bedroom and Bath. The trim on the east side of the Parlor side of the opening appears to have been adjusted to accommodate the adjacent built-in cabinetry, which is known to have been installed during this period.

The original straight stair to the second floor in the Upright was removed and replaced with a curved colonial style stair, and a full glazed door with divided lights was installed to connect the first floor Stair Hall to the new Living/Dining Room.

At the second floor the introduction of the curved stairway permitted a new connection between the old north and south Bedrooms along the west side of the House, and the built-ins along the west wall were likely built at that time. It is speculated that the small Episode Two Bathroom was enlarged, receiving a new larger claw foot tub, and new lavatory sink matching the sink at the first floor Bathroom. The Bathroom was made directly accessible to both Bedrooms, and a new wall was built between the Stair and Bath. As noted in Episode Two, and similar to the first floor Bathroom, the north Bathroom door was relocated from one of the first floor west Bedroom walls in the Wing that were removed during this remodeling campaign. Evidence of this is the matching paint stratigraphy on the door and the first floor window trim on windows located in the former Bedrooms in the Wing.

Because the Hendrie era is the first where interior photographs are available, there is an opportunity to gain some information regarding interior finishes. Unfortunately the information is limited. Photographs from the *Afterglow* and *Antiquarian* articles show only the Wing, first floor Stair Hall, and Living/Dining Room (Figure 8). At that time, interior trim was painted in those rooms, that the current wood finished flooring in the Wing was present, that wall finishes in the Wing, first floor Stair Hall, and Living/Dining Room were wallpaper, and that there was a small picture molding at the top of the wall in the Wing and Living/Dining space. These moldings are still present in both rooms.

Arnold

The little circular stair goes up from a small hall at one end of the "parlor." The center-table with its album, shell and stiff little vase of zineas is typical of the Victorian atmosphere of this room.

Arnold

Most of the furniture in the dining room is old maple. The screen is made of green and white French wall paper and you can just glimpse a piece of the maple corner cupboard with its hoard of old china.

Figure 8. The interior of the house during the Hendrie era. First floor Stair, looking from the Hendries' Parlor (top); Sitting/Dining Room (bottom).

Many additional minor modifications were no doubt made to the interior during this Episode including wall finishes and construction of built-ins and trim modifications, however the dates of these cannot be identified with certainty. Some of the modifications present before the building was moved in 2008 could have dated from either this Episode or Episode Four. Readers interested in further details and photographs may wish to consult the 1926 *Afterglow* and 1927 *Antiquarian* articles.

A photograph dated circa 1937 shows the House toward the end of Episode Five, and most likely represents the House as the Bartons bought it.

Episode Four (1937-2008)

Episode Four covers the period 1937 to 2008, representing the seventy-year period that the Barton family owned it, as well as the brief ownership by the Mancini Development Company, ending at the time when it was transferred to the City of Bloomfield Hills (Figure 9).

During this Episode, the Porch on the west was fully enclosed and the roof was extended west to form a new shallow Porch. Existing windows on the north and south end of the enclosure were converted to doors, creating a passageway between the Kitchen Wing and the formal Parlor in the original Greek Revival Wing.

In the Kitchen Wing beyond the passage, the Bartons added a wall of storage closets and added or remodeled a guest powder room. The orientation of the service stairway changed. Modifications were made to the back exterior doorway in the Kitchen and Stairs to the basement. A walk-in safe was added to the back basement.

In the older portion of the House, a change was made in the first floor area at the bottom of the curved stair. A wall was modified and the glass door with lights was changed to a panel door. At some point, presumably late in this period, the door was completely removed and walled over. In the master Bedroom (original Parlor), a small closet in the southwest corner where the coffin door was in the *Afterglow* article, was removed at some point and replaced with the two large closets on the east wall. There was also an early electrical security system located on that wall. Extensive changes were made to the foundation and floor in the front basement.

A three-car Garage addition was built late in this Episode, linked by way of a covered breezeway to the former Hendrie Garage, which was built on grade. The former Garage was converted to a laundry/utility room, enclosing the overhang at the south wall, and installing double hung windows.

Figure 9. The House at the end of the Barton era, showing the original Greek Revival core (left), the Hendrie addition (center), and the Barton's new garage (upper right).

The Bartons enclosed the Hendries' Terrace at some point during their tenure in the House by adding columns supporting a permanent roof, and sliding glass doors. The Porch on the east end of the Dining/Sitting Room was removed and the French Doors to the Porch were replaced with a projected window.

No doubt other lesser modifications to the interior details were made during this Episode, however it is difficult to know their dates with any certainty. These items may include built-in bookcases, changes in door locations and floor finishes.

Episode Five (2008-present)

This Episode is characterized by the decision to move the House to the School Farm and restore it to one of its earlier pre-Hendrie time periods. When the House was divided into sections to move it to the Bowers Farm, the portions built by the Hendries and Bartons were left behind and demolished.

Period of Significance

The Benjamin-Barton House has in effect had two distinct lives. The first was as one of the early farm homes in the area, and the second as a rambling retreat and suburban home.

As a farm home, it evolved from its construction circa 1842 in an orderly fashion with understated additions that grew organically and reflected its original construction as a fine example of the Greek Revival Upright-and-Wing residential style. Even as it grew as a farm home, it continued to reflect the lifestyle of the working farm family.

By contrast, its second life was characterized by major transformation, introducing a more casual, rambling floor plan. Although these additions were executed with attention to design and workmanship, utilized Greek Revival details, and created interesting living spaces, they were in no way a continuation of the simple Greek Revival aesthetic or the working farm lifestyle. The changes served a more leisurely way of life, providing a retreat for the Hendrie sisters, and later a comfortable suburban home for the Bartons. In this context, the house was only one of many beautiful suburban homes that evolved in the area during the twentieth century.

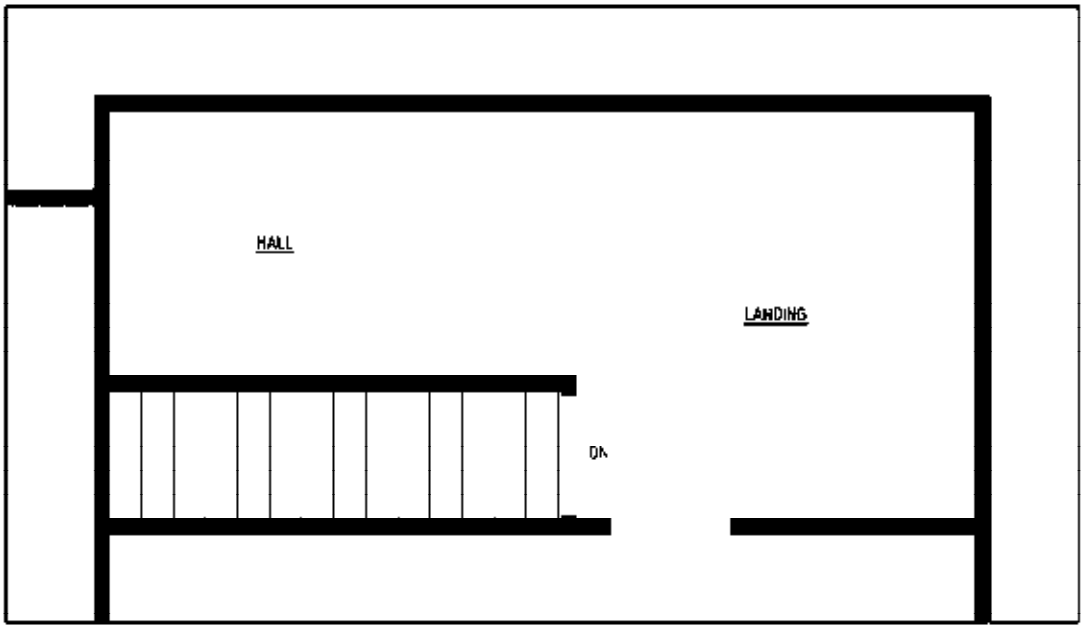
A major part of the House's historical significance is that it still retains its original character as one of the area's earliest Greek Revival homes. The earliest portions of the exterior and interior of the House are still largely intact. And even where changes were made, the house still bears evidence that tell of its configuration before the modifications were made. It represents a unique specimen from the early years of Bloomfield Township's history, and a rare example of the rural farming life that has now been largely consumed.

The portions of the House that reflect the rural farming lifestyle are those built prior to circa 1920, when the house was sold to the Hendries. They consist of the original Upright-and-Wing, the extension of the Upright, the former Kitchen addition and the Side Porch. The period that encompasses construction and use of these elements is broad, extending from circa 1842 – circa 1920. More specifically, however, the years that reflect the House in its maturity as a farm home are circa 1850 – early 1900s. By this time the Upright, Kitchen, and Porch additions had been built, and the home would remain in this configuration until the Hendrie sisters started its major transformation to a completely different type of home in the 1920s.

The circa 1850 – early 1900s period of significance permits the farm life story to be told in the context of the School Farm, and dovetails with the desire to celebrate that period in Bloomfield Township via the oldest portions of the House.

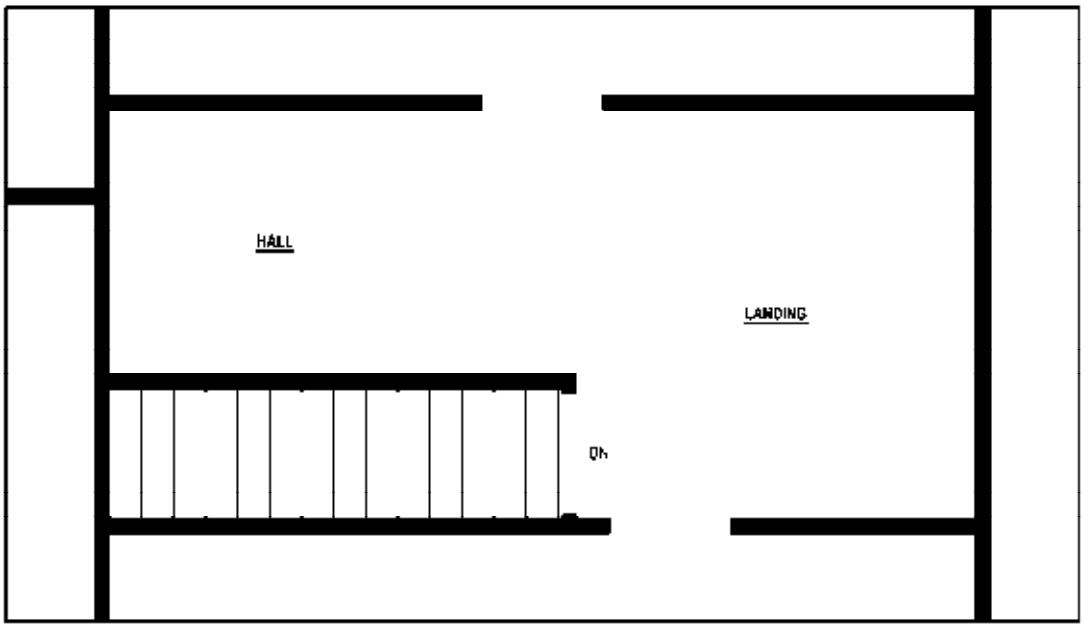
For purposes of interpreting the House through exhibits and furnishings, and decoration, and telling its story in the context of the School Farm, the interpretive period that the interior of the house's preservation zones will portray has been selected to be Pre Civil War (Pre-1861).

Open Questions



The authors of this report feel that the overall evolution of the Benjamin-Barton House set forth above is generally reliable. Continued research is encouraged to attempt to further identify dates associated with the steps in the House's evolution. However some uncertainties remain that should be noted.

North Wall of Wing – Episode One:



There is some evidence of a roof over the rear door at the north elevation, as described in Episode One. However its date is not certain. In addition, observations made during the disassembly of the building for moving in 2008 revealed some remnants of early construction that are difficult to explain. There is no eave for the east 2/3 of the wall. This is consistent with the addition of the shed roofed Kitchen in Episode 2, however there is also a piece of gutter attached to the edge of the roof at the line of the wall, that has been bent up as if it was used as a piece of flashing. It is difficult to understand why there would be no eave, but still a gutter in place, bent up as a piece of flashing. It is speculated that there may have been an earlier overhang attached to the edge of the roof. Perhaps the eave was removed, or even never existed at that location, and the gutter represented some interim configuration that was consumed by later construction. Unfortunately no explanation has been developed at this point that fully explains this condition.

Second Floor Bathroom:

There is some uncertainty about when the addition to the Upright was built, and that impacts the evolution of the second floor Bathroom. If the addition to the Upright was built later than estimated in the Episode Two description, such as circa 1915-1920, the Bathroom could have been built at the same time as the addition. If so, the large open second floor open landing may have never existed during Episode Two, and the Stair/Bath configuration jumped directly from the Episode 1 configuration to the Episode 2.1 layout (Figure 10, top and Figure 11, top).

EPISODE 3
SCALE 1/4" = 1'-0"

Figure 11. Presumed stair and bathroom configuration if bathroom was added in Episode 2 (top); current bathroom configuration, built by the Hendries during Episode 3.

Although the small second floor Bathroom scenario selected as most likely for Episode Two may seem surprising, and is acknowledged as being somewhat speculative, it in fact best fits the evidence discovered. An alternative scenario was also considered where the Bathroom would have originally been built in its 2008 configuration during Episode Two. However this would have necessitated an interim stair configuration – perhaps a square L- or U-shaped stair that would have created a passageway connecting the Bedrooms on the west similar to today's configuration. Without such a stairway revision, the straight run stairway would have terminated in the Bathroom, and one would have had to pass through the Bathroom to access either Bedroom – a highly unlikely scenario. This scenario was also felt to be inconsistent with paint stratigraphy that clearly indicated that the north Bathroom door was originally one of the first floor Wing Bedroom doors, and thus could not have been installed in its current location until the Hendries removed the Wing Bedrooms during their tenure.

Another alternative interpretation is that there was no Bathroom during Episode Two, and that the Hendries built both Bathrooms. However, the water closet at the second floor is of a much earlier vintage, while the lavatory sink is identical to the first floor sink, and it is difficult to explain this odd combination of fixture vintages.

Admittedly, the selected scenario also raises questions:

- As stated in the Episode Two description, the original bathtub would have to have been smaller than the current tub in order to fit in the assumed Bathroom size. Although this may not seem realistic, small tubs – approximately 48" long – were in use at that time, and that was a time period when "modern" indoor Bathrooms were frequently being squeezed into tiny interior spaces such as this, so this is plausible.
- Why did the Hendries install another larger claw foot tub when they expanded the second floor Bathroom instead of leaving the smaller tub, or installing a modern tub such as the one installed at the first floor? The answer may be this: a larger tub was desired to meet expectations of the day. Since a full size tub would have to extend into the doorway several inches, a modern enclosed tub such as that installed at the first floor could not have been installed, while a larger claw foot tub without a skirt would still be visually acceptable, even if it extended into the doorway.
- Why are the tub and water closet of an early vintage, while the lavatory sink is newer? The answer could be that the removal of the wall by the Hendries provided an opportunity to install a larger more useful sink to replace an earlier cramped sink, and it was convenient to purchase the same sink as that was being used at the first floor. It is also possible that the Barton's update both sinks when they made improvements to the house.

Flooring In The Wing:

As noted elsewhere in this report, the flooring in the Wing is 3 ¼", while other strip flooring in the building is 2 ¼". This is curious, and the reason for the difference is not clear. Since there is currently no evidence of silhouettes or nail holes from original Bedroom walls in the flooring, the flooring is speculated to date from the Hendrie sisters'

remodeling in the 1920's, prior to 1926. Supporting this theory is the fact that a picture of the Wing in 1927 *Antiquarian* article shows a floor register near the original front door, and the current floor shows a wood patch at that location.

However it is also possible that the flooring predated the Hendries. When they renovated the Wing, they may have replaced only the flooring in the area where they removed the former Bedrooms, and replaced it new material that matched the old flooring that remained.

Flooring and Framing Under Wing:

The joists under the Wing have without a doubt been replaced at some point.

The current joists are fairly smooth with faint circular saw marks, and are approximately 1 5/8" wide, whereas the joists under the first floor of the Upright are very rough, 1 7/8" wide, with clear vertical saw cut marks. The notches in the main beams that carry the new 1 5/8" joists under the Wing are wider than the "new" joists (resulting in gaps on the sides of the notches), whereas the notches for all other joists in the building are tight. This suggests that the notches under the Wing were originally cut to carry the original wider joists. However it is puzzling that the floor boards that rest on both the newer joists in the Wing and the older joists in the Upright are identical. They both have circular saw cut patterns, are tongue and groove, are the same width - 7 1/2", are very thick - approximately 1 1/4" (Figure 12). It is speculated that one of three things must have occurred:

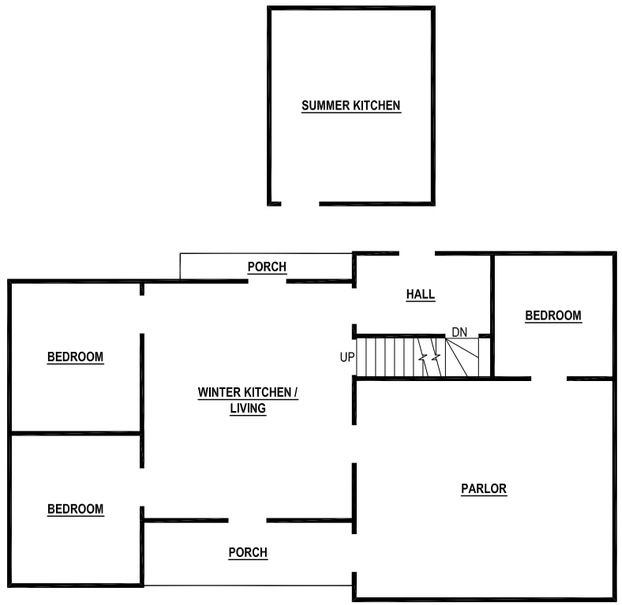
a) The floor of the Wing was pulled up, the joists were replaced, and then the floor was reinstalled. This seems unlikely because the floor boards would have likely been damaged considerably during the removal, and survey team didn't see any evidence of that.

b) The current floor boards of both the Parlor and the Wing are not original, and were replaced when the joists of the Wing were replaced. Although this seems odd, it is plausible. It might explain the very old 18" wide boards in the corner of the Wing. Perhaps the original floor boards were those wide boards, and were rough and thin and cupped, and needed to be replaced, and perhaps there was something built in that corner that prevented their removal.

   However evidence against this is that the older floor boards on the second floor (visible under the drawer in the front Bedroom) appear to be the same 7 1/2' boards. It unlikely the flooring in the entire building would be removed and replaced. More evidence against this is that the floor boards under the second floor drawer extend under the base, suggesting that they were there BEFORE the base was installed, and thus are not likely replacements.

c) The joists were replaced from below, leaving the floor of the Wing intact. This is possible, especially considering the manner in which the joists bear on a beam at midspan - bearing on a ledger on a new beam instead of being notched in. This

theory is supported by the fact that the second floor boards (under the drawer in the front Bedroom closet) also appear to be approximately 7" in width.



There are things to be said for and against each of these three scenarios, however it is the opinion of this report that Scenario C is most likely what occurred.

Figure 12. Underside of flooring under Parlor showing modern oak strip flooring (top), on top of shims for leveling, 1 ¼" tongue-and-groove flooring (believed to be original), and original floor joist (bottom). Note vertical saw marks on joists.

The reason for replacement is unknown, although it was observed that a smooth, non-original north/south wood beam exists under the floor midway between the Upright and the west wall of the Wing, and it is speculated that the floor may have sagged, possibly aided by leakage from the Porch, and required a new beam and joist replacement.

Some 18" wide rough sawn boards were observed in the northwest corner of the Wing floor, visible from the basement. They were first speculated to have been remnants of earlier original floor boards, however this does not appear to be consistent with other evidence found, so the origin of the 18" wide boards remains a mystery.

Building Programming

Introduction

The Board of Preservation Bloomfield, with the assistance of the HopkinsBurns Design Studio, has been engaged in an ongoing programming effort for the Benjamin-Barton House. The assessment of the existing conditions and the analysis of the historic evolution of the Benjamin-Barton House have informed this programming effort. The results of this effort, discussed here, will guide future development of the House, and is the basis for the treatments needed to support programming described elsewhere in this report.

Methodology and Results

In order to facilitate a discussion on the desired uses for the House, each entity on the Board submitted their description of what types of activities should be hosted there. The brainstorming exercise produced a plentiful list of creative ideas that ranged from quilt-making seminars to chess tournaments to woman's suffrage historic reenactments. The list of submitted activities was grouped into ten categories; see Sheet 4-1 for details. In a workshop led by HopkinsBurns, the board discussed the merits of each category and determined that the House would not be used as a guest house or as a voting site. The group also decided that the House's primary activity categories would be the following: Experiential Learning, Meetings, Community Events, Office Work and Storage. The Board did not want to rule out the other categories (Exhibitions, Festivals, Private Receptions), but they would not be the primary activities driving the design of the House.

The programming efforts also yielded an organization of these activity categories into discrete areas within the house, which can be viewed on Sheet 4-2. From the start, it was universally accepted that the best use for the Basement level would be for Archives and Storage. Due to accessibility issues as well as structural limitations, the best use for the second level was also clear: it would be used for Office Work, primarily by the Bloomfield Historical Society. For the rest of the activities, the first floor was subdivided into the north and south sections. The north section of the first floor, which contains the entry and the Multi-purpose room, will be a contemporary space in terms of its function and, therefore, it will be very flexible from an activity standpoint. Higher impact uses should be performed in this space.

The south section of the first floor will be the area of the house where the visitor is immersed in the history of a 19th century farm house. This is the area of the home that student groups and interested community members will participate in Experiential Learning activities related to the history of Bloomfield. Because of the historic treatment of the south section of the first floor, it will be less flexible from an activity standpoint. It is not recommended that an art exhibition be held in this area because of the lack of modern lighting and display areas. However, it is encouraged that other activities

(Meetings, Community Events, Festivals and Private Receptions) take advantage of the authentic historic setting provided by this section of the home.

To get a feel for what it would look like to host some of these proposed activities at the House, HopkinsBurns mocked up some furniture layouts, for discussion purposes, that can be seen on Sheets 4-3 & 4-4. These include potential layouts for a music recital, a board meeting, a chess tournament and a wedding.

Depending on the extent of interpretive elements, such as stoves, pianos, large period furnishings, the capacity of rooms for these uses could be reduced.

Preservation Zones

The general approach to preserving the Benjamin-Barton House has been in place for many years due to the careful planning that took place prior to moving the House to its existing site in 2008. All of the work documented in this report has both reinforced this approach and provided the next layer of details for moving forward. The Preservation Zones, documented on Sheets 4-5 & 4-6 frame the understanding for what type of intervention will be necessary in each section of the house.

The definitions of the preservation zones are provided below by the National Park's Service (NPS) within the *Secretary of the Interior's Standards for the Treatment of Historic Properties.* The team is using these definitions to help the project team frame an understanding for the approach to the House. For further description of these terms, see the website for the http://www.nps.gov/hps/tps/standguide/index.htm

Preservation
Preservation is defined as the act or process of applying measures necessary to sustain the existing form, integrity, and materials of an historic property. Work, including preliminary measures to protect and stabilize the property, generally focuses upon the ongoing maintenance and repair of historic materials and features rather than extensive replacement and new construction. New exterior additions are not within the scope of this treatment; however, the limited and sensitive upgrading of mechanical, electrical, and plumbing systems and other code-required work to make properties functional is appropriate within a preservation project.

Adaptive Reuse (referred to as "Rehabilitation" by NPS)
Rehabilitation is defined as the act or process of making possible a compatible use for a property through repair, alterations, and additions while preserving those portions or features which convey its historical, cultural, or architectural values.

Restoration
Restoration is defined as the act or process of accurately depicting the form, features, and character of a property as it appeared at a particular

period of time by means of the removal of features from other periods in its history and reconstruction of missing features from the restoration period. The limited and sensitive upgrading of mechanical, electrical, and plumbing systems and other code-required work to make properties functional is appropriate within a restoration project.

New Construction (referred to as "Reconstruction" by NPS)
Reconstruction is defined as the act or process of depicting, by means of new construction, the form, features, and detailing of a non-surviving site, landscape, building, structure, or object for the purpose of replicating its appearance at a specific period of time and in its historic location

Implementation

Phasing and Cost Estimates

It is recognized that the work described in this report cannot all be implemented at one time. For purposes of fundraising, the work is proposed to be phased as follows, based on the following phasing criteria:

- Priority 1: Stabilize the Building
  - Provide the required infrastructure for the building services (power, water, HVAC, etc.).
  - Repair existing and install new building exterior as required to protect the building from the elements.
- Priority 2: Provide Code Compliance and Partial First Floor Restoration
  - Life Safety/Accessibility
    - Building code compliance
    - Access by disabled individuals
  - Make First Floor of Original Building Usable
    - 1st Story, South Wing
- Priority 3: Complete First Floor Restoration
  - 1st Story, South Wing (Bed Room walls)
- Priority 4: Provide Space For Activities
  - Northwest Addition w/ Side Porch
  - Future Meeting Room
- Priority 5: Reuse Second Floor
  - 2nd Story Offices
- Priority 6: Building Context
  - Landscape and Site Improvements

The Benjamin-Barton House

HopkinsBurns DESIGN STUDIO historic preservation & communities by design

Program: The premise for the House Restoration and Adaptive Reuse is based on the following:

The House shall be the historical centerpiece of the community, a place to share/interpret/gather history, house and site be looked at holistically, a place for education (community as well as school use), an example of best practices (site and building), use as a community gathering place for events with kitchenette, place for small retreats, archival storage, Historical Society Office, a preservation prototype, demonstration for sustainability, the house shall be experiential.

House Restoration & Adaptive Reuse

24-Jun-11	Work Scope	Quantity	Unit	Unit Cost	Cost	Totals					Notes
Priority 1: Original Building Stabilization								Stabilize building and allow to be habitable			
1A:	***Infrastructure***										
	Electrical service	1	ls	3,500.00	$ 3,500			$ 3,500			Power to bldg, panel in basement
	Lightning Protection	4	ea	1,000.00	$ 4,000			$ 4,000			Historic lightning rods and grounding
	Gas service	0	ls	0.00	$ -			$ -			None required
	Telephone & data service	1	ls	TBD							Coordinate w/ School District
	Water Service	1	ls	4,000.00	$ 4,000			$ 4,000			From Square Lake Rd if possible or well
	Sewer System	1	ls	12,000.00	$ 12,000			$ 12,000			Lift chamber w/ grinder pump connected to Bower's Academy septic system
	Fire Alarm System	1	ls	4,500.00	$ 4,500			$ 4,500			Optional TBD
	HVAC, complete HTG & Clg system	1	ls	26,436.00	$ 26,436			$ 26,436			Geothermal source, ducted supply & return
						$ 54,436			$ 54,436		
1B:	***Building Exterior (Original)***										
	Exterior walls, 2x4 w/wood siding (12 ft)	168	sf	15.00	$ 2,520			$ 2,520			Include Sheathing, 2 Headers

Bloomfield Hills, MI 48302

Re: Pickering Barn on Franklin Road

Note: all 5 August 2024 changes are made in red.

On the evening of 16 September 2021 at 5:00 pm I had the privilege of touring the Pickering Barn with Bill Pickering, his son, and representatives from the Bloomfield and Franklin Historical Societies, to look at the barn, get an impression about its condition, and discuss what its future might be. What follows is my report.

The Pickering Barn is a three-bay gable barn located just 60 feet off of Franklin Road. It is said to have been on the property when the first Pickerings (Cooper and Eliza) bought the land in 1879. The barn is oriented with its long wall (sliding doors) facing west toward Franklin Road. The barn has a stone foundation and a full height basement, which walks out to the rear yard to the east. To the north of the barn there is an early 20th century, wood-framed heated addition, which is about the same volume as the barn. It was apparently added as a showroom / office for the farm.

The barn has four structural frames (called bents) that divide the space into three relatively equal bays. The barn measures approximately 32 feet by **44** feet, and has 15 foot high eave walls. The footprint of the barn is slightly smaller than is common here in Michigan (40 by 50 to 60 is more common) which may be explained by the fact that this was more of a fruit farm and the demand for hay storage was less, and it may indicate that it is older..

The barn's property is said to have originally been 166 acres, most of which was west of Franklin Road. But much of that land has since been developed. The barn, the 1888 house, and a smattering of other buildings built over the years, now occupy an approximately ten-acre triangular parcel, which is also slated for development. The question is what should be done with the barn?

The timber framed barn (everything above the basement)

The barn has been well cared for over the years and therefore shows little evidence of damage and / or rot. The walls are plumb and true, the roof planes are flat, which is all good to see. There are no major holes in the building and no signs of water leaking into the structure in any major way.

The bent configurations are those of a fairly typical Midwest barn with dropped tie-beams and plumb purlin posts. The only elements noticeably missing are the purlin ties from bents 2 and 3 have been removed for the hay trolley system (very common) and the waste wall has been cut to walk between the bays (also very common). That means that most of the barn is intact and in great shape making this barn a prime candidate for saving.

All of the large timbers in the barn are hewn (squared with an ax) as are the girts. This may mean there was not a sawmill sufficiently close to at the time of construction to get sawn girts from. This can be an indication that it is older. Some of the element that are sawn (braces and ladder rails) do show faint evidence of being sawn with a water-powered sash saw, while others show radial saw marks. Water powered saws were

Charles Bultman
Architect

220 south huron street · ypsilanti, mi 48197

rapidly replaced with steam-powered radial saws right after the Civil War. Therefore it is likely that this barn dates from around that period. However since the barn was originally built as a ground barn (see below) it is also possible that replacement braces from newer stock was introduced during a past renovation. I would strongly recommend doing dendrochronology testing to determine the year(s) the trees were cut. This can be done easily during the barns restoration.

The basement

The barn has a stone foundation on three walls, with a wood walkout wall to the east. The stone walls are in a predictably questionable state, due to the freeze / thaw cycles every year. As such there are some deep cracks, but nothing appears to be imminently dire. However if the barn is to remain in its current location, this foundation will have to be addressed.

The timber framing in the basement, particularly the first floor's platform, appears as I would expect. It has a 10 to 12 inch sill system with three-quarter round joists. The sills and joists are visually in fair shape but there is some evidence of rot and powder post beetle damage. I would consider this material to be questionable.

The basement's system of interior posts are all not tenoned into the bent's sill beams above. And there are no mortises in these beams to indicate the basement construction was built with the original barn. This implies that this barn may have been a ground barn when it was originally built and the basement was 'added' later. That also may mean the barn was in a different location before the basement was added. Typically we never solve the mystery of where it originally was built.

The north addition.

Sometime in the early 20th century an addition was built against what is now the north gable of the barn (touching bent #1). This addition features hewn tie beams and plate, while the rest is circular sawn. The addition measures approximately 30 feet by 32 feet and has a ridge line perpendicular to the older barn to the south. This addition is minimal; with two gable bents and a centered beam below the upper floor. This addition also has no south wall; meaning the tie beams of the gable bents have been fitted into the gable faces of the corner posts on bent #1 of the original barn.

The roof of the adition is a simple gable on the noth slope. But the south slope also needed a saddle to create valleys with the original barn. The valley rafters are simply braced against the corner posts of bent #1 and are somewhat over spanned. This roof probably sagged soon after construction and now has an array of bracing added from the ridge to the floor to stiffen it.

Whether at that time, or later. other smaller additions were also added. There is an 8 foot projection of the addition to the east that stretches the roof-line to cover mechanical spaces and an elevator. There is also a small brick box north of the north addition that served as an entry.

At some point, a decision was made to clad the main floor level of the addition, as well as the space under the loft between bents #1 and #2 of the original barn in plasterboard. A small amount of exploratory demolition was done (4 Aug 24) to verify that the beams that are wrapped in plasterboard are wood timbers. They are.

Under the 32 foot by 30 foot wood addition is a steel framed, concrete floor system of unknown thickness at this time. The floor between bents #1 and #2 of the original barn has an approximately 3" thick concrete floor poured on the wood (log) floor framing system of the orignal barn.

Reclaiming process

To reclaim / salvage the parts of this structure, this building will have to be taken apart in the reverse order it was built. All of the "small" additions (brick box, and structures / rooms east of the addition) need to be demolished down to the main floor level; leaving the first platform and foundation. All of the plasterboard needs to be stripped out of the addition's main floor if this material is to be salvaged, and the plasterboard needs to be stripped off of bents #1 and #2 to expose the timbers of those bents.

All of the asphalt roof shingles must be stripped and properly disposed of. Then the barn's siding can be stripped and denailed and the barns can be craned apart. The addition must be taken down before the original barn, as it is structurally dependant on the original barn

Conclusions

As we discussed on site, when barns are salvaged we focus on everything above the sill beams, as the sill beams and the first floor framing has been exposed to more water and powderpost beetles. In this case almost all of the barn's framing members above are in very good condition (dry and intact), and little is missing or altered. This makes this barn an excellent candidate to be saved and given a new future.

The addition seems to be in reasonable shape, however one can never know what hides behind a cladding until that cladding is completely removed. Certainly there is material in the upper part of the addition that may be useful to us in the future. However the approach to how and what is salvaged from this structure has to be weighed against the labor involved in undoing the plasterboard and mechanical work that has been installed in and around that volume.

Along with its condition, this barn's provenance should be noted. Not only is this barn a relatively old barn for this part of the country / state its history is known and documented. That should make it very valuable to the people who live in the area. The Pickering family owned this property for over 140 years, and this barn was the center of their farming operation for that time. It should therefore carry a lot of meaning to the neighbors who live there too to have a top-notch example of a Midwest barn that was owned by one of the early families who helped to build the Bloomfield Township / Village of Franklin communities.

Respectfully submitted,
Charles Bultman, architect *Inc*

Entirely blank or zero-only rows are omitted from this print view; original row numbers are shown. For the shared master-plan workbook, this print view covers BSF and shared worksheets; JNC worksheets remain in the embedded original.

Source row	1	2	3	4	5	6	7	8
1		Bowers School Farm						
2		Facilities Evaluation						
3		Flint Riverquarium						
4		Facilities Evaluation						
6		BSF	Ave / Priority	Age / Condition	Functionality / Efficiency for Current Use	Guest Experience		Known Improvements Needed
7		Hoop House / New Field Wash Pack	0.0					Needs to be created.
8		Academy Café	1	1.0	1.0	1.0		Café used as social work office space now; Carpeted floor; Storage for food; Too many uses and too small;
9		Root Cellar	1	1.0	1.0	1.0		leaks. Needs a full space review - needs to be rodent proof. Historic structure.
10		Horse & Goat Barn	1	1.0	1.0	1.0		it's time to replace. not ideal for any animal. we have made many modifications to work current needs.
11		Bowers Cottage	1	1.0	1.0	1.0		it is a space that has potential. needs total overhaul
12		Toilet Building	1	1.0	1.0	1.0		needs to be replaced.
13		Laundry Room	1.333333333	2.0	1.0	1.0		Beat up, older stuff. Not enough lockers or space. Office supplies in there. Need additional washer and dryer for kitchen vs animal stuff. Need biosecure entry for all from Farm

Source row	1	2	3	4	5	6	7	8
14		Toilets Entry / Academy	1.333333333	2.0	1.0	1.0		All people use the same toilet…need additional and separate areas. Bad toilet, gaps in doors…
15		Produce Display (in store)	1.333333333	2.0	1.0	1.0		Since we are growing produce, we need to be able to get it to the customer. Closed coolers, not have to move it back and forth.
16		Store	1.333333333	2.0	1.0	1.0		Not intended for retail. Was originally a lunch room. No secure inventory storage. Lack of power. No wall for display. No water line for ice cream. Sound issues.
17		Ticketing	1.333333333	1.0	1.0	2.0		
18		Livestock Pastures	1.333333333	1.0	1.0	2.0		poor ground, poor drainage, lack of guest experience access.
19		Event Storage Barn: FAB Garage	1.333333333	2.0	1.0	1.0		needs to be organized.
20		Outdoor Flex Space "parking lot area"	1.333333333	1.0	1.0	2.0		use for show ring - use for teaching space - not a parking lot. used for events - more entertainment vs parking lot. needs better water management.
21		Hillside Pasture	1.333333333	1.0	1.0	2.0		poor soil. lack of water access. fences are patched together. guests love to say hello. concern of biosecurity with animals nose to nose with dogs on walks. too far from core of animal care.
22		Residence	1.333333333	1.0	1.0	2.0		Needs major improvements (roof, soffits)

Source row	1	2	3	4	5	6	7	8
23		Production Gardens	1.333333333	1.0	2.0	1.0		Needs new shed roof, ok for growing - hard to get to, lack of consistent management for optimal weed and pest management. back part is on a big hill - erosion issues. No electricity. Far from everything - especially the store and the cooler. Will benefit with full site deer fencing. Groundhog issues. NO equipment storage.
24		Wash Pack (area where produce is prepped)	1.333333333	2.0	1.0	1.0		Currently a car port - no electricity. No rodent proof storage space. One season use. Drainage issues.
25		I-75 Pond	1.333333333	1.0	1.0	2.0		when there is water, it is pretty - it's all run off. not ideal for animals. very shallow - attracts unwanted water birds Not ideal for pasture animals.
26		Ropes Course	1.333333333	1.0	2.0	1.0		Was built in 1991 - 4 out of 6 elements will have to be retired by spring and needs a complete rework. Accessibility is a challenge. No site maps. No signage. No electricity. Lots of room for improvements and opportunities.
27		Staff Break Room (Hall)	1.5	2.0	1.0			Not really a room, old equipment
28		Admin 1st Floor Offices	1.5	2.0	1.0			Lacking HVAC, too small…
Source row	1	2	3	4	5	6	7	8
29		Loft Offices	1.5	2.0	1.0			HVAC…intended to be guest experience space, but is used as offices; No storage;

Source row	1	2	3	4	5	6	7	8
								No storage for personal items; Break out space in the open space; Copy and office supplies located here.
30		Gazebo	1.666666667	1.0	2.0	2.0		Starting to show age. needs power. ADA concerns. Slippery when wet
31		Academy Staff Office	1.666666667	3.0	1.0	1.0		Student work space and staff work space, storage and copy all together--too small. Storage and copy pulled out as separate.
32		Academy Common Space (Hall)	1.666666667	3.0	1.0	1.0		Too many things happening here--lunchroom, storage, office, kitchen, hallway, ticket window…
33		Academy Library	1.666666667	3.0	1.0	1.0		Needs to be much bigger--holds 2 kids right now; would like seating, study space, more book storage; 25 kids max.
34		Academy Science Classroom	1.666666667	3.0	1.0	1.0		Not designed for science lab (needs plumbing for sinks; overhead electric; lab tables). Furniture change. Needs more storage. Need chemical storage. Eye wash station. Need Exterior access.
35		Greenhouse	1.666666667	2.0	1.0	2.0		Mechanics for the temperature controls are unreliable. Too hot in the summer. Control of systems needs a reboot. Too small for current needs.
Source row	1	2	3	4	5	6	7	8
36		Kitchen	1.666666667	3.0	1.0	1.0		Too small right now for teaching… equipment is wrong for use for teaching or for bulk

Source row	1	2	3	4	5	6	7	8
								production; Like concession and pizza oven. Storage lacking.
37		Chicken Mobile Coop	1.666666667	2.0	1.0	2.0		needs to be reworked in areas. water and feed challenges. inside parts have started to come apart. Animal husbandry? Would like to look at an improved space for care.
38		Bank Barn	1.666666667	1.0	2.0	2.0		needs historical correct repairs. Wood rot. Water drain issues. electrical issues - not enough power. hard to clean. Functionality is not designed for current methods of use.
39		Outside Lower Barn (bank barn)	1.666666667	2.0	2.0	1.0		could be improved by leveling the concrete and finding a way for a skidsteer to enter for cleaning. LOVE the outside animal space.
40		Community Gardens	1.666666667	1.0	2.0	2.0		Will benefit with full site deer fencing. Concern of hydrant reliability. Some areas are too wet and should not be used for growing. Needs a dedicated, enclosed compost area.
41		Chicken / Bee Classrooms	2	2.0	2.0	2.0		
42		Riding Arena	2	2.0	2.0	2.0		does the job - needs shade shelter - look at shade all cattle shades not adjacent to a horse barn
43		Academy Classroom 1	2.333333333	3.0	2.0	2.0		Too many functions…needs exterior door. Needs storage. Add additional spaces for gym and office.
44		Academy Classroom 2	2.333333333	3.0	2.0	2.0		connected to #1

Source row	1	2	3	4	5	6	7	8
45		Hoop House	2.333333333	3.0	2.0	2.0		Excited to use this! Still under construction. Need interior tables for production support. Being used as a supplemental space to the existing greenhouse -> this is not ideal, but working with what we have.
46		Farm Activities Building	2.333333333	3.0	2.0	2.0		Deck needs to be covered to increase space to accomdate a group of 100. Tent is not a permanent solution
47		Barton Farmhouse	2.333333333	2.0	2.0	3.0		wonderful old home. needs a care plan for continuing to maintain not owned by BHS
48		Hort "Master" Gardens	2.333333333	2.0	2.0	3.0		beautiful and great community connection with the master gardeners.
49		Pumpkin Patch	2.333333333	2.0	2.0	3.0		working on plans for improvement. need a deer perimeter fence around full property. fun destination for guests. great for field trips. use of a porta potty helps each season. Site wide crop rotation plan. Weed issues are great. Groundhog damage.
50		Tubing / Winter Park Facilities	2.333333333	2.0	2.0	3.0		people love it - drain on staff. Need to increase capaity, change operational model to reduce staff inputs. Auto snow maker and snow carpet would help.
51		Cooler (not the freezer)	2.5	3.0	2.0			At times it is not large enough for kitchen and garden use.

Source row	1	2	3	4	5	6	7	8

BOWERS SCHOOL FARM

BLOOMFIELD HILLS, MI

Bloomfield Hills Schools

Johnson Nature Center

Bowers School Farm and Johnson Nature Center are owned and operated by Bloomfield Hills Schools (BHS), which provides a public school experience for pre-kindergarten to high school.

The Farm & Nature Center extend learning beyond the classroom to BHS and local area schools. Their diverse habitats support a variety of native plants and wildlife, livestock and crops. From stepping into the historical buildings and back in time, to digging deep into the soil and imagining a more sustainable future, these unique sites offer dynamic educational experiences to serve the needs of today's students.

OUR CORE VALUES

COMMUNITY

EDUCATION

ENVIRONMENT

SCHOOL PROGRAMS AT BOWERS SCHOOL FARM **PAGE 6**

SCHOOL PROGRAMS AT JOHNSON NATURE CENTER **PAGE 10**

SMALL GROUP PROGRAMS **PAGE 14**

PROFESSIONAL DEVELOPMENT PROGRAMS **PAGE 19**

our goals

We aim to strengthen classroom teaching and learning by engaging teachers and students in authentic, meaningful experiences that enrich their identities and expand their skills, knowledge and perspectives.

Together we will develop a deeper understanding and appreciation of each other and the world around us through inquiry-based, developmentally appropriate practices that promote joy and discovery.

We will build connections within our local community in order to spark action and service. We hope to leverage this action to work toward a healthier community and environment.

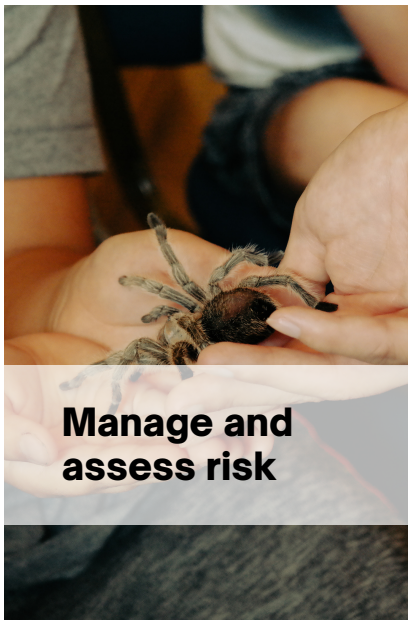
our approach

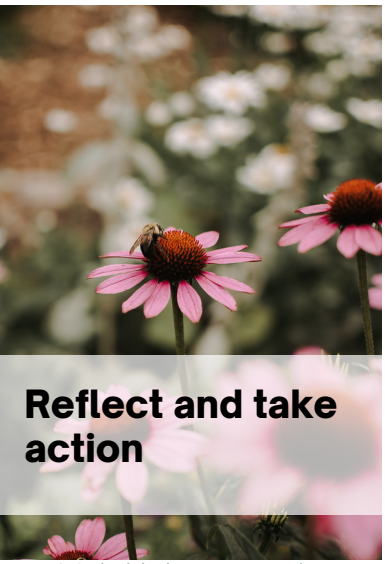
We believe in a place-based educational approach that embraces deep learning and high impacts by immersing learners in the natural world, land heritage and local food systems. We encourage students to make connections by contributing and applying their own unique knowledge, strengths and interests to develop a stronger sense of themselves and their role in their communities, sparking learning that is cross-cultural and centered on respect and belonging.

our commitment

We are committed to designing educational experiences utilizing research-based learning objectives, frameworks and strategies to guide learners in achieving valuable academic and social-emotional outcomes. We will promote the appreciation and value of outdoor experiences for all in order to reach those outcomes by teaching and valuing the whole person.

we encourage learners to...





BOWERS SCHOOL FARM

School Programs

GRADES PRE-K TO KINDERGARTEN

1 ½-2 Hours Spring or Winter: $12 per person
1 ½-2 Hours Fall: $14 per person
Field trips include the option of per child parent/caregiver chaperones with the per person fee.

FRIDAYS ON THE FARM

Experience daily life on the farm during this blended staff-guided and self-guided program. A guide will provide an interactive tour with hands-on opportunities to discover the plants and animals living and growing in our barns, fields, and gardens, then enjoy time to explore the farm at your own pace. Observe and learn more about places and animals of interest, taste farm products and treats available for purchase, and engage in special activities such as a wagon ride around the farm as part of our Open Barn days. The fall adventure includes a pie-size pumpkin. Groups are welcome to enjoy lunch at our picnic area.

FARM DETECTIVES

Explore the joys and mysteries of life on the farm in the fall, winter or spring with our farm guides. Discover how the field, pond and garden habitats support the survival of the plants and animals that visit and grow in them and how food journeys to your table. Enjoy a wagon ride around the farm. The fall adventure includes a pie-size pumpkin from our patch.

BOWERS SCHOOL FARM

School Programs

GRADES K-2

2 Hours: $12 per student / 4 Hours: $16 per student

FARMER FOR A DAY

Experience the seasonal activity of a farm preparing for winter by engaging in the purposeful work of farmers and gardeners. Observe as the animals adapt through natural instincts and learn about their basic needs. Harvest crops in the gardens, tend to the barns, gather freshly laid chicken eggs from the coop and enjoy a scenic wagon ride.

ARE YOU MY MOTHER? (2-HOUR PROGRAM ONLY)

Why do baby animals look like their parents? Discover whether the characteristics of animals are inherited or acquired through this literacy-based farm adventure. Compare and contrast animals at different stages within their life cycle. Make purposeful observations about the basic needs of animals living at the farm by gathering clues and working together.

BOWERS SCHOOL FARM

School Programs

GRADES K-2

2 Hours: $12 per student / 4 Hours: $16 per student

ANIMAL INVESTIGATIONS

Explore animal classifications by investigating their habitats, diet and anatomy along with the role they play within the food and ecosystem. Engage in hands-on tasks and experiments to guide a developing understanding of life cycles while forming meaningful connections to the farm and the food system. This program includes the additional option to engage in classroom incubation and chick hatching with the purpose of adding chickens to our free-range flock.

POCKET FULL OF HISTORY

Immerse in the local history of the local area through exploration of the Barton Farmhouse, the Craig Log Cabin and the farm environment. Engage in farm tasks that would have been common in the 1800's through the mid 1950's. Discover how to manipulate, use and create items and tools from those eras.

BOWERS SCHOOL FARM

School Programs

GRADES 3-5

2 Hours: $12 per student / 4 Hours: $16 per student

THE SCIENCE OF AGRICULTURE

How does a farm grow? Examine the life cycle of several species found on the farm. Distinguish the differences and similarities between them and learn to question, hypothesize, experiment and analyze data through scientific procedures and processes. Determine how the growth of these organisms may not only play a role in individual health and well-being, but to the farm as part of the food system.

ANIMAL BODIES & BEHAVIORS

Become animal scientists for the day by engaging in animal interaction, discovery and reflection. Collect and analyze data from farm animals' digestive, reproductive and immune systems as well as through observation of their behaviors. Based on these findings, determine the animals' needs to ensure they continue to live in a healthy, comfortable environment.

HARVEST & HERITAGE

How is what we value today different from what humans valued in the past? Investigate the history and heritage of Indigenous peoples and early settlers. Card wool, grind corn, churn butter and discover how technologies and ways we interact with the natural world have changed over time. Build connections and celebrate the differences among our own individual identities and heritage.

JOHNSON NATURE CENTER

School Programs

PRE-KINDERGARTEN

1 ½-2 Hours Spring or Winter: $12 per person
Field trips include the option of per child parent/caregiver chaperones with the per person fee.

NATURE DETECTIVES
Explore our forests, prairie, pond and trails, detective-style. Come along with us as nature detectives to solve a seasonally-based mystery! Engage the senses, play as animals and join in song or story. We'll embark on a guided hike with time for self-discovery and play-based provocations.

JOHNSON NATURE CENTER

School Programs

GRADES K-2

2 Hours: $12 per student / 4 Hours: $16 per student

LOG CABIN LIVING (2-HOUR PROGRAM ONLY)

Step back into the 1800s into our log cabin to immerse into the daily chores and routines of the time period. How is life different today than in the past? What other people have stories to tell on the Land? Engage in dough preparation for baking, churn butter, wash clothes and more while enjoying tales of hunting and fishing.

FOREST DAY

Explore the science and joys of living and non-living things alongside Indigenous perspectives. Investigate the basic needs of living things through authentic tasks and contributions with our resident deer and visiting birds. Engage in hands-on investigations of earth materials through 3D map-making, cooperative fort-building, journaling and creative storytelling.

NATURE PREPS FOR WINTER

Make a move with us to experience the ways plants and animals get ready for the winter months ahead. Collect weather data and look for patterns between weather and animal behavior.

PLANT-IT: A JOURNEY OF A SEED

Every plant has a plan on how to grow and develop. The seeds of plants hold the key to the survival of the species. Investigate how plant species root into the Land and become invested in their intimate stories of resilience.

JOHNSON NATURE CENTER

School Programs

GRADES 3-5

2 Hours: $12 per student / 4 Hours: $16 per student

THE SWEET STORY OF MAPLE SUGARING

Investigate what life was like in the 1800s by engaging in activities such as candle dipping, era-approved games and safe tool usage. Explore the sweet history of the sugar maple tree grove and peek into the future of sugaring. Discover the joys and science of maple-tree tapping, sap collection and syrup tasting.

BIRD FIELD RESEARCH

Engage in an authentic scientific study conducting a bird census of the Nature Center, an ongoing study since 1991. Birds are considered excellent indicators of environmental health so the ongoing census data collected can act as a warning if there are contamination problems in our land, air or water. Learn about bird ecology, conservation, biology, behavior and environmental needs.

JOHNSON NATURE CENTER

School Programs

GRADES 3-5

2 Hours: $12 per student / 4 Hours: $16 per student

OUR CHANGING EARTH

Model the skills of an earth scientist to observe and describe the patterns and features that dot the landscapes of Southeast Michigan. Uncover the story of the Land. Investigate geologic clues to understand past events and the process of weathering and erosion.

POND ECOLOGY INVESTIGATIONS

Trace the life of a leaf to discover the energy and activity happening within the plant and below soil and water surfaces! When we start thinking like field scientists, we discover that energy is being used or stored all around us, but where does it go? Through investigation, participants will resolve this very question.

BOWERS SCHOOL FARM

Group Programs

All programs can be personalized to meet the needs and interests of your group, including scout badge requirements as noted within the program descriptions. Programs are open to all groups with an organizing leader.

Thursdays 4:30-6:30 pm & Saturdays 9-11 am
2 Hours: $15 per person; group leader free

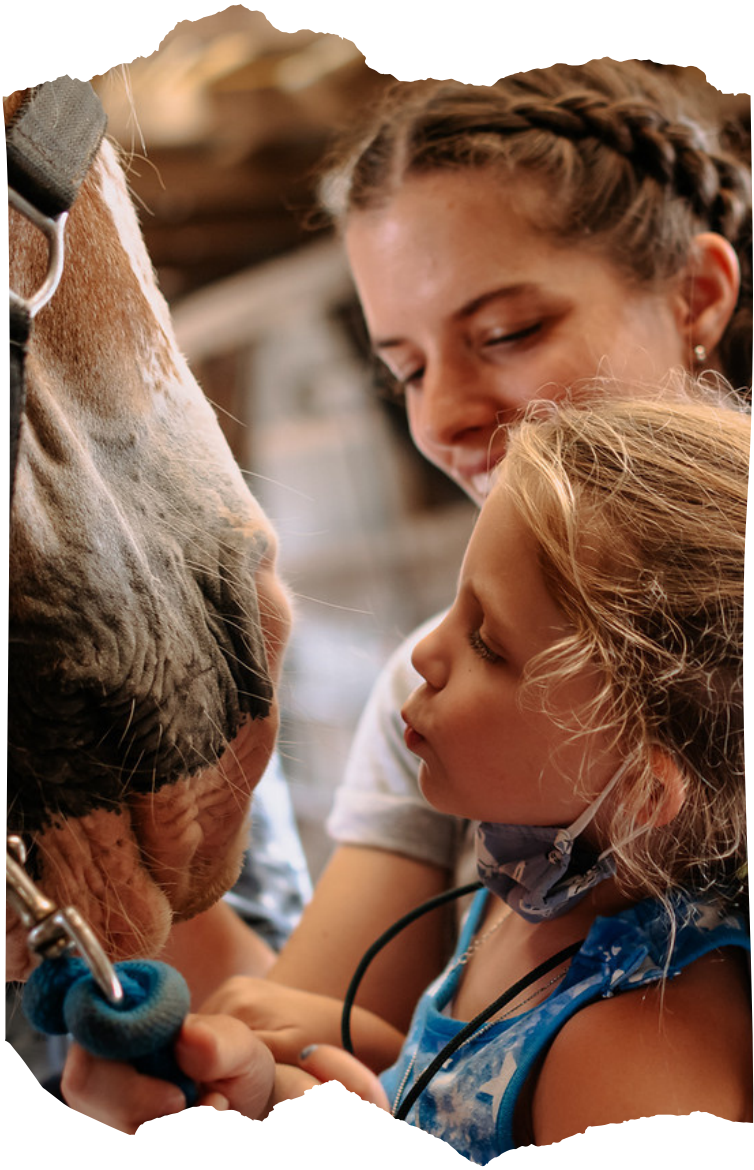
Ages 4-6

OUTDOOR ART MAKER
GIRL SCOUT DAISY
(SEPTEMBER - OCTOBER; APRIL - JUNE)
Explore the farm through the eyes of an artist. Investigate the different shapes, colors and sounds that can be found all over the farm. Gather inspiration through various crafts and games.

5 FLOWERS, 4 STORIES, 3 CHEERS FOR ANIMALS!
GIRL SCOUT DAISY
(SEPTEMBER - NOVEMBER; APRIL - JUNE)
What is one similarity between people and animals? We all need care! This program is designed to get scouts engaged with caring for themselves, while also understanding what it takes to care for the animals on the farm.

BOWERS SCHOOL FARM

Group Programs



Ages 4-6

SNOW ADVENTURE

GIRL SCOUT DAISY

(DECEMBER - FEBRUARY; CONDITIONS PERMITTING)

Winter in Michigan is a special time to head outdoors! Learn about the ways to enjoy the cold weather here at the farm, like snow tubing or ice skating. Keep warm with hot cocoa while enjoying shared experiences in the snow.

READY, SET, GROW!

CUB SCOUT LION ADVENTURER

(SEPTEMBER - OCTOBER)

Explore all the places that we grow and manage food at the farm. What does a plant need to survive, and how does the farmer take care of a garden? Discover where our food comes from through different games, activities and sightseeing.

BOWERS SCHOOL FARM

Group Programs

Ages 7-9

THE WORLD OF BUGS
GIRL SCOUT BROWNIE
(APRIL - JUNE)
From perky pollinators to crawling critters, discover the smallest creatures living at the farm. Investigate as scientists and engage in crafts, projects or games.

OUTDOOR ADVENTURER
GIRL SCOUT BROWNIE
(SEPTEMBER - NOVEMBER; APRIL - JUNE)
Want to become an environmental steward? Nature is both beautiful and exciting! Hike and explore, care for an animal, play games and grow more adventurous and confident in the outdoors.

JOHNSON NATURE CENTER
Group Programs

Ages 4-6

ECO LEARNER

GIRL SCOUT DAISY **(SEPTEMBER - JUNE)**

From the small American goldfinch to the noisy woodpecker, investigate and explore the many birds that call Johnson Nature Center "home." Learn to use some of the tools and tricks of a seasoned birder.

TIGERS IN THE WILD

TIGER CUBS **(SEPTEMBER - JUNE)**

Discover and observe different kinds of plants, animals or signs of animals that have been around the trail. We'll commune with nature directly by touch, taste, smell, sight and sound.

PAWS ON THE PATH

WOLF CUBS **(SEPTEMBER - JUNE)**

Experience a sense of wonder by just watching quiet ordinary things with close attention. During this learning path, identify different animals in the area and watch and record two interesting things you might never have seen before.

JOHNSON NATURE CENTER
Group Programs

Ages 7-9

ECOFRIEND - *BROWNIE* **(MAY - OCT)**
Explore and investigate the outdoors by learning how to respect the environment and how the nature center animal residents manage their lives. Develop an understanding of risk and safety management and gain confidence in the control of fire-building as a skill.

HIKER - *BROWNIE* **(SEPTEMBER - JUNE)**
Every trail leads to a new adventure! Enjoy time with your group and a nature center guide out on the trails. Embark on a scavenger hunt that encourages discovery, fun and learning.

TRAIL ADVENTURE - *BROWNIE* **(SEPTEMBER - JUNE)**
Let's go on a woods hike adventure! What will we discover along the way? Nature is always changing and never without something new to find. Make this adventure an experience you'll remember forever with time for journaling along the way.

FUR, FEATHERS AND FERNS - *BEAR CUBS* **(SEPTEMBER - JUNE)**
With your local map as a reference and the growing knowledge of map symbols, use our trails to look for and identify six signs of living things. Discover the intimate parts of plants to look at plants more closely.

Professional Development Programs

OPT OUTSIDE: A WORKSHOP FOR EARLY CHILDHOOD EDUCATORS

Contact us for a curricular consultation to develop a customized professional learning workshop experience that meets your learning goals and objectives for grades Pre-K-2. Possible topics include: practicing field science, exploring inquiry-based learning methods, reimagining your schoolyard as an outdoor learning environment and adapting/designing learning experiences for the outdoors.

Brooke Larm, Education Specialist: blarm@bloomfield.org

Bowers School Farm and Johnson Nature Center sit on Land that was made by warm shallow seas and slow moving glacial formations, with the most recent glaciers receding 14,000 years ago. This is the ancestral Land of the Indigenous Peoples of the Potawatomi and Ojibwe, who along with the Ottawa, were the People of The Three Fires, the Anishinabek. This Land remains the contemporary dwelling of the Anishinabek people.

The sites are located 5 miles apart and encompass a combined 133 acres in Southeast Michigan, each situated approximately 25 miles from Detroit. We welcome 60,000 a year and seek to make nature and agricultural educational experiences more accessible to all. From serene pond views to production fields, breathtaking forests, and a working red barn, we believe in protecting our state's natural and cultural heritage to support environmental quality and community well-being now and in the future. Each year we serve residents in Oakland County and beyond through our camp, school, and family programs and engage thousands more through our public events and volunteer opportunities. We invite you to explore and discover at Bowers School Farm and Johnson Nature Center, find inspiration and get involved.

Public Programs Inventory

Public Programs Inventory — Discovery Oaks and Bloomfield Oaks
Purpose
Inventory of all public-facing programs currently operated at both BHS partnership sites. Establishes the operational footprint Oakland County Parks will assume on October 1, 2026, organizes programs by category for POMP development, and identifies revenue, partnership, and continuity considerations for the Final PAP.

Discovery Oaks (Bowers School Farm)
Open Barn — flagship public access program
Detail	Value
Season	April 10 – September 26
Hours	Fridays 5:00–8:00 PM; Saturdays 9:00 AM–4:00 PM
Admission	Ticketed; tickets sold at door (sales close 30 min before close)
Resident discount	None
Membership benefit	Unlimited Open Barn admission included
Activities	Animal visits across all barns, wagon rides, farm kitchen, farm store
Accessibility	Mainly gravel paths, few paved; at least one bridge with steps; full accessibility named as future goal
Food/beverage	Farm Kitchen (paid); light snacks may be brought in
Pet policy	Service animals only
Signature seasonal events
Fall Festival (October weekends). Pumpkin picking, wagon rides, animal visits, horse rides, live music (Fridays), hay climbing tower, crafts, games, axe-throwing, food, straw tower, performances. **NEW for 2026: 1.3-mile corn maze.** Adult Beer Garden sponsored by Friends of Bowers Farm and Griffin Claw Brewing Company.
Winter Park (January – March). January 9 – March 1, 2026 schedule: Fridays 4:00–9:00 PM; Saturdays 2:00–9:00 PM; Sundays 2:00–9:00 PM. Free admission. Glow tubing $17 per 50 minutes. Synthetic-surface tubing hill operational regardless of snow. Illuminated for evening hours. Hay stack, animal visits, farm store, farm kitchen with hot cocoa and s'mores. **Hosted by Friends of Bowers Farm; sponsored by Oakland County Parks.** Ice skating rink not offered for 2026 season.
Spring Open Barn / Earth Day Celebration / Farm After Five / U-Pick / Progress Showdown: Livestock Expo. Augmented Open Barn experiences interleaved through the active season. Farm After Five features Friday-evening beer garden and live music with Friends of Bowers Farm and Griffin Claw partnership; 21+ for

beverage purchase, all ages admitted.
Education programs
School field experiences. Year-round on-site programs for school groups of all sizes. Online registration. Three-season program structure (Fall, Winter, Spring) for some classroom partnerships. Students must register all three dates throughout the school year.
BHS Developmental Kindergarten alternation. BHS DK classes alternate weekly visits between Bowers and JNC across the school year, integrating agricultural and nature-based learning into the K curriculum.
Bowers Worm Farming Fun. Off-site vermicomposting program with toolkits, Red Wigglers, and personalized support delivered to teachers and young learners. Worm bins return to Bowers; participants encouraged to graduate to larger bins.
MSU Extension Partnership. Bowers is a proud partner of Michigan State University Extension. Research-based curriculum and experiential methodology inform instructional design; MSU educators enhance learning experiences, activities, and hands-on workshops.
Community classes (sliding-scale model)
Sliding scale pricing: Three tiers — full-cost, mid-tier, supported — designed to welcome participants regardless of financial status while paying educators a living wage. Sliding scale available on some programs, not all. No refunds or date changes once purchased.
Examples of current/recent offerings:
- Toddler farm visits with seasonal themes (bee hives, fresh eggs, wagon rides, story time)
- Sourdough bread baking (beginner classes; gluten-free variant)
- Holiday turkey pre-orders (pasture-raised, fresh-processed)
- Pre-order weekly sourdough loaves (Friday 3–6 PM pickup)
Equine programs
Riding School and equine programs — major program category with dedicated infrastructure (Horse Camp Arena per Exhibit B).
- **Little Riders Pony School** — ages 3–5, play-based with parent/grandparent/caregiver participation
- **Introductory horse program** — ages 4–8, three-week × 1-hour sessions with instructor; adult family member spots/leads
- **Two-part horse foundations** — skill-building for safe horse handling and care
- Adult and child equine programming
Farm Camps (summer)
Farm Camp — ages 3–14, hands-on farming, planting/harvesting, animal care, farm-to-table cooking.
Over 800 youth participate annually. Weekly themes (switched away from multiple themes for 2026 to a unified weekly camp structure). Many sessions sell out; waitlists active.
Stewards Leadership Program — ages 14–18 volunteer-leadership program at summer camp; bridges camper and staff roles for job-readiness experience.
B.O.B. Camp (Bowers + JNC). Joint camp where participants drop off and pick up at Bowers Farm Mon–Tues and at JNC Wed–Thurs. Operational integration between the two sites.
Community engagement programs
- **75 Community Gardens** — public gardener plots
- **21 Curated Botanical Gardens** — maintained in partnership with Oakland County Master Gardener Society
- **4-H Club** — active youth-development partnership for ages 5–19
- **Volunteer programs** — operational and event support
- **Native plant sales** — seasonal
- **Birthday parties** — private rentals during Open Barn hours; private rooms and spaces available
Farm Kitchen and Store
Operates during Open Barn hours and select winter Friday evenings. Sells eggs, meats, prepared foods, baked goods, produce, gifts. Pre-order pasture-raised turkeys for holidays. Pizza, hot cocoa, s'mores, popcorn during Winter Park. **This is a commercial operation embedded in a public-school site.**
Membership program
Tiered memberships supporting site mission. Benefits include unlimited Open Barn admission, special "First on the Farm" preview events with guided tours, members-only farm-to-table experiences, e-news subscription, special access to spring plant pre-sales, early registration for summer camps, early access for Fall Festival and Winter Park, professional photographer access by appointment.
Operational note: dual revenue model

Per Bowers' own statements: "The Farm is funded through the Bloomfield Hills School general fund... Direct expenses for activities that fall outside of the K-12 teaching and learning mission are passed along to participants of community events hosted by the farm." Education programs subsidized by district; community programs self-funded through user fees, memberships, and earned income. **This dual-stream model is operationally distinct from a typical OCP park and must be preserved through transition or deliberately restructured.**

Bloomfield Oaks (Johnson Nature Center)

Public access (free)

Detail	Value
Trails	Open daily 8:00 AM to sunset
Trail surface	Wood-chipped, hard-packed in dry conditions; no paved trails
Trail length	2+ miles of interconnected loops
Visitor Center hours	Saturdays 10:00 AM – 4:00 PM; first Sunday of month 10:00 AM – 4:00 PM
Visitor Center access	Closed on school holidays
Trail fee	None for casual visitors
Group requirement	Groups of 10+ must book a guided program
Pet policy	Pets prohibited
Bike policy	Bikes prohibited
Wildlife enclosures	Orphaned deer, injured falcons and owls observable

TreeSchool — flagship early childhood program

Detail	Value
Population served	Children ages 3–5
Schedule	Tuesdays 9:30 AM – 1:30 PM; February 28 – May 30 (current cohort)
Format	Once-weekly nature-based preschool
Operating period	September through May
Founded	February 2023
Inaugural class	11 students
Ratio	Small-class, instructor-led
Curriculum	Place-based, emergent, student-led; outdoor-first
Lead educator	Brooke Larm (Education Specialist, JNC + Bowers); supported by certified preschool teachers
State precedent	Modeled after Washington State's first-in-nation 2021 nature-based child care licensing
Funding model	Tuition and fees largely cover staffing; donations support gear, supplies, equipment
Partner support	Christine and Scott Alix, Alix Foundation, Cohen Foundation, Bloomfield Hills Rotary Club, Placemaking Realtor Grant
Outdoor classroom	Built 2024–2025; covered area, fort-building zone, art easel, mud and water play, building/construction zone, two raised garden beds; ~$50,000 project cost

Strategic significance. TreeSchool emerged as the highest write-in priority at JNC's October 2025 in-person engagement event (29 votes). Already flagged in fact file as POMP/Final PAP item.

Maple Sugaring — Sap Happy

Self-guided community program. March weekends (March 1, 7, 14 in 2026). Self-guided tours every half hour from 9:30 AM – 12:00 PM (event-day variant) or 9:30 AM – 2:30 PM (some events). $12 per person ages 2+; toddlers under 1 free. Pre-registration required.

Activities: tour the Sugarbush, identify and tap a sugar maple tree, explore the Sugar Shack and Log Cabin, tree identification, syrup tasting. Cookies and tasting available with additional fee.

Partnership: Girl Scouts of Southeast Michigan offers parallel "Maple Sweetness" Outdoor Adventure programming on the same dates. West Bloomfield Parks offers chaperoned bus trips to JNC Maple Sugaring on select dates.

Camps (summer)

Camp programs for ages 3–14. Weeklong camps offering science and natural-world exploration. Financial aid available (the only camps in either site offering financial aid).

- **Forest Friends** — early childhood track requiring state-licensing immunization records by May 1
- **B.O.B. Camp** — joint Bowers/JNC camp (Mon–Tues at Bowers, Wed–Thurs at JNC)
- **Various age-segmented camps** — registration opens annually in early February

Field experiences (school groups)

Detail	Value
Cost	$168 per program slot for max 14 students
Deposit	$80 non-refundable per slot
Duration	1.5–2 hours
Teacher	One free per slot; additional teachers/support staff free as needed
Chaperones	Up to 14 per group, max 1:1 ratio with students, $14/person

Available programs include:

- Native habitats exploration (forests, wetlands, prairies, sugarbush)
- Native plant species
- Native wildlife
- Birding (binoculars provided for up to 30 people)
- Maple Sugar program (with optional cookie tasting add-on)
- Log Cabin Living (1800s historical immersion; bread dough and butter add-on)
- Three-season program for classrooms (Fall, Winter, Spring registration required)
- Off-site outreach available (1-hour, indoor or outdoor); special pricing for public libraries

Scout and small-group programs

10–24 scouts/youth, 2-hour program format, $16/person, scout leader free. Programs available on Thursdays 4:30–6:30 PM by request. Scout-badge-aligned programming.

Naturalist series and special programs (selected current offerings)

- **Birds and Blooms** — immersive naturalist series
- **Owl Prowl** — guided nighttime hike
- **Deer tracking and habitat hike**
- **Enchanted Dwellings: Nature's Architecture** — fairy house and gnome home building with natural materials
- **Pinecone snowy owl craft programs**
- **Birding programs**
- **Fishing** — limited to advertised guided dates only

Volunteer and stewardship programs

- **Earth Day work events** — invasive species removal, litter removal, trail management
- **ReLeaf Michigan partnership** — five-year sugar maple planting program (DTE Energy Foundation funded)
- **Sugar Bush restoration** — long-term volunteer-supported succession planting
- **Adopt a Tree** — Friends-of-JNC sponsorship program
- **Goosechase "Nature Invaders"** — gamified invasive species scavenger hunt

Friends-led fundraising programs

- **Forest to Table** — annual chef-led fundraising dinner using invasive plant species; zero-waste event
- **Friends memberships** — $35 individual to $500 donor tier
- **Photography passes** — $150/day, $500/year (professional photographers, by appointment)
- **Birthday parties** — ages 3–12
- **Targeted fundraising** — trail maintenance, signage, native plantings, sugar-bush restoration, animal care, land acquisition

Operational note: contemplative-use carrying capacity

The October 2025 engagement surfaced a tension at JNC: some respondents want extended hours, more guided programs, and lower fees; others explicitly fear that bringing in more visitors or paving more of the site would damage the peace-and-quiet value they currently use it for. **Per the Decision-Grade Assessment, this is a carrying-capacity and identity issue, not a throughput problem.** The POMP must establish use thresholds, not maximize throughput.

Joint and integrated programs

Program	Both sites	Notes
BHS Developmental Kindergarten	Yes — alternates weekly	Curriculum-integrated across both sites
B.O.B. Camp	Yes — split logistics	Mon-Tues Bowers; Wed-Thurs JNC
Education Specialist (Brooke Larm)	Yes — shared role	JNC + Bowers Education Specialist
TreeSchool field trips	Occasionally to Bowers	TreeSchool participants visit Bowers
Off-site outreach	Yes — both sites offer	Library partnerships, schoolyard programs

---
Mission 26 zone alignment of programs
Discovery Oaks programs by Mission 26 zone type
Zone Type	Programs
Discovery & Learning	School field experiences, MSU Extension partnership, BHS DK alternation, Worm Farming, Open Barn educational components
Stewardship & Cultivated Landscapes	Community Gardens, Curated Botanical Gardens, 4-H Club, native plant sales, equine programs, livestock care programming, sourdough/turkey/cooking classes
Healthy Activity & Social Connection	Open Barn social experience, Farm After Five, Spring Open Barn, U-Pick, family-oriented events
Enterprise	Winter Park (revenue-generating), Farm Kitchen, Farm Store, Fall Festival ticketed events, equine riding lessons, birthday party rentals, memberships
Bloomfield Oaks programs by Mission 26 zone type
Zone Type	Programs
Discovery & Learning	TreeSchool, school field experiences, scout programs, naturalist series, bird/wildlife programs, BHS DK alternation, off-site outreach
Habitat & Ecological Protection	Trail-based wildlife observation, wildlife enclosures, ecological monitoring, native habitat exploration
Stewardship & Cultivated Landscapes	Maple Sugaring (Sap Happy), Sugar Bush restoration, ReLeaf Michigan tree planting, Earth Day stewardship work, Adopt a Tree
Restorative Nature Immersion	Free trail access (8 AM – sunset), Owl Prowl, deer tracking hikes, photography pass program, contemplative natural-area use
---
Visitation and program-volume context
Discovery Oaks (Bowers): ~40,000 annual visitors per Survey Full Report; alternative figures of 20,000+ (county page; Open Barn/store/events only) and 55,000+ (BHS job posting). **Use 40,000 as PAP authoritative figure** per fact file decision.
Bloomfield Oaks (JNC): ~10,000 annual visitors per Survey Full Report.
Combined: ~50,000 annual park experiences — these are existing recurring program contacts that flow directly into Mission 26 Tier 1 metrics (Countywide Distributed Repeat Household Participation, Cost per Experience) on October 1, 2026.

Key continuity considerations for Final PAP
1. **Open Barn schedule and pricing model** — currently runs through September 26, 2026; transition into OCP operations (October 1) requires no Open Barn season disruption.
2. **Winter Park relationship** — operated by Friends of Bowers Farm with OCP sponsorship for 2026 season. Post-transition operating model and revenue allocation between Friends and OCP needs explicit POMP definition.
3. **Sliding-scale community classes** — preserves access; contrast with standard OCP fee structures; POMP item.
4. **MSU Extension partnership** — pre-existing third-party agreement; per Interlocal §3.2.2 BHS provides agreements within 30 days of Effective Date. **`[DATA NEEDED]`**
5. **Friends groups operational role** — Friends of Bowers Farm operationally hosts Winter Park; Friends of JNC operationally hosts Forest to Table and stewardship volunteer events. Per Interlocal §4.9.2, Friends become OCP volunteer organizations post-transition. Operational scope retention must be explicit.
6. **TreeSchool licensing and continuity** — state-licensed early childhood program. Licensing pathway under OCP operation requires Corporation Counsel review.
7. **BHS Developmental Kindergarten alternation** — curriculum-integrated district program; operational schedule preserved through OCP transition per Interlocal §4.18 building access protocols.
8. **B.O.B. Camp logistics** — joint-site camp requires coordinated transportation, drop-off/pickup protocols, and staff scheduling across both sites.
9. **Farm Kitchen and Farm Store as commercial operations** — food service licensing (Oakland County Health Division), retail operations, food safety protocols. Operational complexity exceeds standard OCP food/retail concession arrangements.

10. **Equine program** — Horse Camp Arena infrastructure, equine staff, horse care, riding instruction certification, liability insurance for horse-handling programs. **Operational complexity not present at any other OCP park.**
11. **Animal husbandry across both sites** — Bowers livestock (sheep, horses, goats, poultry, llama, cattle); JNC rescue animals (deer, owls, falcons). Animal care expertise, veterinary protocols, biosecurity, and feed/care budgets transfer with operations per Interlocal §4.11.
12. **Birthday parties and private rentals** — both sites operate private-event rentals during public hours. Revenue allocation, scheduling, and host responsibilities require POMP definition.

Programs not currently offered but flagged in engagement or partnership materials

- **Expanded JNC public hours** — community priority; constrained by carrying-capacity concerns
- **Lower-cost JNC programming** — community priority for equity reach
- **More STEM programming at Bowers** — community write-in priority
- **More accessible trails at Bowers** — community priority; ADA upgrade contemplated in CIP
- **Year-round destination programming at Bowers** — Decision-Grade Assessment recommendation
- **Public food-system interpretation at Bowers** — Decision-Grade Assessment recommendation
- **More guided wellness/nature programming at JNC** — Decision-Grade Assessment recommendation

G-06 | Outdoor Learning Program Inventory

Discovery Oaks worksheet. Source: supplied Outdoor_Learning_Program_Inventory_DO-BO_Final(1).xlsx. Original two-site workbook is embedded in this PDF binder; Bloomfield data are not treated as Discovery data. Reporting periods and mixed participation measures require source-owner confirmation.

Worksheet record 4

Program Name: School Field Trips

Purpose: Extends classroom learning through curriculum-connected farm experiences in agriculture, food systems, animal care, and environmental stewardship.

Main Activities: Hands-on agricultural activities, farm animal interactions, barn and garden exploration, and farm history.

Audience: DK–12th grade

Season: School year, September–June

Delivery Lead: Outdoor Learning Team

Partners: Bloomfield Hills Schools; Birmingham Public Schools (long-standing agreement, Jr. K–5th); Cranbrook, Detroit Country Day, and one West Bloomfield school (three-season programming)

Current Status: Running/Growth

Primary Facility: Primarily outdoor, hands-on farm exploration complemented by indoor educational experiences

Annual Participants: 7500 (not including chaperones)

Fee / Revenue: 12

Staffing: Outdoor learning team

Review Notes: Purpose rewritten; the original was a general mission statement. Confirm which West Bloomfield school. Audience says DK–12 but the Birmingham agreement covers Jr. K–5th; confirm both are accurate.

Worksheet record 5

Program Name: Traveling Farms

Purpose: Brings farm education to schools and community sites, removing transportation as a barrier to participation.

Main Activities: Farm animal encounters, animal care demonstrations, and sensory-based learning about farming and food production, adapted to each group's needs.

Audience: All ages, including early childhood, Pre-K–12, families, older adults, assisted living and memory care residents, and people with disabilities

Season: Year-round, by request and staff availability

Delivery Lead: Outdoor Learning Team

Current Status: Running (Turkey Visits)

Primary Facility: Schools, community centers

Annual Participants: 1408 (8 Visits)

Fee / Revenue: $150-$400

Staffing: Outdoor learning team

Review Notes: Partners blank in original; add host organizations if there are regular ones.

Worksheet record 6

Program Name: Grown-Up & Me

Purpose: Introduces children ages 2–6 and their caregivers to farm life and nature through play-based learning.

Main Activities: Animal encounters and grooming, gardening, seasonal farm activities, nature walks, sensory play, storytelling, and crafts.

Audience: Children ages 2–6 with a parent, guardian, or caregiver; sessions grouped by age

Season: Fall, winter, spring, and summer sessions; typically weekly with rotating themes

Delivery Lead: Outdoor Learning Team

Partners: Open to collaboration with community organizations and early childhood partners

Current Status: Running

Primary Facility: Outdoor Farm exploration

Annual Participants: 315

Fee / Revenue: 20

Staffing: Early Learning Team

Worksheet record 7

Program Name: Adventure Ropes Course

Purpose: Challenge-based outdoor recreation that builds confidence, teamwork, leadership, and problem-solving.

Main Activities: Facilitated ropes challenges, team-building initiatives, cooperative problem-solving, balance obstacles, trust exercises, and group reflection.

Audience: School-age youth, teens, adults, school and community groups, and corporate teams

Season: Spring, summer, and fall; group bookings, field trips, camps, and events

Delivery Lead: Trained ropes course staff

Partners: IA

Current Status: Closed

Primary Facility: Low Ropes and High Ropes Course Located in Forest of Discovery Oaks

Annual Participants: 200 IA Students/ ~700-800 Camper utilize during the sessions

Fee / Revenue: 3000 - IA

Staffing: Facilitator must be 18+ years old. Completion of a recognized ropes facilitator training (e.g., ACCT). Demonstrated competency in: Belay systems and fall protection Course facilitation and rescue procedures Annual refresher training and documentation maintained.

Review Notes: Original label read "Rope Course- Gym lit" and the partner is listed only as "IA." Confirm what both mean, and why the course is closed (facility condition, staffing, certification).

Worksheet record 8

Program Name: Scout Programs / Badge-a-Palooza

Purpose: Helps scouts earn badges through hands-on farm and outdoor learning.

Main Activities: Badge stations, farm animal encounters, agricultural exploration, nature hikes, outdoor skills, and conservation activities. Badge-a-Palooza events run multiple themed stations at once.

Audience: Girl Scouts, Scouts BSA, Cub Scouts, and other youth groups, primarily ages 5–18

Season: Year-round troop visits; Badge-a-Palooza events in fall, winter, and spring

Delivery Lead: Outdoor Learning Team

Partners: Girl Scouts of Southeastern Michigan, local scouting councils, and troop leaders

Current Status: Paused; partnership resuming spring

Primary Facility: Outdoor Farm exploration

Annual Participants: 585

Fee / Revenue: 16

Staffing: Early Learning Team

Worksheet record 9

Program Name: Equine Programs: Riding Lessons and Pony School

Purpose: Teaches horsemanship, horse care, and barn safety while building confidence and responsibility.

Main Activities: Riding lessons: riding fundamentals, horse handling, grooming, and tacking, progressing by skill level. Pony School: grooming, basic horse care, barn safety, crafts, and supervised riding with an adult.

Audience: Riding lessons: ages 8 and up. Pony School: ages 3–5.

Season: Seasonal; outdoor lessons pause for winter. Lessons run in recurring sessions; Pony School runs as single classes and series.

Delivery Lead: Trained equine staff, coordinated with farm operations

Partners: n/a

Current Status: Running/Growth

Primary Facility: Outdoor Riding Arena onsite

Annual Participants: 1,320....165 individuals enrolled in the program Equine lesson series. 140 Pony School individuals enrolled in Pony School Sessions

Fee / Revenue: $275-$415 Lesson Packages / $50-$125 PonySchool

Staffing: Equine programming facilitation was primarily managed and delivered by one staff member.

Opportunities & Notes: Strong community demand. Capital investment in facilities and infrastructure could expand capacity, accessibility, offerings, and revenue.

Review Notes: Moved the growth narrative out of the status column into Opportunities & Notes. Partners blank in original.

Worksheet record 10

Program Name: Camps

Purpose: Summer day camps connecting youth to agriculture, animal care, and the outdoors.

Main Activities: Livestock care and feeding, gardening, food production activities, nature investigations, farm-themed STEM challenges, crafts, and team-building.

Audience: Ages 3–5 (half-day); ages 6–13 (grouped by age); ages 14–17 (Volunteer Camp Stewards)

Season: Summer weekly sessions; additional camps during school breaks as demand and capacity allow

Delivery Lead: Camp counselors, seasonal recreation staff, agricultural educators, and farm operations staff

Partners: Oakland Schools (McKinney-Vento); Friends of Bowers Farm (camperships)

Current Status: Seasonal

Primary Facility: Outdoor Farm exploration

Annual Participants: 1364

Fee / Revenue: $160-$550

Staffing: Seasonal Camp Staff

Opportunities & Notes: Future plan to staff camp through MSU Extension.

Worksheet record 11

Program Name: Classroom-Based Agricultural & Environmental Education Programs Chick Hatching / Vermicomposting

Purpose: Brings embryonic development, life cycles, and animal care into the classroom. Teaches decomposition, soil health, and composting through classroom worm bins.

Main Activities: Classroom incubation, egg candling, temperature and humidity monitoring, hatching observation, introductory chick care, and science journaling. Worm bin setup, feeding and maintenance, observation of decomposition, and data recording.

Audience: Early childhood through elementary; adaptable for other grades

Season: Spring, coordinated with school calendars vermicomposting is year round.

Delivery Lead: Outdoor Learning Team (farm staff provide incubation guidance and animal care support)

Partners: Bloomfield Hills Schools and classroom teachers

Current Status: Confirm

Primary Facility: in classroom: Classroom-based chick incubation and hatching,

Annual Participants: 16 Participating Classrooms: 330–374 Student impact. 90 Eggs distributed

Fee / Revenue: 0

Staffing: School Staff supported by farm learning team.

Review Notes: Status was blank. Delivery Lead originally listed the schools; moved them to Partners.

Worksheet record 12

Program Name: Community Programs

Purpose: Public farm programs and seasonal events that broaden access to Discovery Oaks.

Main Activities: Animal encounters, agricultural demonstrations, wagon rides, gardening, harvest activities, equine activities, crafts, and workshops.

Audience: Individuals and families of all ages, and community organizations

Season: Year-round, with more offerings during peak visitation

Delivery Lead: Outdoor Learning Team

Current Status: Running

Primary Facility: Outdoor farm grounds, animal enclosures, greenhouse, and historic farmhouses.

Annual Participants: 1242

Fee / Revenue: Free - $45

Staffing: Early Learning Team

Review Notes: Original text referred to "Bowers School Farm"; updated to Discovery Oaks.

TRANSITION PERIOD WORK PLAN

Overview

Oakland County Parks and Recreation Commission (OCPRC) is undertaking a coordinated, multi-phase transition to fully integrate Bowers Farm (Discovery Oaks) and Johnson Nature Center (Bloomfield Oaks) into County operational, financial, and technology systems by September 30, 2026. This work represents a significant organizational lift requiring alignment across multiple Oakland County departments, Bloomfield Hills Schools (BHS) site staff, Friends groups, and community partners.

Both sites are active, year-round operations with no downtime available for transition activities. Discovery Oaks manages livestock, equine programming, concessions, and major seasonal events. Bloomfield Oaks operates a licensed preschool, wildlife care, maple sugaring infrastructure, and extensive nature-based programming. These operational characteristics shaped a transition plan centered on continuity, readiness, and rigorous coordination.

Transition Objectives

The transition was structured around five core objectives essential for achieving full operational readiness by October 1, 2026:

- Standardize operations under Oakland County IT, security, and compliance requirements.
- Maintain uninterrupted public-facing services, including registration, membership management, and event access.
- Consolidate all financial activity into County systems, including RecTrac and the County general ledger.
- Deliver modern, accessible digital platforms aligned with County standards.
- Ensure OCP staff are fully trained and prepared to assume site operations on Day 1.

Change Management Framework

The transition is organized under the Prosci ADKAR model, a people-centered, research-based change management framework. This approach recognizes that lasting organizational change requires individual readiness across all stakeholder groups.

- **Awareness** – All stakeholders understand the purpose, timeline, and drivers of the transition.
- **Desire** – Building the personal motivation and choice to support and engage with the change.
- **Knowledge** – Gaining the information, training, and education on how to change and what to do.

- **Ability** – Turning knowledge into action for use of systems, equipment, and processes by Day 1.
- **Reinforcement** – Sustaining the change through feedback, measures and recognizing staff contributions; and community confidence is visible.

Stakeholder Engagement

Stakeholder engagement was prioritized and sequenced to ensure clarity, confidence, and continuity.

• **OCP Executive Leadership** received scheduled briefings to ensure alignment, address emerging questions, and validate external communications.
• **OCP Transition Team** met bi-weekly and monthly across five workstreams. Site visits ensured staff familiarity with operations before the bridge period.
• **BHS Site Staff** remained the highest-priority audience. Formal communications were delivered jointly by OCP and/or BHS leadership before any public announcement. Individual meetings were offered, hiring timelines were communicated in advance, and updates were shared through official channels to prevent misinformation.

Transition Team Structure

OCP established a cross-functional Transition Team composed of Chiefs and mid-level leaders from OCP and BHS to oversee the timeline, research information, obtain assets, and provide integrated guidance. The Team synthesized recommendations from five specialized working groups—Educational Programs; Community and Recreational Programs; IT and Systems; Facilities and Grounds; and Communications and Marketing. This structure ensured alignment across operations, technology, staffing, and community-facing functions.

Change Communications Approach

A multi-channel communications framework supported consistent, timely messaging throughout the transition by employing email, newsletters, internal webpages, property signage, poster announcements, in-person meetings, and hybrid/virtual meetings. Interviews and focus groups with staff in specific roles were also means of obtaining feedback for decision-making and strategizing.

Success Criteria

Some of the success criteria identified for the transition include:

- All operations are active within M365 and RecTrac environments.
- Public-facing services remain uninterrupted throughout the transition period.

- OCP staff are fully trained and ready to operate both sites beginning October 1, 2026.
- Updated OCP webpages for Discovery Oaks and Bloomfield Oaks are live and aligned with County digital standards.
- All financial transactions are fully integrated into County systems and auditable.

Summary

This summary provides only a high-level overview of a transition effort that remains actively underway. The work ahead is substantial, and our teams across OCP, Bowers/Johnson staff, and community partner organizations continue to collaborate closely as details emerge and new needs are identified. We recognize and deeply appreciate the commitment, flexibility, and professionalism shown by everyone involved in this complex, fast-moving effort. As we move toward full operational readiness, OCPRC remains confident in the strength of our partnership, the dedication of our staff, and the shared optimism guiding this transition.

Farm and Nature Center Financials - 3 year plus current year budget summary.xlsx

Worksheet Sheet1 | Columns 1–5 | Printed cached source values

Original workbook is embedded in the PDF binder. Formula definitions, objects and source formatting remain available in that file. Blank cells are preserved within displayed rows. Entirely blank or zero-only rows are omitted from this print view; original row numbers are shown. For the shared master-plan workbook, this print view covers BSF and shared worksheets; JNC worksheets remain in the embedded original.

BHS Capital Investment Priorities

Farm Learning Center / Academy Building

Discussion brief • October 8, 2026

Direct BHS's $1.5 million investment toward renewal of the existing Farm Learning Center / Academy Building, greenhouse repairs, and a defined exterior fence project. Prioritize improvements that protect the facilities and support continued school and public use while larger site projects are evaluated through the ongoing site assessment.

Proposed project punch list

- **Roof** Replace roof covering and flashing; include necessary decking repairs, gutters, and downspouts.
- **Windows** Replace all windows, including frames, seals, flashing, and repairs around openings.
- **Exterior siding** Replace siding throughout; include trim, soffits, fascia, and underlying repairs as needed.
- **Selected doors** Replace identified doors and frames; address hardware, thresholds, weather seals, and accessible operation.
- **Carpet and flooring** Replace worn carpet and flooring in agreed areas; select durable finishes appropriate for farm use.
- **Interior restoration** Repair and paint surfaces affected by the work; resolve moisture damage before installing finishes.
- **Greenhouse** Inspect and price repairs to glazing, seals, framing, and other worn components. Coordinate with the HVAC and ventilation work currently underway.
- **Exterior fence** Confirm remaining fence sections and gates, remove deteriorated fencing, and price a defined phase consistent with future entrances and circulation.

HVAC and ventilation work is currently underway. Coordinate the renewal project with that work and confirm its scope and funding to avoid duplicating costs.

Funding approach and price logic

Use the $1.5 million as one coordinated capital package: building and greenhouse renewal as the primary investment, exterior fencing as a separately priced phase, and an allowance for project delivery and unforeseen conditions. Set the final amounts after a joint walkthrough and current pricing rather than assigning fixed allowances to individual items today.

The master plan's historical $3.355 million Academy renovation and expansion allowance included a mezzanine and a broader scope. Its perimeter fence allowance was $152,000 per phase, or $608,000 across four phases. Using the full historical fence allowance would leave $892,000 for everything else, which supports pricing a focused fence phase alongside the building work. These figures are planning references, not current estimates.

Decisions for today

Confirm the punch list, fence limits, funding deadline, and delivery lead. Obtain coordinated pricing and retain contingency within the $1.5 million. Keep major expansion, restroom replacement, and site electrical upgrades in the broader capital planning process.

Good afternoon Alan,

Apologies for the delay, was sidetracked dealing w/ some urgent issues on other projects the last couple days. Please see below:

• Asphalt Roofing – Performance Spec

o Architectural/Dimensional

o Ice & Water Shield – High Temp Rated, minimum 24” past exterior wall, full coverage on low slope roofs

o Profile – Provide manufacture standard profiles for owner selection

o Color – Provide manufacture standard colors for owner selection

o Gutter Guards – Provide at all locations adjacent trees are present

o Min. Warranty – 20 years

o Install per manufacturer requirements

• Metal Roofing (Climate Controlled Occupiable Spaces) – Performance Spec

o Standing Seam Concealed Fastener

o Min. 24-gauge

o Ice & Water Shield – High Temp Rated, full coverage

o Profile – Provide manufacture standard profiles for owner selection

o Color – Provide manufacture standard colors for owner selection

o Snowguards – Metal Rail Style, provide where eaves direct snow toward pedestrian areas

o Snowguards - Metal Cleat Style, provide where eaves direct snow toward back-of-house areas

o Gutter Guards – Provide at all locations adjacent tress are present

o Min. Warranty – 30 years

o Install per manufacturer requirements

• Metal Roofing (Exterior Covered Spaces (i.e. pavilions)) – Performance Spec

o Exposed Fastener

o Min. 24-guage

o Profile – Provide manufacture standard profiles for owner selection

o Color – Provide manufacture standard colors for owner selection

o Snowguards – Metal Rail Style, provide where eaves direct snow toward pedestrian areas

o Snowguards - Metal Cleat Style, provide where eaves direct snow toward back-of-house areas

o Gutter Guards – Provide at all locations adjacent tress are present

o Min. Warranty – 30 years

o Install per manufacturer requirements

• EPDM Roofing – Performance Spec

o Single-Ply Membrane over ½” Plywood Sheathing, over structural roof deck – non-insulated application

o Single-Ply Membrane over ½” Plywood sheathing, over rigid insulation (thickness as required), over vapor barrier, over structural roof deck – insulated application

o Installation Method – Fully Adhered

o Thickness - 45 mil minimum, 60 mil for buildings where occasional foot traffic is expected

o Color – White or Black (Depending on building location/design/purpose)

• Corrugated Metal Siding – Basis-of-Design Spec

o Manufacturer – Butler

o Style – Butlerib II Wall System

o 24/26-gauge depending on location/use

o Finish – Kynar 500

o Warranty – 25 years

o Install per manufacturer requirements

• Metal Windows – Basis-of-Design Spec

o Manufacturer – Tubelite

o Style – T14000 or T14650 Storefront Series (depends on wall thickness)

o Profile – 2” x 4 ½” or 2” x 6 ½”

o Operable windows (if req’d) to be compatible models from Tubelite

o Finish – Provide manufacture standard colors for owner selection

o Glazing – 1” Low-E on surface #2 or #3 depending on building use/orientation

o Install per manufacturer requirements

• Wood Windows – No Standard Spec Historically (Project Specific)

• Vinyl Windows – No Standard Spec Historically (Project Specific)

• Exterior Hollow Metal Doors – Performance Spec

o Grout Frames Solid if installed in exterior CMU wall

o Provide Insulated Core

o Provide Small Format Interchangeable Core (SFIC)

o Schlage Lockset – Function is location specific

o 16-gauge door frames

o 16/18-gauge doors depending on location/use

o Finish – Provide manufacture standard colors for owner selection or paint

o Hardware sets are always door location/use specific

o Install per manufacturer requirements

• Exterior Aluminum Framed Doors – Basis-of-Design Spec

o Manufacturer – Tubelite

o Model – Compatible w/ T14000 or T14650 Storefront Series

o Style – Standard Medium or Wide Stile (Project/Location Specific)

o Finish – Provide manufacture standard colors for owner selection

o Glazing – 1” Low-E on surface #2 or #3 depending on building use/orientation

o Install per manufacturer requirements

• Interior Doors – No Standard Spec Historically (Project Specific)

• Carpet Flooring (Field) – Basis-of-Design Spec

o Manufacturer – Mannington

o Style – Ramie

o Color – 33341 Juniper

o Install – Quarter Turn

o Adhesive – As required by manufacturer

o Install per manufacturer requirements

• Carpet Flooring (Walk off) – Basis-of-Design Spec

o Manufacturer – Mannington

o Style – Ruffian II

o Color – 8404 Tan Tetons

o Install – Monolithic

o Adhesive – As required by manufacturer

o Install per manufacturer requirements

• LVT/Vinyl Plank Flooring – No Standard Spec Historically (Project Specific)

The above are by no means exhaustive but a good starting point for any specific need. In the end, every project has its own specific spec book that may have adjustments to the above to address the specific needs of a project. For the items labeled “No standard Spec Historically (Project Specific)” we have never had any consistent requirements for and have no standardized installation across the whole park system. Some of these items may be consistent across an entire building or park but we don’t really have any park wide direction on these items.

Let me know if you need anything else at this time.

Best,

Darryn Horvath, AIA | LEED AP BD+C | NCARB

Subject: RE: Fw: Bowers Farm OCP $1.5

Thank you for clarifying. I will work to get these all together. I'll provide 2 specs for the doors if replacing all as we have hollow metal doors for back of house/utility doors and aluminum storefront door systems for public entry doors.

Roof – Provide following specifications:

Asphalt full replacement

Metal (spec the thicker gauge)

Yes provide EPDM spec as if for full replacement

Siding – Detail to match existing aesthetic as full replacement.

Window – Provide spec if replacing all to our standard

Door – Yes provide spec for our standard door with SFIC

Flooring – YES provide spec for our standard

Subject: RE: Fw: Bowers Farm OCP $1.5

Good afternoon team,

Looking thru the below email chain, I can definitely help provide this information but may need some direction/scope clarification on a few to make sure I'm providing the right information. A lot of my questions relate to whether or not we are replacing all of a item type or just replacing some and need to make sure new matches existing to remain. Please see below in red.

Subject: FW: Fw: Bowers Farm OCP $1.5

Darryn - Please provide specification/detail information as it relates to the Bowers Learning Center Building;

Roof –

Pull general roof spec information for asphalt replacement (EPDM spec) – are we replacing all the roofing? If only part, we would likely want to patch with material to match existing. If replacing all, do we want to explore different materials (i.e. metal) over asphalt shingles? The flat sections appear to be EPDM looking at aerials but I would have to confirm on site. If we are replacing the flat sections, we would use EPDM and our standard spec for those areas. If just patching existing EPDM, we would want to use the same manufacturer as the current system for warranty and integrity purposes.

Windows

Reference Spec from xx project (IND Wint) - same, are we replacing all? Only failed windows where we would want to match existing to remain? Or replacing on whole sections (i.e. the historic gabled barn area, etc.) where a certain aesthetic may be desired over what is used elsewhere on the building.

Exterior Siding

Preference (SAC Event Center) – existing building has multiple types and colors of siding. What is replacement scope? Are we trying to make the whole building the same? Newer addition siding is likely in good shape but has different look/feel than historic part. What is our goal?

Doors

Preferred Vendor reference – FRP with large format interchangeable core – parks uses small format interchangeable cores (SFIC), not large, we can definitely replace all cores to our standard with relative ease. Regarding replacing doors, same questions as above. Replacing all? Some and need to match existing? Etc?

Carpet and Flooring

Flooring options noted on building floor plan. – can provide our standard spec for office carpeting to match admin, is there any areas where we wouldn't be replacing all and need to match existing?

Interior Restoration

Confirm Scope

This information provided back to BH Schools will move toward on site meeting with Barton Malow/Bloomfield team to finalize potential scope.

Please provide breakdown by our next meeting on 10/27 for review w/Colin/Tom.

Thank you

CAUTION: This message is from a sender outside of the Oakland County organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Alan,

I am working on obtaining rough estimates from Barton Malow for the items included on the proposed project punch list. To help ensure the estimates reflect the intended scope of work, I need clarification on a few items from your list.

• Roof: Please clarify the type of roof covering to be installed so the estimate includes the appropriate materials and scope. The list already identifies the associated flashing, decking repairs, gutters, and downspouts.

• Windows: Are we planning to replace the existing windows with wood windows, or would OCP prefer fiberglass or another material?

• Exterior siding: What type of siding would OCP like installed? Please also identify any specific material or finish preferences, if applicable.

• Selected doors: I reviewed the previous emails but did not find specific doors identified for replacement. I will walk the building to identify the doors that may need attention and follow up with the locations.

• Carpet and flooring: Do you have a list, marked floor plan, or other documentation identifying the agreed-upon areas for replacement? This will help ensure the estimate covers the intended spaces.

• Interior restoration: I will include this item as outlined on the punch list, including repairs and painting associated with the work and addressing any moisture damage before new finishes are installed.

• Greenhouse: I will include the greenhouse repairs identified on the list, with consideration for the HVAC and ventilation work currently underway.

Once these details are clarified, I can provide Barton Malow with the information needed to develop the rough estimates.

DRAFT

This Contract is organized and divided into the following Sections for the convenience of the Parties.

Section 1. Contract Definitions

Section 2. Contract Term and Renewal

Section 3. Contract Administration and Amendments

Section 4. Contract Termination

Section 5. Scope of Deliverables and Financial/Payment Obligations

Section 6. Contractor's Warranties and Assurances

Section 7. Liability

Section 8. Contractor Provided Insurance

Section 9. General Terms and Conditions

§1. CONTRACT DEFINITIONS

The following words when printed with the first letter capitalized shall be defined and interpreted as follows, whether used in the singular or plural, nominative or possessive case, and with or without quotation marks:

1.1. "**Amendment**" means any change, clarification, or modification to this Contract.

1.2. "**Business Day**" means Monday through Friday from 8:00 a.m. to 5:00 p.m., excluding County designated holidays.

1.3. "**Claims**" means any loss; complaint; demand for relief or damages; lawsuit; cause of action; proceeding; judgment; penalty; costs or other liability of any kind which is imposed on, incurred by, or asserted against the County or for which the County may become legally or contractually obligated to pay or defend against, whether commenced or threatened, including, but not limited to, reimbursement for reasonable attorney fees, mediation, facilitation, arbitration fees, witness fees, court costs, investigation expenses, litigation expenses, or amounts paid in settlement.

1.4. "**Contract**" means this document and any other documents expressly incorporated herein.

1.5. "**Contractor**" means the entity or person listed under "Contractor" on the first page of this Contract.

J-02 | original source page 3 | APP 1502

1.6. "**Contractor Employee**" means any employee; officer; director; member; manager; trustee; volunteer; attorney; licensee; contractor; subcontractor; independent contractor; subsidiary; joint venturer; partner or agent of Contractor; and any persons acting by, through, under, or in concert with any of the above, whether acting in their personal, representative, or official capacities. Contractor Employee shall also include any person who was a Contractor Employee at any time during the term of this Contract but, for any reason, is no longer employed, appointed, or elected in that capacity.

1.7. "**Contract Documents**" mean the following documents, which this Contract includes and incorporates:

Exhibits (Applicable if Checked)

1.7.1. Exhibit I: Contractor Insurance Requirements

1.7.2. Exhibit II: Scope of Contractor Deliverables/Financial Obligations

1.8. "**County**" means the County of Oakland, a Municipal and Constitutional Corporation, its departments, divisions, authorities, boards, committees, and "County Agents" as defined below.

1.9. "**County Agent**" means any elected and appointed officials; directors; board members; council members; commissioners; employees; and volunteers of the County; whether acting in their personal, representative, or official capacities. "County Agent" shall also include any person who was a "County Agent" anytime during the term of this Contract but, for any reason, is no longer employed, appointed, or elected and in that capacity.

1.10. "**Day**" means any calendar day, which shall begin at 12:00:00 a.m. and end at 11:59:59 p.m.

1.11. "**Deliverables**" means goods and/or services provided under this Contract, whether tangible or intangible, and may be more specifically described in the Exhibits.

1.12. "**Effective Date**" means midnight on the date listed on the first page of this Contract.

1.13. "**Expiration Date**" means 11:59.59 p.m. on the date listed on the first page of this Contract.

1.14. "**Iran-Linked Business**" is defined in the Michigan Compiled Laws (MCL), specifically MCL 129.312, being Section 2 of Public Act 517 of 2012.

1.15. "**Not to Exceed Amount**" means the dollar amount listed on the first page of this Contract, unless amended. The "Not to Exceed Amount" is not the County's financial obligation under this Contract, but the maximum amount that can be paid to Contractor during the term of this Contract.

DRAFT

1.16. "**Purchase Order**" means the County's written request to Contractor for Deliverables pursuant to this Contract. The Purchase Order may include terms regarding delivery schedule, payment, and transportation.

1.17. "**Purchasing**" means the Purchasing Unit of the Oakland County Compliance Office.

§2. CONTRACT TERM AND RENEWAL

2.1. **Contract Term.** This Contract shall begin on the Effective Date and shall end on the Expiration Date.

2.2. **Contract Renewal.** Unless otherwise provided herein, the Parties are under no obligation to renew or extend this Contract after the Expiration Date. This Contract may only be extended by an Amendment.

2.3. **Legal Effect.** This Contract shall be effective and binding when all of the following occur: (a) this Contract is signed by a Contractor Employee, legally authorized to bind Contractor; (b) this Contract is signed by an authorized County Agent; (c) all Contractor certificates of insurance, required by this Contract, are submitted and accepted by Purchasing; and (d) any other conditions precedent to this Contract have been met.

§3. CONTRACT ADMINISTRATION AND AMENDMENTS

3.1. **Contract and Purchase Order Issuance.** Purchasing shall issue this Contract and any Purchase Orders that may be required. Purchasing is the sole point of contact in the County regarding all procurement and contractual matters relating to this Contract and any Purchase Orders. Purchasing is the only County office/department authorized to make any Amendments to this Contract or Purchase Orders.

3.2. **Purchase Orders**. Purchase Orders issued under this Contract are governed by the terms and conditions of this Contract and are included and incorporated herein.

3.3. **Project Managers.** Each Party may designate an employee or agent to act as a Project Manager. If Project Managers are selected, they shall be listed in Exhibit II and their duties shall be set forth in Exhibit II. Unless otherwise stated in Exhibit II, the County's Project Manager has no authority to amend this Contract.

3.4. **Contract Administrators.** The County shall designate an employee or agent to act as Contract Administrator(s). Contractor may designate its employee or agent to act as Contract Administrator(s). The Contract Administrators shall be listed on the first page of this Contract. The County's Contract Administrator(s) shall be responsible for monitoring and coordinating

J-02 | original source page 5 | APP 1504

day-to-day activities under this Contract, reviewing Deliverables and invoices, and submitting requests for Amendments to Purchasing. The County's Contract Administrator(s) have no authority to amend this Contract.

3.5. **Contract Amendments.** All Amendments to this Contract must be in writing. This Contract shall not be amended by any packing slip, Purchase Order, invoice, click through license agreement, or Contractor policies or agreements published on Contractor's website or otherwise. Amendments to this Contract shall be issued only by Purchasing. The Amendment shall be effective when signed by an authorized Contractor Employee and an authorized County Agent.

3.6. **Unauthorized Changes.** Contract changes shall not be effective until an Amendment containing the change is executed according to the procedures described in this Contract. If the Contractor is directed to perform work that Contractor believes is a change in the Contract/Deliverables, then Contractor must notify Purchasing that it believes the requested work is a change to the Contract before performing the requested work. If Contractor fails to notify Purchasing before beginning the requested work, then Contractor waives any claims for additional compensation for performing the requested work. If Contractor begins work that is outside the scope of this Contract or begins work before an Amendment is executed and then stops performing that work, Contractor must, at the request of the County, undo any out-of-scope work that the County believes would adversely affect the County.

3.7. **Precedence of Contract Documents.** In the event of a conflict, the terms and conditions contained in Sections 1 through 9 of this Contract shall prevail and take precedence over any allegedly conflicting provisions in all Contract Documents, Exhibits, Purchase Orders, Amendments, and other documents expressly incorporated herein. Terms and conditions contained in Contractor invoices, packing slips, receipts, acknowledgments, click-through licenses, and similar documents shall not change the terms and conditions of this Contract.

§4. CONTRACT TERMINATION

4.1. **County Termination.** In addition to any other legal rights the County may have to terminate or cancel this Contract, the County may terminate the Contract as follows:

4.1.1. **Immediate Termination.** The County may terminate or cancel this Contract, in whole or in part, immediately, upon notice to Contractor, if any of the following occur: (a) Contractor, officer of Contractor, or an owner of a 25% or greater share of Contractor is convicted of a criminal offense; or (b) if any third-party funding for this Contract is reduced or terminated.

J-02 | original source page 6 | APP 1505

4.1.2. **Termination for Convenience.** The County may terminate or cancel this Contract, in whole or part, at any time, upon ninety (90) Days' notice to Contractor, for any reason, including convenience without incurring obligation or penalty of any kind. The effective date for termination or cancellation shall be clearly stated in the notice.

4.1.3. **Contractor Termination.** The Contractor may terminate or cancel this Contract, in whole or part, at any time, upon ninety (180) Days' notice to Contractor, for any reason, including convenience without incurring obligation or penalty of any kind. The effective date for termination or cancellation shall be clearly stated in the notice.

4.2.

4.3. **County's Obligations Upon Termination.** The County's sole obligation in the event of termination or cancellation of this Contract is for payment of the actual Deliverables provided to the County before the effective date of termination, including reimbursement for materials, supplies, and other authorized expenses purchased or incurred in connection with the performance of this Contract prior to the effective date of termination. Under no circumstances shall the County be liable for any future loss of income, profits, any consequential damages, any loss of business opportunities, revenues, or any other economic benefit Contractor may have realized but for the termination or cancellation of this Contract. The County shall not be obligated to pay Contractor any cancellation or termination fee if this Contract is cancelled or terminated as provided herein. If the County chooses to terminate the Contract in part, then the charges payable under this Contract must be equitably adjusted to reflect those Deliverables that are terminated.

4.4. **Contractor's Obligations Upon Termination.** If the County terminates this Contract, for any reason, then Contractor must do the following: (a) cease providing all Deliverables as specified at the time stated in the notice of termination; (b) take any action necessary, or as the County may direct, to preserve and protect Deliverables or other property derived or resulting from the Contract that is in Contractor's possession; (c) return all materials, property, and County Data provided to Contractor by the County; (d) unless otherwise directed by the County, transfer title in and deliver to the County all Deliverables in the possession of Contractor or Contractor Employees (which Deliverables are transferred to the County "As-Is", except to the extent the amounts paid by the County for these Deliverables include warranties or warranty services and, in that situation, the Deliverables will be transferred with the warranty or warranty services and not "As-Is"); and (e) take any action to mitigate and limit any potential damages, including

J-02 | original source page 7 | APP 1506

terminating or limiting, as applicable, those subcontracts and outstanding orders for materials and supplies connected with or related to this Contract.

4.5. **Assumption of Subcontracts.** If Contractor is in breach of this Contract and the County terminates this Contract, then the County may assume, at its option, any subcontracts and agreements for Deliverables provided under the Contract and may pursue completion of the Deliverables by replacement Contract or otherwise as the County, in its sole judgment, deems expedient.

§5. SCOPE OF DELIVERABLES AND FINANCIAL/PAYMENT OBLIGATIONS

5.1. **Performance of Deliverables.** Contractor shall provide all Deliverables identified in and as set forth in Exhibit II, any Purchase Orders, or any Amendments to this Contract.

5.2. **Financial Obligations.** Except as otherwise set forth in this Contract, the County's sole financial obligation under this Contract shall be set forth in Exhibit II. The amount and manner of payment of the financial obligation shall be set forth in Exhibit II or a Purchase Order.

5.3. **Payment Obligations.** Except as otherwise set forth in the Exhibits, Contractor shall submit an invoice to the County's Contract Administrator itemizing amounts due and owing under this Contract, as of the date of the invoice. Invoices shall contain the following information: (a) County Contract Number; (b) dates of Deliverables; (c) itemized list of Deliverables; (d) Contractor Tax ID Number (federal and State); (e) licenses; and (f) any other information requested by Purchasing. The County shall have no obligation to make a payment under this Contract until an invoice is submitted in the form set forth herein and shall have no obligation to pay for Deliverables, which have not been invoiced (as required herein) within one hundred and twenty (120) Days of Contractor's performance. Unless otherwise set forth in the Exhibits, the County shall only pay Contractro ro Devilerables under this Contract and not any subcontractors or assingees of Contractor.

5.4. **Not to Exceed Amount.** The amount due and owing to Contractor, under this Contract, shall not exceed the "Not to Exceed Amount." If Contractor can reasonably foresee that the total financial obligation for the Contract will exceed the "Not to Exceed Amount," then Contractor shall provide Purchasing with notice of this fact at least ten (10) Days before this event.

5.5. **No Obligation for Penalties/Costs/Fines.** The County shall not be responsible for any cost; fee; fine; penalty; or direct, indirect, special, incidental, or consequential damages incurred or suffered by Contractor in connection with or resulting from the performance of this Contract under any circumstances.

J-02 | original source page 8 | APP 1507

5.6. **Set-Off of County Costs.** If the County incurs any costs associated with the duties or obligations of Contractor under this Contract, then the County has the right to set-off those costs from any amounts due and owing Contractor. This set-off includes withholding payment in an amount equal to the cost of any County-provided equipment, supplies, or badges that are not returned by Contractor upon completion, termination, or cancellation of this Contract.

5.7. **In-Kind Services.** Unless expressly provided herein, this Contract does not authorize any in-kind services by either Party. Friends of Bowers Farm shall provide in-kind services pre-approved by the County which may include, but not be limited to: donation of materials or equipment for Bowers Farm, volunteer labor, fundraising, marketing, sponsorship support, specialty expertise, and other services or resources approved by the County.

§6. CONTRACTOR'S WARRANTIES AND ASSURANCES

6.1. **Full Knowledge of Contract Expectations.** Contractor warrants that before submitting its Proposal and/or entering into this Contract, it had a full opportunity to review all County requirements and/or expectations for this Contract. Contractor is responsible for being adequately and properly prepared to execute this Contract. Contractor has satisfied itself in all material respects that it will be able to perform the Contract as specified herein.

6.2. **Complete and Accurate Representations.** Contractor certifies that all statements, assurances, records, and materials submitted to the County in connection with seeking and obtaining this Contract have been truthful, complete, and accurate.

6.3. **Contractor Incidental Expenses.** Except as otherwise expressly provided in this Contract, Contractor shall be solely responsible and liable for all costs and expenses associated or needed to perform this Contract, including, but not limited to, any professional dues, association fees, license fees, fines, taxes, and penalties.

6.4. **Equipment and Supplies.** Contractor is responsible for providing all equipment and supplies to perform this Contract, which are not expressly required to be provided by the County.

6.5. **Contractor Employees.**

6.5.1. **Number and Qualifications of Contractor Employees.** Contractor shall employ and assign qualified Contractor Employees as necessary and appropriate to perform this Contract. Contractor shall ensure all Contractor Employees have the knowledge, skill, and qualifications to perform this Contract and possess any necessary licenses, permits, certificates, and governmental authorizations as may be required by law.

J-02 | original source page 9 | APP 1508

6.5.2. **Control and Supervision of Contractor Employees.** Contractor shall solely control, direct, and supervise all Contractor Employees with respect to all Contractor obligations under this Contract. Contractor will be solely responsible for and fully liable for the conduct and supervision of any Contractor Employees , unless otherwise specifically agreed to in writing by the Parties.

6.5.3. **Removal or Reassignment of Personnel at the County's Request.** Contractor shall remove a Contractor Employee performing work under this Contract at the County's request provided that the County's request is based on legitimate, good-faith reasons. Replacement personnel for the removed person must be fully qualified for the position.

6.5.4. **Contractor Employee Identification.** If requested by the County, Contractor Employees shall wear and display appropriate County-provided identification at all times while working on County premises. Contractor shall return all County-provided identification upon completion of Contractor's obligations under this Contract.

6.5.5. **Contractor Employee Expenses.** All Contractor Employees shall be employed at the Contractor's sole expense (including employment-related taxes and insurance). Contractor warrants that all Contractor Employees shall fully comply with and adhere to the terms of this Contract. Contractor shall be solely liable for all applicable Contractor Employees' federal, state, or local payment withholdings or contributions and/or all Contractor Employee related pension or welfare benefits plan contributions under federal or state law. Contractor shall indemnify and hold the County harmless for all Claims against the County by any Contractor Employee, arising out of any contract for hire or employer-employee relationship between Contractor and any Contractor Employee including, but not limited to, Worker's Compensation, disability pay, or other insurance of any kind.

6.6. **Acknowledgment of Independent Contractor Status.**

6.6.1. **Independent Contractor.** Nothing in this Contract is intended to establish an employer-employee relationship between the County and Contractor or any Contractor Employee. In no event, shall Contractor Employees be deemed employees, agents, volunteers, or subcontractors of the County. Contractor shall ensure that Contractor Employees are apprised of their status and limitations of independent contractors.

6.6.2. **Contractor/Contractor Employee Representations.** Contractor and/or Contractor Employees shall not represent themselves as County employees. Contractor shall ensure that Contractor Employees do not represent themselves as County employees.

J-02 | original source page 10 | APP 1509

6.6.3. **County Benefits and Plans**. Contractor and Contractor Employees shall not be entitled to participate in any County employee benefit plans and programs, including but not limited to, retirement, deferred compensation, insurance (including without limitation, health, disability, dental, and life), and vacation pay. This limitation includes access to benefit plans and programs that are not described by a written plan. However, Contractor Employees who are retired County Employees may receive vested post-employment benefits such as retiree health care and pension benefits from Oakland County.

6.6.4. **County Reliance**. The County entered into this Contract in reliance of the representations made by Contractor regarding its understanding of the role of independent contractors, its stated relationship to Contractor Employees, and other representations Contractor has made regarding the management and performance oversight of Contractor Employees.

6.7. **Permits and Licenses.** Contractor shall be responsible for obtaining and maintaining, throughout the term of this Contract, all licenses, permits, certificates, governmental authorizations, and business/professional licenses necessary to perform this Contract. Upon request by the County, Contractor shall furnish copies of any permit, license, certificate, or governmental authorization necessary to perform this Contract.

6.8. **E-Verify.** In accordance with Miscellaneous Resolution No.09116 (BOC Minutes, July 30, 2009, pp 37-38), unless otherwise exempted, all service contractors who wish to contract with the County to provide services must first certify they have registered with, will participate in, and continue to utilize, once registered, the E-Verify Program (or any successor program implemented by the federal government or its departments or agencies) to verify the work authorization status of all newly hired employees employed by the Contractor. Breach of this term or condition is considered a material breach of this Contract. Contractor's execution of this Contract constitutes a certification that they are authorized to certify on behalf of Contractor and do hereby certify on behalf of Contractor that the Contractor has registered with, has and will participate in, and does and will continue to utilize once registered and throughout the term of this Contract and any permissible extension hereof, the E-Verify Program (or any successor program implemented by the federal government or its departments or agencies) to verify the work authorization status of all newly hired employees employed by the Contractor.

6.9. **Iran-Linked Business Certification.** Contractor certifies that it is not an Iran-Linked Business. Contractor further certifies that it was not an Iran-Linked Business at the time it submitted its Proposal for this Contract. Contractor must promptly notify the County, if Contractor becomes an Iran-Linked Business at any time during this Contract.

6.10. **Taxes.**

6.10.1. **Contractor Taxes.** Contractor shall collect and pay its local, state, and federal taxes, including but not limited to, all employment taxes, sales taxes, personal property taxes, and real property taxes. The County shall not be liable to or required to reimburse Contractor for any local, state, or federal tax of any kind.

6.10.2. **County Tax-Exempt.** The County is exempt from state and local sales tax, personal property tax, and real property tax. Prices under this Contract shall not include taxes, unless the County is not tax-exempt for a specific Deliverable. Exemption certificates for sales tax will be furnished upon request.

6.11. **Warranty for Services.** Contractor warrants that all Deliverables that are services shall be performed in compliance with all applicable laws, statutes, regulations, ordinances, and professional standards.

6.12. **Warranty for Goods.** All Deliverables that are goods shall be subject to the following warranties:

6.12.1. **Warranty of Merchantability.** Goods provided by Contractor pursuant to this Contract shall: (a) be merchantable, (b) be of good quality, (c) be fit for their ordinary purpose, (d) be adequately contained and packaged, and (e) conform to the specifications and descriptions contained in the Contract.

6.12.2. **Warranty of Fitness for a Particular Purpose.** If Contractor knows or has reason to know that the goods will be used for a particular purpose and the County is relying on Contractor's skill or judgment to select or furnish the goods, then there is a warranty that the goods are fit for a particular purpose.

6.12.3. **Warranty of Title.** All goods conveyed to the County shall be conveyed and transferred: (a) with good title, (b) free from any security interest, lien, or encumbrance that the County did not have knowledge of when the Contract was executed, and (c) free of any rightful claim of infringement or similar claim by a third-party.

6.13. **Response to Legal Request for County Data.** If County receives a Court Order, a Freedom of Information Act (FOIA) request, or other legal request to provide County Data held by Contractor, then Contractor shall provide County Data to the County, in a format directed by the County, within the time frame required by law.

§7. LIABILITY

J-02 | original source page 12 | APP 1511

7.1. **Contractor Indemnification**. Contractor shall indemnify, defend, and hold the County harmless from all Claims, incurred by or asserted against the County by any person or entity, which are alleged to have been caused directly or indirectly from the acts or omissions of Contractor or Contractor's Employees. The County's right to indemnification is in excess and above any insurance rights/policies required by this Contract.

7.2. **No Indemnification from the County.** Contractor shall have no rights against the County for indemnification, contribution, subrogation, or any other right to be reimbursed by the County, except as expressly provided herein.

7.3. **Waivers.** Contractor shall ensure and require all its volunteers sign a waiver releasing the County and County Agents, as defined herein, from any Claims.

§8. CONTRACTOR PROVIDED INSURANCE

At all times during this Contract, Contractor shall obtain and maintain insurance according to the specifications listed in Exhibit I.

§9. GENERAL TERMS AND CONDITIONS

9.1. **Access to County Property or Facilities**. As set forth in this Contract, Contractor has access to and the right to use County property and facilities necessary to perform this Contract. ,

9.2. **Signs on County Property or Facilities.** Contractor shall not place any signs or advertisements on County property or facilities without the prior written permission of the Oakland County Parks and Recreation Commission, Executive Officer.

9.3. **Use of County Property or Facilities.** While performing this Contract, Contractor shall keep County property or facilities and anything stored thereon in a clean, safe, and healthful condition and shall keep the property and facilities in a manner that will not prevent or interfere with the County's performance of its functions.

9.4. **Removal of Contractor Personal Property.** At the expiration or termination of this Contract, Contractor shall leave County property or facilities in the same condition that Contractor found them and clean of all rubbish. Contractor shall remove all of its personal property within thirty (30) Days of expiration or termination of this Contract. If Contractor does not remove its personal property within the thirty (30) Day period, then the County shall dispose of it and bill Contractor for any costs associated with the removal and disposal.

9.5. **Damage to County Property or Facilities.** Contractor shall be responsible for any damage to any County property or a facility that is caused by Contractor or Contractor Employees.

J-02 | original source page 13 | APP 1512

If damage occurs, the County shall make the necessary repairs and/or replacements or cause a third party to make the necessary repairs or replacements, provided, however, that Contractor shall reimburse the County for all costs associated with repairing and/or replacing the damaged property or facilities.

9.6. **Damage to Contractor's Property.** Contractor shall be solely liable and responsible for any property loss or damage resulting from fire, theft, or other means to Contractor's personal property located, kept, or stored on or at County property or facilities during performance of this Contract.

9.7. **County's Right to Suspend Contract Performance**. Upon written notice, the County may require Contractor to suspend performance of this Contract if Contractor has failed to comply with federal, state, or local laws or any requirements contained in this Contract. The right to suspend performance of this Contract is in addition to the County's right to terminate and/or cancel this Contract. The County shall incur no penalty, expense, or liability to Contractor if the County suspends performance of this Contract under this Section.

9.8. **Discrimination**. Contractor and Contractor Employees shall not discriminate against an employee or an applicant for employment in hiring, any terms and conditions of employment or matters related to employment regardless of race, color, religion, sex, sexual orientation, gender identity or expression, national origin, age, genetic information, height, weight, disability, veteran status, familial status, marital status or any other reason, that is unrelated to the person's ability to perform the duties of a particular job or position, in accordance with applicable federal and state laws.

9.9. **Conflict of Interest**. Pursuant to Public Act 317 and 318 of 1968, as amended (MCL 15.301, et seq. and MCL 15.321, et seq.), no contracts shall be entered into between the County and any County Agent. To avoid any real or perceived conflict of interest, Contractor shall identify any Contractor Employee or relative of Contractor's Employees who are presently employed by the County. Contractor shall give the County notice if there are any County Agents or relatives of County Agents who are presently employed by Contractor.

9.10. **Access and Records**. Contractor will maintain accurate books and records in connection with performance of this Contract for thirty-six (36) months after the end of this Contract and Contractor shall provide the County with reasonable access to such books and records, upon request.

9.11. **Assignments/Delegations/Subcontracts.**

9.11.1. **Prior Written Consent Required.** Except by operation of law, neither Party may assign, delegate, or subcontract any of its duties, obligations, or rights under this Contract without the prior written consent of the other Party.

9.12. **Non-Exclusive Contract.** This Contract is a non-exclusive agreement. No provision in this Contract limits or is intended to limit, in any way, Contractor's right to offer and provide its services to the general public, other business entities, municipalities, or governmental agencies during or after the term of this Contract. Similarly, the County may freely engage other persons to perform the same work that Contractor performs. Except as provided in this Contract, this Contract shall not be construed to guarantee Contractor or any Contractor Employee any fixed or certain number of Deliverables.

9.13. **No Third-Party Beneficiaries.** Except as provided for the benefit of the Parties, this Contract does not and is not intended to create any obligation, duty, promise, contractual right or benefit, right to be indemnified, right to be subrogated to the Parties' right in this Contract, or any other right in favor of any other person or entity.

9.13.1. **Survival of Terms and Conditions.** The following terms and conditions shall survive and continue in full force beyond the termination or cancellation of this Contract (or any part thereof) until the terms and conditions are fully satisfied or expire by their nature: **Section 1**. Contract Definitions, **Section 5.** Scope of Deliverables and Financial/Payment Obligations, **Section 6.** Contractor's Warranties and Assurances, **Section 7.** Liability, **Section 8.** Contractor Provided Insurance, and **Section 9.** General Terms and Conditions.

9.14. **Reservation of Rights.** This Contract does not, and is not intended to impair, divest, delegate, or contravene any constitutional, statutory, or other legal right, privilege, power, obligation, duty, or immunity of the County.

9.15. **Compliance with Laws.** Contractor shall comply with all federal, state, and local laws, statutes, ordinances, regulations, insurance policy requirements, and requirements applicable to its activities under this Contract.

9.16. **Force Majeure.** Notwithstanding any other term or condition of this Contract, neither Party shall be liable for failure to perform contractual duties or obligations caused by events beyond their reasonable control, including but not limited to: (a) acts of public enemies; (b) natural disasters; (c) terrorism; (d) war; (e) insurrection or riot; (f (g) strikes, lockouts, work stoppages, or other labor difficulties; or (h) compliance with law. Reasonable notice shall be given to the affected Party of such event.

J-02 | original source page 15 | APP 1514

9.17. **Notices.**

9.17.1. **Written Notice.** All notices required under this Contract shall be in writing. Notices shall be effective: (a) the next Business Day, if personally delivered; (b) the third Business Day, if sent by U.S. mail, postage prepaid, return receipt requested; (c) the next Business Day, if sent by a nationally recognized overnight express courier with a reliable tracking system; or (d) the next Business Day with a receipt of confirmation, if sent by e-mail or fax.

9.17.2. **Notice to Contractor.** Unless otherwise specified, Notice to Contractor shall be addressed to the Contract Administrator listed on the first page of this Contract.

9.17.3. **Notice to County.** Unless otherwise specified herein, Notice to the County shall be addressed to Purchasing, the County Project Manager (if applicable), and the County Contract Administrator(s) listed on the first page of this Contract.

9.18. **Captions.** Section and subsection numbers, captions, and any index to sections or subsections contained in this Contract are intended for the convenience of the reader and are not intended to have any substantive meaning and shall not be interpreted to limit or modify any substantive provisions of this Contract. In this Contract, for any noun or pronoun, use of the singular or plural form, use of the nominative, possessive, or objective case, and any reference to gender (masculine, feminine, and neuter) shall mean the appropriate form, case, or gender as the context requires.

9.19. **Waiver.** Waiver of any term or condition under this Contract must be in writing and notice given pursuant to this Contract. No written waiver, in one or more instances, shall be deemed or construed as a continuing waiver of any term or condition of this Contract. No waiver by either Party shall subsequently affect its right to require strict performance of this Contract.

9.20. **Cumulative Remedies.** A Party's exercise of any remedy shall not preclude the exercise of any other remedies, all of which shall be cumulative. A Party shall have the right, in its sole discretion, to determine which remedies are to be exercised and in which order.

9.21. **Severability.** If a court of competent jurisdiction finds a term or condition of this Contract to be illegal or invalid, then the term or condition shall be deemed severed from this Contract. All other terms or conditions shall remain in full force and effect. Notwithstanding the above, if Contractor's promise to indemnify or hold the County harmless is found illegal or invalid, Contractor shall contribute the maximum it is permitted to pay by law toward the payment and satisfaction of any Claims against the County.

DRAFT

J-02 | original source page 16 | APP 1515

9.22. **Dispute Resolution.** All disputes arising under or relating to the execution, interpretation, performance, or nonperformance of this Contract involving or affecting the Parties may first be submitted to the respective Project Manager (if applicable) and Contract Administrators for possible resolution.

9.23. **Governing Laws/Consent to Jurisdiction and Venue.** This Contract shall be governed, interpreted, and enforced by the laws of the State of Michigan. Except as otherwise required by law or court rule, any action brought to enforce, interpret, or decide any Claim arising under or related to this Contract shall be brought in the Sixth Judicial Circuit Court of the State of Michigan, the 50th District of the State of Michigan, or the United States District Court for the Eastern District of Michigan, Southern Division, as dictated by the applicable jurisdiction of the court. Except as otherwise required by law or court rule, venue is proper in the courts set forth above. The choice of forum set forth above shall not be deemed to preclude the enforcement of any judgment obtained in such forum or taking action under this Contract to enforce such judgment in any appropriate jurisdiction.

9.24. **Entire Contract.** This Contract represents the entire agreement and understanding between the Parties. This Contract supersedes all other prior oral or written understandings, communications, agreements, or contracts between the Parties. The language of this Contract shall be construed as a whole according to its fair meaning and not construed strictly for or against any Party.

DRAFT

EXHIBIT I

CONTRACTOR INSURANCE REQUIREMENTS

During this Contract, the Contractor shall provide and maintain, at their own expense, all insurance as set forth and marked below, protecting the County against any Claims, as defined in this Contract.
The insurance shall be written for not less than any minimum coverage herein specified.

Primary Coverages

Commercial General Liability Occurrence Form including: (a) Premises and Operations; (b) Products and Completed Operations (including On and Off Premises Coverage); (c) Personal and Advertising Injury; (d) Broad Form Property Damage; (e) Independent Contractors; (f) Broad Form Contractual including coverage for obligations assumed in this Contract;

$1,000,000 – Each Occurrence Limit

$1,000,000 – Personal & Advertising Injury

$2,000,000 – Products & Completed Operations Aggregate Limit

$2,000,000 – General Aggregate Limit

$ 100,000 – Damage to Premises Rented to You (formally known as Fire Legal Liability)

Workers' Compensation Insurance with limits statutorily required by any applicable Federal or State Law and Employers Liability insurance with limits of no less than $500,000 each accident, $500,000 disease each employee, and $500,000 disease policy limit. If they are a non-profit with no actual employees (all volunteer run) is workers compensation required? I don't know if they would be an "except entity"?

1. ☒ Fully Insured or State approved self-insurer.
2. ☐ Sole Proprietors must submit a signed Sole Proprietor form.
3. ☐ Exempt entities, Partnerships, LLC, etc., must submit a State of Michigan form WC-337 Certificate of Exemption.

Commercial Automobile Liability Insurance covering bodily injury or property damage arising out of the use of any owned, hired, or non-owned automobile with a combined single limit of $1,000,000 each accident. This requirement is waived if there are no company owned, hired or non-owned automobiles utilized in the performance of this Contract.

J-02 | original source page 18 | APP 1517

Commercial Umbrella/Excess Liability Insurance with minimum limits of $2,000,000 each occurrence. Umbrella or Excess Liability coverage shall be no less than following form of primary coverages or broader. This Umbrella/Excess requirement may be met by increasing the primary Commercial General Liability limits to meet the combined limit requirement.

DRAFT

Supplemental Coverages (Required as Checked)

1. ☐ **Professional Liability/Errors & Omissions Insurance** (Consultants, Technology Vendors, Architects, Engineers, Real Estate Agents, Insurance Agents, Attorneys, etc.) with minimum limits of $1,000,000 per claim and $1,000,000 aggregate.

2. ☐ **Commercial Property Insurance**. The Contractor shall be responsible for obtaining and maintaining insurance covering their equipment and personal property against all physical damage.

3. ☒ **Liquor Legal Liability Insurance** with a limit of $1,000,000 each occurrence shall be required when liquor is served, sold, and/or present.

4. ☐ **Pollution Liability Insurance** with minimum limits of $1,000,000 per claim and $1,000,000 aggregate when cleanup & debris removal are part of the services utilized.

5. ☐ **Medical Malpractice** with minimum limits of $1,000,000 per claim and $1,000,000 aggregate.

6. ☐ **Garage Keepers Liability** with minimum limits of $1,000,000 per claim and $1,000,000 aggregate.

7. ☐ **Cyber Liability** with minimum limits of $1,000,000 per claim and $1,000,000 aggregate.

8. ☐ **Other Insurance Coverages** as may be dictated by the provided product/service and deemed appropriate by the County Risk Management Department.

General Insurance Conditions

The aforementioned insurance shall be endorsed, as applicable, and shall contain the following terms, conditions, and/or endorsements. All certificates of insurance shall provide evidence of compliance with all required terms, conditions and/or endorsements.

1. All policies of insurance shall be on a primary, non-contributory basis with any other insurance or self-insurance carried by the County;

2. The insurance company(s) issuing the policy(s) shall have no recourse against the County for subrogation (policy endorsed written waiver), premiums, deductibles, or assessments under any form. All policies shall be endorsed to provide a written waiver of subrogation in favor of the County;

3. Any and all deductibles or self-insured retentions shall be assumed by and be at the sole risk of the Contractor;

DRAFT

4. Contractors shall be responsible for their own property insurance for all equipment and personal property used and/or stored on County property;

5. The Commercial General Liability and Commercial Automobile Liability policies along with any required supplemental coverages shall be endorsed to name the County of Oakland and it officers, directors, employees, appointees and commissioners as additional insured where permitted by law and policy form;

6. The Contractor shall require its contractors or sub-contractors, not protected under the Contractor's insurance policies, to procure and maintain insurance with coverages, limits, provisions, and/or clauses equal to those required in this Contract;

7. Certificates of insurance must be provided no less than ten (10) Business Days prior to the County's execution of the Contract and must bear evidence of all required terms, conditions and endorsements; and

8. All insurance carriers must be licensed and approved to do business in the State of Michigan and shall have and maintain a minimum A.M. Best's rating of A- unless otherwise approved by the County Risk Management Department.

DRAFT

EXHIBIT II

SCOPE OF CONTRACTOR DELIVERABLES / FINANCIAL OBLIGATIONS

- Contractor shall provide services and support to Oakland County Parks and Recreation ("OCPR") in connection with Bowers Farm ("Farm") as described in this Exhibit. OCPR shall remain responsible for operating and maintaining the Farm as a public park pursuant to federal and state law, local ordinances, and County/OCPR policies and procedures. Upon written approval of the Director or their designee, Contractor may provide programs, events, projects and activities at the Farm, which shall be governed by the terms and conditions of this Contract. Such written approval shall address all aspects of a program, event, project or activity, including but not limited to costs, cost reimbursement to Contractor, and distribution of revenue associated therewith. Such programs, events, projects and activities and schedules shall be communicated to and approved by the Director or their designee as required by OCPR.
- Contractor may, in coordination with OCPR and, where appropriate, in cooperation with other nonprofit organizations, provide for and conduct the sale and service of alcoholic beverages at approved Farm programs, events, projects and activities, including but not limited to Farm After Five, Fall Fest, and Winter Park. As required by law, Contractor shall be responsible for coordinating the purchase, sale, staffing, and administration of such beverage service and for complying with all applicable licensing, permitting, insurance, and legal requirements. All revenues from such sales shall Contractor and/or participating nonprofit organization(s), as mutually agreed among such organizations and as required by law. Net proceeds from these activities shall be used to support Bowers Farm programs, activities, improvements, and other purposes that enhance the Farm and its public benefit. No payment, reimbursement, revenue sharing, commission, or other transfer of funds between Contractor and OCPR shall be required or made in connection with programs, evernts, projects and activities provided under this subsection.
- The Parties shall meet at least twice a calendar year to discuss: (1) the services and support provided under this Contract and (2) the schedule and content of any programs, events, projects and activities provided under this Contract.
- Upon written request of the OCPR Director or Deputy Director, Contractor may provide planning and fundraising support intended to enhance the Farm experience and

supplement OCPR operations. Such activities shall be coordinated with the Director or their designee and reduced to writing.

- Upon written request of the OCPR Director or Deputy Director, Contractor may provide marketing, communications, sponsorship and community outreach support for the Farm, subject to OCPR standards, policies and procedures and OCPR review or approval.
- Contractor may recruit, organize and coordinate volunteers for approved Farm programs, events, projects and activities. Volunteers provided by Contractor under this Contract, shall be deemed volunteers of Contractor and not volunteers of OCPR or the County.
- Location, ownership and disposition of any materials, equipment or improvements associated with approved Farm programs, events, projects and activities shall be determined and approved by the Director or their designee, in writing.
- In January 2027, the Parties shall meet to review and discuss this Exhibit to determine if changes are needed. If changes are needed, they will codified in an amendment to this Contract.

DRAFT

DISCUSSION FRAMEWORK

Preservation Bloomfield + Oakland County Parks

Partnership Framework for Bowers Farm / Discovery Oaks

General Intent

Oakland County Parks and Preservation Bloomfield share an interest in protecting and interpreting the agricultural, cultural, and community history represented at Bowers Farm / Discovery Oaks.

As Oakland County Parks develops the long-term vision for the site, we see an opportunity to establish a partnership that both protects significant historic resources and creates meaningful opportunities for residents to experience, understand, and participate in the history they represent.

The intent is not simply to preserve historic structures, nor to assume that every historic resource should be used in the same way. The partnership should establish an informed approach that balances preservation, interpretation, education, public access, and appropriate activation.

What We Hope to Accomplish

- Protect significant historic structures, landscapes, artifacts, and stories.
- Expand public understanding of Bloomfield Township's agricultural and cultural history.
- Create authentic and engaging heritage experiences.
- Determine appropriate levels of preservation, access, and use for individual historic resources.
- Incorporate heritage interpretation into the broader Bowers Farm / Discovery Oaks experience.
- Develop meaningful volunteer and community involvement opportunities.
- Create a sustainable long-term relationship between the two organizations.

Preservation Guided by Expertise

Historic preservation will be an important part of the future of Bowers Farm / Discovery Oaks.

Oakland County Parks will work with professional expertise, including the **Oakland County Historical Architect** and the **Oakland County Parks Historian**, to inform decisions regarding historic significance, preservation priorities, interpretation, appropriate use, and treatment of individual resources.

This is important because historic resources are not all the same.

Some structures, collections, or spaces may warrant a high level of preservation and limited physical interaction. Others may appropriately support tours, demonstrations, educational programs, exhibits, adaptive use, or carefully managed hands-on experiences.

The goal is to make those decisions intentionally and resource by resource, using professional preservation guidance rather than applying a single standard across the entire site.

The Heritage Farm Experience

The long-term vision for Bowers Farm / Discovery Oaks includes a dynamic Heritage Farm experience that can interpret agriculture and community life across multiple periods, stories, and themes.

Historic structures will be important components of that experience, but the visitor experience should extend beyond simply viewing buildings or artifacts.

Potential experiences could include:

- guided interpretation and tours;
- agricultural and community-life demonstrations;
- exhibits and storytelling;
- historic skills and trades;
- food and agricultural traditions;
- workshops and educational programs;
- volunteer-led interpretation;
- seasonal programming; and

- special events.

The objective is to create a continuum of experiences. Some resources may appropriately be preserved primarily for viewing and interpretation, while others may allow more active public participation.

Preservation and public engagement should reinforce one another.

Roles of the Partners

The partnership should recognize the strengths of both organizations while maintaining clear responsibilities.

Oakland County Parks would be responsible for:

- Overall management and operation of Bowers Farm / Discovery Oaks.
- Public access, visitor safety, staffing, and site operations.
- Coordination of programming and Outdoor Learning experiences.
- Integration of heritage interpretation into the broader site vision.
- Coordination with historical, architectural, preservation, and operational professionals.
- Decisions related to the overall use and management of the park.

Preservation Bloomfield would provide important partnership support through:

- Historical knowledge and institutional memory.
- Input regarding historic significance and preservation priorities.
- Historical records, stories, collections, and interpretive knowledge.
- Participation in tours, interpretation, programs, and demonstrations.
- Volunteer involvement.
- Community connections.
- Potential philanthropic and preservation support.

The intent is for Preservation Bloomfield to remain meaningfully involved in protecting and sharing the history of the site while Oakland County Parks maintains responsibility for operation of the public park.

Initial Partnership Approach

1. Establish a Shared Vision

The first step is to agree on what we collectively want to accomplish.

Questions would include:

- What historic resources and stories are most important?
- What should residents understand or experience?
- What elements of the site should be preserved for future generations?
- Where could interpretation, education, or public engagement strengthen preservation?
- What role should Preservation Bloomfield play in the long-term heritage experience?

The emphasis during this stage should be on defining the **desired outcomes** before developing detailed operational requirements.

2. Assess the Historic Resources

Oakland County Parks, Preservation Bloomfield, the Oakland County Historical Architect, the Oakland County Parks Historian, and other appropriate professionals would review the historic resources associated with the site.

The assessment would consider:

- historical significance;
- physical condition;
- preservation needs;
- appropriate levels of public interaction;
- interpretive potential;
- potential educational or programmatic uses;
- accessibility;
- safety; and
- opportunities for responsible adaptive use where appropriate.

This work would establish a professionally informed foundation for future decisions.

Future Partnership Development

The initial work would be formalized through a basic **Memorandum of Understanding between Oakland County Parks and Preservation Bloomfield**.

The first MOU would focus primarily on:

- establishing the partnership;
- developing the shared vision;
- completing the historic-resource assessment;
- defining the initial roles of the organizations; and
- creating a process for determining future preservation, interpretation, and public-use strategies.

As that work progresses, the MOU could eventually be expanded or replaced with a more detailed agreement addressing matters such as:

- preservation standards;
- maintenance and care;
- use of individual structures;
- collections and artifacts;
- programming and interpretation;
- volunteer responsibilities;
- fundraising;
- communications; and
- public access.

The MOU would be **reviewed annually**, allowing both organizations to evaluate the partnership, incorporate new information, adjust priorities, and determine what additional agreements or responsibilities are appropriate.

Long-Term Direction

The long-term opportunity is to move from preservation of historic resources alone toward a broader model of **preservation through public understanding and engagement**.

Preservation Bloomfield's work has helped protect important pieces of Bloomfield's history. The next chapter can build upon that work by ensuring those resources remain protected while also becoming more visible, understood, and meaningful to the public.

Oakland County Parks believes Bowers Farm / Discovery Oaks can become a place where residents do more than observe history. They can encounter it, learn from it, participate in it, and understand why preserving it matters.

DRAFT FOR DISCUSSION

Draft Memorandum of Understanding

Between Oakland County Parks and Preservation Bloomfield
Bowers Farm / Discovery Oaks Heritage Partnership

This document is intended as an initial discussion draft. Final language is subject to review and approval through the appropriate Oakland County and Preservation Bloomfield processes.

1. Purpose

Oakland County Parks and Preservation Bloomfield share an interest in protecting and interpreting the agricultural, cultural, and community history represented at Bowers Farm / Discovery Oaks.

The purpose of this MOU is to establish a collaborative process to:

- develop a shared vision for the heritage experience at Bowers Farm / Discovery Oaks;
- identify and better understand the historic significance of structures, landscapes, collections, and other resources;
- establish appropriate preservation and public-use considerations for those resources;
- clarify the initial roles of Oakland County Parks and Preservation Bloomfield; and
- provide a foundation for a future, more detailed partnership agreement.

The parties recognize that preservation, interpretation, education, and appropriate public engagement can reinforce one another when decisions are informed by professional expertise and the significance and condition of individual resources.

2. Shared Principles

The parties agree to work from the following principles:

- Significant historic resources should be protected and preserved for future generations.
- Decisions regarding historic resources should be informed by professional preservation and historical expertise.
- Individual resources may require different levels of preservation, interpretation, public access, and use based on their significance, condition, safety, and suitability.
- Public education, interpretation, and appropriate access are important components of the long-term heritage experience.
- Preservation Bloomfield's historical knowledge and contributions should inform development of the heritage experience.
- Oakland County Parks retains responsibility for management and operation of Bowers Farm / Discovery Oaks.

3. Shared Vision Development

Oakland County Parks and Preservation Bloomfield will work together to define desired outcomes for the heritage experience at Bowers Farm / Discovery Oaks.

This process will consider questions including:

- What historic resources, stories, and themes are most important to preserve and interpret?
- What should residents and visitors experience, understand, or learn?

- How can historic preservation, interpretation, education, and appropriate public access work together?
- What role can Preservation Bloomfield play in supporting preservation, interpretation, volunteers, programming, and community engagement?
- How should heritage experiences complement the broader mission and operation of Bowers Farm / Discovery Oaks?

The intent is to establish agreement regarding **what the partnership is seeking to accomplish** before developing detailed operational requirements regarding how those outcomes will be delivered.

4. Historic Resource Assessment

The parties will participate in a review of historic resources associated with Bowers Farm / Discovery Oaks.

Oakland County Parks will coordinate this work with appropriate professional expertise, including the **Oakland County Historical Architect** and the **Oakland County Parks Historian**.

The assessment may consider:

- historic significance;
- physical condition;
- preservation needs;
- relationship to the overall heritage experience;
- appropriate level of public interaction;
- interpretive opportunities;
- potential educational or programmatic uses;
- accessibility;
- visitor and staff safety; and
- opportunities for responsible adaptive use where appropriate.

The assessment is intended to establish a thoughtful, resource-specific approach rather than applying the same preservation or use standard to every structure, collection, or historic resource.

5. Oakland County Parks Responsibilities

During the initial term of this MOU, Oakland County Parks will:

- retain responsibility for overall management and operation of Bowers Farm / Discovery Oaks;
- coordinate the shared visioning and historic-resource assessment process;
- engage appropriate historical, architectural, preservation, operational, and program expertise;
- consider how historic resources fit within the broader Bowers Farm / Discovery Oaks and Outdoor Learning vision; and
- facilitate development of recommendations for future preservation, interpretation, access, and programming.

6. Preservation Bloomfield Responsibilities

During the initial term of this MOU, Preservation Bloomfield will:

- provide historical knowledge, records, and institutional context where available;
- identify preservation priorities and areas of concern;
- participate in discussions regarding historic significance and interpretation;
- assist in identifying stories, collections, structures, and landscapes important to the history of the site; and
- participate in development of potential future volunteer, interpretive, educational, preservation, and community-engagement opportunities.

7. Operational Authority

Nothing in this MOU transfers responsibility for management or operation of Bowers Farm / Discovery Oaks to Preservation Bloomfield.

Oakland County Parks retains responsibility for park operations, including decisions related to public access, staffing, programming, visitor safety, facility operations, and overall site management.

Preservation Bloomfield will serve as a collaborative partner and historical and preservation resource within the framework established by this MOU.

8. Future Partnership Framework

The work completed under this MOU is intended to inform development of a more detailed long-term partnership framework.

Following development of the shared vision and completion of the historic-resource assessment, the parties may consider additional written provisions addressing:

- preservation standards;
- maintenance and care of historic resources;
- use of individual structures;
- public access;
- interpretation and exhibits;
- educational programming;
- volunteer involvement;
- collections and artifacts;
- events and demonstrations;
- communications;
- fundraising and donations; and
- responsibilities associated with resources owned by Preservation Bloomfield.

Any expanded responsibilities or commitments would be documented through a future written agreement approved by both parties.

9. Annual Review

This MOU will be reviewed by Oakland County Parks and Preservation Bloomfield at least annually.

The annual review will provide an opportunity to evaluate:

- progress toward the shared vision;
- findings from historic-resource assessments;
- preservation priorities;
- interpretive and public-use opportunities;
- the effectiveness of the partnership;
- proposed changes in responsibilities; and
- whether revisions or a more detailed agreement are appropriate.

10. Term

This MOU will remain in effect for an initial period of one year from the date of execution unless amended or terminated in accordance with any requirements established in the final approved agreement.

The parties may renew, amend, or replace this MOU based on the findings and recommendations developed during the initial partnership period.

11. Financial Commitments

This initial MOU does not establish a financial obligation for either party unless separately authorized in writing through the appropriate approval processes of each organization.

Any future financial commitments, fundraising arrangements, capital improvements, maintenance responsibilities, or other expenditures will be separately defined and approved.

12. Nature of the Agreement

This MOU establishes the intended framework for collaboration between Oakland County Parks and Preservation Bloomfield. Final language regarding legal obligations, amendment, termination, liability, ownership, insurance, and other legal requirements will be subject to review and approval through the appropriate Oakland County and Preservation Bloomfield processes.

RETURN TO AGENDA

Memo

To: Parks and Recreation Commission
From: Chris Ward
Date: October 30, 2026
Re: Director's Report

PARK IMPROVEMENTS AND COMMUNITY ACCESS

October brought two significant improvements to places Oakland County residents use for everyday recreation. At Catalpa Oaks County Park in Southfield, portions of the 24-acre park reopened following approximately 15 months of construction. Improvements include an expanded universally accessible playground, accessible pathways, shaded gathering areas, a second picnic pavilion, new outdoor fitness equipment and green stormwater infrastructure. Recreation fields will remain closed while the turf becomes established and are expected to open in spring 2027.

In Madison Heights, the transformation of Red Oaks Park, formerly Ambassador Park, brings new opportunities for play and gathering to a city-owned park managed by Oakland County Parks through a partnership agreement. The multigenerational McGillivray Play Garden honors former Parks Commission Chair Gary R. McGillivray and is a centerpiece of the redesigned park, alongside new shade and gathering amenities, restrooms, improvements to the sledding hill and stormwater-management upgrades.

REGIONAL TRAILS AND PARTNERSHIPS

Repairs to two major washouts on the Clinton River Trail in Rochester were completed in October, restoring an important connection for walkers, runners and bicyclists. The City of Rochester led the restoration with support from philanthropic and public partners, including a $700,000 Oakland County Parks grant. The project illustrates how OCP can help sustain regional recreation infrastructure beyond county-owned parks.

OUTDOOR LEARNING AND RECREATION

Since September, Discovery and Bloomfield Oaks have served 2,010 students through school field trips. Pony School for younger children began at Discovery Oaks at full capacity, while riding lessons for older students serve 18 riders weekly. New early childhood and homeschool nature programs are underway at Red Oaks and Wint Nature Centers, with Wint's adapted Field Science Lab serving as a home base. November offerings include fifth-grade Harvest & Heritage at the farm, Turkey Visits at local schools and Log Cabin Living at Johnson Nature Center for kindergarten students.

The October 10–11 Rotary/We Love Lit Campout at Groveland Oaks brought 12 families together, concluding a year of Nature READS programming for approximately 60 participants. Pontiac and Bloomfield Rotary Club volunteers and OCP staff provided outdoor experiences and shared meals. Supported by the MiFamily Network Grant, the partnership combines literacy, nature learning and family recreation. OCP intends to seek a $5,000 grant in December to support three seasonal programs and the next campout.

Lakeside Lights: Hike the Night at Independence Oaks on October 17 also drew encouraging public feedback, according to staff, and offers a promising model for future seasonal recreation experiences.

ENVIRONMENTAL STEWARDSHIP AND RECOGNITION

On October 22, the Michigan Association of Conservation Districts named Oakland County Parks and the Oakland County Cooperative Invasive Species Management Area its 2026 Conservation Partner. Natural Resources Education & Outreach Specialist Patrick Caniff accepted the award in Lansing. This recognition highlights OCP's role in bringing community organizations, public agencies and residents together for environmental education and stewardship.

Staff also hosted a seed-collection stewardship learning day at the Waterford Oaks administration grounds. Participants learned about and collected seeds, including wild petunia and blazing star, from pollinator gardens for use in future park projects.

LOOKING AHEAD: REGIONAL RECREATION AND WELLNESS

Initial planning is underway for a conversation with communities in southeast Oakland County about shared recreation and wellness needs. Discussions have included the possibility of Oakland University facilitating the exploration. The first step would be to listen to the communities about what they hope to accomplish, before determining whether a more formal regional collaboration would add value for residents. Discussion around a similar effort in northwest Oakland County are also underway.

GRANT AMENDMENT FOR THE FY 2024 DNR MICHIGAN INVASIVE SPECIES GRANT PROGRAM

In March 2024, Oakland County Parks (OCP) was awarded a $69,300 Michigan Invasive Species Grant through the Michigan Department of Natural Resources (DNR) to support invasive species monitoring and treatment. OCP is now requesting a one-year extension of the grant agreement, moving the end date from July 30, 2026, to July 30, 2027, to allow additional time to complete the project. The extension will be presented as a communications item at the November 5 meeting of the Board of Commissioners' Legislative Affairs & Government Operations (LAGO) Committee.

ANNUAL SIX RIVERS LAND CONSERVANCY LUNCHEON

Oakland County Parks was proud to support the annual Six Rivers Land Conservancy Luncheon on October 28 at the Detroit Athletic Club as a River-level sponsor, helping advance the important conservation work Six Rivers Land Conservancy is doing throughout Oakland County. Attendees included Parks Commission Chair Ebony Bagley, Vice Chair Yolanda Smith Charles, Commissioners Kate Baker and Shanell

Weatherspoon, Parks Director Chris Ward, Deputy Director Alan Jaros, and Parks Chiefs Ashlie Smith, Erin Watson, and Simon Rivers.
